and have come to a conclusion which is a satisfactory one, and that is that we sbould have shown 3,500*l*. on the better side of the accounts if we had been working the whole 12 months. If the ore at the grade of 4 dwts. which we bave been getting continued during the present year, my calculations come out that we shall in the present year make a profit of 3,500*l*., and we sball be that amount financially better without doing any more work. (Cheers.)

The CHAIRMAN: That is right.

Mr. HILL: I should like us to have six-monthly meetings.

Mr. REID (director): The meeting would be without accounts, we could not trouble to have the accounts audited in the middle of the year.

Mr. HILL: I should not wish that.

The CHAIRMAN: There would be no great objection to that, only the expense, and it would be extremely difficult to get the accounts from the mine in time for two meetings a year.

The SECRETARY: We publish all information we get, or any shareholder can receive any particulars by calling at the offices of the company.

Mr. HILL: I should not think that there would be very much expense, only the biriug of the room for the meeting. I should say that for the few shareholders that attend we could meet at the offices.

THE PRESS.

The CHAIRMAN (pointing to the Press representatives): Perhaps we could, but how about these gentlemen?

Mr. HILL: I do not wish to give any trouble. I only made the suggestion.

The CHAIRMAN: I will now put the resolution for the adoption of the report. Those in favour please hold up their hands. Carried unanimously. Mr. Reid and myself retire by rotation on this occasion, and we offer ourselves for re-election.

Mr. DODD: I tbink we had better take the names separately.

The SECRETARY: I think that they should be taken together.

A TRIBUTE OF PRAISE.

Mr. DODD: I will take them together, then. I think that the ultimate success of this company is due to these two gentlemen, and we are very much indebted to them who have worked so hard for us. They have very large holdings in the company, and if it were not for the hope tbat they may be rewarded in the future, the reward that we give them would not be sufficient for them to give us their time and attention as they do. I feel that they will continue to give us their best services in the future as they have done in the past, and I have therefore much pleasure in proposing that Mr. Prince and Mr. Reid be re-elected as directors of the company for another term of office. He would not like to see them separated. (Hear, hear.)

Mr. HILL seconded tbe resolution.

Mr. DODD: The chairman cannot put the resolution, and I, there-

fore, ask you to vote. Those in favour—against—carried unanimously. Gentlemen you are re-elected unanimously.

FORMAL BUSINESS.

The Chairman: The next business, gentlemen, is the re-election of the auditors.

Mr. Hill: What is their remuneration?

The Chairman: 25*l.*

Mr. Hill: I beg to propose their re-election.

A Shareholder: I will second it.

The resolution was carried.

The Chairman: I wish to return thanks for the manner in which Mr. Dodd spoke of the services of Mr. Reid and myself, and the manner in which you responded and re-elected us. I have been connected with the company since its formation, and have always given a great deal of my time and taken a great deal of interest in the company, which I will continue to do until the property has been proved a success, and if that is not done it will not in any way be my fault. I thank you, gentlemen, for re-electing me.

The proceedings then terminated, and the shareholders inspected various fine

NUGGETS

that had been received from the property, and which were much admired.

SOUTH CONDURROW.

THE UPS AND DOWNS OF MINING—THE SEVERE STORMS.

A four-monthly meeting of the adventurers was held on Wednesday.

Mr. H. J. Marshall

presided.

The accounts showed that the labour costs, merchants' bills, and dues for the 16 weeks had been 5,749*l.* 14s. 7d. The tin sold amounted to 99 tons 4 cwt., and produced 5,502*l.* 15s. 11d.; extra carriage, 3*l.* 1s. 3d.; discounts, 31*l.* 13s. 6d. This left a loss on the working of 312*l.* 16*l.* 11d. There was a balance in favour of the mine of 1,937*l.* 0s. 2d.

The Chairman proposed the adoption of the accounts, and the motion, having been seconded by Mr. J. Wickett, was carried.

THE REPORT.

Capt. Rich, in supplementing the report, said he did not like the making of regrets and apologies, but he was sorry that after 16 years of unbroken prosperity they met for the first time without being able to declare a dividend. He might say, without boasting, that theirs was the only mine in Cornwall that had paid dividends continually for so long a period, and he hoped, with strong reasons for the hope, that this was only a little break, for their prospects were not by any means worse. It had been a trying quarter. They had experienced the same sort of weather as other people, and other things had come in to throw them behind. But on looking at the sample-book they would find that the average produce of their stuff had increased from 34 lbs. to 40 lbs. to the ton of stuff, and that was a favourable feature. They had several good points in the mine. The work they were doing at Marshall's shaft was going forward in a satisfactory manner. The shaft was nearly down to the 138, and was well equipped and provided, and they were proceeding with the development of the mine as well. All this had to come out of the profits, and yet they had not made a call. They might reduce the costs, but it would not be judicious to do that and stop the chances of discovery. During the last 16 years they had paid over 100,000*l.* in dividends, and that was fairly good. A junction of lodes was likely to take place when they got Marshall's shaft down to the next level. A rich dropper was coming in on the flat lode, and he had reason to believe that there would be a great improvement. In the western part of the mine they would have to look deeper than in the eastern part, for there the ground was capped with killas.

The Chairman said when they met last in Cornwall he had the pleasure of proposing a dividend. They must expect to have their ups and downs like other people, and now they were a little bit down. He was not enough of an orator and juggler to make their position look better, than it was when they were declaring dividends, but they would find that their tin sales had been nearly the same as last time—about 25 tons a month, but that the average price was 3*l.* a ton lower. The weather, too, had been extraordinarily unfavourable, and quite a week's work was lost on the mine. He was underground on the previous day, and he thought the symptoms all round were favourable. He brought up some good samples from different levels. They had experienced very good times so far, and, to the best of his belief, they would again in the future. They had received handsome treatment from the lord. He did not think the committee would approach him on the subject mentioned by Mr. Wickett, but if it should occur to him to make them any offer, they would be glad to receive it.

On the motion of Mr. Wickett, seconded by Mr. W. Pike, J.P., the committee were re-elected and thanked for their services during the past 12 months.

Mr. Jeffery proposed a vote of thanks to the chairman, which was seconded by Mr. Davey and carried, and the meeting closed.

The letters of allotment and regret to applicants for shares in The Albion Steam Coal Co.,' Limited, have been posted.

Messrs. Matheson and Co. have received from Mexico remittances for 18,635*l.* 12s. 10d., being the amount collected during the month of Mar. on account of subsidy, appertaining to the Mexican National Railroad.

THE LINARES LEAD MINING COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the HALF-YEARLY GENERAL MEETING of the Shareholders of this Company will be held at this Office, on THURSDAY, the 23rd inst., at One o'clock p.m.

To receive the Accounts, Balance-sheet, and Reports of the Directors, Auditors, Superintendents, and Mining Agents for the half-year ending December 31, 1890.

To elect two Directors in the place of Robert Henty and Richard Donagan, Esqs., who go out of office by rotation. They are both eligible, and offer themselves for re-election.

To appoint two Auditors for the ensuing year. James W. Jepps and Samuel J. Wilde, Esqs., who are eligible, offer themselves for re-election.

And for general business, as authorised by the Deed of Settlement.

By order of the Board,
H. SWAFFIELD, Secretary.

No. 6, Queen Street Place, London, E.C.,
April 15, 1891.

THE FORTUNA COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the HALF-YEARLY GENERAL MEETING of the Shareholders of this Compauy will be held at this Office, on THURSDAY, the 23rd inst., at Half-past One o'clock p.m.

To receive the Accounts, Balance-sheet, and Reports of the Directors, Auditors, Superintendent, and Mining Agents for the half-year ending December 31, 1890.

To elect two Directors in the place of Robert Henty and Edward L. Agar, Esqs., who go out of office by rotation. They are both eligible, and offer themselves for re-election.

To appoint two Auditors for the ensuing year. Samuel J. Wilde and Francis S. H. Judd, Esqs., who are eligible, offer themselves for re-election.

And for general business, as authorised by the Deed of Settlement.

By order of the Board,
H. SWAFFIELD, Secretary.

No. 6, Queen Street Place, London, E.C.,
April 15, 1891.

THE ALAMILLOS COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the HALF-YEARLY GENERAL MEETING of the Shareholders of this Company will be held at this Office, on THURSDAY, the 23rd inst., at Two o'clock p.m.

To receive the Accounts, Balance-sheet, and Reports of the Directors, Auditors, Superintendents, and Mining Agents for the half-year ending December 31, 1890.

The elect two Directors in the place of Edward L. Agar and Frederick A. Simmonds, Esqs., who go out of office by rotation. They are both eligible, and offer themselves for re-election.

To appoint two Auditors for the ensuing year. James W. Jepps and Samuel J. Wilde, Esqs., who are eligible, offer themselves for re-election.

And for general business, as authorised by the Articles of Association.

By Order of the Board,
H. SWAFFIELD, Secretary.

No. 6, Queen Street Place, London, E.C.,
April 15, 1891.

THE RUBY MINING COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the ORDINARY GENERAL MEETING of the Shareholders of the RUBY MINING COMPANY, LIMITED, will be held at the Cannon Street Hotel, Cannon Street, London, on TUESDAY, April 28, 1891, at one o'clock, for the following business, viz.:—

To receive and adopt the Report and Accounts of the Directors as audited.

To elect Directors in the place of Mr. William Bellingham and Mr. Charles W. C. Hutton, who retire by rotation, but, being eligible, offer themselves for re-election.

To appoint Auditors in place of Mr. W. B. Peat and Mr. W. Russell Crowe, who offer themselves for re-election.

The Transfer Books will be closed from the 18th to the 28th instant, both days inclusive.

By Order,
J. FORSTER HAMILTON,
Secretary.

22, St. Mary Axe, London.

REPORTS OF MEETINGS.

THE OOREGUM GOLD MINING CO. OF INDIA, LIMITED.

FIRST DIVIDENDS — MR. LOW'S VISIT TO THE MINE — THE STRENGTH AND PERSISTENCY OF THE LODES THE MINE'S DOMINANT CHARACTERISTICS—WORKINGS FULLY DESCRIBED BY MR. JOHN TAYLOR—SIGNIFICANT FACTS FOR SHAREHOLDERS—THE NEW PURCHASE UNANIMOUSLY AGREED TO.

AN ordinary general meeting was held at the Cannon Street Hotel, on Tuesday.

Mr. Malcolm Low, M.P.

(chairman of the company), presided.

Mr. JOHN GARLAND (secretary) read the notice of meeting, and the report of the directors was taken as read.

FIRST DIVIDENDS.

The CHAIRMAN: Gentlemen, it is with a high sense of gratification that we, your directors, meet you on this occasion—the first on which, after paying off all our liabilities, we are in a position to declare a dividend—a dividend which, unless events altogether falsify all reasonable forecasts, is but the foreshadowing, and the harbinger of assured and augmenting prosperity in the current and in future years. (Cheers.) Especially this occasion must be gratifying to those of us who are old shareholders, who struggled for the undertaking in the times of adversity, and who responded to the appeal to subscribe for preference shares, and so saved the company from destruction, and put us in the way now of landing you in the gratifying position in which you find yourselves to-day. But let us not claim too much in our success. Mining is not like some undertakings, where you can create and build up a business from the natural surroundings. Nature must have made the mine for us, and in this case I am very glad to say she has been very propitious, and has opened out to us real treasures, and all the merit we take is that we have put you in the way to obtain them. (Cheers.) The opening months of this, the second of our prosperous years, has been

CLOUDED BY TWO VISITATIONS

of that Eastern scourge—the cholera. The first attack was when I was at the mines, when, I grieve to say, we lost over 40 of our native workmen—some of them experienced hands. The second attack commenced in Mar. It has not been so generally fatal as the first, and I am very glad to tell you it is now, we believe, over, but we have to deplore the loss of our chief mining captain, Mr. Prout, whose death we have heard of by telegram since the issue of our report. It is really, personally to me, a very grievous thing to think that a man, so young and strong, and full of energy as Capt. Prout, should be struck down so suddenly, and I am sure you will allow us to convey to the family of one of your servants, who died at his post, an expression of your sympathy. (Hear, hear.) From sad experiences of my own in cholera epidemics, I can personally testify on this occasion to the devotion of our superintendent, Mr. Collins, the medical officer, and other responsible officers during the visitation. They did all we expect to find, and generally do find, British officials do in times of danger, when want of cool-headedness on the part of the officers means panic on the part of the men. (Cheers.) These misfortunes have, of course, temporarily retarded our underground development. They have not been allowed, thanks to Mr. Collins' dispositions, to interfere with the returns—our last return for Mar., 3,004 ozs., being, in fact,

THE LARGEST WE HAVE YET MADE.

(Cheers.) As to the quantity and quality of the ore dealt with—the quantity was 12,972 tons of quartz, which produced 27,351 ozs. of bar gold, showing an average of 2 ozs. 2 dwts. 7 grs. to the ton. That is an increase in the year of 5,090 tons and 11,426 ozs. over the production of the year before, and you will also have noticed that as to our reserves of ore, these at the end of last year were 24,106 tons, being an increase of 6,606 tons over the reserves of 1889. That is all so far satisfactory, and I may say that we are reasonably assured this year of having a much larger output, and not only that, but at the end of the year having a considerable increase to our reserves—thus, not only increasing the current year's profits, but adding to the sources from which profits will be derived in years to come. With regard to mining development—Mr. John Taylor will follow me, so that I need say but little; for the first reason, because a good story gets spoilt by twice telling, and next because it does not follow that though I have recently visited the property, therefore I should assume to myself a duty which

MR. TAYLOR, A PAST PROFESSIONAL MASTER OF THE CRAFT,

is here to perform for us. Let me then just say that every expectation I ever formed of this property, from the time I first set foot on it some years ago, has been more than confirmed by what I have seen this year. No man who has eyes to see, and a mind to understand, can go underground at Ooregum without seeing that we have here a very great mine. No man with eyes to see, or a mind to understand, can doubt that with the additional land we propose to attach to it, it is a very lasting one. What is so particularly satisfactory about it outside the mere richness of the ore is the length of the rich shoots, and the fact that the

DEEPEST POINTS ARE ALMOST ALWAYS THE BEST.

Take for example the rich shoot of more than 400 ft. in length on the 280-ft. level at Wallroth shaft, with the various winzes going down, all of them in rich ore, whilst the shaft itself at the date of the last report was going down in quartz worth 6½ ozs. to the ton. Or take again an entirely new bit of ore, not shown on the plan, coming in from the south end—we do not know very much about that—but as far as we have gone it is rich, and I think we have already penetrated some 40 to 60 ft. with no signs of cessation of richness. Then take, for example, Probyn's shaft, where you have that great rich shoot coming in from the south and continuing with one interruption—only one serious interruption—right away up to the northern boundary. Well, Probyn's shaft is going down in a lode 3 ft. wide, and worth 3 ozs. 11 dwts. to the ton. Or take Low's shaft, where, at the lowest level (the 350), the cross-cut from the shaft intersects a lode 4 ft. wide, worth 4½ ozs. to the ton. Wherever you go in Ooregum, whether you are sinking or driving, you find that

THE PERSISTENCY AND THE RICHNESS OF THE ORE SHOOTS

are the dominant characteristics of the mine. (Cheers.) Now, we mention in our report that the maximum crushing capacity for our present mill of 30 heads is pretty nearly attained, and that we are dispatching (or, rather, perhaps I should say, have dispatched) a new battery of 20 heads, with engine power to drive 20 more, so that very shortly we shall have at work 50 heads in two batteries, one of 30 and the other of 20, while the latter power can be doubled in a very short time—say, at three months' notice. With the old battery we shall deal with the haulage from Wallroth shaft, and the new battery will deal with that from Low's and Probyn's shafts. The sites both for the new battery and the tailings machinery were selected with my own approval while on the mines. Then as to the tailings machinery which we have ordered. We anticipate a very considerable increase of profit from that. We have now accumulated an amount estimated at 22,000 tons of tailings, and Mr. Collins leads us to anticipate

A PROFIT OF AT LEAST 7,000*l.* PER ANNUM

from that source alone. (Cheers.) Two questions occupied much of my attention—the extension of our lease, and the railway communication (the link between the Madras Railway and the field. As regards the extension of lease, the Mysore Government have, for reasons which I need not particularly advert to, decided to withdraw the general notification granting to all working companies in the field in a lump an extension of 20 years on the same terms.

SATISFACTORY ASSURANCE ABOUT THE LEASE.

They prefer, it appears, to deal with each company individually, and on its own merits. Now, our present lease has 20 years more to run, and from all I can gather, not only from official correspondence, but also from personal conferences both with the British Envoy and the Chief Minister of the State, I gather that there will be not the slightest difficulty in our case about granting an extension of 20 years on the same or similar terms, thus making altogether a further length of lease of 40 years for us. (Cheers.) Of course, the truth is that the present royalty we pay is in these times, I submit, not a small, but a very large one—(hear, hear)—and I ventured to impress that as strongly as I could upon the minds both of the Envoy and the Chief Minister. Everybody must have noticed that in these days the general tendency of mining royalties is towards decrease, and not increase—(hear, hear)—and I think it is no small thing for us to have already paid to the Mysore State between 9,000*l.* and 10,000*l.* before we have had a single penny for our outlay and patience.

A HINT TO A DORMANT COMPANY.

There is a company in London called the Mysore Goldfields Railway Co., and I hope that concern will either soon proceed to seriously undertake the work for which they were incorporated, that of making a broad gauge railway, or else leave the field clear for the companies, or the Mysore State, to construct a narrow gauge. I understood from the Chief Minister that the Mysore State itself will be perfectly willing to undertake the work of a narrow gauge railway for us, and really do not think that Nundydroog, Ooregum

or Mysore (not to speak of other companies coming on) can rest much longer contented with paying a cartage of 3s. 9d. per ton for all their fuel and material, when the railway charge would be only 4d. or 5d. Of course, a narrow gauge would not really be so good as a broad gauge, but it would be mightily better than nothing. As to

THE LAW SUIT

brought against the company by Mr. Roper, and the payment of the dividend on the preference shares, I cannot do better than read what the report says :—

"With the object of expediting a final decision in the action brought by Mr. Roper, it was decided on the advice of counsel not to argue the case in the Lower Courts, but to accept *pro formâ* judgment in those Courts against the company. The petition of appeal has been presented to the House of Lords, and the directors hope that before many months have elapsed the matter will be finally settled."

Of course, the question involved in this suit is simply whether the House of Lords will declare that there is a liability (not necessarily to be a payment) of 15s. on each preference share. Those preference shares were issued upon terms conceived, proposed aud ratified by the original ordinary shareholders themselves. (Hear, hear.) But for the response of the preference holders, the ordinary ones would have been wiped out. The only question is whether there is any legal flaw in the original ordinary shareholders' own act in attaching certain conditions to these preference shares. Well, we must take our stand upon legality (sentiment has nothing to do with the question), and we are advised by the best legal authorities. The company asserts that the discount was legal—Mr. Roper that it was not. All I can say is, that it is very satisfactory this much vexed question is now on the eve of being settled by the highest Court in the realm. As to the payment of the preference dividend, we state :

"The question raised in the legal action now pending as to a possible liability of 15s. per share on the preference shares has no bearing whatever upon the matter of the payment of a dividend. On this question the directors have obtained the opinion of eminent counsel and are advised that a preference dividend of 10 per cent. must be paid upon the *nominal* amount of the preference shares before the ordinary shares can participate in profits. The decision of the House of Lords in the case of Oakbank Oil Company *v.* Crum" is conclusive upon this point."

To that statement I have nothing whatever to add.

FINANCE.

Turning to finance, I think that those really acquainted with the administration of this concern will consider our finances are now in a pretty satisfactory condition. We have had no floating capital, and the amount of outside cash that has been given to this mine to bring about present results has been astonishingly small. Of course, in our general expenditure, if we could have placed what is properly debitable to capital account—why our revenue account would have been much larger, and our profits much greater. But we could not do this. As affairs stand we have been able from the profits of the year, first, to pay off all our debts 22,500*l.*—(hear, hear)—and then to recommend to you

A DIVIDEND OF 3s. ON THE PREFERENCE AND 1s. ON THE ORDINARY SHARES.

The total amount of those dividends is 24,250*l.*, leaving us with 3,570*l.* to carry forward to next year. On the subject of lahour, I have long thought that as time goes on, and our native labour gets more and more instructed, we shall be able to replace some of our European workmen by skilled native craftsmen. (Hear, hear.) This must be done gradually—it cannot be hurried. It must be kept in view, and acted on by degrees, as our native workmen become more and more educated, and as the engagements of some of our European *employés* expire. Mr. Collins's mind is thoroughly familiarised with this point, and he quite sees the importance of it. With regard to our fuel (a very heavy item), we have now been able to arrange that if we want it at any time we shall be able to procure a steady supply of Bengal coal, weighed and delivered at the mine, in any quantity at ~~Rs~~23 to ~~Rs~~24 a ton. That is a good coal, and the price is reasonable. Moreover it has this double advantage, that it tends to lessen the price of wood. I should not like at present to decide exclusively in favour of coal. The fact is that coal is good for some of our purposes and wood for others, and I think we should play the one off against the other for the purpose of keeping down the price of both.

INNOCENT SHAREHOLDERS.

As to explosives : from some letters we have had it would appear that certain shareholders imagine we can do without it. (Laughter.) But I cannot see my way to making any better or cheaper arrangement than we have with the Nobel Co. As to expenditure generally, that will more and more bear a favourable ratio to our receipts according as our operations enlarge. The ratio of expenses does not proceed in the same ratio as compared with receipts as those receipts enlarge. I have made a calculation, and striking out from working cost only two items, royalty and debenture interest (and no one will contend, I suppose, that they should go into working costs), I find this, that in the year 1889 we spent exactly 2*l.* 13s. in getting each ounce of gold, whereas last year, with our increased output, we paid exactly 2*l.* 2s. 8d. per ton—

AN IMPROVEMENT OF 10S. 4D.

This improvement, I am desirous to impress upon you, will go on according as our output is increased. It was mentioned at the Mysore meeting (I see Mr. Rowse present, and I think it was he who stated it) that their costs, which were 2*l.* 6s. in 1888, were brought down last year to 22s. 6d. ; but here, in comparing the results with ours, you must remember not only their much larger output, but also the fact that they are in a position to place to capital account what is capital expenditure, which, as I have explained already, we are not in a position to do. (Hear, hear.) I will ask the secretary to read the telegram which has just come from the mine, expressly ordered for this meeting, and we have such confidence in Mr. Collins, that I am sure he would not make it favourable simply because of the meeting, but tell us the facts as they are. Mr. Garland will kindly read the telegram.

A GOOD CABLE.

Mr. JOHN GARLAND : The telegram is dated Apl. 13 :—
"Wallroth shaft sunk in Mar. 25 ft. ; lode 4 ft.; valuc 2 ozs. 18 dwts. 280 south of Wallroth shaft ; lode 1 ft. 6 ins. wide ; value 1 oz. 4 dwts." (That is something new.) "215 north of Wallroth shaft ; lode 2 ft. wide, and value 5 ozs." (Cheers.) "Low's shaft : Developments suspended. Probyn's shaft sunk in Mar. 30 ft.; lode 4 ft. 6 ins. wide ; value 2 ozs. 4 dwts. Probyn's shaft : 450 level south advanced in Mar. 52 ft.; lode 3 ft. 6 ins. wide ; value 6 ozs." (Cheers.) "Probyn's shaft : 300-ft. level south lode, 1 ft. 3 ins.; value 1 oz. 16 dwts. Eight other points of development, average width of vein 2 ft.; average assay for last week 2 ozs. 5 dwts. Camp healthy. Moplahs expected to-day. Erection of tailings machinery proceeding." (Cheers.)

The CHAIRMAN (resuming) I am sure you will all be glad to hear the latter part of that telegram. "Camp healthy"—means to say that this last attack is over ; and "Moplahs returning"—means that the artisans from the Western coast are now on their way back. I think I have occupied you too long over this. (Cries of "No.")

STAFF NOT FORGOTTEN.

Let me conclude by a word of encouragement on the matter of the services of our staff, including, amongst others, our able secretary, Mr. John Garland, here, our superintendent, Mr. Collins, our chief engineer, Mr. Hamley, and our chief mining captain, Capt. Noble, at the mine. If it be true that good masters make good servants, it is surely equally true that good servants ought to make appreciative masters. I shall reserve anything I have to say on the intended acquisition of land for the second meeting, and have only now to thank you very much for your courtesy in hearing me, and to propose the adoption of the report and accounts. (Loud cheers.)

Mr. PROBYN (director) : I second the motion.

Mr. JOHN TAYLOR, who was heartily received, said : Gentlemen, the information which is given to you in the report of the directors and that of the local agents I am sure cannot fail to have been read by all of you with very great satisfaction. This information most fully justifies the concluding paragraph in the directors' report, wherein they say :—

"The board, in conclusion, cougratulate the shareholders on the continued and increasing prosperity of the company. The mine is an extremely rich one, and is destined, the directors believe, to have a brilliant future."

Now, the development during the year in the shafts, levels, winzes, and rises, amounts in all to a length of 3,368 ft., which represents close upon two-thirds of a mile of underground work, to say nothing of stoping, and a good proportion of this has been in productive ground. (Cheers.) Notwithstanding this large extraction that the chairman has told you about, of nearly 13,000 tons, this drivage through productive ground has given us an increase in the reserve of 6,600 tons—a very healthy state of things, as all of you will admit, and especially those who have a thorough knowledge of mining—and I am glad to see several gentlemen in the room of whom I can speak in that sense, and several also who know the field well. (Hear, hear.) At the time of our last meeting, a year ago, I was able to tell you of the opening up for a considerahle length of a valuable lode in the 250 level, south of main shaft, but which is now called the 280-ft. level, in the sinking of Wallroth shaft, and since then this part of our mine has

DEVELOPED EXTRAORDINARILY WELL.

The chairman has dealt in very few words with the salient points in the mine, and it must have been extremely pleasing to the shareholders to have such confirmation from so powerful and reliable a source of the information we have had from time to time from our local agents, and I am sure you will agree with me that the thanks of all are due to Mr. Low for the great exertions he has made, and the interest he has taken in the welfare of the company, in which we are so much all concerned. (Hear, hear, and cheers.)

WORKINGS DESCRIBED.

To begin at the southern portion of the workings—the development that I spoke of at the 280, as it is now called, but then called the 250—at the time of the last meeting I told you we had a very bright outlook there. In the 280-ft. level we have now proved that the pay-shoot is something like 400 ft. long, and rich all the way, with Wallroth shaft being sunk in the centre. The 280-ft. level has been driven south for a long distance, as shown on the section. After passing out of the long pay-shoot the lode was poor, but we have recently seen an improvement, and it has been stated to be worth over 2 ozs. to the ton in recent reports, whilst the cable message which the secretary has read tells you it has now increased in width to 1½ ft., and is worth 1 oz. 4 dwts. We have full reason for firmly believing that we are now well into the commencement of another pay-shoot entirely independent of and separate from the one that we had at Wallroth shaft. As we have considerably more than 900 ft. (nearly 1,000 ft.) in length to our southern boundary—the northern boundary of the Champion Reef Co.'s property—you can readily understand the importance to be attached to that one point. Wallroth shaft has been sunk 75 ft. below the 280-ft. level. The printed report has told you of a length of about 47 ft., and of a lode averaging for all that distauce 2 ft. 4 ins. wide, and worth 6½ ozs. to the ton. (Cheers.) The cable message gives an important piece of information, for it shows that the lode has widened out considerably, that is to 4 ft., but not quite so rich, and probably you would not have expected it to be so, but, at all events, giving the satisfactory average of 2 ozs. 18 dwts. to the ton. Then we have five winzes in the neighbourhood of Wallroth shaft, under the 280-ft. level, two of them to the south of the shaft, and three to the north, and the result of working all of them confirms what we have in the bottom of that shaft, both as to the size and value of the lode. You will readily understand that a very large body of ore is being developed in this part of your property. I am very pleased to hear mentioned in the telegram the 215 level north of Wallroth shaft. It says that they are driving again there, and that the lode is 2 ft. wide, worth 5 ozs. to the ton. (Cheers.) That level has not been driven for several months (not since the beginning of Jan.), probably because the ventilation has been bad.

The CHAIRMAN : That is so.

LOW'S SHAFT.

Mr. Taylor : To come next to Low's shaft—at the time of our last meeting the outlook was not as bright as we could wish at this part of the mine. The 270-ft. level in the bottom was only 15 or 16 ins. wide, but I was able then to indicate that an improvement was to be expected, because we had in a winze a great widening of the lode, and quartz worth from 2 to 2½ ozs. to the ton. Since then, as foreseen, matters have gone very well with us in this part of the mine. The 270 has been driven south 167 ft.; for the first 100 ft. the lode was small and poor, but the next 55 averaged 2½ ft. wide, and was worth over 6 ozs. to the ton. (Cheers.) We are opening up a very fine piece of ground at this point. A winze below the 270 has been sunk 30 ft., and is 3 ft. wide, worth 4 ozs. to the ton. The shaft is sunk in this section to the 350 ft., not on the course of the vein, but almost at the same point of the shaft a winze has been sunk 80 ft. to the 350 level, which is now the bottom of this part of the mine. For the first 50 ft. the lode was small, but then opened up to 3½ ft. wide, and was worth 4 ozs., on an average. In the bottom level (the 350) the lode is 5 ft. wide, and has been worth from 4 to 4½ ozs. to the ton, and we hope to drive that level with great vigour. The printed reports in both cases, that of Mr. Collins and of Mr. Prout, have drawn special attention to the great importance of the improvement which has taken place in this part of the property between now and this time last year. The telegram says the work at Low's shaft has been suspended, but I take it to be a wise arrangement on the part of the local agents, and I understand its meaning to be this :—They do not desire that the work at Probyn's shaft or at Wallroth's shaft should go short-handed, but they have found it better to keep up a full staff at those places, and for the moment to take them from the other one. Probyn shaft is one that we must all look to with great interest, as it is considerably deeper than any other part of the property. According to the telegram, it has been sunk 30 ft. in the last month, and is now 512 ft. deep. It is an immense satisfaction to us to know that the temporary difficulty we were in when we met with a poor floor of ground, or unproductive rock, has been overcome, and that we have a lode below looking so well. At 390 ft. the lode was cut off apparently, and went to nothing. It was made entirely unproductive by a floor of ground dipping in the direction indicated, and for 27 ft. we had nothing at all to value, but have since had a lode 3 ft. wide, worth 3½ ozs., and the cable tells you that it is now 4 ft. 6 ins. wide in the bottom, and worth 2 ozs. 4 dwts. The bottom level at Probyn's shaft (the 450) has been driven a short distance north near the Nundydroog boundary ; the lode is 3 ft. wide, worth 5 ozs. 8 dwts. In the 450 level north, which has been driven over 100 ft., we have a very rich lode indeed. The cable describes it as 3½ ft. wide, worth 6 ozs. (Cheers.) Drifts are being made under this poor floor of ground, and Mr. Collins specially calls attention to the improvement of the vein below this unproductive rock. It is entirely impoverished in the floor, but below we have a richer lode than we had above. In a winze below the 366 to the north of Probyn shaft we have a lode 3 ft. wide, worth 5 ozs. 8 dwts., and all the neighbouring workings are in rich ground. The 366 has been driven south of Probyn's about 400 ft. When we had advanced about 90 ft., this poor floor of ground was met with and continued in the level for over 110 ft., but the lode came in again, and has since then been continuous, giving an average of about 2½ ft. wide, and worth about 2½ ozs. to the ton. Above the 366 a rise has been put up some 17 ft., where we also have a good lode, and above, again, in the 300-ft. level (which until recently one would naturally expect to be in this poor floor of ground) we have lately an improvement ; and, again, the cable tells you that the lode is 15 ins. wide, worth nearly 2 ozs. to the ton, so that we feel confident in this 300-ft. level south we have the commencement of the rich ground that we have had in the level below. I think I have said enough with regard to the mine. You may depend upon it, it is

MOST ADMIRABLY LAID OUT,

and all the work has been done in a most minerlike manner. I should like to express the deep regret I feel at the sudden death of Mr. Prout, which has been so feelingly alluded to by the chairman. (Hear, hear.) In him the company has lost a most zealous and able agent. I do not think it is necessary I should comment upon the long and very able report of Mr. Hamley, the engineer. It must be evident to all who have read his report what a thorough grasp he has of the work under his charge, and you may rest assured in his department that everything is and will continue to be well cared for. The question of the

NEW PURCHASE OF LAND TO THE WEST

I do not propose to say much about to-day, as I hardly think it necessary. It has been fully gone into elsewhere, and I daresay many of the shareholders here have read what was said at the Mysore meeting ; but I shall be glad to give any other particulars should they be thought desirable. This great Champion reef has been proved to extend over a number of miles, and to be a true fissure vein, one which most fully maintains its size and strength as it goes down, I think I have said enough this morning (to say nothing of what has been said at other meetings) to show that it not only maintains its richness, but appears to become more valuable in depth. By our own operations we are day by day increasing the value of this property to the west, and it is perfectly clear to me, as it must be to everyone else, that if we do not secure it somebody else will. Therefore, I do not myself hesitate to advise the shareholders, and as a shareholder myself, to carry out this purchase now that we have the opportunity of doing so, and I really feel that, as between company and company, the price which, after a good deal of discussion and thought, has been fixed upon can only be regarded as both fair and reasonable. (Loud cheers.)

Mr. Whitworth : 830*l.* seems a large sum for law costs on account of the suit. Does it include the costs on both sides?

The Chairman : The case has to be prepared for the House of Lords in a very elaborate way. The mere printing covers a large expenditure, so that I do not think the amount is extraordinary, and the costs are paid to the House of Lords, and we have paid those on the other side as well.

A Shareholder : I am a preference shareholder, and am glad to get a dividend. A part of this money now being divided is a balance from last year's profit, and the preference shareholders ought to have had dividends in respect to last year, when over 9,000*l.* was carried forward. If that had been divided, then it would have given to the preference shareholders about 7½ per cent., and it takes 12,000*l.* to pay the full 10 per cent. dividend. What is now being divided is 9,000*l.* from last year, and 18,000*l.* from this—I think the 9,000*l.* ought to go to the preference shareholders for 1889, and the 18,000*l.* then be divided between the preference and ordinary shareholders as the profits for 1890. This year they get 12,000*l.*, and then 6,000*l.* out of the 18,000*l.*, divided between the ordinary and preference shareholders, carrying forward a large sum in favour of the ordinary shareholders, and making an unfair difference of the expense of the preference shareholders. ("Quite true.")

THE LAW SUIT.

A Shareholder : As I read the report, the preference shareholders get not only 10 per cent. on 5s. paid, but 10 per cent. being calculated as if they had paid 20s., or equal to 60 per cent., whereas the ordinary shareholders only get 5 per cent. I have been very glad to hear the interesting speeches of the chairman and Mr. Taylor, but I do not agree with the chairman that the case Oakbank Oil Co. *v.* Crum applies in this one. I was intimately associated with that case and know every step taken, and the judges in the Courts below and the Courts above proceeded differently, for the shareholders were held liable for the full 20s. I wish we could get more information as to the original issue of these shares, and cannot see why an intelligent board should have issued these shares with such enormous dividends attached to them. The authorities in the case I mentioned, laid it down that it is quite *ultra vires* for a board to issue preference shares at a discount.

The Chairman : The company issued them, not the directors.

The Shareholder : But the directors permitted the proposal.

The Chairman : Yes ; and the shareholder confirmed it ; so that it is their act.

The Shareholder : You are in excellent hands, and I say so as a professional lawyer.

Mr. Snell (solicitor) : As to the issue of preference shares—the issue was made long before the Almada and Tirito case, and the circumstances of the company were such that it was necessary to make that issue to save it. The general belief, in which Sir Horace Davey and Mr. Rigby, who are engaged on behalf of the company, and Mr. Wallroth is that in the Almada case the facts were not fully argued, and that when our own case comes before the House of Lords they may decide that the Court of Appeal has been wrong in the decison it has given, in which they have held that shares cannot be issued at a discount. With reference to the amount of dividend, the articles are perfectly clear, and upon this question the opinions of Sir Horace Davey and Mr. Rigby have been taken, that the directors are perfectly right in declaring the dividends they propose to-day. The article reads that the directors may, with the sanction of the company in general meeting, declare a dividend to be paid to the members in proportion to their shares — not in proportion to the amount paid, but in proportion to their shares. Therefore, the directors are quite right in declaring this dividend. Supposing the House of Lords were to determine that the shares were not to be issued except with a liability of 15s., it might be that the company would never want that 15s., and certainly it would not be called unless it were absolutely necessary. It would be a breach of faith on the part of the original shareholders to the preference shareholders if they had to pay up that 15s.

The Chairman : As to the sum carried over (9,000*l.*) from last year, it is perfectly true that we have included that as in this year's profit. It certainly is the property of the company, but I would call attention to the article which enables the directors, before declaring a dividend out of profits, to set aside a certain sum, and that sum we set aside for the purpose of being carried forward, and so being brought into the profits of this year.

Mr. Snell : As to the dividend on the preference shares—I would call attention to the resolutions under which they were issued. It provides that the preference shareholders shall be entitled to a non-cumulative dividend at the rate of 10 per cent. on the nominal amount of such preference capital.

Mr. L. P. Swinborne : "Full nominal" are the words in the prospectus, and in extra large type. (Hear, hear.)

IT WAS SO.

The Chairman : We were obliged to tempt you in those days. (Hear, hear.)

The resolution was carried unanimously.

The Chairman : I propose "That a dividend of 3s. per share on the preference shares, and 1s. on the ordinary shares, free of income tax, be, and is hereby declared payable on Monday, Apl. 27, 1891, to shareholders on the book on Apl. 17, 1891, and that the transfer books be closed during the said Apl. 17."

Mr. Wallroth seconded the motion, which was carried unanimously.

Mr. Wallroth : Mr. Malcolm Low, M.P., and Mr. W. G. Probyn are the retiring directors, and I move their re-election.

Mr. L. P. Swinborne : I second the motion.

Carried unanimously.

Mr. Probyn : You all know what a splendid chairman Mr. Low is, and the obligations we are under to him. I can understand your electing him, but my qualifications are but small, though one of them is my very large holding in the company. We thank you most heartily, and hope we shall continue to merit your confidence.

Mr. Long proposed the re-election of the auditors—Messrs. Cooper Brothers and Co.

Mr. Davidson seconded the motion, which was carried.

STAFF THANKED.

The Chairman : Mr. Snell suggests that we should pass a vote of thanks to our staff. It is a very kind suggestion, and will be much appreciated. They work hard in your interests, and their exertions have merited our thanks and confidence. I have great pleasure in proposing that the hearty thanks of this meeting be, and are hereby, accorded to Mr. Collins, the superintendent, Mr. Hamley, the chief engineer, and the staff in India.

Mr. Judge seconded the motion, which was carried unanimously, and this terminated the business of the ordinary meeting.

THE SPECIAL MEETING.

An extraordinary general meeting was then held for the purpose of considering, aud, if deemed advisable, passing the following resolutions, namely :—

"That this meeting hereby approves the purchase by this company from the Goldfields of Mysore, Limited, of the exclusive mining and other rights possessed by the selling company in aud over a certain block of land, comprising about 114 acres, on the western boundary of this company's property, extending for the entire length of the sett and for 1,500 ft. wide, for 20,000 fully-paid ordinary shares of this company, and that the directors be and they are hereby authorised aud empowered to carry out and complete the said purchase accordingly." "That the capital of this company be and the same is hereby increased to 265,000*l*. by the creation and issue of 20,000 ordinary shares of 1*l*. each."

DESIRABILITY OF THE PURCHASE.

After the notice had been read by Mr. Garland,

The Chairman said: Gentlemen, the weighty reasons given in our circular, the careful remarks to which you all have listened from Mr. John Taylor at the first meeting, and the general favour with which our proposal to acquire this land has been received, seem to point to the expediency of my not troubling you with either a long or argumentative speech. As to the desirability of the acquisition, of course there can be no doubt whatever in the mind of any man at all conversant with mining, and least of all any man conversant with the character of the lodes in this field. In the circular we say (and we say truly) that it is obvious the company must eventually obtain it, unless prepared to acquiesce in unduly limiting the life of the undertaking. Against the mere desirability on fair terms, there can, I think, be no possible argument, except, perhaps, this, that although all known lodes on the field do have a westerly inclination, and that at an angle of not less than 45 degs., yet that our main lode (though it has never done so) may at some unknown depth become vertical, or, perhaps, as a celebrated orator once said, "turn its back upon itself"—(laughter) —and change its dip from west to east, and come again running cheerfully into our sett. That is possible, but it is possible in the sense that I, for example, may live till I am 98. If I were to act upon that possibility as a probability, you would know what to think of me. The only question now is one of terms, and here you will undoubtedly to some extent trust to your directors, and rely on their having made the very best arraugement that is possible under the circumstances. I myself have no interest in the Mysore Goldfields Co. I only wish I had ; but

I DO NOT THINK WE COME THE WORST OUT OF THIS BARGAIN.

If we take the ordinary shares as worth, say 2½, which is near enough for my purpose, we may say that we obtained this new property for 50,000*l*. To us Ooregum shareholders it seems this additional block is worth a great deal more than that—first, because we need it ; and, second, because if we do not take it on these terms, others will. Is it worth while for us to insure a really long life to this brilliant undertaking for an insurance premium of 50,000*l*., or, to put it in a totally different but equally true way, is it worth while for us to affect that insurance by permanently giving up one-thirteenth only of our available profits? That is the question, and that is *all* the question. The method of finding the price might be criticised, and if we are asked why we did not issue the shares to our own shareholders, and pay the vendors with the proceeds, the answer is two-fold. First, that the veudors bargained for the shares ; and second, if we had been able to induce the vendors to take cash instead of shares—then, if we wanted all the shares to be taken up by our own proprietors it is evident we should have to tempt them by issuing them at a lower price than the market price, which would have resulted in the creation of a larger number of shares, and, therefore, a larger number than 20,000 involves. I can assure you that this proposal had not beeu made without the utmost consideration and thought on the part of the directors, and I venture to hope that you will be pleased to ratify our judgment by passing the resolution unanimously, which I now propose.

Mr. Wallroth : I second it.

The Chairman (after a pause) : I am very glad to see that all appear to be agreed. It is very satisfactory to us to find such a hearty and unanimous approval of our acts in this matter. Those in favour— those against—carried unanimously. I now move the second resolution (as above), which is consequential upon the first.

Mr. Wallroth : I second the motion—carried unanimously.

A Shareholder : Are the preferred shareholders to participate in the new acquisition, or simply maintain the rights they have now?

The Chairman : Certainly they are to participate. The resolution is carried unanimously. We are greatly obliged to you for your attendance, and I am particularly struck by what I cannot but regard as this mark of your confidence in passing these extraordinary resolutions with such complete unanimity.

A cordial vote of thanks to Mr. Low for presiding brought the meeting to an end.

ST. AUGUSTINE, LIMITED.

CONFIDENT BELIEF IN THE PROXIMITY OF DIAMONDS—MR. FINLASON AS SANGUINE AS EVER—SHAREHOLDERS HEAR EXPLANATIONS, AND LEAVE THE MEETING FULLY SATISFIED.

An ordinary general meeting was held at the Cannon Street Hotel on Monday.

Col. Malleson, C.S.I.

(chairman of the company), presided.

Mr. G. H. Newman (secretary) read the notice of meeting.

MR. FINLASON'S VIEWS.

The Chairman : Gentlemen, this is the third meeting of St. Augustine, Limited. The company was incorporated on Oct. 8, 1889. We had our first meeting in Feb. of last year, and a second general meeting when Mr. Finlason came home from Kimberley, in order that he might inform the shareholders of all that he had done at the mine, and the reason which forced him imperatively to leave it and come to England. I regret very much that that reason is in force still, because, although Mr. Finlason has constantly attended our board meetings, giving us information, and advised us on every point on which we have consulted him (and I am bound to say that his advice has been most practical and most valuable), yet his state of health is such that, although he was very anxious to attend this morning, he informed me last Wednesday that his doctor had prohibited him coming to any place which would cause the smallest excitement, and he was in such a state of nervous prostration that the consequences might be very unpleasant, but Mr. Finlason added that, personally, he was so anxious to meet the shareholders that if his health would allow it he would chance the risk of a breakdown, and come here. I do not expect him to attend this morning, and, on his own account, I should be very sorry if he did, because there is no doubt that his health is in a very bad state indeed. But, gentlemen, the proceedings we have carried on at the mine since Mr. Finlason left have been carried on with his approval. We have consulted him on every detail, and there has not been a single point upon which we have not availed ourselves of his experience and followed his advice, and I am able to tell you that Mr. Finlason's opinion of the prospects of the mine is as sanguine, and as bright as it has ever been in his life. It is as sanguine as it was when he expressed it at the July meeting, and I am bound also to tell you that he has carried out the declaration he made also on that occasion—that the whole of his shares are deposited in a sealed envelope in the offices of the bankers of the company, and that he has not sold a single one, and does not intend to do so. (Cheers.) I may take this opportunity, whilst on the subject of selling shares, to inform you that

I REPRESENT FOUR OR FIVE GENTLEMEN WHO HOLD ALTOGETHER 150,000 SHARES,

not one of which has been sold, and not one of which will ever be sold. (Cheers.) Our confidence in the future of the mine is just as strong as it ever was. For myself I have not sold a share, but I have added largely to my holding. I think the report has told you in sufficient detail what we have been doing since we met last July. But there are various matters which can hardly be put into a report, but which I will endeavour to explain to you, and will, I think, convince you that our hopes of the future are extremely well grounded. We sank the main shaft to a depth of 524 ft., but just before we had arrived at that level, when we had arrived at the 509-ft. level, Mr. Hartley, our manager on the spot, determined, on the advice of Mr. Finlason, to make a drive in the direction of the Kimberley Mine. He carried this drive 82 ft., and then sank a winze. That winze has now gone down to a depth of close upon 700 ft., and at the time I am speaking it will be about 700 ft.—that is, 700 ft. from the top of the mine, but beyond that Mr. Hartley has worked from about the 526 level from the winze. He made a cross-cut in the direction of the main shaft with this remarkable result, that he found the

GOOD BLUE WAS TO BE MET WITH

at the distance of about 6 or 8 ft. below the 524 level, and further investigation has proved to his satisfaction that there is there a very large body of blue, which we shall in all probability cut by sinking the shaft (which has remaiued untouched while the winze was being sunk) further from the 524 level, and about a month ago we sent out instructions to Mr. Hartley to commence that sinking, and it is obvious from what he writes that he will not have very far to sink, but that we shall almost immediately get into the blue, and as soon as we do we shall commence hauling, and, after the requisite time, washing again. The hopes of the shareholders were raised by a report which we sent to the papers (as we send everything as we receive it) that Mr. Hartley was going to begin washing, but we found out when we received his letters that he had not obtained the proper stuff on which to commence washing on a large scale, and that practically he had only washed 200 loads of blue, with the result that the return of diamonds doubled that which we received on the previous occasion. The return was 22 carats out of 200 loads. That is a very small return, because in order to have largely payable returns we ought to have one carat for every load, but the blue which was obtained was not recovered from the regular blue level to which we are now delving. We hope in a short period to arrive at that level, and then there will be no doubt of the future of the mine. But, at all events, the washing had this result, that although the number of diamonds found was very small they were

ALL OF THE BEST AND WHITEST CHARACTER,

and it is a peculiarity of our mine that there is hardly a yellow diamond to be found in it. They are all of that white type which is almost peculiar to the Brazils. I have only to add that we are keeping a very watchful eye upon what is going on there. Your directors meet practically five times every week. They have one regular board meeting, but they meet informally in my office, which is the same office as that of St. Augustine, Limited, once every day for five days in the week, and in every case of emergency we consult with Mr. Finlason, who, I repeat, is of opinion that

OUR MINE IS A PROVEN DIAMOND MINE,

and that a very short time will elapse before we shall have results quite equal to those of Kimberley and De Beers. I should like to say one word with respect to funds. We shall have enough to carry on with until Oct. or Nov., and I trust before that we shall have such a success as will place the mine in a position to go on further without makiug any call on the shareholders. If the prognostications of Mr. Hartley prove true, that the great sea of blue lies withiu 5 ft. or 6 ft. of the level at which we are working, it is certain that we shall almost immediately have returns which will place our mine upon a footing equal to that held by other mines in Kimberley which arc paying large dividends. We might at any momeut receive a telegram, and I had hoped one would have arrived before this morning, but as soon as it does arrive it shall be communicated to the papers. I beg to move the adoption of the report and balance-sheet, and shall be pleased to give any additional information that may be required. (Cheers.)

Mr. F. POWER (director): I second the motion.

A SHAREHOLDER: What time will you require, after getting the good blue, before it can be washed, because that must be included in the time before Oct., and before we can say we have succeeded?

The CHAIRMAN: That is quite true; it will require three months to disintegrate, and then washing will take place.

A SMALL BUT SARCASTIC SHAREHOLDER.

Mr. A. G. JONES: I am glad to see the shareholders take all this so quietly, and that they are apparently so happy. I should like to share a little of it. It may be my ignorance of mining subjects, and because I do not hold many mining shares, but when the report came to me I tried to study it. I was in the old company, though unable to attend the re-construction meetings. When you took over the old mine you had sunk the shaft 450 ft., but since then you have sunk it 524 ft.—practically 74 ft. I am afraid I shall not be clear in what follows, because I do not understand it myself—(laughter)—but I am trying to elicit information. I want to form an opinion as to whether, having bought these shares at 17s. (including the calls), it is wise to hold on any longer, particularly as the chairman holds out the temptation of re-construction.

The CHAIRMAN: I did nothing of the sort. (Hear, hear.)

Mr. JONES: I understand my shares to be fully-paid, and there is only one way of getting more mouey, and that is by re-construction. From the 524 level you have sunk a winze—whatever that may mean. (Laughter.) In one part of the report you describe it as a hole to the 667-ft. level, and then you have some tunnelling, though what that means I do not know. (Laughter.) By referring to the balance-sheet I find that this winze and sundry holes and sinking to the 74 have cost the company 11,900*l*., and the gross produce of diamonds has been 344*l*. Under ordinary circumstances, I should have thought this is what is called dead work, in order to reach the El Dorado promised at 700 ft., which Mr. Hartley says is necessary: "It would be necessary to reach 700 ft. before he would be able to attain certain results." You have to sink the shaft 174 ft., and seeing you have only sunk 74 ft. for nearly 12,000*l*., and that you have only 6,000*l*. in hand, I fail to see how you are to go on without appealing to the shareholders. What troubles me most seriously is the small earning of diamonds on which you pay to the royalty certificate holders a percentage of proceeds 329*l*., leaving 15*l*. for shareholders. Is it true the royalty certificate holders take 9-10ths of the amount realised by the sale of diamonds? because, if so, perhaps I had better take the 1s. 6d. a share that has been offered and close the account. (Oh!) You have paid 6,000*l*. for underwriting, and I should like to know to whom it was paid, for it is practically equal to 2s. a share on the amount raised. I see the secretary looking at some reports, whereas I thought it was the share register to see what I hold. I only hold a small number myself, but represent, at least, 4,000 or 5,000 shares of persons who will be guided by me. I have no practical suggestion to offer, but should like to have a run for my money. I should like some other gentlemen to get up, because surely some of you must be discontented as well as myself. (Laughter.) Even if you cannot get anything back you might make the people who hold your money uncomfortable, and personally I feel more comfortable for having said what was in my mind. So long as I can shift my burden on someone's shoulders I shall be satisfied. (Laughter and "Oh.")

LANGUAGE OF SNEERING DEPRECATED.

Mr. SAMUEL J. CAPPER: I do not think there will be any practical utility in our forming a "cave of Adullam," and personally I am not disposed to look upon this as a wrecked concern. (Cheers.) I stand here as a small shareholder. If I had been a large one I should have been ashamed to own to having put so many eggs into a basket that at present seems rather leaky. I wish to avoid anything like the language of sneering—(cheers)—or anything that would infer that Col. Malleson, the directors, and Mr. Newman are not our best friends who are striving to promote our interests to the utmost of their ability. (Cheers.) But I have been looking into the accounts, and thought I would like to ask a few questions. I see a notice on the liability side—less calls in arrear, 3,609*l*. 6s., and presume that most of us who have paid our calls are suffering an injustice from the others who have not. If the future of this mine turns out badly we shall lose our money, and they will not, but if the mine turns out well they will pay their calls, and participate in the benefits. Now what course is being taken with regard to gentlemen who have not paid up? I think their shares ought to be sold, and the proceeds go to the benefit of the company.

ACCOUNTS.

On the other hand, there are other items to which I should like to draw attention. I see manager's salary, rent, and general expenses lumped. Now I like to see detailed accounts. When I see manager's salary I should like to know how much he gets, and so on. Then I come to expenditure in London, and find office expenses, rent, and secretary's salary, 1,505*l*. 1s. 7d. To great mining magnates 1,500*l*. is a small sum, but to shareholders like myself it is a very nice one. I have the most painful solicitude for the well-being of Col. Malleson and Mr. Newman, but should prefer that that well-being should be the result of diamonds found rather than of calls made. Therefore, I venture to ask how that sum is divided? As to directors' fees—it is 614*l*. 16s. 8d. It is possible that the amount of work done may be very inadequately compensated by that sum, and should that be the case I hope they will receive more, but only when diamonds are found, and I think it will be becoming in the board that they should until then not take any fees, and then I pledge myself to come here and move that they be handsomely rewarded. (Cheers.) I believe the board holds largely, and would ask the chairman, not as a right, but as a favour, that he would tell us how their accounts stand. I thank Col. Malleson for the courteous way in which he has listened to me, and hope my observations may not do the mine any harm.

COMPLETE REPLY BY THE CHAIRMAN.

The CHAIRMAN: Perhaps you will allow me to answer the pertinent questions of the gentleman who has just sat down, and in the first place in respect to the calls. At present the amount unpaid is 1,904*l*., but of this 1,400*l*. belongs to the estate of the late Col. McMurdo. I speak with authority upon that point because I am, under the Court of Chancery, the receiver to that estate, and am only waiting the realisation of certain assets, which will shortly be realised, to pay that amount. That leaves 500*l*. outstanding, and I can assure you that we have done our level best by serving writs on the defaulting shareholders to recover the calls, and I believe we shall recover every one of them eventually.

EXPENSES GREATLY REDUCED.

The manager's salary, rent, and general expenses are 2,358*l*. 12s. 6d. When Mr. Finlason was out there he received 1,200*l*. a year, with the full assent of the shareholders, but Mr. Hartley receives half that sum (600*l*.), and by the return of Mr. Finlason to England we have actually saved 1,100*l*. a year, because Mr. Hartley then received 500*l*., and Mr. Finlason, 1,200*l*. Now, Mr. Finlason receives nothing whatever, and Mr. Hartley 600*l*. a year. (Cheers.) There are considerable expenses out there, all of which can be explained by the auditor. Amongst them we have to pay 250*l*. a year for the trading license, and there are various items of that sort, which make up the amount stated. Perhaps justifiable misconception has pervaded the remarks of Mr. Capper, for he has taken these accounts as indicating a period of 12 months, whereas they

INDICATE A PERIOD OF CLOSE UPON 15 MONTHS.

(Hear, hear.) These accounts cover a period from Oct. 8, 1889, to Dec. 31, 1890, which is as nearly as possible one and a quarter years.

Mr. CAPPER: I am not a discontented shareholder, but only wanting information, and am much obliged to you for having given it so clearly. (Cheers.)

The CHAIRMAN: I did not class you amongst the discontented. I now proceed to the expenditure in London, which is also for 15 months. The office expenses, rent and secretary's salary seem high for 12 months, but for 15 months they are at the rate of something under 1,200*l*. a year. Out of that the secretary, who is

ONE OF THE BEST SECRETARIES I HAVE EVER WORKED WITH

—(loud cheers)—receives only 250*l*. a year. As to the office expenses, they are less by one-half than they were when I addressed the shareholders in Feb. last. (Cheers.) We have been able to concentrate the work at the office in two small rooms, and the board room they have gratis, and those two small rooms cost about 70*l*. a year, in St. Swithin's Lane. This item includes the charge for postages, which has been heavy, as it always is at the outset, amounting to not less than 100*l*. It includes the transmission of our monthly remittances to the Cape and the bank charges, &c. All the details are here, and we have no desire to conceal a single item. I can assure you that if you investigate them you will be like Lord Clive—amazed at their moderation. (Cheers and laughter.) I have now to speak of the directors' fees. The 614*l*. covers also a period of 15 months. At the first meeting we held the shareholders unanimously voted to the directors 500*l*. a year, to be divided amongst them, and considering that we, as I told you, are at the office every day in the week except Saturday and Sunday, and that there is not a single day that we do not devote a considerable time to St. Augustine, I do not think you will consider 500*l*. for the directors of a company so large as this is excessive.

BIG HOLDINGS OF DIRECTORS.

Now, I will tell you the holdings of the directors. Personally, I hold 1,200 shares; Mr. Power between 1,000 and 1,100; Col. McCoy, 7,000; and I also hold 88,000, belongiug to the estate of the late Col. McMurdo. Moreover, two of my most intimate friends, whose shares I practically control, hold between them 37,000. They have not sold a share, and do not intend to. As to the royalty certificates, as is well known to the shareholders who attended the first meeting they absorb 25 per cent. of the gross output of diamonds until they are paid, but they get no interest meanwhile. The underwriting of the company was approved by the shareholders at a full meeting—the fullest I have ever seen in London, and it cost not, as the gentleman said, 2s. per share, but 3d. (Cheers.) The whole matter was fully explained to the shareholders, and was agreed to without a dissenting voice. (Cheers.)

AN AMENDMENT WITHOUT MUCH SUPPORT.

Mr. BOYDELL: I am a discontented shareholder, because of the slow progress in sinking the shaft. We were promised a progress at the rate of 10 to 15 ft. a week, and had that been carried out we would have been below the 700 level, and I do not know why it has not been. I hold 195 shares, and propose, as an amendment, the non-reception and adoption of the report and accounts, and the adjournment of the meeting for eight weeks. (Cries of "No.") That will give you the opportunity of reaching the level and also of bringing before us a practical proposal for re-construction, in which I suggest that a committee should be appointed to assist you. (No.)

Mr. ROBERTSON: I second the amendment.

AMENDMENT DEPRECATED.

The CHAIRMAN: I sincerely hope the shareholders will not agree to it. (Cheers.) Nothing could be more fatal to the prosperity of the mine than managing the details of the work in London. These are best known to the men on the spot, and we have a manager whom we can trust, and whose reputation is high for practical knowledge, industry, and integrity. We have, to assist him, an engineer of first-rate capacity who was taken out by Mr. Finlason, and who is also an admirable expert in his work. These two gentlemen are aided by the advice of Mr. Finlason, who first developed the property, and spent eight or nine years at the work, and who must know more about it than any-one in this room. If you agree to this amendment you will take the first step towards proving the mine a failure. Kimberley and De Beers Mine cost a great deal more than we have spent upon this property. I do not see how any investigation in London can better your position in South Africa. (Cheers.) It is not to be supposed that gentlemen who have never seen a diamond mine could give our manager advice by which he could profit. I must demur to your remark that we promised to do anything more than our utmost for your prosperity. It was under Mr. Finlason's advice that we stopped the sinking of the shaft and proved the mine in various quarters, and it has had an excellent result, because we have found out exactly where the blue lies, and know how to work. If we had gone on without first making drives we might have missed the point which Mr. Hartley has reached by that process. I strongly deprecate the acceptance of the amendment. (Cheers.)

AMENDMENT LOST.

I will now put the amendment. Those in favour—those against—the amendment is lost by an overwhelming majority. (Cheers.) I now put the motion for the report—carried practically unanimously. I retire by rotation from the direction, and offer myself for re-election.

THE AMENDE HONORABLE.

Mr. CAPPER: I am most anxious to speak again so as to say that the secretary is suffering from an injustice, inasmuch as he is thought to be receiving a salary much larger than that which is actually paid to him. (Hear, hear.) I think the explanation the chairman gave us was quite satisfactory. (Cheers.) I propose his re-election. I have always had a high opinion of

THE PUBLIC CHARACTER AND ATTAINMENTS OF COL. MALLESON.

I am a brother quill driver, and respect him for being an historian—a true historian, I believe; but that is not his only virtue, for he is a loyal man, and will do his best for us, and I hope we shall *unanimously* elect him. (Loud cheers.) I should like to ask him if there is a reasonable prospect of our being called together to re-construct the company in two or three months' time. Meanwhile I beg most cordially and heartily to propose that our chairman, Col. Malleson, be re-elected—I trust unanimously—and that very soon we shall be able to congratulate him upon having obtained some very big diamonds.

Mr. ROBERTSON seconded the motion, which was carried by acclamation.

The CHAIRMAN: I am extremely indebted to you for having re-elected me, and much obliged to Mr. Capper for the terms in which he has referred to my pursuits, which, I assure you, do not interfere with the management of St. Augustine Mine, because

I DO ALL MY LITERARY WORK BETWEEN FOUR AND SEVEN IN THE MORNING.

I do not believe you will be called to aid in any scheme of re-construction. (Cheers.) I think we shall have our El Dorado before the expiration of this year, and even if we do not I think that some means may be found, if the mine develops in the way I think it will, of raising what we want in another way. Since the last meeting the Hon. Arthur Cadogan has retired, and Mr. Frederick Power, who has great mining experience, has been elected in his place. This requires confirmation, and I ask you to confirm it.

Carried.

The auditor, Mr. Lakeman, was re-elected, and in replying to a cordial vote of thanks, Col. MALLESON expressed the hope that on the next occasion the shareholders would meet under far happier auspices.

THE NEW GUSTON CO., LIMITED.

REMARKABLE DEVELOPMENTS OF THE PROPERTIES—BIG DIVIDENDS PAID AND IN PROSPECT FROM FIVE ORE BODIES—NO ATTEMPT MADE TO UPSET THE DIRECTORATE—"WE ARE TOO STRONG FOR THEM"—STRONG VIEWS OF SHAREHOLDERS AGAINST THE CRABB AND ASKWITH SECTION.

THE fourth ordinary general meeting was held at Winchester House, on Wednesday. The business of the meeting was "to receive and consider the balance-sheet, the revenue account, and report of the directors, and auditors for the year ending Dec. 31, 1890; to elect two directors in place of those retiring by rotation, and who, being eligible, offer themselves for re-election; to elect auditors and to transact any other business which, under the articles, ought to be transacted at an ordinary meeting."

Mr. Thomas Phillpotts

presided, in the unavoidable absence of Mr. Stewart Pixley, who, unhappily, had met with an accident.

Mr. BEDFORD MCNEILL (secretary) read the notice of meeting.

GRATIFYING POSITION OF THE COMPANY.

The CHAIRMAN: I am sorry to inform you that our esteemed colleague, Mr. S. Pixley, has met with an accident, which prevents him from presiding at this meeting. He has requested me to make this explanation, and to apologise to you for his unavoidable absence. In moving the adoption of the report I may be permitted to congratulate you all upon the very satisfactory condition of the affairs of this company. Since we last had the pleasure of meeting you the capital of the company has been increased by 10,000*l*., as authorised by the shareholders at the extraordinary general meetings, held on Mar. 5 and Mar. 20, 1890. The option of acquiring some of the 10,000 shares thus placed at our disposal, at 45s. per share, was given to each shareholder, in the proportion of one share for every 10 shares in the company already held by him. The price at which they were offered was 10s. a share below the then quoted market value of our shares, so that each shareholder derived a substantial advantage by the transaction. The balance of the amount thus raised—after payment of the purchase-money for the Little Annie and Smuggler properties—was carried to capital account, to the credit of which account we have at present 25,346*l*. 12s., equal to 23 per cent. of the entire capital of the company.

PROPERTIES BOUGHT AND PAID FOR OUT OF THEIR OWN ORE.

The wisdom of adopting our recommendation to purchase these two properties is shown by our underground developments, which have proved a continuance of the Guston ore body into the Smuggler ground, and its extension to the Robinson claim, and we have during the last 12 months extracted from the Smuggler ground alone more than sufficient ore to repay us the purchase price of both the Little Annie and Smuggler properties. Another advantage obtained by the acquisition of these two properties is that it precludes the possibility of any adverse claims which would undoubtedly have been made upon us had these properties been acquired by any other parties whose interests might have been antagonistic to our own. You will observe by the ground plan which accompanies our report that the Robinson claim slightly overlaps that of the Smuggler, but the Robinson claim is owned by the Yankee Girl Co., and as several members of the board are directors of that company, the agents of these two companies can, and do, pursue their respective underground developments in a perfectly amicable spirit.

NEWS CONTINUES TO BE GOOD.

As a proof of this, a connection has been made between the Smuggler and the Robinson workings, much to the advantage of the New Guston Co., inasmuch as we utilise the Robinson shaft as an upcast shaft, and thus obtain perfect ventilation for our mine. Mr. Harvey's annual report, dated Feb. 28, gives so very full a description of our developments that I need not dilate upon it. I will only call your attention to his later report, received on the 1st inst., a copy of which has also been furnished you, wherein you doubtless noticed that the latest developments in the stope of No. 6 ore body confirm the anticipations held out by Mr. Harvey in his annual report, since some samples of the ore recently met with show an assay value of from 400 to 1,100 ozs. of silver to the ton. Unusually severe weather has prevailed in Colorado since January last: so much so, indeed, that the railroads have been completely blocked by the heavy snowfalls, and all traffic has been for a time suspended. It is, however, expected that the roads will be clear by the end of this month, so that we shall soon be able to ship all the ore which has been accumulating during the last two months and a half. To briefly summarise our position, I may remind you that we have increased our capital to 110,000*l*., and have distributed in dividends during the last two years and a half 143,374*l*. 12s.

THE DIVIDENDS.

We have acquired two additional properties, the produce from which has already more than repaid their original cost; and, after paying the 20 per cent. dividend to-day, we carry over to the credit of revenue account upwards of 10,000*l*., and we have to the credit of capital account 25,346*l*. We have, besides, a large quantity of ore assorted and stored on the surface, and in the mine, ready to be shipped as soon as the railway is clear. These facts must, we think, be as satisfactory to you as they are gratifying to the directors, and having thus briefly alluded to them, I should not, under ordinary circumstances, have troubled you with any further remarks, but, to our surprise, some shareholders have expressed themselves dissatisfied with our administration of the affairs of this company; and although the two leading dissentients, Messrs. Crabb and Askwith, have withdrawn the formal notice they gave of their intention to offer themselves for election to seats at the board in lieu of the two directors who retire by rotation—accompanying this withdrawal is a suggestion that they should be elected as directors in addition to the five gentlemen who constitute the present board. Now, as this suggestion was not one which we could adopt, we did not feel justified in incurring the expense of postponing this meeting in order that these gentlemen might have time to enable them to give the necessary legal notice of their intention to submit this proposal to you to-day.

JUSTIFICATION OF THE PRESENT BOARD.

We consider that the existing board has shown itself quite competent to administer the affairs of this company, and we do not think that we should be strengthened by two additional directors being added to our number, and although our opponents have not shown as appreciative a spirit as we imagined our successful efforts would have met with, we can assure these gentlemen that we bear them no ill-will. Moreover, we admit that they are acting quite within their rights in the course they have adopted. We also recognise to the fullest extent that the majority of the shareholders have a perfect right to nominate directors and appoint any board they please, and that the existing board only holds office during their pleasure; but it was in order that we might ascertain the views of the majority of our shareholders that we sent out forms of proxy to each shareholder, so as to enable those who desire to support us, but who cannot attend to-day, to record their votes, through us if necessary, upon any question which may arise, because, if the opinion of the majority should be adverse to us, and they condemn our management, we could only regard such an expression of opinion as tantamount to a vote of want of confidence, and in such case we should respectfully bow to the decision of the majority and retire in favour of any other gentlemen they desired to elect in our stead. I now beg to move the following resolution, viz.:—"That the report and accounts, as presented, be received and adopted." (Cheers.)

A SPEECH IN FOUR DIVISIONS.

Mr. FREDERICK P. CROWTHER (director): Gentlemen, I have to address you upon various points, and will divide them under four heads. First of all, finances; secondly, the ore reserves; thirdly, the mine; and fourthly, the proposal to replace the retiring members.

FINANCES.

I will take, first of all, the finances—details of expenditure. Some of you may be interested to have the items in the accounts explained to you. In the revenue account you will find under the head of mines' expenditure the large sum of 30,992*l*. 11s. 6d. That item is composed of 17,760*l*. 3s. 9d. for miners' wages, and 1,234*l*. 16s. 7d. for Capt. Harvey's salary, and Mr. Crawford's remuneration for attending to the selling of the ores, and our business generally in America. The other items are stores and lumber, 2,646*l*. 4s. 3d.; freight of ore, 4,362*l*. 16s.; ore sampling, 1,592*l*. 11s. 8d.; coal and fuel, 1,814*l*. 3s. 1d.; machinery repairs and renewals, 439*l*. 15s. 3d.; cables, 83*l*. 6s.; postages, 14*l*. 1s. 5d.; travelling expenses of Capt. Harvey to the mines (he became our manager in Mar., 1890), and sundry small journeys, 67*l*. 19s.; incidental expenses, rent of telephone, and bank charges, stationery, and office furniture at mine, 162*l*. 9s.; horse and stabling expenses, 20*l*. 7s. 8d.; Pittsburg office expense, 38*l*. 11s.; rates, taxes, and insurance in America, 533*l*. 17s. 10d.; survey of property, 103*l*. 6s. 1d.; legal charges in America, 9*l*. 13s. 2d.—those items

together making the first-mentioned sum of 30,992*l.* 11s. 6d. Coming to our London expenditure, there is one item that is large—the legal expenses which, as you know, were incurred in fighting our law-suits against Mrs. William Weston, which could not be avoided.

GRATIFYING FINANCIAL POSITION.

The position financially at the present time is this—to credit of capital account, 25,346*l.* : to credit of revenue account (the chairman said upwards of 10,000*l.*, but my figures are rather larger) about 13,000*l.* ; and, in addition. there is ore stocked at the mine which may be valued at 21,000*l.* (Hear, hear, and cheers.) That, gentlemen, shows a very satisfactory state of affairs. (Renewed cheers.) My next point is the ore in reserve. It is very difficult to get at it exactly, but we have made a calculation, and it shows several thousand tons. You may take it that that ore will run in value about the average of what has been shipped for the last year or so, that is 22*l.* 12s. 6d. per ton. You have probably in reserve something like double the amount of your capital. (Cheers.) I consider this very satisfactory, particularly when you consider that when we took charge of the mine there was no ore in sight. We appear to have

FIVE DIFFERENT ORE BODIES

at the present time discovered, but have much ground yet unexplored. From the main shaft to the northward there are 1,280 ft. of ground in the New Guston claim lying upon the ore break, as far as we know all favourable to the formation of ore bodies, at the present time quite untested, except that about 80 ft. from the shaft on the third level, where you see the letter E, there is an ore body. That ore body they are now developing, and I am glad to say it is turning out very well indeed. We have a large amount of unexplored ground, which we intend to prospect with a pioneer level as rapidly as we can, and by means of the diamond drill. We fully expect in that grouud we shall discover valuable deposits of ore. It lies upon the ore-break, which seems to be continuous from American Belle Mine, to the south of us, as far as the Silver Bell Mine, on the north of us—a distance of something like 1½ miles. We fully expect that further developments will add considerable value to our property. Last year I entered very fully into the subject of the

SMUGGLER AND LITTLE ANNIE PROPERTIES,

which we had acquired, and I told you I thought with the amount of ore we should be able to extract from that ground we should repay the costs of those two properties. Now, gentlemen, that was a forecast, and I want to tell you what has been the result. You will see on the section at the point H certain workings very limited in extent.

REMARKABLE RESULTS OF THE "SMUGGLER."

Those workings are in the Smuggler ground. Out of them we have extracted to the present time 1,600 tons of ore, which have been sold and realised a gross value of $318,000. (Cheers.) Turning that into sterling it amounts to 63,000*l.*, and you know we paid for the Little Annie and Smuggler 15,000*l.* (Cheers.) The value of those claims for the future is very large. We expect to extract a good deal of money out of those properties, and if we had to buy them to-day, I am sure we could not do so under $500,000, taking the present value of properties in the Red Mountain District. Therefore you will see for yourselves the wisdom that was exercised in acquiring those properties when offered to us at that moderate price. (Cheers.) The value of the Annie (which is not shown upon the section, but only upon the ground plan as it extends up the mountain) has not yet been proved. We have had so much to do during the past year in other directions that we have had to leave the prospecting of the Annie ground alone. There is no reason to suppose that it will uot turn out valuable. Now as regards

THE GENERAL WORKINGS :

wc are sinking a winze on the ore body to the north of the shaft from No. 5 level, and Mr. Harvey cabled to us on Apl. 11 that he had sunk 40 ft., that good ore has beeu met with, and that it was improving in value as he went down upon it. That is very satisfactory, because it is an ore body that has hardly yet been prospected. We are driving No. 6 level to undercut it as rapidly as possible, and have some 30 or 40 ft. to go before reaching it. We are driving No. 7 level to undercut the ore bodies to the south of the shaft marked C upon the section. Those are the main ore bodies (two of them) of the Guston Mine, from which has been produced the largest proportion of the results hitherto derived. They have driven 115 ft., and have still 85 ft. to 100 ft. to go before they catch them upon the dip. We expect to reach those ore bodies very shortly, and if you refer to page 9 of the report (clauses 5 and 6) you will see that in No. 6 level these ore bodies arc large and very valuable, and when undercut at No. 7 the addition to the reserves will we hope be important. It is our intention to sink the main shaft another 100 ft. as quickly as it can be done, and to continue our developments upon the same scale that we have done during the past year. Now, gentlemen, I would remind you that also upon the bouudary of the Robinson property, which is likewise managed by the members of this board, we have a large ore body, which is shown on the plan, and which adjoins us upon the Smuggler, and they have taken out of that ore body very rich ore. In fact, on our side of the boundary we have had the cars running as high as

1,100 OZS. OF SILVER TO THE TON,

and they have had some running on their side as high as 1,500 ozs. or 1,600 ozs. to the ton. It runs in the Robinson a long way, and is continuing, and they are still in ore at that mine. You will notice the levels running right up to the boundary. Now, I heartily congratulate you all upon the position of affairs with regard to New Guston Mine. It is

UNQUESTIONABLY A BONANZA MINE.

We ventured to predict two years ago a career of prosperity for this company, and the result has been that we have steadily increased our output, and our dividends, until to-day we are paying you for this quarter at the ratc of 80 per cent. (Loud chcers.) There is no reason for us to expect, and Capt. Harvey distinctly states so in his report, that our career of prosperity is likely to be cut short, and therefore our future is of a very satisfactory description. These mines in the Red Mountain are peculiar, not so much as to the size of their ore bodies as in their great richness. We have only shipped some 4,070 tons this past year out of the New Guston Mine. Now that is a very small tonnage, and yet that ore produced the results which you have received in the shape of dividends, in reserves, on revenue account, and in ore at the mine ready for shipment. Therefore you must not measure the prosperity of these mines by poorer mines which contain larger bodies of ore. We have

NEVER BEEN IN SUCH A GOOD POSITION AS WE ARE TO-DAY

—a position that improves rather than goes back ; in fact, it does not go back. It has been steadily going forward, but the latest reports from the mines are of the most satisfactory character. (Cheers.) There are samples upon the table, which are open for the inspection of shareholders after the meeting. There is one point more that I have to touch upon which was referred to by the chairman, and that is the

ACTION OF MR. E. CRABB AND MR. G. R. ASKWITH.

I want to do it kindly because I have not a particle of animosity towards those gentlemen. *I know that they cannot beat us*, and, therefore, their case is lost before, you may say, it is begun. (Cheers and laughter.) I just want to say two or three things on this point, and the first is, that they do not intend to persist in their effort to replace the retiring members, or to have their names added to the present board. (Cheers.) Their opposition to our policy has, in fact, ceased. (Hear, hear.) I am very glad they have brought themselves to that frame of mind. (Laughter.) Sometimes second or third or even fourth thoughts are better than first thoughts, and in this case I am sure they have been well advised to cease from troubling us. (Loud cheers.) The main body of the shareholders is with us. (Renewed cheers.) We know *that* from the proxies, and it is a matter of very great satisfaction to us that such is the case. I would just say this, that had they persisted, and had the shareholders seen fit to support them, it would have resulted unquestionably in our retiring from the management of New Guston, and would likewise have resulted in Mr. Crawford retiring from his position, and Capt. Harvey from his. You would have had the whole thing thrown into chaos, because we are not the men who are going to be dictated to. We are not of that character. When we feel that we are doing our work honestly, straightforwardly, and successfully, it is due to ourselves that we should have some regard to our own reputation. (Hear, hear.) We do not desire to force ourselves upon any board, but when, as was the case in this mine, we were invited to take charge of this property when it was in a state of ruin and chaos, and when it was in the pangs of re-construction, and had been for six months, with only some 30,000 shares assenting to the re-construction, and the remaining 70,000 shares doing neither the one thing nor the other—it was at that time we were asked to take charge of the property, and

BRING IT OUT OF ITS STATE OF RUIN.

Well, you can quite understand that men as a rule do not like undertaking such things as these, but we put our shoulders to the wheel, the board was formed, and the results you have before you to-day. Therefore, we hold under those circumstances, I think rightly, that we are in a position not to be dictated to, but rather to dictate—not that we have any desire to dictate, but still to show you the strength of the position, I simply say that we are in this matter in a position to dictate and not to be dictated to. Therefore, we should have undoubtedly retired, but there is no necessity to pursue the matter further, but I would like to put upon record, so that it can never be gainsaid what we have done for Mr. Crabb, who is our largest shareholder. Mr. Crabb was also an original shareholder, and when we took charge of the property his 6,000 shares were worth 150*l.*, and difficult to sell at that. What is the position to-day? Mr. Crabb was the gentleman who seconded the proposition that the present board, as it stands, should be elected to take charge of the Guston property at that time, and bring it out of its state of ruin and chaos. Mr. Crabb had 6,000 shares, worth 150*l.*, aud to-day they are worth 22,000*l.*, and in addition he has received something like 8,675*l.* in dividends. It passes one's compreheusion how a man who has received such benefits should have adopted the course of conduct he did. Therefore, I can only say again that I am exceedingly glad

HE HAS SEEN THE ERROR OF HIS WAYS,

aud without any ill-feeling, he has now become, I hope, a sturdy supporter of the board, who have done so much for him. (Cheers.) Mr. Askwith I do not deal with. He is a new shareholder, who only joined us in the month of Aug. last. He is in a different position to Mr. Crabb, and I do not take any uotice of Mr. Askwith at all.

ADVICE TO MR. ASKWITH.

I havc no doubt he is an exceedingly clever and able barrister, and I would advise him to stick to his law work and leave mining alone, for he will only make a mess of it. (Laughter.) I have great pleasure in seconding the resolution that is before you : "That the directors' report and balance-sheet to Dec. 31, 1890, be reccived and adopted." (Loud cheers.)

MR. CRABB EXPLAINS.

Mr. E. Crabb : The reason of the opposition to the board has been not the general management, but the want of giving us a thorough explanation of what is going on. We do not want that information in the way of hurting the mine, but a number of us wrote requesting for further information, and we got a curt reply that the board did not consider it desirable to give it. They did not ask us to come to any board meeting to give their reasons quietly—we were simply told that we were to have no further information, and during the past half-year we have seen much fuller information given to the neighbouring mine than to ours. Latterly we have had more information, and I am content with it, but I was not content before.

VIEWS OF A BARRISTER.

Mr. Askwith : It may be as well I should say a few words to follow up what Mr. Crabb has said with regard to the position taken up by a number of large shareholders in this mine. It may be difficult to say anything about these splendid directors after their pæan of self-glorification ; but we have heard the extremely theatrical way, as I consider it, that they have met us. (Cries of "No.") But putting that aside, I am merely alluding to the position taken up by

some large shareholders with regard to the directors. Information has been sought and refused, and the reason will be found by the directors, if they consult their correspondence book, as to why there was some opposition to them. Mr. Crabb has stated he wrote to the directors for information so long ago as Sept. last. A month afterwards (a board meeting having apparently not been held till that time) a reply was sent, which I have here, and which refused the information that I am now glad to see the directors are giving us. His letter of Sept. 27 was acknowledged, and the next letter was this :—

"In further reply to your letter of Sept. 27, which was laid before the board yesterday, I am instructed to inform you that the directors do uot think it advisable to adopt the views expressed thereiu. To do so would entail much extra work on the local agents, and absorb an amount of time, which, in their opinion, can be much more advantageously devoted to the development of the mine." (Cheers.) "The directors are also of opinion that it is not expedient in the interests of the shareholders to issue such reports as you suggest."

Those reports are now being issued, and, further, the local agent has also been appointed agent for Yankee Girl Mine, which has the same board. The reports we ask for are the reports the directors are receiving, and which they did not in any sense communicate to the shareholders. Of course, much of what was in these reports dealt with minor matters, which it was useless for individual shareholders to know about, but there are other matters which could have been given to the shareholders, and such as were given to Yankee Girl shareholders. A great many other letters were sent, and similar answers given. In the course of Jan. I went and saw the directors, and was shown a plan of the mines. I suggested that a small plan might be published, so as to give the shareholders some knowledge of the properties alluded to in Mr. Harvey's reports, but to that they answered that "the directors think it would be detrimental to the interests of the shareholders to publish the plan of the mine, inasmuch as misuse might be made of such publication by owners of adjacent properties. We have now this information, and also the rough section, which will give no information to adjacent owners, and therefore I think

THIS MOVEMENT HAS BORNE FRUIT,

but owing to the refusal that took place a circular was issued, or rather prepared, which suggested in a tentative way that "many large shareholders in the New Guston Mine are much dissatisfied with the manner in which the present directors substantially retain all the information received from the mine in their hands, and communicate but little to the shareholders. Repeated applications have been made to directors to change this policy, but no satisfaction can be obtained. Under these circumstances it has been determined that Mr. E. C. Crabb, the largest shareholder in the mine, and Mr. Askwith, barrister at law, shall be proposed as directors at the next general meeting." (Laughter.) That was a tentative circular, which it was suggested might be sent out, and various shareholders signed that circular, holding over 23,000 shares. A large number of letters came to me evidently wishing for some change. There was a desire not so much to turn out the present directors, as that some circulation in the board should take place, and that the directors having been once elected should not continue in office in perpetuity. I cannot help thinking that to a certain extent the directors have not gauged the changed character of the shareholders in this mine. They have alluded to the time when the shares were 6d., and seem to consider it almost a bad thing that a man should have been so unfortunate as to have bought his shares at 3*l.* 10s. or more. But the shares now are to a good extent held by large shareholders, and held firm, and that is a very good thing for the stability of the mine, and if those shareholders desire to be represented, I cannot see why the directors should consider that that is a vote of censure, and that they should make a threat, such as they have done to-day, that they would resign in a body, withdraw the manager, withdraw everybody, for that is keeping the whole mine in their own hands, and making it exist for the purposes of the present directors—(loud cries of "No") —and not for the shareholders. (Cries of "Certainly not," and "Time.")

Mr. Bayliss : Pray give him time. (Laughter.)

Mr. Askwith : I will only allude to an apparently inspired article in which these directors are said to have come like good Samaritans, and taken up the company as it lay by the wayside, bleeding and dying, and which asks whether these two embryo directors would thus have acted the part of the good Samaritan, or would, like the Priest and the Levite, have passed by on the other side. (Cries of "Hear, hear.") I do not know it requires much of the Samaritan's spirit to buy shares at 6d. which rise as these have done, and to receive some hundreds a year. I do not wish to say anything upon that, except that although we have not been good Samaritans, yet there is no reason why a large body of shareholders should not, if they desire it, be represented on the board. We have decided that

WE DO NOT WISH TO PUSH THE MATTER FURTHER,

as we have no feeling against the directors, and we withdraw our proposal. We urgently suggest to them that they should continue to give us full information, as full as they possibly can with regard to the working, that we may know as much as possible of what is going on ; and I would also suggest that if it is desired by a large body (we have not our proxies in this case) that the directors should meet us so far as to allow of others being brought upon the board, and that some rule should be made whereby at the end of three or four years a present director should be ineligible for the post for the space of one year, that should be acceded to. (Loud laughter.) I do not care about being one myself—(cries of "Question," and laughter)—but the company, we all agree, will never consent to any kind of a ring being formed, and in order to prevent the suggestion of a ring I think the directors should meet the shareholders so far.

Mr. John Bayliss : After hearing that the two gentlemen who have just spoken had withdrawn from their untenable position, I congratulated myself upon the fact that I should not have a word to say at this meeting, for, naturally, I expected, on hearing of their withdrawal, that one or other or both of these gentlemen would be present, and would be prepared to apologise to the shareholders for the trouble and anxiety they have caused by their peculiar mode of action. (Hear, hear.) I congratulate Mr. Crabb upon his policy and his speech. He explained the matter in plain and simple language, and we all understood it but for the life of me I cannot understand the speech of his advocate, or, rather, the would-be director in place of those who are now serving us. Anything more outrageous I have never heard, and I think the remarks he made about the directors indulging in "a pæan of self-glorification" were

MOST UNSEEMLY, AND IN THE WORST POSSIBLE TASTE.

I shall now make a few observations, because it is well these gentlemen should understand that whatever their representation may be, and whatever their *clientèle*, they cannot come and play ducks and drakes with us in this way, and make propositions only to withdraw them, to be succeeded by other propositions, also only to be withdrawn at the eleventh hour. (Cheers.) I would speak to you as a shareholder not of yesterday, not of last August—(laughter)—but as one whose first action in connection with the company can be measured by years ; and, in fact, I speak as an original shareholder, not merely in this company, but in the old one ; so that what I say will be from the standpoint of long experience in connection with the concern, an experience, when contrasted with that of Mr. Askwith, which is very limited indeed, comes out rather strongly. (Hear, hear.) In the first place, I would say that the action of these gentlemen was a puzzle to me from the moment I received the directors' report. I could not understand it. I can understand it now, because it appears that Mr. Askwith has let the cat out of the bag. He has a few large clients, and he is advocating what I call a special, or

CLASS REPRESENTATION UPON THE BOARD.

I am old-fashioned enough to know that that would be the worst thing that could happen to this or any company. We do not want special or class representation—we want men who have at heart only one interest, and that the interest of *all* the shareholders ; and I say that no man is justified who seeks access to a board merely to represent a few clients, however wealthy or however distinguished, and it would be a bad day for this company if ever any such directors should get access to the board. (Cheers.) I can only tell these gentlemen (and it is well they should know it) that if they persist in either of their proposals —either to remove two of your directors who have served you so well, or to make the directorate seven instead of five—I have no hesitation in saying that either of these proposals will meet with the most emphatic rejection at the hands of the shareholders. (Loud cheers.) We could not accept either of them, and never will do so. I was not surprised at what Mr. Askwith termed an "unseemly threat" on the part of the directors, that if the shareholders elected these special representatives to the board they would retire. That is just the sort of decision I should expect from men having the grit and spirit of our directors. I should have been disposed to turn them out of office if, at the dictation of any special class, they would have admitted to the board gentlemen they have never seen and whose services they do not desire. It really

DEGENERATES INTO A PERFECT FARCE.

Mr. Crabb spoke about "want of information," and I ask you, gentlemen, to consider that if his complaint proves anything, it is that he and Mr. Askwith are unqualified for the positions they sought as directors, and I will give you one example :—What would have been your position if, when in treaty for the purchase of the adjoining properties for 15,000*l.*, the directors had been so ill-advised as to give information of what they were doing? (Cheers.) All information is right provided only it comes at the proper time and place. I am speaking now from a knowledge of the board personally, and am positive they have never withheld from their shareholders any information which they could publish without damage to the company. (Cheers.) That course they have pursued with reference to other companies for years past, and I do not think they will make any exception in this one. So long as they give such information as they can with safety to the interests in their keeping, I think we may rest perfectly satisfied. At all events I am satisfied with what they have done, and, I think, you are. (Cheers.) It is a fact that three years ago they led what many considered a forlorn hope, or otherwise the shareholders in the old company would not have sold their right to shares in the new company at 6d. a share, and thousands of shares were sold at that price, because it was looked upon as a "forlorn hope."

WHAT THE DIRECTORS HAVE DONE,

A few months after the present directors took office they gave us 20 per cent., and they have been increasing these dividends by leaps and bounds—37½ per cent., then 60 per cent., and the dividend they have just declared, with the bonus, equals 80 per cent. and I ask these two gentlemen, with perfect confidence, if they could have done better than that? (Laughter.) If so I would ask them further to stand up and frankly tell us *how* they would have done it, but if they are reticent on this point, they cannot be surprised that I, for one, am incredulous as to their powers, and that those present share my incredulity. One bird in the hand (which we have in the shape of your board) is worth far more than these two mysterious birds in the bush. I came here with an open mind, as I thought it was due to these gentlemen that I should attend the meeting and hear what they had to say before giving my vote. I have not given my proxy, because I came to listen, and, if possible, to learn. Taking an all-round view of the position, I must tell them that if this matter had come to a vote I should have unhestitatingly, and with a free conscience, have voted in favour of the directors who have served us so well, and in determined opposition to anyone who attempted to supersede them upon the board in the interests of class representation. (Cheers.)

INFORMATION NOT WITHHELD.

Mr. Crowther : The charge brought against us of withholding information is absolutely untrue. I want Mr. Crabb and Mr. Askwith thoroughly to understand this question. I want it settled with them for their own peace of mind and ours. At first the workings of this property were very small, and there was not very much to say. During the period they complain of, and at the last meeting, someone asked if we could not give further information. We told them how difficult it was, but that we would publish everything that was of value to the shareholders, and we have carried out that pledge fully, and those gentlemen have received from time to time various circulars which conveyed

that information. It has been invariably conveyed to them within 12 hours of receipt—as fast as it could be printed it was sent out. The workings of the mine are now increasing. There are more points of interest and more ore bodies, and the information has grown fuller, and will grow fuller. The movement which they have made has not "borne fruit"—we are simply carrying out the policy of the board, which has been consistent from the first day we took charge of the mine until now—to give the shareholders every particle of information we could in their interests that would be of value to them. (Cheers.)

Mr. WEBB: I came here without giving my proxy, like the last speaker but one, as I wished to hear both sides. I have now made up my mind that there can be no question but that the directors should be supported. It seems to me perfectly preposterous that we should think of turning out men who have acted in a straightforward and most satisfactory manner for the company. The whole of this great charge that is brought against them is that they have not sent out sufficient information; if the company were in a bad way we should want information to show us the cause of failure, but as its course has been as satisfactory as it possibly could be, I really fail to see the need for more information than we have received. Throughout, the directors have given a fair supply of it, and, personally, I should not want more, as I do not understand technical details. Probably these gentlemen at the Bar may find time in the intervals of the Court sitting to study mining and other things, but, personally, I cannot. (Laughter.) Mr. Askwith's remark that the directors are receiving so many hundreds a year may be true, but I suppose Mr. Askwith himself would have no objection to receive that—(laughter)—and if he and his friends were added to the board, instead of paying 2,500*l*. we should be paying 3,500*l*. for the services of these two gentlemen who are good enough to offer them. (Laughter.) I think we must be satisfied with the present board, and I am glad to have heard upon what flimsy grounds they have based their opposition. (Cheers.)

The report was unanimously adopted.

Mr. CHARLES THOMAS: The directors have told you that this mine was deserted and discredited when they took it over, and in a short period they returned to you the whole of your capital, and nearly 50 per cent. added to it. That is sufficient to show that in the directors you have the right men in the right place. I propose: "That Mr. Thomas Phillpotts be re-elected a director." (Cheers.)

TRIBUTE TO MR. PHILLPOTTS.

Mr. BAYLISS: I second it. I do not think that any shareholder in this room—not excepting the colleagues of Mr. Phillpotts—is better able to express an opinion upon his capabilities for this position than I am. I say that because, in connection with another company I sat by his side day by day for three years, so that I know something of the man, something of his ways, and something of his capabilities, and I assure you that that is a vote which you all ought to pass unanimously, and really with some feeling of gratitude to Mr. Phillpotts that he still offers himself for re-election.

The motion was put by Mr. THOMAS to the meeting, and carried by acclamation.

The CHAIRMAN: I have to return you my best thanks to assure you that no effort on my part should be spared towards promoting the welfare of this company. (Cheers.)

Mr. REID: I propose the re-election of Mr. Dyson Weston. It was through this gentleman's influence that the mine was associated with the present board who have so ably carried out their work. (Cheers.)

Mr. T. ELEY SYKES: It gives me great pleasure, as an original shareholder, to second that proposal. (Cheers.)

Carried unanimously.

Mr. WESTON, in returning thanks, said: This is a board, so far as I have been connected with it, that pulls together, and that is a very important thing for shareholders. A board divided against itself is often like the divided house. Mr. Askwith has mentioned a passage of Scripture, and I will not follow his example, but I will say, "The devil you do know is very often better than the devil you do not know." (Laughter.)

Mr. HENDERSON proposed the re-election of the auditors, Messrs. Monkhouse, Goddard and Co., at a fee of 25 guineas, and commended them for their practice in accounts of mentioning where no depreciation had been written off the property. They had put that at the foot of this balance-sheet, and he was glad to see it, though he did not think there was any occasion to call special attention to it, but it was significant that they were watching the shareholders' interests by pointing out anything that occurred to them as suitable to be brought to the knowledge of shareholders.

The CHAIRMAN: You should go on to read "that the expenditure on repairs and renewals and on mines development has been debited to revenue account." (Cheers.)

Mr. F. W. PIXLEY seconded the motion, which was carried.

STAFF THANKED.

Mr. STOREY, in proposing a hearty vote of thanks to Mr. Crawford, the general manager, Mr. J. K. Harvey, the superintendent, and all the officers of the company at home and abroad, said: I think the shareholders of this company are very fortunate in having Mr. Crawford to look after their interests in America. There is not the slightest doubt that he is a most capable man and has done his work well, whilst as regards Mr. Harvey there is probably not a more competent mining captain in America at this time. I believe the claim is not easily worked. There is a certain amount of difficulty to follow the ore bodies, and a good deal of our success is due to the manner in which Mr. Harvey has worked. A good mining captain is very important to have, but he is of little use unless backed up by a good board, and in the present board New Guston is very fortunate. I am a shareholder in a large number of mining companies, and wish that the directors of those companies could be replaced by the directors of New Guston. I believe that a large amount of the rubbish retained in my safe would then increase in value. I have been interested in mining for many years, and think the information given by the directors as full as could be desired. If Mr. Askwith knew as much about mining as probably he does about law, he would know that it is not always proper to give information. If he wants to get on the board, to scatter broadcast all the private information he can get, we must use our utmost endeavours to keep him off. (Laughter.) Personally, I am very well satisfied with the management, and will never be a party to disturbing a board that has acted so well and so successfully as this one has done.

Mr. F. W. PIXLEY seconded the motion, and endorsed the previous speaker's remarks.

Mr. W. B. KINGSFORD, in moving a cordial vote of thanks to the directors, said: I have been a shareholder nearly three years, and can well remember the state of things that prevailed say in the early autumn of 1888; the price of the shares and the general condition of the company, and having followed the changed condition of the company, and having lived to see the present brilliant state of affairs, I gladly propose this hearty vote of thanks to the directors. Even

IN BUSINESS THERE IS ROOM FOR SENTIMENT,

and as regards the business of this company there is ample room for gratitude to the directors to whose skill we owe so much.

The motion was carried unanimously.

The CHAIRMAN: I would take the opportunity of reminding Mr. Askwith of one little matter. I am sure he will do me the justice of saying that I invited him to attend our board, and that I tried to give him every possible information I could when he did attend, but that I told him there were circumstances which might prejudice the interests of the company if directors were to divulge all they knew. I said that he, being a large and respectable holder, might at any time come, when I should be happy to explain matters to him, as I think he will do me the justice of saying that I did on that occasion. It remains only for me to thank you for the compliment you have paid us.

THE ASIA MINOR MINING CO., LIMITED.

THE CHAIRMAN'S VISIT TO THE PROPERTY — THE PRESENT POSITION AND OUTLOOK EXPLAINED.

THE tenth ordinary general meeting of this company was held at the Guildhall Tavern, Gresham Street, E.C., on Wednesday, Apl. 15.

Admiral Sir J. E. Commerell, G.C.B., V.C.,

presided.

The SECRETARY (Mr. Edwin Habben) read the notice convening the meeting, and the report and accounts were taken as read.

APPOINTMENT OF A NEW MANAGER.

The CHAIRMAN: Gentlemen, in moving the adoption of the report and balance-sheet, I have a few words to say to you, and especially this time more than any other, because since I met you last year I have paid a visit to the mine. I went out in May and I returned at the end of June. I was 14 days at the mine, and the greater part of that time I spent underground. Well, gentlemen, you will have seen from the papers that our late manager, Mr. Twelvetrees, has left us, and that he has been superseded by a young engineer called Creswell. This young engineer was strongly recommended to us, and he went to the mine with me and examined the workings thoroughly. I was greatly impressed with him for his zeal, attention, and apparent knowledge of his profession, and as it was understood Mr. Twelvetrees should remain at the mines until the new manager was thoroughly initiated, the directors determined to secure Mr. Creswell, and to give him the advantage of being six months with Mr. Twelvetrees, so that he might thoroughly understand the work he had before him. I think you will agree with me that that was a very wise proceeding on the part of the directors, because a sudden change of management is always bad. It was arranged that when Mr. Twelvetrees and Mr. Creswell were satisfied that Mr. Creswell had received such information as would enable him to do his work thoroughly, Mr. Twelvetrees should leave, which he accordingly did on Apl. 4, and Mr. Creswell is now in sole charge.

UNDERGROUND WORKS.

No doubt you will want me to say a little with regard to the underground working of the mine and the general management when I went out there. It is very easy to be a critic; very easy for a man to go out to a place and go underground, and say, I do not like this, or I do not like the other. It is an easy thing for him, but it is very often a very difficult thing for those who are in charge to take exception to what is said. Well, I will say this—when I went out to the mine I was very pleased to find that Mr. Twelvetrees had managed most admirably; (and in this connection I must not forget Mrs. Twelvetrees, for she was a very important factor in the management of the men)—(laughter)—the *employés* were all happy and contented. Of course, they wanted more pay—that was only natural, but they were well treated and quite happy. There were many things at the mines which I considered could not be improved; there were other things which I thought could be improved. There was the question of making up the cartridges; there was the question of drilling, and other matters which I went into thoroughly with Mr. Twelvetrees, and the improvements will, no doubt, be effected—in fact they have been already carried out as far as possible.

UNDERGROUND MANAGEMENT.

Now with regard to the underground management of the mine. I was not quite so satisfied here as I hoped I should have been. We have, for some years past, had underground captains who have not been quite what they ought to have been. In regard to our present underground captain (Capt. Northey), I have no fault to find whatever. I found he was an energetic man, and was trying to do his best. I should also be very sorry to say very much against the men who have preceded him, because out of three of them two are dead, but at the same time I think we made a mistake in employing men who were a little too old. Youth, to my mind, is the most valuable ingredient you can have, and it is very often more valuable than experience. When I looked through the mine and saw what had been done, I was not quite so satisfied as I might have been, but you must remember it was a matter of opinion. I was not there as an expert, and it is possible I might have been mistaken. I merely give you my opinion. However, Mr. Creswell has been taken on, and the directors are confident he will do his best. He is a very energetic and painstaking young man, and the only fear I have is that

he may knock himself up by working too hard. As regards the mine, of course, you know as well as I do

THERE ARE UPS AND DOWNS IN MINING.

One day you will get a rich find, and the next day you will discover it is not so rich as you thought. In the Asia Minor Mine for the last year we have not been particularly fortunate in the main mine. In fact, on the contrary, our stopes have not given us as much ore as we should have liked to have seen, but at the same time, in some of the outlying portions of the mine, especially in the valley of the Dolu-deré, and at the new level we are driving at the end of the Pappa Sawa Mine we have been as successful as we had hoped. I put a great deal of faith in the Dolu-deré. Though our production certainly has not been so good as it was last year, yet at the same time the quantity of silver in our ore has been greater than for three or four years. Our last shipment was 58 ozs. to the ton, and before that it had been as low as 42 or 43 ozs. The price of our last was 17*l.* 15s. The price of the lead was 12*l.* 10s., but the silver, I am sorry to say, was only 48½d. With the low prices that have ruled it is a very

UPHILL GAME

to make any mines pay. There was one thing I was going to touch upon on my own responsibility. We received, the day before yesterday, a telegram from our mine, but you will agree with me it is very rarely that anybody puts any faith in telegrams received just before a meeting. However, this one has been received, and I think it only right you should have all the information that we can give you, besides which, I may tell you that our agents out there have no idea we are meeting here to-day, but think we met some time ago. The telegram is almost unintelligible, but it is as follows :—"Sommet numero 4 veine Savalan coupé aujourdhui rich." It is a difficult telegram to make out, but it must mean one or two things—either that we have cut the lode in the top (Michael) level, or that we have tumbled into rich ore in the cross-cut from No. 4 stope in the Savalan lode. It is a telegram which, I think, shows we have

CUT INTO RICH ORE SOMEWHERE,

and I think it is a very satisfactory one. Since Mr. Twelvetrees has been there we have never had a telegram informing us that we have cut into rich ore. Therefore, we may naturally suppose that Mr. Creswell has had good warrant for telegraphing. I have told you the story of the telegram, because no doubt it would get out in the papers, and all I can say is I have not the slightest intention of either buying or selling a share on it. The directors do not dabble in the shares at all. I have not sold a share since I started, although I have bought a good many. We have to regret that one of our colleagues (Mr. Reeves) has found that he has got so much business to do in connection with one or two other companies that he has resigned his seat at this board. We are sorry to lose him because he gave us a great deal of valuable assistance. Mr. Kottgen retires to-day, and we hope you will re-elect him. He attends the board meetings constantly, and is a most valuable colleague. There is also the re-election of the auditor, which will be brought before you later on. I hope when we meet you next year we shall be able to lay before you a little more flourishing account than we are able to do to-day. You may depend upon it we are doing our very utmost to make the mine a paying concern. We have had great difficulties to struggle against. These low prices have been very bad for us.

THE CHAIRMAN'S INTERVIEW WITH THE SULTAN.

While I was at Constantinople I had the pleasure of seeing the Sultan, and he assured me everything would be done to enable those foreigners who embarked their capital in Turkey to realise a handsome interest for it. Nothing could have been more kind, nothing more satisfactory, than my interview with him and his Ministers at Constantinople. What I wanted done was done in a very short time—in fact, I doubt whether it would have been done so quickly in this country. We suffer, however, from one or two disagreeable restrictions, and one is that we are not allowed to use powerful explosives in Asia Minor. This is a great misfortune, because if we were allowed the use of such explosives we should work very much cheaper. The laws are against the use of dynamite, and while those laws remain of course we shall have to abide by them. I have no doubt that in any future communication we have to make to the Turkish Government we shall receive every satisfaction at their hands as far as they can meet us. The road to the mines is in a fairly good condition. Half way it is very good indeed, and as to the other half, our manager has done all he possibly could to induce the Government to put it to rights, and I am in hopes before very long they will do it, and we shall be enabled to carry all our ore from the mines to the port of shipment by wheels. We may not be able to do it very much cheaper, but there will be a very great saving in bags, and in many other ways. I beg to move the adoption of the balance-sheet and report.

Mr. EDMUND SCHLUTER (director) seconded the motion.

SATISFIED SHAREHOLDERS.

Mr. GASKELL : We ought to be very much obliged to you, sir, for the time and trouble you have taken in going out to Constantinople and the mines, and it is very fortunate for us that we have in you a gentleman who, being so well known, is able to obtain for us advantages, which otherwise we might not be able to obtain from high quarters in Turkey I think we ought to consider ourselves very fortunate in the small fees the directors take, and the general London expenses. I only wish other companies were in the same position. We often see companies with directors who are on a dozen different compauies, and make a point of drawing high fees. I am glad to say in this case we have directors who are on a very few companies. I think there is one thing we ought to bear in mind—if by any means we could extend our business and do more work, we should find our expenses would not increase in the same ratio. I think out of the total expenses of 21,000*l.* there is at least 5,000*l.* absolutely independent of the work done—that is, for fixed charges. I think we must ultimately look for an increase in our profit from the extension of our business rather than in a lucky find. (Hear, hear.)

Mr. HAMILTON : I think we have every reason to be satisfied that everything is done to ensure success, and we may be quite sure of this —whether this little gleam that comes to us from the manager means much or little, the best will be made of it, and this company is now in a position to take advantage of all that nature affords. The great evil in many mines is that the unfortunate shareholder gets nothing, whatever happens, but here we may be sure we shall get whatever returns nature affords.

THE CHAIRMAN'S VIEWS AS TO EXTENSION OF THE BUSINESS.

The CHAIRMAN : I quite endorse what Mr. Gaskill says about the standing expenses. We have done our best to keep expenses down, but there are some expenses which you cannot keep down. If we could induce the shareholders to subscribe and let us have more capital so that we could develop the mine quicker by means of rock-drills, or by other means there is no doubt we could make a substantial profit. You have the knowledge that the money we should get would be carefully dealt with, and I have no doubt in my own mind that the Asia Minor Mining Co. would be a paying company. We are obliged, however, to cut our coat according to our cloth, and we have very little cloth to spare. It is quite possible we may get hold of another piece of ground some distance off, but it would not do for me to say too much about it at present. If that comes to anything it will be necessary for us to call the shareholders together to get their permission and the wherewithal. You may rest assured we are most anxious to extend our business as much as our capital will allow us, but it will not do for us to extend our business, and find at the last moment we are short of cash.

A SHAREHOLDER asked whether the price of lead had ever been much higher in the experience of the company than at the present time?

The CHAIRMAN : Yes ; it has been up to 16*l.*

The motion was then carried unanimously.

Mr. SCHLUTER proposed the re-election of Mr. Kottgen as a director of the company.

Mr. HAMILTON seconded the motion, which was carried unanimously.

TRIBUTE TO MR. TWELVETREES.

Mr. KOTTGEN : I beg to thank you, gentlemen, for the manner in which you have received the proposal of my re-election, and I shall continue to do my best for the company. Your board, as it is at present, may be compared to a family in which harmony has always reigned, and reigns at the present time. I wish you to think of us in that light, but it is happy families that can afford to indulge occasionally in a little debate or difference of opinion. I shall do no harm in letting you into a secret upon one subject upon which we have been differing. I refer to our late manager, Mr. Twelvetrees, and to his services, of which I wish to tell you my opinion. Our esteemed chairman is blessed with a character in which a most kindly and generous disposition predominates, but I do not think he allowed the full play to that quality in judging of our late manager. He has no wish. I am sure, to curtail Mr. Twelvetrees' merits. (Hear, hear.) Nothing personal is in his mind, and he has acted, as he always intends, for the welfare of the company. He has such a strong conviction of the capabilities of the mine that when success has not been achieved he cannot get away from the idea that something must be amiss with the management. That is not my opinion at all. Success is not everything. If single-minded devotion to our interests and to his duties could have secured success, Mr. Twelvetrees would have been successful. It requires some strength of character to hold out in that place for eight years. Mr. Twelvetrees has had eight years there of a life which offers nothing if he did not find satisfaction in his duties. He has been living to bring this thing to a success. When he went there eight years ago it was just at a time when the whole concern was one mass of corruption and we were insolvent. Mr. Twelvetrees, after eight years, leaves us, and leaves behind him

A WELL-ADMINISTRATED CONCERN.

As our chairman has told you, there is really nothing to find fault with —on the contrary, there is everything to be satisfied with. That is not a small achievement, and I do not think we ought to lose sight of it. The man has given us what he was able to give us—his faithful services, the services of a man of great intelligence and perseverance. I am not going to say anything to discourage Mr. Creswell, for I think we have been exceedingly fortunate in finding such a capable young man to succeed Mr. Twelvetrees. If Mr. Creswell makes a success of the mine the credit due to him is not to be curtailed. I hope he will succeed, and there are some reasons for supposing he will. But whether he succeeds or not, if he is able to carry on the concern in the way it has been carried on by his predecessor, it will reflect great credit on so young a man. I have said enough to show what I think of Mr. Twelvetrees, and he leaves us to take a well-deserved rest. He is going with his family on a voyage round the world, and he will probably settle in one of the colonies. I am, therefore, going to propose to you that we give Mr. Twelvetrees a cordial vote of thanks for his faithful services, and wish him a prosperous journey.

Mr. BEW : I have very great pleasure in seconding the proposition.

The motion was carried unanimously.

Mr. GASKELL proposed the re-election of the auditors.

Mr. BEW seconded the motion, which was carried unanimously.

Mr. BEW proposed a vote of thanks to the chairman and directors, which was carried unanimously.

The proceedings then closed.

LATEST REPORT.

Apl. 4.—Ara Dere Mine : The rise has holed to surface, and good ventilation has been secured. There is still a little lead in the end of drive, and the lode looks promising. The stopes here have so far proved disappointing. Chief Mine : The men are stripping out the lode in Savalan ; worth 12 cwt. A small rib of ore has appeared in Petri air shaft end. The end east from long cross-cut is opening up ground ; worth 18 cwt. per fm. The cross-cut from No. 4 stope has intersected what is taken to be the Savalan lode. It is only in 6 ins., but the stuff broken looks most encouraging, for it is well sprinkled with lead. We shall know next week what we have here. Dressing floors : Production to Apl. 3, 1,361 tons crushed, yielding 51 tons of rich silver-lead.

THE URUGUAY LAND AND DEVELOPMENT CO., LIMITED.

CONTINUED SATISFACTORY PROGRESS—A 12 PER CENT. DIVIDEND —THE RECUPERATIVE POWERS OF SOUTH AMERICA.

THE third ordinary general meeting of the Uruguay Land and Development Co., Limited, was held at Winchester House, Old Broad Street, on Wednesday last, to receive the statement of accounts and the balance-sheet, and the report of the directors, and to sanction the declaration of a dividend for the year ended Dec. 31, 1890, and for the election of a director and an auditor, and for other general business of the company.

Mr. George H. Kearton

presided.

Mr. J. D. KENNEDY (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said: Gentlemen,—Before I proceed to the business of the meeting, I should like to say two or three words as to why I am in the chair to-day. Mr. Arthur Holland, my colleague, was chairman of the last meeting, and has been since the commencement of the company, but as the duties of the chairman entail a very great deal of work, and Mr. Holland has already done a fair share, he asked me if I would undertake the duties for a period. I have undertaken those duties, and I hope that my colleagues will take the position in rotation afterwards. Now, I think, gentlemen, we may fairly congratulate you and ourselves on being able to give you in this our second year so good a dividend as 12 per cent., and to also add to our reserve fund the sum of 626*l.* 9s. You all of you know what very bad times South America has been passing through, and I expect that many of you may be surprised at receiving so good a dividend. You will see by the report that since we last met we have purchased two additional tracks of land aggregating 10,408 acres, which were personally inspected previous to the purchase by one of our directors, Mr. Pearce Edgcumbe, who I shall call on presently to second the adoption of the report and accounts, and he will probably be able to tell you a little more about the land than I am able to do. However, we are all very well satisfied with our purchase. Our total holding is now 16,168 acres, of which a portion has been let profitably. We are getting about 6 per cent. on the cost of that portion, and as regards other parts of the land we have succeeded in getting a number of colonists already to go out there and take plots of land. This, of course, is a somewhat tedious business in trying to get any real return from this source, but I think I may say that the colonists who have gone there already and have settled on their property have undertaken to pay prices which will satisfy even those amongst us who look for a very large profit. About 1,000 acres have been taken up in this way. Perhaps, I may add, that the two last portions of land purchased are not very far from Salto, and although there is not at the present time a station there on the North-Western Uruguayan line, yet there is a stopping place, where the trains stop by signal, and if we can only get sufficient people there, I think we may be able to induce the directors of that railway company to give us a station also. That, however, is

A THING FOR THE FUTURE.

Now, as regards our steamer, the Guanaco, I am sorry that I am not in a position to give you more information as regards the more recent doings of that steamer, but it really did not commence to run until last Dec., and beyond information of a merely general character as to what she was doing at that time it is really impossible for us to say as to what her earnings have been since then. I may say that a letter has been received only recently, telling us that the boat was going up-stream with 120 tons. I take it that she had a couple of barges in tow, for it is absolutely impossible for her to carry that quantity of goods. As regards her passenger accommodation, she is reported to be the finest passenger boat that has ever been placed on the upper river. We have some photographs of this steamer at the office, and any shareholder who cares to inspect them will be able to form an idea of what a very fine boat she is. I hope that in addition to being fine, she will also prove a very profitable boat to you. Well, gentlemen, you may notice that there is a paragraph in the report stating that we do not think that the profits of the company will be unfavourably affected by the recent financial troubles in South America. This might give rise to ideas in the minds of some people that, owing to the bad times that have prevailed on the other side, we are making a statement which may prove rather difficult to justify. I may, however, put it to you in this way. We are a company who are more likely to make money when things are cheap than when they are inflated. At the present moment we consider that we have really a fair chance—perhaps even a better chance than when we started this company—and I would like to add that the position of affairs on the other side has, I understand, induced the Government seriously to give attention to concerted measures for inducing immigration. I hope that this will bear some fruit, and I have very little doubt that the Government will shortly cause something to be done in that direction. We are doing all we can in that direction ourselves in a small way by getting colonists to go out there. Since the date of the last report

MR. H. GRANT M. CONYBEARE HAS JOINED THE BOARD.

He belongs to a family distinguished for having good heads, and I have not the slightest doubt that the assistance we shall be able to get from him will be of the greatest advantage to this company. Now, I wish to say a word or two with regard to the balance-sheet and accounts. First of all, our capital, as you see, stands at 13,405*l.*, and our 5 per cent. debenture stocks at 3,700*l.* Since the commencement of this year we have been enabled to issue some more debenture stock, but this has not altogether been a very nice process. I am sorry to say that our proprietors have not thought fit to take up so much debenture stock as we should have hoped. When we get debenture stock at 5 per cent., and are able, perhaps, to make double that amount by dealing with matters on the other side of the Atlantic, we would like to see debenture stock subscribed for to a very much larger amount. However, I am glad to say that some members of the board have very kindly come forward and assisted in placing more debenture stock, so that next year you will see in the accounts a very much larger amount placed under that head. As regards the bills payable, amounting to 7,337*l.*, they were mainly for lands purchased, or, rather, for the balance due, and also for expenditure in connection with our steamer and for mortgages on the other side. Then we have reserve fund No. 1, being premiums on the ordinary shares, amounting to 648*l.* According to our memorandum of association, we are bound to pay that to the reserve fund for the general good. The reserve fund No. 2 only represents the balance of revenue account to the end of 1889, and amounts to 22*l.* If you pass these accounts to-day you will have another balance of 626*l.* added to that fund, so that you really have in these two reserve funds a sum equal to about 10 per cent. on the paid-up capital, which I venture to say is not a very bad result for a company that has only been in existence for two years. The net revenue account amounts to 3,342*l.* On the other side of the account we have land purchased and the expenses of transfer amounting to 13,410*l.* As to this, Mr. Edgcumbe will probably say something further later on. The cost of the steamer Guanaco and the materials for the steam launches amounts to 8,924*l.* I think we may expect a further expenditure on that head of about 700*l.*, or perhaps a little more. As regards our investments, they stand at 5,554*l.* I daresay many of you will think that they embrace some depreciated South American securities.

NOTHING OF THE SORT.

As regards 4,000*l.* of that item it was invested in Monte Video, but since the beginning of the year we have sold that for the same sum as is put down here—in fact a little more. So that as regards 4,000*l.* at least we have actually received the money. As regards the other amounts they consist of some American railroad bonds and others, which we have cut down to the price ruling at the beginning of the year, but which has been a little better since. The preliminary expenses I thought we should have been able to have got rid of by this time. We have written off a certain amount this year. It is a general custom whenever debenture stocks run over a period of years to write off a certain amount every year, but we wish first to get rid of all these preliminary expenses, and then to write off the balance of 200*l.* during the current year if possible, that is if we have sufficient profits, and I do not think we shall have much difficulty in getting rid of that item. Perhaps I may be allowed to say one or two words with regard to the present condition of affairs on the other side. It may be as well for me to give my opinion on that matter, and, in expressing my opinion, I am sure from the conversations I have had with them, that I am expressing the opinions of the other members of the board. We have noticed lately, of course, that the tone of the Press, and, in fact, I may say the tone of everybody we meet, is decidedly adverse to South American affairs. From lauding them to the skies they have put them down now amongst the dirt. Now, in new countries like Uruguay and the Argentine, there are always vicissitudes to pass through, and there are always a number of men in power, who, from their own personal motives, are either interested in seeing things booming or otherwise. There is no doubt that in their eagerness to make money and by the ease with which they were able to borrow in Europe, the South American Republics have suddenly outrun the constable. But they have in them an inherent prosperity and an inherent worth. Their means of communication and their railways are being multiplied and their population is increasing, so that, although it may take some time before confidence is perfectly restored, I am inclined to fancy myself—and I say so with due deference to the opinions of others—that the condition of affairs is not likely to be worse, at least, in Uruguay. As regards the Argentine, I could not perhaps say so much.

URUGUAY, HOWEVER, IS IN A BETTER POSITION THAN THE ARGENTINE.

It has an excellent climate and a fine country, and a population which is changing its character now. The Italians and others who have gone out there are excellent labourers, and what with the cultivation of the vine and other improvements, I think we may look for very much better times in Uruguay. There is one other point that I should like to bring before your notice. You will see, according to the balance-sheet, that we have some 4,300 and odd shares issued, leaving a balance of some 600 shares still in hand. We do not want to increase our share capital beyond 5,000 shares, but it is our intention presently—and I tell you so that you may know our views—to issue to you a provisional allotment in regard to the unissued shares. As near as I can say, it will be about one in seven, or something of that sort, and we propose to charge 2*l.* premium on the shares. We do not want to ask 5*l.* for the shares all at once: we propose to ask for only 2*l.* 10s. at first, and the other 2*l.* 10s. perhaps at some time later. That is the idea of myself and my colleagues, and I hope you will see your way to take up your proportion of shares. In conclusion, I move the adoption of the report and accounts.

Mr. E. R. PEARCE EDGCUMBE (director) seconded the motion, and said that after the very clear and lucid statement of the chairman there was really not much that he could add. The serious condition of affairs that had existed in the Argentine Republic had naturally, to a certain extent, affected Uruguay much the same way as

THE WASH OF A BIG STEAMER AFFECTED A LITTLE BOAT.

The small boat might be all right and sound in itself, but it could not help being disturbed by the larger vessel, and thus the troubles in Argentina had had their effect upon so close a neighbour as Uruguay. He felt that a country with the great resources possessed by the Argentine Republic could not fail to get over these recent troubles, as it had got over former ones; for instance, in 1875 there was a similar condition of things, but the country soon recuperated, and, he believed, would in a very few years recover from its present depression. There could be no doubt, with an improved condition of things in the country, the company would participate in the increased prosperity. For instance, with more flourishing trade there would be more business done by their steamer. He must candidly confess that speaking personally he did not regret the little delay that had taken place in the development of their lands, and he was quite content that they should wait awhile and not push it unduly. They were getting a good rate of interest upon the money spent. The whole of this land was situated close to the railway, and must increase in value as time went on. They only paid 17s. 6d. per acre for it, while at the present time the price of land in Uruguay was about 2*l.*

per acre, and land at a very little distance from their own had fetched as much as 10*l*. per acre, and land for vine cultivation fetched as much as 50*l*. per acre. When the colonists who were interested in the wine making industry came in larger numbers to that portion of the country the value of the land would be still further enhanced. Ordinary agricultural land, of course, existed largely, but the quantity of land suitable for vine cultivation was restricted, and he was glad to be able to say that the whole of their land was in the particular district where the land was specially suitable to the cultivation of the vine. He congratulated the shareholders therefore upon the present position and prospects of the company, and hoped when they next met they would meet under even more favourable circumstances than they did that day.

Mr. Pegler asked the amount that was lent by the company on land out there. He considered that South America was a splendid country and possessed great resources, and believed that it would become more and more prosperous. He also wanted to know whether the colonists cultivated the vine or maize.

The Chairman said, in reply to Mr. Pegler's questions, he might state that they advanced about one-third of the value; as regarded cultivation the colonists grew maize and alfalfa.

The resolution was then put, and unanimously carried.

DIVIDEND.

The Chairman then proposed the second resolution, viz.:—Resolved, (1) "That out of the net profits for the year 1890 a dividend on the amount paid up on the ordinary share capital of the company be paid, which with the interim dividend will make 8 per cent. per annum on such capital for the year 1890; and (2) That one moiety of the remaining profits for the year 1890 be paid to the owners of the founders' shares, and that out of the other moiety, to which the ordinary shareholders are entitled under the memorandum and articles of association of the company, a sum be applied which with the 8 per cent. will make up a total dividend for the year on the amount paid up on the ordinary share capital of the company of 12 per cent.; and (3) That the sum of 629*l*. 9s., being the residue of the before mentioned moiety of profits, be carried to a reserve fund to be called No. 2."

Mr. Arthur Holland seconded the motion, and congratulated the shareholders upon the results achieved during the two years' existence of the company.

The motion was carried.

FORMAL BUSINESS.

The Chairman then proposed the re-election of the retiring director, Mr. Arthur Holland, and spoke in high terms of that gentleman's services.

Mr. H. Grant M. Conybeare seconded, and remarked that since he (the speaker) had been on the board he had seen the attention that had been devoted to the company's affairs by Mr. Arthur Holland, who had never missed attendance at a board meeting. Mr. Holland was a most valuable director. Mr. Conybeare also referred to the present position of Argentina, and endorsed Mr. Pearce Edgcumbe's remarks as to its recuperative powers.

The motion was carried.

Mr. Holland briefly returned thanks.

The auditor, Mr. Clarendon G. Hyde, was re-appointed.

A vote of thanks having been accorded to the chairman and directors for their services,

The Chairman, in replying to the same, expressed the hope that when they next met it would be under still better circumstances than at present.

The meeting then separated.

THARSIS SULPHUR AND COPPER CO.

DIVIDEND INCREASED, BUT DEBTS DUE TO THE COMPANY NOT DECREASED—OVER 4½ MILLIONS STERLING DIVIDED.

The twenty-fourth annual meeting was held on Wednesday, in Glasgow.

Sir Charles Tennant, Bart.

(chairman of the company), presided.

The Chairman moved the adoption of the report, and said it proved another of those gratifying retrospects which it had been his privilege to present to the shareholders during the last 24 years. Since the formation of the Tharsis Co. the sum of

4,633,432*l*. HAD BEEN DIVIDED AMONGST ITS SHAREHOLDERS.

The dividend now proposed was 22½ per cent., against 20 per cent. for 1889, and against 19½ per cent., the average, as nearly as possible, of their dividends from the first. It must be remembered, however, that the dividend for 1890 was upon 1,250,000*l*., the full amount of their capital, whilst in 1889 it was only on 1,174,660*l*., so that to pay the dividend on this increased capital the profits of the year had to provide an additional sum of 16,951*l*. 10s. He hoped, therefore, the shareholders would agree that the statement placed before them was of a very encouraging kind, and of which they would heartily approve. Perhaps the feature which would not be the least satisfactory was the fact of their having

PLACED THE BALANCE OF UNISSUED CAPITAL,

viz., 37,670 shares, at an average price of 6*l*. 5s. 8d., or 4*l*. 5s. 8d. premium, giving a premium in all of 161,353*l*. 9s. 8d., which had been devoted to writing down their assets in Spain to figures which placed the company in a position of great soundness and strength. They might now look forward to treating these accounts in future years with greater tenderness than they had done in the past, and thus comply with the wish of many of their shareholders who had accused them at times of being unnecessarily severe in this respect. The mines now stood at 220,000*l*., against 280,000*l*.; the railways, rolling stock and pier at 240,000*l*., against 317,253*l*.; the works, buildings, and plant in Spain at 139,071*l*., against 166,454*l*. in the previous year's accounts. The operations on the mines had proceeded steadily; the total extraction had been 501,480 tons, against 589,048 tons in 1889. A fire in one of the shafts had caused a loss of 5,000*l*. which went against revenue. The total shipments were 265,197 tons, being an increase of 14,779. The

DELIVERIES TO CUSTOMERS HAD BEEN 12,979 TONS MORE

than the previous year, and the quality of the ore was good. They obtained 10*l*. 8s. more per ton for their copper last year than the year before. The deliveries of iron ore had been 206,437 tons, against 204,160 tons, the price received being 7¼d. per ton more. The amount at the debit of the Société des Métaux had risen to 321,417*l*. He did not care to say anything about their prospects of dividend. They had obtained a decision in their favour in the English Courts, and they had now to come before the French Courts. They watched the proceedings with intense interest. The result to the creditors would depend mainly on matters to be decided between the Société des Métaux and the Comptoir d'Escompte, of which they could form no opinion. The balance at the credit of profit and loss account amounted to 297,487*l*., against 249,169*l*. in 1889, out of which it was proposed to pay 281,250*l*. in dividend, being at the rate of 22½ per cent., free of income tax, and to carry forward 16,237*l*. 15s. 7d. As to the prospects for the current year, the copper market, on which their future so much depended, did not present an unfavourable aspect. The production of copper over the world did not look like being at all excessive. The Anaconda Mine had been closed for the present, and the West Coast supplies were rather falling off, so that even with only the existing demand current values should be maintained. The

DEMAND FOR SULPHATE OF COPPER

which had been largely used in connection with the vine disease, had for the moment subsided considerably. Stocks remained over, and until these were cleared off a revival of consumption could not be expected. The iron ore contracts for this year were 140,000 tons at satisfactory prices. On the whole, the prospects for this year were fairly satisfactory. He was glad three French directors were present. The French shareholders had an important position in the company, and they were well entitled to exercise no small influence on the policy and affairs of the company.

M. de Berly seconded the motion for the adoption of the report, which was carried unanimously.

EAST POOL.

A DIVIDEND OF 7s. PER SHARE.

A twelve weeks' meeting of shareholders in East Pool was held on Monday,

Major Haye, J.P.,

presided.

The accounts showed labour costs 7,349*l*., merchants' bills 2,127*l*., Wheal Agar Adventurers (water charges) 75*l*., stannary assessments 14*l*., income tax 81*l*., rates 75*l*., rents 70*l*., dues 77*l*., total debits 11,294*l*. On the other side 236 tons 4 cwt. of tin have been sold for 11,098*l*. wolfram 934*l*., arsenic 1,032*l*., copper and halvans 357*l*., carriage on tin ore 14*l*., discounts 98*l*., sundries 9*l*., income tax off dues 15*l*., total credits 13,555*l*., leaving a balance profit of 2,261*l*.

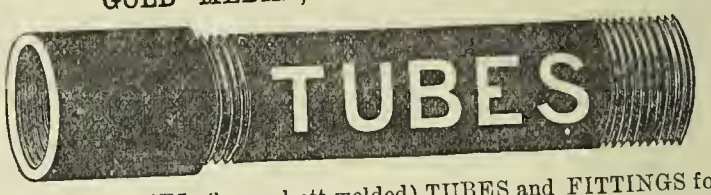
The Chairman hoped the adventurers would consider the result of the past 12 weeks' working favourable. They had had to contend with the terrible snowstorm, and they had felt it more, perhaps, than any other mine, because of the distance the stuff had to be carted, and the delay that was thus occasioned. Their tin sale was, however, 8 tons in excess of the previous quarter, and that he thought was very encouraging.

The committee recommended a dividend of 7s. per share, adding 21*l*. to the balance, which was thereby increased to 3,537*l*. He proposed the adoption of the accounts, and the declaration of a dividend of 7s.

Mr. Henry Rogers seconded.

Carried.

GOLD MEDAL, MELBOURNE, 1881.



IRON and STEEL (lap or butt welded) TUBES and FITTINGS for Gas, Steam, Water, Hydraulic, Refrigerating, Compressed Air, and Heating Purposes, Black, Galvanised or White Enamelled Inside Tubes in stock to 8 inches diameter. THE MINING COMPANY OF IRELAND, LIMITED.
(In Liquidation.)

VOLUNTARY WINDING UP OF THE COMPANY.

NOTICE OF SALES.

The LIQUIDATORS HEREBY GIVE NOTICE that they will be prepared to receive Tenders up to May 1, 1891, for the purchase of the following Properties, detailed particulars of which will be furnished on application :—

(1.) RINGSEND LEAD WORKS, Ringsend, Dublin, in which the manufacture of sheet lead, lead water pipes, composition gas pipe, Corporation alloyed pipes, &c., is being carried on. These Premises are held under leases for a long term, at a gross rent of £151 12s. 3d. a year and taxes. A small portion of land and a cottage adjoining are held under a short lease at £25 a year and taxes, and are at present sub-let at about the same rent.

(2.) BALLYCORUS LEAD WORKS, near Carrick Mines, County Dublin, in which the operations and manufactures of smelting lead ore, desilverising, making shot, and red lead, &c., are being carried on. The premises are leasehold, subject to the yearly rent of £118 and taxes. Premises let to tenants produce about £110 a year, and there are several workmen's cottages on the property. The mountain and land adjacent to the land on which the chimney is erected are held under a short lease, subject to the yearly rent of £30, and realise by grazing lettings about sufficient to pay the rent.

NOTE.

Tenders will be received for the purchase of the foregoing lots, either together or separately.

(3). The SLIEVARDAGH COLLIERIES, near Thurles, in the County of Tipperary. The Company's mining rights extend over a very large tract of country, a great portion of which is unworked, and there is an almost inexhaustible supply of coal and culm therein. The property is variously held, including surface land, part of it being in fee, and not subject to any rent or royalty whatever. There is a large number of cottages on the property. The collieries have been worked until quite recently, and are in working order. All particulars as to the takings will be given on application.

(4.) A large Stock of excellent Culm at the pits' mouths at Slievardagh will be Sold with the Collieries.

(5.) The MINES of KNOCKMAHON and ARDMORE (near Bonmahon, a shipping place in the County of Waterford, and within 5 miles of a railway station), held in fee, and not subject to any rent. Knockmahon was partially worked for many years with great success by the Company, and immense quantities of Copper Ore of good quality were raised, but Ardmore has not been worked by the Company. The property presents ample opportunity for further exploration.

Full particulars as to title and otherwise can be had on application to

The LIQUIDATORS, Mining Company of Ireland, Sun Chambers, Trinity Street, Dublin ; or to

MESSRS. D. and T. FITZGERALD, Solicitors for the Liquidators, 20, St. Andrew Street, Dublin.

Dublin, April 1, 1891.

IRON MINE TO LET.

SITUATED at HAYTOR, three miles from Bovey Railway Station ; shipping ports Teignmouth or Dartmouth.

The iron ore is magnetic, and suitable for steel-making purposes.

With a lease of the above Mine, terms and conditions would be included, if desired, for working tin, which has been discovered, and is now being worked in adjoining lands.

Principals only, or their solicitors, can obtain further information by applying to Mr. Hatherly, Yattendon, near Newbury, Berks.

PROSPECTUS.

This Company is formed to purchase the right to work for minerals in the three leasehold properties known respectively as Upper Kinedder, Blair, and Nether Kinedder, situate in Fifeshire, Scotland ; to work the underlying coal field, and further develop the several seams of coal, ironstone, limestone, fireclay, and other minerals on the said properties.

This coalfield, the area of which is about 2,000 acres, is situate in Fifeshire, Scotland, 4 miles west of Dunfermline, and 6 miles from the newly opened Forth Bridge. The leases are to run for 31 years, from May, 1890.

Mr. Cheesewright says :—"In addition to the horings made on the properties, a rectangular shaft, 12 ft. by 5 ft., has been sunk to a depth of 21 fms. on Upper Kinedder, and fitted with pumping aud hauling machinery. In this shaft four workable seams of coal, 2 ft. 8 ins., 5 ft. 3 ins., 1 ft. 9 ins. (with 1 ft. 7 ins. good fireclay), and 3 ft. 1 in., have now been opene l up, and from it a supply of good marketable coal can at once be raised."

"I went down the pit and found the coal and fireclay, as stated, in the borings ; the face of the 5 ft. coal was bright and brilliant as polished marble—a very valuable seam. The Mynheer coal is also a good coal, but the best coal is the Dunfermline splint ; there is no better coal in Scotland. This lies at the bottom of the shaft. There is no doubt these seams of coal run through the property. I also saw some bands of splendid fireclay, which will be a source of great revenue to the Company."

"The property is of very great value, being undoubtedly a very rich coalfield with an unlimited supply of fireclay of first-rate quality ; with proper appliances, and when the pit is in full working order, an output of from 350 to 450 tons of coal, and from 150 to 200 tons of fireclay per day can easily be maintained."

"The fireclay alone will show a handsome profit on the cost of its production."

Mr. Gregory says :—"The Kirkealdy and District Railway Company are applying to Parliament for powers to build a line aeross Upper Kinedder, and, as the course of it will be only about half a mile north of the present pit, a short branch might be made to connect. The Stirling, Dunfermline and Edinburgh part of the North British Railway, across the new Forth Bridge, passes the south edge of Blair, and is connected with the estate by sidings."

"The fixed rents are moderate, merging into exceptionally low royalties for coal, being 5d. per ton on common coal from Upper and Nether Kinedder, and 5d. per ton for large and 2d. per ton for small from Blair."

"There are miners' cottages on the Blair property, which can accommodate about 200 colliers There is also 'Blair House,' which could he used as a dwelling-house for the managers and for offices, and also other buildings."

"The present price of good household coal at the pithead is about 10s. per ton. The cost (ineluding royalties, winning, raising, and loading) is about 4s. per ton.

"I estimate the amount of common coal in the leaseholds at over 25,000,000 tons ; but say only 12,000,000 tons ; this will give an output of 400,000 tons a year for 30 years."

"On this modified calculation, and taking into consideration the lowness of the royalties, and that the cannel coal, ironstone, and fireclay have not been included, I value the property at £200,000."

"In every respect I consider this a most valuable mineral field, and one which ought to pay well under prudent management, and which may be worked up into a most successful affair by energy and skill."

Mr. Cheesewright says :—I cannot too forcibly urge upon those connected with this valuable property the importance of commencing work at once. There was never a time when the coal found in Fife realised such high prices as at present. The lowest estimate I can put as the value of the property is £220,000. This I do after careful consideration of the bores, my knowledge of the field, and easy access by road or rail to the property."

During the past 15 years the output of coal from the Fife collieries has shown a marked and steady increase, as proved by the returns published by the Board of Trade—thus :—

In 1874, the annual output of Fife coal amounted to 1,390,678 tons.

In 1880, the annual output of Fife coal amounted to 1,930,511 tons, 38 per cent. increase over 1874.

In 1889, the annual output of Fife coal amounted to 2,761,616 tons, nearly 100 per cent. increase over 1874.

The purchase price of the several mineral leases enumerated above, together with the machinery and plant, including all mineral and other rights, and the obligations of the vendor hereinafter mentioned, has been fixed by the vendor (who is the promoter of the Company) at £25,000 in fully paid-up preference shares, £25,000 in fully paid-up ordinary shares, and the balance (£25,000) in cash.

£75,000 of the shares will thus be available to provide working capital. The directors are advised that £20,000 would be ample to sink the new pit No. 1, supply all machinery for it, and open up the seams of coal for an output of 500 tons a day, but they will reserve £25,000 for these purposes. The subscription of the shares now offered will, as the directors are advised, provide for an increased output up to 2,000 tons per day.

Judging by Mr. Gregory's report, the cost of winning and raisiug coal to the pithead at Kinedder, including royalty and way-leave, will not exceed 4s. 6d. per ton. The selling price of the "Splint" and other good household coal in waggons at the pithead at the present time averages fully 10s. per ton according to current prices in Fifeshire ; showing a gross profit of 5s. 6d. per ton. To be on the safe side, however, the profit is estimated at 4s. 6d. per ton only.

Taking the daily output of coal at only 500 tons, and allowing for 260 working days, the total annual output would be 130,000 tons, and assuming a gross profit of 4s. 6d. per ton, as above, this would amount to a gross annual income of ... £29,250

Less as under :—

Management expenses, say	£5,000	
Sinking Fund to redeem capital within the term of the leases, say on a 3 per cent. table	3,300	
8 per cent. ou £75,000 preferenee shares	6,000	
8 per cent. on £75,000 ordinary shares	6,000	
		£20,300
Leaving a surplus of		£8,950

For division—one-third to the preference shares and two-thirds to the ordinary shares.

The above estimate, it will be noticed, is calculated on a daily output of only 500 tons, but should the output be increased to 2,000 tons a day, divideuds would, of course, be proportionately increased.

In the above estimates no credit is taken for the profit to be obtained from the fireclay and ironstone, which the directors are advised is considerable.

Full reports on the coal, fireclay, and other minerals lying in and under the properties have been prepared by Mr. F. H. Cheesewright, A.M.I.C.E., M.S.E , 60, Haymarket, S.W., and by Mr. T. Currie Gregory, F.G.S., M.E., C.E., London, on the instructions of Messrs. Andrew, Mellor and Smith, solicitors for the Company, acting under the authority of the chairman of the Company, and all the above statements and estimates are made by the directors on the basis of such reports, and have been duly certified by those experts to be correct. These reports and estimates, together with plans and surveys of the properties, can be seen at the offices of the company.

The contract for purchase is dated April 16, 1891, between William Paterson, the vendor, and the Company. This is the only contract to which the Company is a party. Under such contract the vendor agrees to pay all the preliminary expenses of the Company down to the first allotment of shares, and to indemnify the Compauy in respect thereof. In relation to such preliminary expenses and to the subscription of a portion of the capital, certain arrangements have been entered into with various persons which might be considered contracts within the meaning of the 38th section of the Companies Act, 1867 ; applicants for shares will be affected with notice of the existence of such arrangements or contracts, and will be deemed to have waived the specifications of the dates and names of the parties of and to the same, and to accept the above statement as a sufficient compliance with the said section or otherwise, and applications for shares will be received subject only to this provision.

Messrs. Wm. Hunter and A. Ferguson Bainbridge, whose names appear as directors, on this prospectus, being interested in the assignment of the leases, are willing to join the board after allotment.

Copies of the contract and of the memorandum and articles of association of the Company may be inspected at the offices of the solicitors.

In the event of no allotment being made, the amount paid on application will be returned in full, and, in the case of partial allotment, any balance of application money, up to the amount payable on allotment, will be credited on account of the amount due on allotment, and the surplus (if any) will be returned to the applicant.

It is intended to apply for a quotation on the London, Edinburgh, Glasgow, and Dublin Stock Exchanges, and in any other places where, in the opinion of the directors, the Company's business may be developed.

Prospectuses and forms of application for shares can be obtained at the Company's offices, or from the bankers, solicitors, brokers, and auditors of the Company.

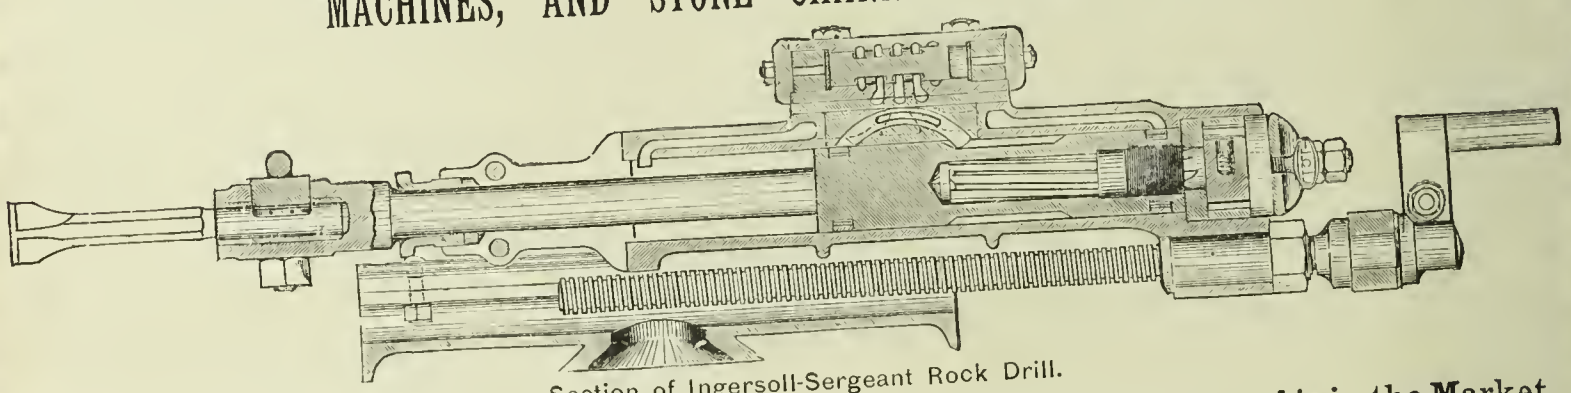
THE INGERSOLL-SERGEANT DRILL CO. OF AMERICA,

114a, Queen Victoria Street, London, E.C.
Telegraph Address: "ENYAM, LONDON."

Chief Office: 10, Park Place, New York.
Cable Address: "IRONCHAIN, NEW YORK."

INGERSOLL AND SERGEANT ROCK DRILLS, AIR COMPRESSORS, COAL MINING MACHINES, AND STONE CHANNELLING MACHINES.



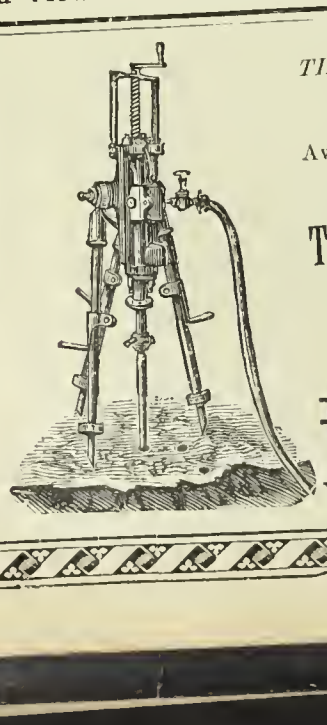
Section of Ingersoll-Sergeant Rock Drill.

The Only Drill with Positive Valve Motion and Variable Stroke for Steam or Air in the Market.

Equip your mines with "Sergeant" Rock Drills and Air Compressors. Follow the American method of machine mining, and reduce your cost of mining by from 25 to 50 per cent. below the cost of hand labour. Full information given of the system on application.

Duplicates of Sergeant Drills are kept in stock, and can be shipped at a minute's notice.

On View at the Offices of the Company as above, where Catalogues, Estimates, and all Particulars may be obtained.



GOLD MEDAL AT THE CRYSTAL PALACE MINING EXHIBITION, 1890, and THE ONLY GOLD MEDAL AWARDED AT THE LEEDS MINING EXHIBITION, 1890

HIGHEST AWARDS:—Silver Medal, Sydney, 1879. Silver Medal, Paris, 1878.
First Silver Medal, Mining Institute of Cornwall, 1881 and 1883.
Awarded the First Prize at the Rock Drill Boring Competition, at East Pool Mine, Cornwall, Sept., 1883.
Inventions Exhibition of 1885; and the Gold Medal at Liverpool of 1886 Winner.
AND ECLIPSING ALL OTHER MACHINES IN THE TRIPOD COMPETITION AT THE MINING EXHIBITION, CRYSTAL PALACE, 1890.

THE PATENT "ECLIPSE" ROCK DRILL and RELIANCE AIR COMPRESSOR

now supplied to the English, Foreign, and Colonial Governments, and are also in use in a number of the large Mines, Railways, Quarries, and Harbour Works in Great Britain and Abroad, and largely used in the United States of America.

QUINLAND—LONDON.

MINING MARKET.

City, Friday Evening.

AN UNEVEN WEEK — AUSTRALIAN BROKEN HILLS DECLINE—SPECIAL NOTES AS TO NINE REEFS, FLAGSTAFF, LISBON-BERLYN, AND OTHER MINES — HOME MINES STILL DECLINING—OUTLOOK.

Although the Mining Market has by no means been in what can truthfully be termed a booming condition, the retrospect of the week on the whole is not unfavourable. If there is no augmented activity, there has at least been maintained the lively tone that has characterised it during the past two or three weeks. It is true the glory has departed from Australian Broken Hills Consols, and that these shares have been left to the mercy of a rough market that has shown them little consideration. It is true also that the new company has been anything but successfully launched, and that the underwriters have been saddled with a larger percentage of stock than they had expected. It is, however, amusing to read in the circular of one of the brokers that, "applicants have had allotted to them all that they applied for, and more than they required." The question naturally is, why did they apply for shares if they did not require them, and how could they have been allotted to them if they did not apply for them. The priority shares of the sister company, Wentworth Goldfields, have remained steady at about last week's prices, and it is expected that next week when the account is closed there will be renewed dealings.

Being thus deprived of any special feature to which to refer we have at least the satisfaction of being able to devote more space to mines generally, and first of all we begin with Nine Reefs which held a most successful meeting. The strength of the position is shown by the fact that the directors propose an issue of preference shares instead of a re-construction scheme. The instructive speech of Mr. Rowse showed clearly that, as depth is attained in the Colar field, mines become more and more valuable. Talking of Indian shares, a strong prejudice in some quarters appears to exist against Nundydroog, but we have good reason to believe that this company's stock is about the cheapest on the Colar field, and that any idea of the lode being poor or giving out is based upon a misconception of the facts. The capital, even after the Goldfields purchase is concluded, will be smaller than that of many of the other companies. Good accounts we also hear from Indian Consolidated, and as for Balaghat—the position was never better than it is at the present moment. Goldfields Company is in a really splendid position, and apparently holds, for the moment, the master key of the situation. It is "sitting in the receipt of custom" It has no need to search for buyers—they are coming to it thick and fast. The greater part of the Indian Mines have now postulated before it, and others are coming on. In shares and cash it is piling up assets "beyond the dreams of avarice."

In the general Foreign Market we have to note the successful meeting of Flagstaff Co., upon which the shares (instead of falling as they usually do with strange perversity on a good meeting) became steadier. Prof. Vincent holds 33,000 of them, and was in good form and spirits at the meeting. Of the new discovery the substantial evidence is now in the mine to the amount of about 14,000*l.* or more. If the shares were worth 11s. a few months ago, they are worth more than that now. Flagstaffs, according to all that was said, has only to "go in and win." Emmas are weaker on forced sales by a large holder, and owing to the intermittent character of the news received from the mine, which, however, is wholly favourable.

Lisbon-Berlyn meeting was successful, and the shareholders swallowed the resolutions as to the issue of half a million more shares more readily than the market will swallow the shares themselves. The public digestion is fairly good, but half a million shares! Dyspepsia threatens it in its most frightful form. Mr. Macklin appears to be very restive under criticism, but financial operations like this invite it. The efforts to bring Mount McClellan shares into notice have deservedly failed, and we can assure the management that meetings of the kind held this week to which the press generally is not invited, never do a company any good. The market for Montanas is like Sam Weller's knowledge of London "peculiar." We cannot but think that these shares are both good to buy and to hold. There has been some inquiry for Esmeraldas. Palmarejos have not benefitted by the late circulars and statements, and the shares steadily decline.

There has been renewed inquiry for Golden Gate and Golden Feather shares, owing to the satisfactory telegrams from Col. McLaughlin, and the general knowledge that the season for working has arrived. New Gustons have advanced, and there has been renewed inquiry at better prices for Richmonds. On the other hand, Frontino, Tolima, and Yankee Girls are weaker, and Lomas fell on the rumour that the directors are about to make a call.

Turning to the Kaffir market, Pigg's Peak, and one or two other descriptions are firmer, but generally the record has been the other way. This is notably the case with Land shares. Silatis are down 1s. 6d. and Oceanas 5s., whilst Goldfields of South Africa fell 1½. On the other hand, firmness has characterised the market for Explorings and Transvaal Gold. In the Diamond section the public are beginning to see that St. Augustines are worth buying, and large quantities of shares have been taken off the market this week. On the other hand De Beers and New Jagersfontein have justified our prediction and have fallen.

To a large extent the Australian section has occupied the attention of both speculators and investors. The Scottish Australian directors propose a dividend of 10 per cent. per annum, and to carry forward over 1,000*l.*

Day Dawn P.C. is to the fore with a profit from all sources totalling above 50,000*l.*, and substantial dividends declared throughout the year, but, strange to say, the market did not respond to an encouraging report like this. The course of Australian Broken Hill has been like that of a pilgrim to the shrine of his patron saint—full of vicissitudes. The shares have fluctuated at times violently, but on the week exhibit a fall of about 10s.

British Broken Hills have lost some of the firmness that characterised them a week ago.

In the Home market we deeply regret to state that the fall has continued without intermission, and, indeed, without

exception. Dolcoath, on the declaration of a 10s. dividend, and the statements at the meeting, fell 30s., and all other Home shares toppled in sympathy. The premier mine is now Carn Brea, which is selling at about 312,000*l.*; Dolcoath at about 296,000*l.*, and has gone down nearly one-half compared with three years ago; whilst East Pool shows a drop of about 100,000*l.* in the same time. Still it is just at the point when people most of all despair of Cornish Mining that a rise in the tin market puts a totally different complexion upon affairs, and causes prices to rise by jumps. We hear good news from the East Grassington Mine in Yorkshire, to the effect that the concern is now being worked at a profit. Should it ever blossom into dividends the result will be almost wholly due to the indefatigable energies of Capt. David Williams, the manager.

The Van directors are, what in Ireland would be called, "broth of boys." The company has scarcely been re-constructed six weeks and the energetic board—too energetic the shareholder will say—have beaten the record by making no fewer than four calls. There was first the call of 6d. on application; there was the next the call of 6d. on allotment; this was rapidly followed by the Easter offering of another 6d., and for fear the shareholders should spend too much at Whitsuntide the directors have asked them to pay another 6d., making, as we have said, 2s. per share in six weeks. A similar amount of energy thrown into the mine ought to disembowel all Llanidloes. But bantering apart, the calls have been rendered necessary to pay the debts of the old company. We understand the mine to be looking very well.

The outlook for the first part of next week is not particularly hopeful, as it will be mainly occupied by the settlement; but in its latter part we anticipate a substantial revival of prices.

African Lands.

There has been more actual business, but on the whole a fall is shown, the principal sufferer being Goldfields of Sonth Africa, on the rumour that the company will not pay a dividend for the last half-year. On the other hand it is stated the company is purchasing other properties in new fields. Oceana and Silati have again fallen. Explorings have risen on Paris buying.

Business.—The only two rises are Exploring ½; and Transvaal Gold, 6d.

The following have fallen: Bechuanaland, 1/16; British South African Chartered, 1/16; Gold Estate (Transvaal), 1/16; Goldfields of South Africa, ¼; Klerksdorp, 1s.; Nooitgedacht, 2s.; Oceana, ¼; Ophir, 6d.; Silati River, 1s. 6d.; Sutherland Reef, 1/16; and Zoutpansberg, 6d.

Making-up Prices. Apl. 8, 1891.	Name of Company.	To-night's Prices.

Kaffirs.

A somewhat considerable business has been transacted in this class, but on the whole prices have fallen. The chief sufferers have been the following:—Crown Reef, Durban Roodeport, Ferreira, Johannesburg Pioneer, and Wemmer. The market closes somewhat weak.

Business:—The only rises to note are in Pigg's Peak Preference of ⅛; Geldenhuis, 1/16; Great Gold Zone, 6d.; and Kleinfontein, 3/16.

The following have fallen:—Sheba, ⅛; Bantjes, 6d.; Black Reef, 6d.; Bothas Reef, 6d.; City and Suburban, ⅛; Crown Reef, ¼; Durban-Roodepoort, ¼; Ferreira, ¼; Golden Kopje, 1s.; Heriot, ⅛; Johannesburg Pioneer, ¼; Johannesburg Waterworks, 1/16; Jubilee, ⅛; Jumpers, 1/16; Langlaagte, 1/16; Langlaagte Block B, 3/16; Luipaards Vlei, 1s.; Main Reef, 6d.; Modderfontein, 6d.; Moss Rose, 6d.; Robinsons, ⅛; Salisbury, new, 1s.; Simmer and Jack, 1/16; Spes Bona, 1/16; Vogelstruis, 1s.; Wemmer, ½; Witwatersrandt (Knights), 1s.; and Walhuter, 1/16.

	Wolhuters	5/8 — 3/4

Diamonds.

There has been but a dull market in this class, and when changes have taken place they have been on the downward track, and this has been notably so with De Beers and New Jagersfontein.

Business:—There is no rise to record, whilst the following have fallen:—Bultfontein, 3d.; De Beers, 1/16; and New Jagersfontein, ¼.

Making-up Prices. Apl. 8, 1891.	Diamond Shares.	To-night's Prices.
20/6	Bultfontein Consolidated	20/3 — 20/9
15 5/16	De Beers Consolidated	15 1/4 — 15 3/8
3/6	Gordon	3/ — 4/
5 7/16	Griqualand West	5 3/8 — 5 1/2
5 7/8	New Jagersfontein	5 7/8 — 6
7/8	North-Eastern Bultfontein	1 5/16 — 1 7/16
—	United Jagersfontein	—
7/8	Burma Ruby Mines	1/8 — 1/4 pm.

Australian.

Without doubt the principal dealings have been in this class, and foremost have been the variations in Australian Broken, which closed 3, 3⅛ last week, have since been offered at 2¼, and close 2 7/16, 2 9/16, while the East Broken Hill Consols, after being ½ premium, buyers, close ⅛ dis to par.

Business.—There is no rise to record on the week, but the following have fallen :—Australian Broken Hill, ½ ; Bonnie Dundee, 3d. ; British Broken Hill, ¼ ; Day Dawn P.C., 6d. ; Etheridge, 3d. ; Gympie Great Eastern, 6d. ; Mosman, 6d. ; and New Queen, 3d. Wentworth Proprietary shares also close lower.

Indians.

This class has been somewhat dull, and with the exception of Ooregnm Preference (which have improved) shares generally are lower.

Nundydroogs were offered on the announcement of extra capital being wanted, and Goldfields, Ooregum Ordinary, and Champion are all slightly lower.

Business :—The only rise to note is in Ooregum Preference of ⅛, whilst the following have fallen :—Balaghat, 3d. ; Champion Reefs, ⅛ ; Goldfields of Mysore, ⅛ ; Indian Consolidated, 6d. ; Mysore Reefs, 3d. ; Mysore West, 3d. ; Ditto Wynaad, 6d. ; New Devala Moyar, 3d. ; Nine Reefs, 3d. ; and Ooregnm Ordinary, ¼.

Copper.

Mason and Barry's are again lower, and there appears very little life in the market as regards other shares, although they show a fall with the exception of Quebradas, which have slightly risen.

Business : A rise has to be recorded in Quebrada of ⅛ ; whilst a fall is noted in the following :—Bratsberg, 3d. ; Capes, ⅛ ; Copiapo, ⅛ ; Libiola, ⅛ ; Mason and Barry, 1 ; and Namaqua, ⅛.

General Foreign Shares.

There has been a good demand for Golden Gates and Richmond, which have both risen, together with several others in a lesser degree, while Frontino, Lisbon, Berlyn (on the meeting), Montaua, and Yankee Girl. Tolima A have receded, but only on dividend acconnt.

Business : The following show a rise :—Amador, 3d. ; Flagstaff, 3d. ; Golden Feather, 6d. ; Golden Gate, ¼ ; New Guston, ¼ ; Richmond, ⅛ ; and St. Angustine, 3d.

The following have fallen :—Barretts, 3d. ; Callao Bis, 3d. ; Emma, 3d. ; Frontino, ⅛ ; Graskop, 3d. ; Idaho, 3d. ; Lisbon-Berlyn, 6d. ; Loma, 6d. ; Montana, 1s. ; New Russell, 3d. ; Tolima, ¼ ; Venezuelan-Austin, 3d. ; Yankee Girl, 1/16 ; and Zaruma, 1s. 6d.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

Colonial Mines.

Brilliant.—A cable from Charters Towers, reports cleaning up on 18th inst., from 18 days' crushing, 1,200 tons, yielding 1,902 ozs. gold, value, 6,650*l*. A dividend of 2s. per share is declared.

Day Dawn P.C.—The directors have, through Messrs. Johnson, Matthey and Co., the gold ex Jumna, which realised 6,109*l*. 13s. 10d.

Gympie Great Eastern.—A cablegram from the mine, dated Apl. 22, gives the result obtained during the past month :—"24 days, 400 tons 314 ozs. ; 1,100*l*., value ; 340*l*., profit."

Mount Zeehan (Tasmania). — The ore received by this company, ex Prodano, realised 1,832*l*. 10s. 8d., being 24*l*. 12s. 8d. per ton.

Foreign Mines.

Elkhorn.—Cable : "Bullion shipped for week ending Apl. 18 was $9,200" (nine thousand two hundred dollars).

Golden Feather.—Cablegram from Col. Frank McLaughlin, the company's general manager at Oroville :—"First-class progress on all work. 90 per cent. of this season's canal finished.—McLaughlin."

Golden Gate Alluvial Syndicate.—A cable from Col. Frank McLaughlin, the company's general manager at Oroville, states :—"Work on flume is making rapid progress. Everything is going well."

La Plata.—The results for Mar. month, as cabled by the manager, are as follows :—"Mine royalties, $1,400 ; dump royalties, $220 ; profit for the month, $1,200. Prospects encouraging. White Cloud claim (Red Mountain) : The sinking of the shaft has been commenced.

Orita.—Cablegram from the superintendent relating to Rnn No. 55 :—"We have cleaned up from Mondeco, 200*l*."

Pinos Altos.—The out-turn for the week ended 11th inst. was $9,000.

Rio Tinto.—The company invite holders of share warrants to bearer to present Coupon No. 25 for the dividend of 18s. per share to be paid on 20th proximo.

Tolima.—The board have received advices by the mail of Apl. 23, 1891, from their mines, of which the following is an abstract :—Frias February returns, 8,937*l*. 7s. 2d. ; cost, 3,185*l*. 2s. 2d. ; profit. 5,752*l*. 5s.

United Mexican.—Telegram :—"San Cayetano : Gross returns for week ending Apl. 18, $1,850 ; expenditure, $3,560 ; loss, $1,710 ; El Cubo : Gross returns for week ending Apl. 18, $7,500 ; Expenditure, $4,700 ; profit, $2,800.

Home Mines.

West Basset.—The call was 6s., and the loss on the three months' working was 1,856*l*.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Transvaal Gold and Land.—The directors will pay off on Friday, May 1, the balance (9,362*l*. 10s.) of the debenture debt of the company.

Great Eukaby.—Bird-in-Hand Mine (Mar. 20) : Sinking Victoria shaft and extension. South drive bottom level progressing steadily. Machinery working well.

Graskop Mill and Mining.—A consignment of gold (235 ozs.) has been sold through Messrs. Johnson, Matthey and Co., for 918*l*. 6s. 5d., or 3*l*. 18s. 2d. per oz.

Sheba.—A cablegram has been received from Eureka to the following effect :—"The general manager cannot as yet accept from the contractors the Otto wire ropeway, which will require some further expenditure before the satisfactory working of tramway guaranteed by the contractor is attained. Crushing stopped for a few days ; 1,100 tons csushed up to the 17th inst."

Stanley (Sheba United).—Report from the mauager, Apl. 10 :—Upon my visit to the mine to-day I found that the crcvice in the shaft had very much improved, being now 18 to 24 in. in width, but the rock is yet too hard for good pay. There is considerable copper scattered through the ore, and this we hope will continue. We sent to the mill last month about 40 tons of milling ore ; this is quite low-grade ore, but we think it will certainly improve. The ore in the shaft, as I cabled you last week, assays over $27 per ton, and is improving in width as we sink.

Gipsy Queen.—Work has been carried on actively. In the rock at the end of the low level drive there are patchcs of quartz, and right in the northern corner of the forebreast a more solid body seems making. In No. 2 winze a drive towards the low level has been commenced. The most southern working in the upper drive has opened up a large body of quartz coutaining a large percentage of lead, which, though very poor in gold, carries a lot of silver. The drift north from the old shaft carries a seam of quartz about 10 ins. wide, with friable gold. Comstock Mine : No. 1 shaft : The old stope on the north side is secured, and workiug will now be started on the south side, where the best quartz is to be looked for. I have this morning received the following cable, dated 22nd inst. :—"Gipsy : Have struck rich quartz in the low level drive."

Pigg's Peak (Mar. 21).—Devil's Reef : Drift on top of the hill driving south-east drove for the week 25 ft., total 38 ft., passing through

small leaders. Bottom cutting, 150 ft., shows gold in panning, but not enough to mill. Two boys taking out ground in the bottom drive for sinking a shaft. One white man and six boys working on cart road. Both carts working well. Delayed by rain 1½ days. Remaining boys filling bags, getting out stuff for mill and loading wagons. I have put one prospector out on the concession to endeavour to find the continuation of the Devil's Reef. Peak: Drive No. 2 south: Drove for the week, 5 ft., total, 17 ft.; no change in ground. Work at the Peak is progressing slowly as the ground passed through is very hard. I have one man prospecting the Peak, who has found indications of gold in an entirely new place. No. 1 Works: Started new drive, distance from face 20 ft. Battery: The heavy rains damaged the dam to such an extent, that we were obliged to put a gang to work on same. We will have finished in a few more days, when crushing will be resumed.—E. J. Murray.

Edwin Bray (Mar. 14).—Report from manager.—Mine: Working, No. 2 quarry: We have a good supply of quartz at the mine, and it is my intention to start at once sinking a winze from the level of No. 2 drive to our lowest level. Ropeway: I am sorry to say that the ropeway gave us considerable trouble during the last week. First one bucket got off the line in the longest span, and coming in contact with one of the standards pulled it down, compelling us to stop from Wednesday afternoon till Thursday midday. Friday was also bad, and another bucket having left the carrying wire another standard was bent to the ground, and all work had to be stopped. The ropeway delivered only 338 buckets representing 84½ tons of quartz during the whole week. I must add that the line was in order at 2 p.m. to-day (Monday), and the ropeway is now in full work. Mill: The battery has worked well, but the belts and machinery have suffered considerably from the heavy rain we had this last week. The pump belt had to be replaced for the second time, and some of the battery belts will not last very much longer. On account of the accidents to the ropeway we exhausted the reserve of quartz we had at the mill, and were compelled to have the stamps idle from Sunday morning till to-day (Monday) 2 p.m. The battery is now crushing with 25 stamps.

COMMERCIAL NOTES.

METALS.

The Metal Market has been quiet during the current week. Bank Rate remains 3½ per cent. Bar silver declined to 43⅞d., closing at 44d. per oz.

Copper has been easier. G.M.B. Warrants sold from 51*l.* 10s. to 50*l.* 15s. cash, and from 52*l.* to 51*l.* 2s. 6d. three months. To-day's prices are 50*l.* 17s. 6d. cash, and 51*l.* 5s. three months. We quote English tough, 54*l.* to 56*l.*; best selected, 56*l.* to 58*l.*; strong sheets, 64*l.* to 65*l.*; India sheets, 60*l.* to 61*l.*; yellow metal, 5⅛d. to 6d.; ore, &c., 9s. 3d. to 10s. 6d. per unit. The world's production for 1890 is given as 269,685 tons against 261,650 tons in 1889.

Tin.—Straits has been freely sold at declining prices, from 90*l.* to 88*l.* 17s. cash, and three months from 90*l.* 5s. to 89*l.* 2s. 6d. The decline has been mainly caused by the collapse of prices in New York, and the proposed closing of tinplate works for July. Lower prices are also reported from the Straits. Our prices to-day are 88*l.* 15s. to 88*l.* 17s. 6d. cash, and 89*l.* 2s. 6d. three months. The Dntch market has been easier. We quote Banca fl53¾, and billiton fl53½. The billiton sale in Batavia went at an average of 62.50fl. per picul, parity with 53⅞fl. per 50 kilos in Holland, or 90*l.* per ton. English Ingots, 92*l.* 10s. to 93*l.*

Tinplates are weak. Ordinary coke for prompt delivery quoted 17s. Liverpool. July-August, nominally, 15s.

Spelter quiet. We quote ordinary brands 22*l.* 12s. 6d. to 22*l.* 15s. ex ship here.

Lead has been weak. We quote soft Spanish, 12*l.* 7s. 6d.; soft English, 12*l.* 10s. to 12*l.* 15s.; L.B. China pigs, 13*l.*; sheets, 13*l.* 10s. to 13*l.* 15s.

Quicksilver dull. Rothschild reduced his price late last Friday to 8*l.*, which is his present quotation; seconds, 7*l.* 17s. 6d.

Antimony weak. Hallett's price for America, 62*l.* 10s. for May delivery; ordinary brands and delivery of English, 60*l.*; foreign, 58*l.* to 59*l.*

Dividends Declared and Announced for Week Ending Apl. 25.

Asphalte de France	14s. per share.
Alliance Trust	5 per cent.
Australian Mortgage	10 per cent.
Ansell and Sons	8 per cent.
Bank of Montreal	10 per cent.
Bombay Gas	4 per cent.
Bnenos Ayres and Ensenada Railway	2 per cent.
City of Buenos Ayres Trams	1s. 3d. per share.
City of Glasgow Life	8s. per share.
Ceylon Tea	15 per cent.
City of Santos Improvement	7 per cent.
Continental Metropolitan Trams	6 per cent.
Demerara Railway	4 per cent.
Eastern Mortgage	8 per cent.
Hamburg and Altona Trams	5 per cent.
London and Lancashire Fire	20 per cent.
London Chartered Bank of Australia	8 per cent.
Metropolitan Electric Snpply	2s. per share.
Mexican Railway	3 per cent.
Monte Video Waterworks	2½ per cent.
Otago and Southland Investment	5 per cent.
Reuter's	4s. per share.
Union Bank of Scotland	11 per cent.
Union Steamship of Copenhagen	3 per cent.
Victorian Mortgage Bank	8 per cent.
Western and Brazilian Telegraph	9s. per share.
West India and Panama Telegraph, 2nd Pref.	34s. 6d. per share.
West India and Panama Telegraph, Ordinary	9d. per share.

ZWARTLAND (TRANSVAAL) LAND CO., LIMITED.

DIRECTORS TAKE ACTIVE STEPS TO PROVE AND WORK THE PROPERTY.

As soon as possible after allotment the directors secured the services of Mr. F. Lavington Evans as manager, who left for Pretoria in Jan., 1890. The circulars issued to the shareholders on June 30 and Dec. 5, 1890, explained the difficulties which had arisen with regard to the areas of the farms in the Waterberg district, and the directors are now advised that the Government are inquiring into the matter with a view to the appointment of a re-inspection commission at an early date. According to latest advices the Government re-inspection of the Lydenburg district will commence in a month or two, when the company's manager will, if possible, accompany the re-inspection commission. Owing to the imperfect inspection of the farms in these districts, it has been impossible to proceed with prospecting during the past year to the extent which the directors desired. Expeditions are now being organised to the farms in the Waterberg (Zoutpansberg) district, and these are expected to start in May. Owing to the delay in prospecting, caused by the above difficulties, it has not been found necessary, up to the date of this report, to make a call of more than 1s. per share beyond the 15s. per share specified in the prospectus. The auditors, Messrs. H. Woodburn, Kirby and Co., offer themselves for re-election by the shareholders.—W. H. Fox, Secretary.

THE DAY DAWN P.C. GOLD MINING CO., LIMITED.

A BIG PROFIT FOR THE YEAR AND GOOD DIVIDENDS FOR THE SHAREHOLDERS.

A very satisfactory report is that just issued by the directors of this company. The profit shown in the revenue account to Dec. 31 is 45,421*l.* 2s., to which has to be added the balance brought forward from the year 1889, amounting to 4,585*l.* 11s. 5d., making a total of 50,006*l.* 13s. 5d. Out of this sum three dividends of 6d. a share, free of income-tax, amounting to 35,750*l.*, have already been paid, leaving a balance of 14,256*l.* 13s. 5d. This is sufficient to pay a further dividend of 6d., leaving a balance of 2,006*l.* 13s. 5d. to be carried forward. There was expended during 1890, 12,740*l.* 4s. 2d. in capital charges, namely, the purchase of the East Day Dawn property (lease No. 1,280), sinking the shafts, new plant and machinery, and other permanent improvements. The capital expenditure in question has been fully justified, for it has already greatly reduced the working charges, and a table shows that although 2,328 more tons were treated in 1890 than in 1889, the cost was 2,971*l.* 16s. 3d. less. The saving of 4s. 10d. per ton applied to 28,879 tons amounts to 6,979*l.* Besides the diminution of 2,971*l.* 16s. 3d. in the mining and milling charges there was a diminution of 532*l.* 13s. 5d. in the general charges, making a total decrease of expenditure in 1890, as compared with 1889, of 3,504*l.* 9s. 8. The reduced percentage of the ore has unfavourably affected profits, but the company's record is a good one.

REPORTS OF MEETINGS.

DOLCOATH.

DIVIDEND OF 10s. PER SHARE.

The adventurers in Dolcoath held a 12-week meeting on the mine on Monday.

Mr. M. H. Williams

presided.

The accounts showed that the labour costs had been 12,261*l.* 16s. 1d.; tribute, 1,744*l.* 13s. 5d.; merchants' bills, 5,564*l.* 1s. 10d.; rates, 281*l.* 13s. 8d.; stannary dues, 26*l.* 11s. 2d.; total debits, 19,878*l.* 16s. 2d. Tin sold, 456 tons 7 cwt., at an average price of 52*l.* 17s. 9d. per ton, for 24,137*l.* 19s. 4d.; less dues, 1-18th (1,340*l.* 19s. 11d.), 22,795*l.* 19s. 5d. Extra carriage, 57*l.* 1s. 1d.; old iron sold, 2*l.* 1s. 3d.; discounts, 32*l.* 5s. 7d.; total credits, 22,888*l.* 7s. 4d.; profit, 3,009*l.* 11s. 2d. The average price of tin was about 6s. a ton less than during the previous three months.

Capt. Josiah Thomas said considering the great checks with which they had met, he thought the returns must be fairly satisfactory. The next time he hoped they would have a few tons more.

On the motion of Mr. Heard, a vote of thanks was accorded to the committee for their services in this matter, and they were requested to pursue their efforts.

We understand in the course of the next few days an enterprise of considerable promise will be submitted to the public under the title of the Pitkin (Colorado) Mining and Exploration Co., Limited. Unusual trouble has been taken to ascertain the value of the property which from all points of view can be commended with confidence to public notice. Sufficient work has been done to prove its value and it is well located for working. The property is described by an engineer of high reputation in this country as "both promising and valuable."

PITTSBURGH CONSOLIDATED.—Mar. report:—We have run three mills during the month as far as possible, but have lost 288 hours, or 12 days, for one mill. This is owing to having had an insufficient number of men in the mine, and until rise C is connected with No. 5 level we shall not be able to keep more than three mills running continuously. More men will be put on in the mine, and better results may be expected during the present month.

SILVER MINES OF LA LUZ.—The manager writes:—If I am to believe what is told me, and the willingness of the miners to work the Zapopan, that mine will be more than self-sustaining in a short time, and the San Miguel has the name of being better than all the mines in this section combined. My foreman leaves me one week from to-day, but I have written to Guadalajara for another man to take his place, and as I know the party, and believe he will come, I will not be inconvenienced by the change. I will push the works as vigorously as possible, and as economically as I can.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Apl. 23).—Wheal Maria, Capel Tor, Eastern shaft: During the past month the 112-fm. level west has been driven 3 fms. 4 ft., the lode proving from 1 to 1½ ft. wide, composed of capel and quartz, with peach, and in places a little copper and mundic ores. The 74-fm. level east has been driven 1 fm. 3 ft., the lode proving small and unproductive. This point having reached the cross-course, and the appearance of the lode not being of such a character as to warrant further prosecution in this direction, operations have been suspended. Watson's engine shaft: The 132-fm. level west has been driven 3 fms. 4 ft. 2 ins., the lode proving of good size from 3 to 4 ft. wide, composed of capel and quartz with fluor, and for the greater distance driven yielding saving work of copper and mundic ores, with a little tin. It has improved, and will now yield from 3 to 4 tons of copper and mundic ores per fm. The 160-fm. level east has been driven 2 fms. 2 ft. 6 ins., the lode proving 4 ft. wide, composed of strong capel and quartz, with fluor and small quantities of copper and mundic ores. The lode has recently improved here also, and is now worth 3 tons of copper and mundic ores per fm., and is very promising. The machinery throughout the mines is in good condition and working well.—I Richards.

DRAKEWALLS (Apl. 15).—The contractors are carting away the pile of arsenic soot, which we anticipate will weigh off about 70 tons. We purpose selling a parcel of tin to-morrow. We sampled on 10th inst. 105 tons computed copper ore, which will be sold on 23rd inst. The machinery throughout the mine is all in fairly good working order.—H. Rodda.

DRAKE WALLS (Apl. 23).—Since last have put in a new 10-in. working barrel in sinking lift. Lode in 160 east: 10 tons mundic, and saving work for tin. A little more capel in bottom of drivage, mixed with mundic. Lode in 160 west: 7 tons mundic, and saving work for tin. Lode in stope, back of 160 west: 162 tons mundic, mixed with a little tin. Stope in bottom of 147 west: 12 tons mundic per fm., and a little tin. Ground in 147 east: 4 tons mundic, and a little tin. Nothing new in 147 west; lode still disordered. Stope bottom 132 west of cross-course: 3 tons of capel, and 3 tons mundic per fm. Stope back of 132 west of cross-course: 6 tons capel and mundic per fm. Contractors carted away 69 tons 10 cwt. Arsenic soot. Sold on 17th inst. 5 tons 9 lbs. black tin, at 50*l*. Walls for jiggers now up; putting jiggers in house for fixing.

EAST GRASSINGTON (Apl. 16). — Report from the mine manager:—Hammond shaft: The 47-fm. level west continues in a strong masterly and well defined lode 2 ft. wide, the matrix or filling matter being chiefly lime spar and gossan, mixed with branches of blue lead ore, worth fully 23 cwt. per fm. and improving. We are now in advance of the 37-fm. level, and fast approaching whole ground giving 20 fms. of backs, and our prospects towards the hog and beneath the shale beds are highly encouraging. Stope in back of level in a lode 18 ins. wide worth 10 cwt. lead ore per fm. Rise east of shaft has been communicated with intermediate level, hopper fixed in back of level, and the ore stuff delivered downwards to the shaft. No. 2 sump: Operations have been temporarily suspended here owing to a strong feeder of water met with in driving westward, in consequence of the late heavy rains, and the porous nature of the vein; we have, however, proved the vein stronger and richer than in the 47, being strong evidence of the ore bodies reforming beneath the zone or channel of barren ground met with above. Two stopes in intermediate level and 37 worth respectively 10 and 12 cwt. lead ore per fm. Harris Main Engine shaft: I am pleased to notice the vein in the 47 east gradually improving as we get clear of the nip referred to in my last, and the leader of gossan widening out and containing nice stones of lead ore. Two stopes in back of level worth together 22 cwt. of lead ore per fm. The 37 east is advanced 27 ft. from the heave in a vein 18 ins. wide, worth 12 cwt. of lead ore per fm. Winze is down 13 ft. below the 37. Two stopes worth respectively 10 and 12 cwt. of lead ore per fm. Weather has improved during the week; we have commenced cutting our annual supply of peats as smelting fuel; a much larger supply will be required this season to meet the increased returns of ore. Dressing in full swing. Machinery in good order, and working smoothly. We have delivered last parcel of pig lead, and resume smelting on Monday next.

ENGLISH ANTIMONY.—The manager reports Apl. 20: We have commenced to drive north and south on the course of the lode with six men in each end. The lode in the end driving south of trial shaft seems to be improving and opening abroad in the bottom part of the level. We are raising some good stones of antimony.

GAWTON (Apl. 16).—The drivage of the 105 east is being continned by the side of the lode within the past week, consequently there is no change in the value since last reported. The lode in the 95 west of cross-cut is yielding 10 tons of mundic per fm. In the 82 west of cross-cut the lode will yield 9 tons of mundic per fm. At the same level, driving west of No. 3 cross-cut, the lode is carried 5 ft. wide, yielding 11 tons of mundic per fm. All the stopes are without change to notice.—G. Rowe.

LEADHILLS (Apl. 20).—Brown's vein: The 145-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, mostly quartz, with ore worth 30 cwt. per fm. The stope above the 145 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The two stopes above the 145 south of Wilson's shaft are worth 30 cwt. and 15 cwt. of ore per fm. respectively. The stope above the 145 north of Wilson's shaft is worth 30 cwt. of ore per fm. The 130-fm. level north of Jeffrey's shaft shows a vein above 8 ft. wide, mixed with promising quartz and wet, but without ore. The four stopes above the 130 north of Jeffrey's shaft are worth 25, 20, 25 and 5 cwt. of ore per fm. respectively. The stope above the 130 south of Jeffrey's shaft is worth 30 cwt. of ore per fm. The stope above the 130 north of Wilson's shaft is worth 20 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft keeps in a vein above 4 ft. wide, but charged with improved quartz and a good stone of ore, not, however, to value. The stope above the 115 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 25 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft is still in a vein above 4 ft. wide, well mixed with kindly quartz, but without ore. The 85-fm. level north of Jeffrey's shaft continues in a vein 3½ ft. wide, showing some quartz, but no ore. The 70-fm. level south of Wilson's shafts is in a vein 5¼ ft. wide, charged with somewhat better quartz, although keeping without ore. The 35-fm. level south of Flat Rod shaft keeps in a vein above 4 ft. wide, showing a rib of quartz and ore, worth 20 cwt. per fm. The stope above the 35 south of Flat Rod shaft is worth 30 cwt. of ore per fm.—T. Newbigging.

LEEDS COPPER (Apl. 13).—I am pleased to tell you that Martin (the man left in charge) has fulfilled his duties very satisfactorily. The 20 fathom west end is still in a good vein of copper ore, and the drive opposite steam drill stope is holed to a small shaft sunk on same vein and filled; this has made it very convenient for the getting away of the stuff from steam drill stope. We shall continue steam drill drive to-day, which is very promising, and in a short time I hope will open out good stoping ground. Shall put about 20 more men in the mine this week as early as possible.—T. R. Davey.

MID-DEVON.—Report for week ending Apl. 18.—Surface: It only takes 3¾ revolutions of wheel per minute to cope with influx of water to shaft. A shaft: Water kept drained to bottom of the 80. C shaft: The 60-fm. level has been driven obliquely towards south wall of lode, by nine men, 1 fm. 2 ft. 6 ins.; total distance from shaft, 93 fms.: the strata is chiefly composed of garnet, interspersed with yellow ore and arsenical mundic, with an admixture of capel, hornstone, and chlorite. The position on which the two men are working at the 60, east of the winze following some small branches of ore, does not yet show any material improvement; it yields a little ore in saving quantities, which is embedded in congenial strata, in similar at the 50 I have seen good deposits of ore.—J. Neill.

PRINCE OF WALES (Apl. 22).—The shaft is sunk 15 fms. 4 ft. below the 166-fm. level, and the shaftmen are now engaged taking down the lode, which maintains its size and character, viz, 2 ft. wide, well defined, and composed of capels, peach, and quartz, with a little tin. We now purpose driving east and west on the course of the lode and shall commence forthwith. In the cross-cut driving south there is no change since last reported. It is reset to six men at 8*l*. per fm. In the tribute department there are 10 pitches being worked by 26 men, at tributes varying from 10s. to 13s. 4d. in the £.—J. Prowse.

SOUTH DARREN (Apl. 23).—The shaft is let to sink below the 142 to six men, to be sunk by six men and three labourers at 17*l*. 10s. per fm., the men to pay the labourers. The size of the shaft is 12 ft. by 6 ft., but for the first few fathoms it will be much more than 6 ft. wide. Cistern and bearers have been fixed, and the lift put right. I expect the men will be able to commence on their bargains in the beginning of the week. The 130 end west is let to four men at 9*l*. 5s. per fm.; the lode is strong, worth 10 cwt. of silver-lead ore per fm., with good stones of copper. The ladderway has been completed from the 40 to the 130, and a new footway is being put down from the 130 to the 142, through a stope east of the shaft. The drawing of ore stuff has been hindered by the work in the shaft, but will be pushed on as soon as we commence to sink. On Saturday last 15 tons of silver-lead ore was sampled.—J. Mitchell.

WEARDALE LEAD.—Report on Weardale Co.'s mines for week ending Apl. 18:—Ore raised for week, 100 tons; ore dressed for week, 118 tons; ore, slag and fume, smelted for week, 121 tons; producing 62 tons of pig lead.

WEST WHEAL GRENVILLE (Apl. 21).—In the 130-fm. level driving north of the engine shaft, the lode has been cut into about 6 ft., which shows it to be composed of capels, quartz, muudic, and carrying a little tin. The 120 cross-cut driving north is extended 102 fms. 1 ft. In the early part of last week we intersected a small mineralised branch, since which may be only of a temporary character. The 120-fm. level driving east of cross-cut on No. 2 vein is now extended 25 fms. 5 ft. During the past week we have passed through a crossing in this drivage, around which the lode has improved. The stuff broken from this end by boring machine, as sampled, has given a result of about 22 lbs. of tin to the ton of stuff. The lode in the forebreast still presents a promising appearance, carrying tin, and letting out a little water. We are not yet certain the junction of No. 2 vein with the main lode has taken place.—J. Skeat, N. Temby.

WHEAL CREBOR (Apl. 21).—The cross-cut south at the 156 east of the new shaft has been driven since Apl. 14 report 8 ft., but no more lode nor mineral-bearing branch has been discovered, and as the end is now in country rock we think it best not to drive it any further, but continue the drivage east on the hanging part of the lode. The stopes and pitches in the mine are yielding about the same amount of mundic and copper ore as reported last week. We have sold 55 tons coppery mundic at 40s., 25 tons No. 1 mundic at 30s., and 150 tons No. 2 at 16s. per ton, and have sampled 60 tons copper ore of 9¼ per cent. produce for sale on the 23rd inst. The particulars of the mundic now in stock and ready for sale shall be forwarded after the above lots are weighed off.—P. D. Holman.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (Mar. 31).—Extracts from a letter from the superintendent:—Mine: The drivage on the new Tirito road for last week was 38.4 ft. The work is being pushed without interruption, and the ground being very favourable, the daily drivage is now from 7 to 8 ft. As far as I am able to judge from our old maps, after driving about 150 ft., we ought to connect with the Primera Veta drift running west of the tunnel; this drift is supposed to be on solid ground, and is expected to save us about 156 ft. of drivage. From the breast of this drift we shall have to drive about north 32½ degs. east for a distance of 177 ft., to connect with a cross-cut from the tunnel. After completing this piece of work, we shall be in a position to explore the Primera Veta northwards. This Primera Veta lode, I believe, corresponds to the 100 lode in Mina Grande, and stands good chances of making an ore body somewhere between Tirito and Mina Grande. The tunnel is still stopped with the bulkhead, to prevent access of air to the section in fire. We cannot yet ascertain whether the fire has been completely extinguished or not, but as we have stopped all source of ventilation as far as practicable, I believe the fire cannot make much progress. I have not attempted to open the bulkhead and inspect inside, for fear that if there is still any fire it would at once take new impulse with the access of fresh air. We have a few men working at the Cruz Verdi Mine, continuing the drift north from bottom of shaft, and also stoping a branch of green ore, which is producing from 1 to 2 tons mineral daily. We are also doing something in the way of improving the water supply for the reduction works. The line of 1¼ in. pipe from Calerita, one of our water springs, was entirely choked with lime accretions, and we are cleaning the pipes by boring them with steel bar and hammer; it is quite a job that is taking considerable time, the length being about

7,000 ft., but when completed will give us about 1 in. of water, which will be of great assistance. We also fixed a steam pump in an old well at the mine yard in order to drain it and drive a cross-cut from the bottom of the well in search of water springs. Reduction: The mill is idle this week. There is still a little ore to be stamped, but we had to send all the water available to the leaching works. There is a stock of stamped ore which will keep the chlorination furnace going for about three weeks, or a little less. At the leaching vats, lack of water has been a constant hindrance; the precipitate collected was not enough to run the cupel this week, and we postponed the clean-up till next Saturday.

ARGENTELLA (Apl. 16).—No. 2 Marine: In the cross-cut south, we have cut the footwall and found a very kindly lode of quartz laying on it, about 12 ins. wide. We have nothing so promising in cross-cut No. 1. The lode from hanging to heading is 7 metres 70 centimetres. The whole lode produces more pyrites in cutting through. The men having started driving again east on the hanging. We will cross-cut again after we have advanced another 25 or 26 metres. Eastern drive set to six men at 60 francs per metre. Quartz Reef, cross-cut south: We are making headway here. The ground is a little stiffer as we are getting into the strength of the hill. Ogliastrone Valley: Driving east. Have cut a little more copper pyrites. The whole drive is very promising. In another fortnight we shall cut into the body of pyrites. No. 3, Rome's workings, cross-cut south: Better progress; strings of silver-lead more numerous and ground more kindly.—J. B. Roberts.

BALAGHAT-MYSORE (Apl. 1).—I am sorry to say we continue to suffer so seriously from cholera scare, that we are not yet able to resume full operations. I have, therefore, but very little progress to report. At the time of writing the last report, a few local coolies had returned to work, and we were fully expecting several others would follow; a few have done so, but I regret to say they have not as yet turned up in sufficient numbers to enable us to resume all our works. We are, however, in a more satisfactory state to-day than for some time past, and I trust the coolies will so continue to daily increase that we may soon be in full working order. North engine shaft: We are to-day clearing up the shaft, and I hope the siuking below the 500-ft. level will be resumed in the course of a day or so. The 500-ft. level north has been advanced 8 ft. 3 ins., or 471 ft. 6 ins. from the shaft; the lode is at present unproductive. The No. 1 winze in the bottom of this level has been idle since the last report; hence there is no change to notice. The winze is down 50 ft. below the level, and yields quartz of about 1 ft. wide, aud assays 2 ozs. 6 dwts. 21 grs. of gold per tou. The stopes in the back of this level produce quartz of about 1 ft. wide, and assay on an average 3 ozs. 1 dwt. 17 grs. of gold per ton. The 500-ft. level south and the stopes in the back of the level continue idle owing to the scarcity of coolies. The winzes Nos. 2 and 3 in the bottom of the 410-ft. level are also idle for the want of coolies. The machine rise in the back of the 410-ft. level has been risen 10 ft., or 28 ft. above the level, and, I am glad to say, has been communicated with the 330 winze. This now brings Haines' shaft to the 410-ft. level. The stopes in the back of the 410-ft. level yield quartz of about 1 ft. wide, and assay, on an average, 1 oz. 3 dwts. 6 grs. of gold per ton. The plat stopes in the back of the 330-ft. level yield quartz of about 9 ins. wide, and assay 4 ozs. 8 dwts. 4 grs. of gold per ton. The stopes in the back of the 330-ft. level north yield quartz of about 1 ft. wide, and assay 3 ozs. 1 dwt. 6 grs. of gold per ton. The machine winze in the bottom of the 330 level north has been sunk 2 ft. 6 ins., or 46 ft. below the level, and is now communicated with the rise in the back of the 410-ft. level. The stopes in the back of the 270-ft. level north produce quartz about 1 ft. wide, and assay, on an average, 1 oz. 3 dwts. 8 grs. of gold per ton. The stopes in the back of the 270-ft. level south produce quartz of about 9 ins. wide, and assay, on an average, 2 ozs. 9 dwts. 13 grs. of gold per ton. Haines' shaft: The timbering, &c., of the ground around this shaft at the 270-ft. level is being pushed forward as fast as the limited staff at command will admit of; when secured, we shall at once proceed with the shaft below the level, and hope in a short time to connect it with the shaft or winze below the 330; the shaft will then be in direct communication with the 410-ft. level north of the north engine shaft. Surface: I am pleased to say a considerable number of our surface labourers have returned to their work; our surface work is, therefore, now being carried on in the usual way. Milling: We have again resumed crushing, but, as yet, cannot obtaiu the necessary dirt to work full time; our returus will consequeutly be very much lower than usual, but this will, of course, right itself again as soon as the necessary coolies return to the underground work.—J. Pryor.

BRATSBERG.—Report for week ending Apl. 11:—Hoffnung Mine: There is practically no change at either No. 2 or No. 3 adit levels since last week's report. At No. 4 level the lode although still yielding saving stuff, is not rich enough to value. Ball's shaft is now sunk about 6 metres under No. 4 level, and the lode continuing unproductive; we have decided to stop sinking at once. and when the stoping excavation in the back of No. 4 level is sufficiently advanced as to admit of applying the portable hoisting engine at a desirable point; we will make another trial sink further west in the bottom of No. 4 level. The lode in the trial level iu Murchison's section is yielding about 1 ton ore per fm. Johannes Mine: The westeru level on Howard lode is apparently inuproving, now yielding nearly ½ ton per fm. The eastern level is worth about ½ ton per fm., and the rise going in the back about 1 ton per fm. Surface work and remarks: During the past week we have set in motion and kept running on trial one set of the jigging machines, in order to get all to run smoothly, and excepting suudry small adjustments, everything rau very well from the first. We are now engaged in paiuting the machines, which will take some days to complete and dry, when we hope to start operations with one crushing machine, which will treat all the stuff we shall have to handle, until such time as the frost disappear, and a start on the stuff accumulated at the sortiug house is possible. The other set of jigging machines is in positiou awaiting connectiou with the couuter-shafts, and water main pipe, with sundry other small details before also being ready for operations.—J. D. Holman.

BRITISH BKOKEN HILL (Mar. 11).—No. 1 shaft, second level: The thirteenth floor is making fair progress, but it is a nasty place to work in, being surrounded with loose fallen rocks, with a yawing chasm to the southwards, extending up towards No. 3 shaft. No. 2 shaft: Stoping has been continued at the first aud second levels. The ore on the first level is mostly cleau cerusite or crystalliue carbonate of lead, and carries only a few ouuces of silver per ton. That on the second level is more friable, and intermixed with gossan and other substances, and carries less lead and a little more silver. The ore broken from both levels is being sold to the Australian Smelting and Refining Co. No. 5 shaft: The sinking done during the week amounts to 7 ft., making the total depth 86 ft. below the first level. The ground is a little harder again, and the flow of water is increasing slowly, which together tend to retard our work. Surface: The work in connection with the new smelting furnace and the reconstruction of the O.D. mill is all going on very well.

CALLAO BIS (Apl. 2).—The directors have received advices from the mines as under:—Independiente: Nothing has been done in the shaft since last reported. The miners are still cutting station, but I hope in a few days more this will be completed, when preparations will be made to fix the plunger lift, to resume the sinking of our shaft. No. 3 cross-cut has been driven 33 ft. from shaft 73-ft., where the lode is intersected, showing visible gold. We are advanced 6 ft. through lode matter, but have not met with any hanging wall. I hope by the next mail to give you the thickness of this lode and its underlie, although we have a quantity of water to contend with, and it is with great difficulty the work can be carried on. No. 2 level west: Winze in the bottom of this level has been advanced 12 ft. Lode showing 5 ft. wide of good value, but owing to the water we have met with in the last few days, we are obliged to suspend it for the present. I am of the opinion as we advance on the course of the lode in the No. 3 level, this will soon fall off, when we shall be able to resume the sinking to open out stoping ground. No. 2 raise: Stope advanced 5 ft. Lode showing 9 ft. wide of good value. No. 1 stope advanced 4 ft. Lode showing 12 ft. wide of good value. Surface work: Loading of Cornish pump almost completed. New mill: Mortars for 20 stamps completed. We are now raising frame timbers to receive battery post. I hope to have 10 stamps running in May.

CANTABRIAN.—The report just received from Capt. Roskilley, the manager at the mines, shows that duriug the last few months the unusual severity of the weather and continual heavy snowfalls have greatly retarded the surface work and the erection of the new engine and machinery. These difficulties are now surmounted, and during the ensuing month the main shaft will be unwatered, which will allow of the unusually rich ore said to have been opened up at that depth to be extracted, and the works will then be in full operation. The ore is greatly improving in quantity and value, and as soon as freight can be arranged, a shipment of high elass ore now at surface will be despatched to Swansea. He says: "Excellent and most satisfactory progress has been made in all our surface work during the latter part of the week, and if the weather continues as favourable as at present we shall soon have everything finished and the enginc going, with a view to which I am putting all the force possible npon building both the boiler house and balance bob loading."

CASTILLON (Apl. 20).—Since resuming work at the mine on the 1st inst. the weather has been most unfavourable to our works generally, the working of the eable having been frequeutly interrupted, in consequence of which our output of mineral has not been so good as it otherwise would have been. There is no material change in the yield of the various stopes, &c., since their values were last given. They are now as follows:—St. Eugenie level: No. 1 stope in the bottom west of winze, block D 12=25 cwt. of silver lead ore and 65 cwt. of blende. No. 2 stope in the back, block C 14=5 cwt. of silver lead ore and 20 cwt. of blende. No. 3 stope in back east of rise, block B 15=10 cwt. of silver lead and 30 cwt. of blende. No. 4 stope in back west of rise, block B 17=7 cwt. of silver lead and 20 cwt. of blende. No. 5 stope in back, block D 20=6 cwt. silver-lead, and 20 cwt. of blende. No. 6 stope in back east of rise, block E 20=10 cwt. of silver lead and 40 cwt. of blende. No. 7 stope in back, block F 23=20 cwt. of silver lead and 20 cwt. of blende. No. 3 level: No. 1 stope in baek, block E 23=20 cwt. silver lead and 25 ewt. of blende. St. Victorine level: No. 1 stope in back, block A 17, 18=8 ewt. silver lead and 35 ewt. of blende. No. 2 stope in back, block B 19, 20=10 cwt. of silver lead and 35 cwt. of blende. Ezpeleta level: No. 1 stope in bottom, block B 29, 30=20 cwt. of silver lead and 55 cwt. of blende. No. 2 stope in back, block A 29=15 cwt. of silver lead and 40 cwt. of blende. New level: Stope in back, block A 15=5 cwt. of silver lead and 25 ewt. of blende. We are yet unable to start work in St. Barbe level in consequence of the vast quantity of snow lying there, but we hope to be in a position to do so early next month. I have no change to report in the Bentaillon level cross-cut. The end still continues to be in the lode, which shows a mixture of silver lead and blende. On the 17th we sampled a parcel of silver lead of 50 tons, sample sent on the 18th. Eighty-five tons of blende have been delivered at St. Girons, and we expect to complete a cargo of 200 tons by about the 12th prox. Machinery in good order.—John Edwards.

CHAMPION REEF.—Superintendent's report for the fortnight ending Mar. 29.—Mysore section—Carmichael's shaft: During the fortnight the men have been employed putting in the new drawing lift, which is now finished, and the sinking of shaft resumed. The cross-cut at the 225-ft. level has been advanced 10 ft.; total length, 32 ft. During the last 3 ft. there was a slight change in the rock which now carries small veins of mineralised matter. This change is very favourable, and beyond doubt indicates a close proximity to the lode. Ribblesdale shaft has been sunk 3 ft. 6 ins.; total depth 226 ft. 3 ins. There is little or no change in the appearance of the rock since last reported. The ground and stringers of quartz still have an underlie to the west. Garland's shaft: Sinking 9 ft. 6 ins.; total depth, 222 ft. The rock in this shaft is very favourable for siuking, and good progress has been made. We are sinking on the course of the lode. At Dalyell's shaft, 6 ft. 6 ins. have been sunk, making a total depth of 225 ft.; the lode has improved a little since last report, it is now about 1 ft. wide of good-looking quartz. Coromandel section: The 320 drive north of Prospect shaft has been extended 9 ft.; the lode is 3 ft. wide, assaying from ½ oz. to 15 dwts. per ton. The 290 end south has been driven 4 ft. 9 ins.; total distance from shaft, 139 ft. 9 ins.; the lode at this point has opened out again to a foot in width of quartz, but unfortunately it carries only a trace of gold. The cross-cut east from bottom of winze below the 290 has been advanced 4 ft. 3 ins.; total distance, 14 ft. 3 ins. Not having discovered any branch of the lode in this direction the work at this point is abandoned. The cross-cut west at the same level has been advanced 1 ft. 3 ins., the result of three days' working. Surface work: At Garland's shaft the pumping engine is erected, and we are now pushing on with the erection of winding engine, boilers, stacks, &c. This work has been retarded considerably, owing to a scarcity of meu for digging excavations. At Ribblesdale's shaft a

hand capstan is in course of erection, and nearly completed. This will enable us to make greater speed in sending down our pitwork, and will also be more secure than the crab-winch, which up to the present has been doing the work.

COLAR CENTRAL (Apl. 1).—Eastern section, north division, new shaft: The 200 ft. north-west cross-cut has been commenced and driven 17 ft. The ground remains unchanged, being still quite dry and hard. We have also started to cross-cut east, but this has only been driven 9 ft. as it has not been worked full time. We think it best to cross-cut both ways, in case the lode may have been heaved. At the 70-ft. level the lode was split up into several branches, one of which was followed in sinking new shaft. The work now in hand is confined to the north division of the property only—at new shaft—where we are trying to pick up the lode that was lost, on the south side of the dyke, in the old St. Stephen's shaft.—A. S. B. OAKLEY.

COLON (Mar. 20).—The superintendent writes: During the past month of Feb. I had a few peons working in the Quebradona mine, extracting gravel and cleaning bedrock exposed, and washing with long tom and bateas. The result of this work, as you will see by the statement enclosed, was 20 ozs.; estimated value, $722.00, which more than covers all my expenses at the mines during the month. Owing to the difficulties in working in this manner in any heavy deposit, this result is, I consider, very satisfactory. I have now commenced similar operations in the part of our mines which was formerly known as the El Alto Mine. Sabandija River question: We must now petition the appeal before the Ministro de Tometo in Bogotá. As soon as this is granted the whole case must again go to Bogotá for the final resolution. In the meanwhile, however, we must keep in suspension all work with the monitors, and keep down all expenses as much as possible. I think we shall be able to continue covering all expenses at the mine with the prospecting work, as at present arranged.

COLOMBIAN HYDRAULIC (Mar. 18).—The following are the details of the operations during run No. 170 :—Run No. 170 : In consequence of the sluice being badly in want of repair, and the blocks very much worn, I was obliged to make clean-up much earlier than I had intended. Therefore, after ouly 573 hours run at the head of the mine on the north side, we cleaned-up on Feb. 23 from the main sluice $11,358.05, which, with $580 purchased gold, has produced a total of $11,938.05. or about 2,387*l*., against a cost of $4,277.60, or about 450*l*.—A. E. OAKES.

ELMORE (Apl. 4).—The south cross-cut from the 540 level has been advanced during the week past 25 ft.; total distance now in from the shaft 205 ft.; 200 ft. from the shaft we cut into a vein of quartz, 3 ft. wide. We supposed this was the little Elmore vein. The quartz not being very good, we concluded to drive at least 50 ft. further from the Alturas before drifting on the vein passed through. The Alturas vein should not be more than 50 ft. from this one, providing it is the Elmore we have cut. We have started a drift about 50 ft. below the Star tunnel, which improves every day as quick as we get in far enough; stopers will be put on. The vein to-day shows from 12 ins. to 14 ins. of very good milling ore.—G. MCCORNICK.

EMMA (Apl. 10).—There have been almost constant storms prevailing at Alta City, and, therefore, as the telephone is not in operatiog, I have received very few reports from the mine of late. Storms are now abating, and I hope hereafter to have regular advices from the mine. I received a letter to-day from Mr. Wallace (who is at Alta), in which he states in substance that the various workings which he has described to you maintain their good and promising appearance. I expect Mr. Wallace down in a few days.—C. W. BENNETT.

GOLDFIELDS OF MYSORE.—Superintendent's report for the fortnight ending Mar. 29 :—Sinking south shaft 8 ft., making the total depth from surface, 241 ft. 6 ins. Bottom of shaft in hard country rock, but on the east side there are small stringers of quartz, and the rock is slightly mineralised. This may be expected as the shaft gets deeper and nearer the lode. The 8-in. drawiug lift at Middle shaft has been lowered to the 235-ft. level, and in the course of another week we shall get all the water out to this level, and possibly drain a little of the water from south shaft.

GRAVEL (Mar. 21.)—The following are the details of the operation during the month of Feb. :—Works : During the month of Feb. the average number of men was 319, of which 152 were employed upon the Agua de Dios section, and the rest in finishing ditch from San José, laying Reposo syphon, mine pipe, and finishing sluice at mine. The second syphon at Reposo is now completed. It was confidently expected that we should have been able to turn the water on by the 1st inst., and the sluice, ready blocked, and the monitor in position, have been waiting since then, but the construction of the various gates and small pieces of flume along the line has been delayed by the difficulty in getting plank owing to the sawyers not working full time. The question of getting the mine to work with the San José water is now only a matter of days.—W. S. WELTON.

GYMPIE GREAT EASTERN (Mar. 5).—Fortnightly report.—During the past fortnight the rise ou the Orient reef has been extended 13 ft.; total, 85 ft. from where we cut the reef. The country is good hard slate in the hanging-wall. The reef will not average more than 8 ins. at present in the face of the rise, with a little gold showing. The cross-cut at this level has been extended 6 ft.; total, 401 ft. from the shaft; there is no change in the country. The north drive has been extended 10 ft.; total, 43 ft.; the reef formation at present is very nearly all mullock, with some leaders through it, and no gold. The south drive has been extended 4 ft.; total, 37 ft. We had to bear to the west here for the last week, or there would have been more driven; there is not much improvement in the reef. In the stopes over the north level there is about 2 ft. of reef formation, but there is not much quartz; they show a little gold. The 690-ft. level: The stopes north and south above this level all show a little gold. On the whole, the stone going through the mill at present is the poorest we ever had. For the four weeks ending Feb. 23 there were 500 tons of quartz raised and crushed for a return of 434 ozs. 1 dwt. 6 grs. of smelted gold. Out of this stone there was about 150 tons from the Orient reef. At present I am only crushing with 10 head of stampers, as the stone is very limited, until the ground is opened up more on the Orient reef, and then I do uot think it will be ever regular, as it forms in bunches; there are 10 heads of the stampers idle. Everything about the mine, winding-eugine, and battery is in good working order. There are 53 men employed, 46 on the miue, and seven at the battery.—J. JAMES.

HOOVER HILL (Apl. 11).—Following the ore below the 50-ft. level south of Provost shaft there is still some fair ore in the bottom, but we have a quantity of water coming through from the Provost old workings. As there is no improvement in the drift going south at this level I have taken the men from here and put them to extend the 130 drift south of Briol's shaft, in order to draiu the water from the Provost old workings; possibly we shall cut the continuation of the Provost ore chimney; we have to drive a distance of about 30 ft.

INDIAN CONSOLIDATED (Mar. 30).—Phœnix section : Tramway drive driven 10 ft. for fortnight; the quartz in this end shows a better appearance. No. 1 level has been extended 8 ft. The vein ailuded to in my last still continues, but is of low quality. Stoping is going on as usual. The backs of tramway level are, I am sorry to say, looking poorly, but the rest have not varied. Water : Our supply is failing daily, and we are now obliged to exhaust in the air. Mill and surface works : Everything is going on well, and the health of staff coolies is good.

— (Apl. 1).—Colar section : No. 1 new shaft has not been sunk any deeper for this report owing to our being unable to keep the water. We have now just fixed another pump here, and hope to be able to commence sinking again immediately. No. 2 new shaft : 210 ft. north-east cross-cut has been driven 13 ft. 6 ins.; total, 42 ft. We have put a rock-drill in here, as this is a very important point, and we wish to force on the end. There is a change coming in, and I hope we may be close to the real lode. The 210 ft. south has been driven only 12 ft. 6 ins.; total, 115 ft. 6 ins.; the end shows no quartz at present. The 210 ft. south-east cross-cut : 5 ft. 6 ins. have been driven nortbwards; the quartz, which was 3 ft. wide, is very much smaller now, and broken up into stringers. The assay is only 1 dwt. 7 grs., but we have, during the last few days, seen some small stones with visible gold in them, and the samples taken daily have once or twice washed over 5 dwts. Driving south, we have advanced 5 ft.; total, 10 ft. from east cross-cut. The quartz is much broken up, showing only a trace of gold, and the lode does not carry any walls. Main shaft : The 240 ft. north drive has been driven 12 ft. 6 ins.; total, 134 ft. 6 ins. The ground remains unchanged, still showing a little quartz in patches in the end. No. 5 shaft : The 156 ft. north has been driven 3 ft. 9ins.; total, 198 ft. 6 ins.; thereis no change here. The 156 ft. north-east cross-cut No. 2 has been advanced 28 ft. 6 ins., making a full distance of 145 ft. The end is still in barreu ground, with no evidence of a lode. This point has been suspended, as well as all work in No. 5 shaft, pending further developmeuts in other parts of the mine. The 425 winze : During the last week we had some quartz from the drift in the bottom of this winze, which showed from about 6 dwts. to 12 dwts., but it is again poor, and will not pay for breaking. Air-compressor machinery : The new engine and boilers are erected, and we have now to finish the engine house, erect the stack, and complete the boiler flues and water service.—A. S. B. OAKLEY.

LOMA (Mar. 21).—Since my last a large portion of the line has been graded, and so many contractors have applied for sections that a great number of men can be placed at work the moment the tools reach. A number of camps and stores for supplying the men with food have been erected all along the line, and the board may rely upou this work being pushed as quickly as possible.—W. S. WELTON.

MONTE DEL ORO (Apl. 14).—Fortnightly report :—Shaft No. 6 : Good progress is made in driving the 244-ft. level uorth of this shaft, seeing since the last measurement 28 ft. have been driven, making its total length 465 ft.; the lode averages 18 ins. in width, and it is composed of slate and flookan, with a stringer of quartz about 4 ins. wide; two samples were taken, one yielding no gold and the other 15 grs. of gold per ton on assay. In the west cross-cut a branch of soft slate 6 ins. wide and carrying some fine quartz intermixed has been cut, but it does not resemble the appearance of a lode. The total length of a cross-cut is now 223½ ft., showing an advance of 22½ ft. from the time of the previous report, and at present the end is quite dry. Slate and flookan is the composition of the lode, which averages in width from 15 ins. to 18 ins. in the 186-ft. level north of the shaft. The samples taken assayed respectively 2 dwts. 14 grs. and 1 dwt. 23 grs. of gold per ton. During the fortnight capital speed was made, 25 ft. being driven, making the total distance from the shaft 628 ft. Taylor's and Low's engine shafts : Operations in both these shafts remain temporarily suspended on account of the heavy influx of water, caused by the prevalent wet weather.—J. ROBERTS.

MOSMAN.—Mine managers report for fortnight ending Mar. 7.—North Australian Mine : Stoping is being carried on in the mine Sometimes a bunch of fair quality is met with a foot or over in thickness, at other times the stone is poor and thin, making work irregular. Of late the gold obtaiued has more than paid expenses, and has helped to carry on the work at the Wyndham shaft. Yield of gold from stone crushed : From 73 tons of stone crushed, 209 ozs. 1 dwt. 12 grs. of gold was obtained. During the fortnight 35 tons of quartz have been raised, and is lying in the paddock water. The extra water making in the mine owing to the wet weather has greatly decreased since the rain stopped. Eastward Ho Mine : There are four men working in 1,100-ft. level, two stoping over the level, and two sinking a winze in a large body of quartz, which is of poor quality. Two tributers are working above 600-ft. level on the north side of shaft, 12 tons of stone has been raised during fortnight. The 68½ tons of stone, mentioned in my last report as having been crushed, yielded 107 ozs. 11 dwts. 21 grs. of gold. The tributers have been working for the past few weeks, but so far with but little success. They have raised a few tons of quartz from a small leader which, though it may yield fairly well, will scarcely pay them. Wyndham shaft : This shaft has beeu further sunk during fortnight 19 ft.; total depth, 695 ft. The slide contiuues in the shaft, but I hope to get stoue from the other side of it. The 400-ft. level south has been driven a further distance of 9 ft.; total from shaft, 44 ft.; reef 8 ins. thick, of poor stone. The 550-ft. level south has been driven a further distance of 11 ft.; total from shaft, 53 ft.; reef 6 ins. in thicknees. The 550-ft. level north has been driveu 13 ft.; total distance, 54 ft.; a slide cut the reef out, but it is making again, there now being 6 ins. of stone, of fair-looking quality. This slide appears to be the same as is in the shaft. Some stoping is going on, but the reef does uot appear to make as I expected it would do; it will improve, I think, a little higher up. In about 35 tons of quartz raised during the fortnight (now lying in the paddock) the quality is not of high average. The 38½ tons of stone, mentioned in last report as having passed under the stampers, yielded 33 ozs. 8 dwts.

16 grs. A new brace has been completed, and is a great improvement on the old one. Crushing Mill: The mill is engaged crushing stone from the new Victoria Mine; about 350 or 400 tons is going through; I look for 5 ozs. about per ton.

MOUNT MORGAN EXTENDED.—The board have received from their local committee (Mr. R. Ballard, M.I.C.E.), dated Mount Morgan, Queensland, Mar. 1, as follows:—Our operations have been confined to the eastern cross-cut in No. 3 shaft at the 86-ft. level between Feb. 16 and Feb. 24. We had driven 14 ft., so you will observe that we are doing better, and the manager hopes to attain an average of about 10 ft. a week for the future. The drive on Feb. 24 was into a distance of 42 ft. There is no change in the country except a small seam of carbonate of lime at 40 ft.

MYSORE (Apl. 1).—Mining operations for the month ending Mar. 31:—The progress made with the rock-drills in the different bargains during the past month has been very satisfactory. The 780 north of Rowse's shaft has been driven 60 ft. 8 ins.; total distance, 154 ft.; this level is still in the country rock, but there is a good lode of quartz in the winze sinking in the bottom of the 700 north of shaft, which is only a little ahead of this end that we are daily expecting to meet with. The 700 north of Rowse's shaft has been driven 31 ft. 3 ins.; total distance, 336 ft. 3 ins.; the lode is 1 ft. wide, and assaying 7 ozs. 10 dwts. The 550 south of incline shaft on west lode has been driven 11 ft. 4 ins.; total distance, 21 ft. 4 ins.; the lode is 2 ft. wide, and assaying 2 dwts. The 466 cross-cut north-west of Rowse's shaft has been driven 32 ft. 8 ins.; total distance, 439 ft. There is no change in the composition or appearance of the ground. The 236 north of Rowse's shaft has been driven on No. 3 fold 2 ft. 6 ins.; total distance, 36 ft. 6 ins.; the lode is 4 ft. wide, and assaying 2 dwts. 14 grs. Glen's shaft: The 250 north of shaft has been driven 54 ft.; total distance, 150 ft. 10 ins.; the rock contains small veins of quartz and a little pyrites, but in a very unsettled state. We have also cross-cutted east at this level 19 ft. 8 ins., but up to this time have not discovered any other part of the lode. We purpose continuing this cross-cut a few fathoms further. Schaw's shaft: The 450 north of shaft has been driven 66 ft.; total distance, 241 ft.; the lode is 1 ft. wide, and estimated to be worth 5 dwts. The 450 south of shaft has been driven 8 ft. 6 ins.; total distance, 68 ft. 6 ins.; the lode is 1 ft. 3 ins. wide, and yielding quartz of low quality. The 320 north of shaft has been driven 5 ft.; total distance, 151 ft. 6 ins.; the lode is small and unproductive. The 320 south of shaft has been driven 8 ft. 6 ins.; total distance, 197 ft.; the lode is 1 ft. wide, and estimated to be worth 15 dwts. Tennant's shaft: The 300 north of shaft has been driven 60 ft.; total distance, 340 ft. 6 ins.; the lode is small and disordered; this level is not quite far enough north to catch the dip of the rich shoot of quartz gone down in the level above. The 290 north of shaft has been driven 75 ft. 6 ins.; total distance, 657 ft. 6 ins.; the lode is 1 ft. 6 ins. wide, and estimated to be worth 10 dwts. The 290 south of shaft has been driven 51 ft. 6 ins.; total distance, 307 ft.; the lode is small, but carrying a very regular footwall; if this end does not improve very soon, we intend to prove the ground by putting out a short cross-cut. The 180 north of shaft has been driven 63 ft.; total distance, 817 ft. 6 ins.; the lode is 3 ft. wide, and assaying 5 dwts., but looking very promising to improve. Stopes: The lode in stope in bottom of the 770 south of the incline shaft is 2 ft. 6 ins. wide, and estimated to be worth 5 dwts. The lode in stope in back of the 700 south of incline shaft (on wide lode) is 4 ft. wide, and assaying 5 dwts. The lode in stope in back of the 700 south of Rowse's shaft is 2 ft. wide, and assaying 1 oz. 0 dwts. 5 grs. The lode in stope in back of the 700 north of Rowse's is 1 ft. 3 ins. wide, and assaying 3 ozs. 2 dwts. 1 gr. The lode in No. 2 stope in back of this level is 2 ft. 6 ins. wide, and assaying 5 ozs. 10 dwts. The lode in stope in back of the 620 north of Rowse's is 1 ft. 6 ins. wide, and assaying 1 oz. 9 dwts. 9 grs. The lode in No. 2 stope in back of this level is 1 ft. 2 ins. wide, and assaying 2 ozs. 17 dwts. 16 grs. The lode in No. 3 stope in back of this level is 2 ft. 6 ins. wide, and assaying 1 oz. 12 dwts. 16 grs. The lode in stope in back of the 620 south of incline shaft is 3 ft. wide, and estimated to be worth 1 oz. The lode in stope in back of the 620 south of Rowse's is 2 ft. wide, and assaying 1 oz. 6 dwts. 3 grs. The lode in stope in back of the 600 south of Rowse's is 2 ft. wide, and assaying 13 dwts. 1 gr. The lode in stope in back of the 550 north of Rowse's is 3 ft. 6 ins. wide, and assaying 3 ozs. 5 dwts. 8 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 oz. 19 dwts. 4 grs. The lode in stope in bottom of the 550 south of Rowse's is 1 ft. 6 ins. wide, and assaying 1 oz. 12 dwts. The lode in stope in bottom of the 466 north of Rowse's is 2 ft. wide, and estimated to be worth 2 ozs. The lode in stope in back of the 400 north of Rowse's is 2 ft. 6 ins. wide, and estimated to be worth 10 dwts. The lode in stope in back of the 400 south of Taylor's shaft is 3 ft. wide, and assaying 3 dwts. The lode in stope in back of the 400 south of Plummer's shaft is 3 ft. wide, and assaying 6 dwts. The lode in stope in back of the 296 north of Plummer's is 2 ft. wide, and assaying 6 dwts. 12 grs. The lode in stope in back of the 296 north of Rowse's is 2 ft. wide, and assaying 19 dwts. 14 grs. The lode in stope in back of the 290 north of Tennant's shaft is 4 ft. wide, and assaying 8 dwts. 11 grs. The lode in stope in back of the 180 north of Tennant's shaft is 4 ft. wide, and assaying 1 oz. 2 dwts. 20 grs. The lode in No. 2 stope in back of this level is 3 ft. 6 ins. wide, and assaying 2 ozs. 12 dwts. 6 grs. Rising: The rise in back of the 290 north of Tennant's shaft has been put up 31 ft. 6 ins.; the lode is 4 ft. wide, and assaying 1 oz. 12 dwts. 6 grs. This rise will be communicated to the 180 some time during this month. The lode in rise in back of the 180 north of Tennant's is 3 ft. wide, and assaying 1 oz. 19 dwts. 14 grs. Sinking: Rowse's shaft has been sunk 30 ft.; total distance, 50 ft. below the 780; this shaft is still in the trap dyke, but the rock is getting darker coloured and less crystalline than it was, which I consider an indication that it is getting near the west side of the dyke. The winze in bottom of the 700 north of Rowse's has been sunk 44 ft. 10 ins.; the lode is 2 ft. 6 ins. wide, and assaying 2 ozs. 10 dwts. The new shaft north of Tennant's, which is now called Gilbert's shaft, has been sunk 29 ft. 6 ins.; total distance, 63 ft.; the rock is firm and very congenial for the production of gold. The winze in the bottom of the 320 south of Schaw's shaft has been sunk 7 ft. 6 ins.; total distance, 122 ft.; the lode is yielding a little quartz, but not sufficient to value. All our surface operations are going on with their usual regularity.—J. Gilbert.

NEW CALIFORNIA.—Mine report for second half of Mar.—Shaft: Sinking below the 2,000-ft. level down 2,154 ft. The contract for 100 ft. of shaft is completed, bringing it down to the depth required for the 2,100-ft. station, with plats and sump. The lode has yielded pay ore throughout this sinking, being in places rich in high-grade rock, but in the bottom of the shaft it has a finer appearance, and is richer, being worth from $500 to $600 per fm. With such a splendid vein in sight we propose continuing the shaft to the 2,200-ft. level forthwith, and thus open up two lifts on this ore body before the half-year is over. The 2,000-ft. level: Drift west of shaft in 747 ft. The lode in the drift has been pinched and small during the past two weeks; in the end there is a change, with good indications for pay ore; there the veinstuff is some inches wide, and of a favourable character. The 2,000-ft. level: Cross-cut north at 125 ft. from shaft in 13 ft. The object of the cross-cut is to search for and prove up a branch of the lode, which appears to be going off in the footwall near the main shaft. The 2,000-ft. level: Stopes east and west of No. 2 winze, west of shaft. The stopes are yielding from 9 to 10 tons of ore per fm., and are opening up very satisfactorily. The grade of the ore is improving sensibly, and at present we are getting good milling returns from it. The 2,000-ft. level: Drift east of shaft. The vein is small, the drift evidently passing through a pinch of the lode. The 1,000-ft. level: Stopes east of winzes 1,800, 1,900 west of shaft. These stopes continue to yield well, the lode being 3 ft. wide, and of good grade. The 1,000-ft. level: Stopes on south vein east of junction. The lode maintains a uniform size, and yields, as previously reported, some 5 tons of milling ore per fm. The 1,500-ft. level: Prospect drift on south branch west of shaft at 204 ft. The work done at this point has opened up some stoping ground on a vein branching off from the main lode near the old stopes, and there are prospects of its developing into a thing of some importance. The vein is yielding in the stopes, just started, 6 tons of fair-grade milling ore per fm. The 1,400-ft. level: Stopes on B lode south of shaft. Having discovered within the past month a spot of pay in the backs of the east level (from cross-cut south) on the B lode, we started a prospect stope, from which we now are getting ore of remarkably good appearance. A 24-ton test lot has been shipped to the mill to see what value it may have, returns upon which will be in for next report.—A. Rickard.

NEW DEVALA-MOYAR (Mar. 31).—Bottom winze: We have cut through the reef at the bottom of this winze, and commenced sinking. We have sunk 4 ft.; total depth from the 116-ft. level, 35 ft.; the reef, as far as we can judge, has taken a fresh underlay, and carries its size, showing in places dark close-grained pyrites, rich in gold. Our stopes are all in good order, and yield their average quantities of stone; 90 tons of quartz have been raised, sorted, and sent to the mill during the week. Owing to our mill boiler being under repairs, crushing has been stopped for the last few days. The boiler will have to be tested before we can raise steam in it.—R. B. Johnston.

NEW EBERHARDT (Mar. 29).—The mine manager reports:—Total weight of ore extracted and assorted for the week, 35 tons; assay value of same, as per mine samples, $40 per ton. The mine prospects are quite as favourable as they have been for several weeks past with quite as much ore in sight, but as yet it is much mixed with lime and spar. Fortunately the "La Grippe" here at Taylor was of a very mild form, and only one of our men was considered dangerously ill, and for a few days we feared the worst would come; but I am very happy to be able to state that at this writing he is very much better, and is able to be up and around. All our other men have returned to their work, having quite recovered from their recent illness. I shall, of course, get over to Eberhardt as soon as possible, but the weather for the past two months has been very stormy, and I anticipate a late spring. I had fully expected to have been able to have started our mill on Apl. 1, but owing to the stormy weather and bad roads we have been unable to get down sufficient ore from the mine to warrant our starting at that date, but I trust we shall be able to commence milling from the 6th to the 10th, the weather permitting.

— The secretary adds:—A cable has been received, stating that Capt. Read commenced milling on the 6th inst.

— The mine manager reports, Apl. 5: Total weight of ore extracted and assorted, 40 tons; assay value of same, as per mine sample, $40 per ton. Our mine prospects are a little better. Our ore at this time is pitching off into the west side of our large south chamber; about 10 ft. ahead of us there is a large fissure or break. Should our ore continue through the break, I shall have hopes of finding ore in larger quantities. Our ore team is at last bringing down full loads. I trust that our weather will now continue fine.

NEW VISO.—The development of the mine is being carried on vigorously by the driving of six adit levels on four strong lodes, one of which at present yields sufficient tin to cover the cost of extraction, and as the others are in virgin ground they may lead to a good discovery at any time; in fact, one of them has recently presented very good indications in the shape of nice stones of tin and tinstuff, which we sent to the dressing-floor to be washed, but at present the forebreast is poor. The rainy season seems unusually protracted this year, and has hindered, and still continues to interfere with, our surface work; notwithstanding which we have made a fair start in preparing another parcel of tin for market.—R. R. Nancarrow.

NEW GOLD HILL (Apl. 9.)—The work at the mine is progressing satisfactorily. On the 6th inst. in the 435 ft. west of Barnhardt, we cut a stream of water which flooded the level, but this morning we have pumped the water out and commenced working again. I think the water will drain down in a short time, as the 160 level west of Barnhardt shaft and the winze have become dry since we cut the water in the 435-ft. level. Indications are good for ore in the 435-ft. level, but we are still in a slide which is 7 ft. thick. The veiu going on it is 12 to 14 ins. wide. In the 300-ft. level west there are numerous stringers running into the footwall, and I have commenced a cross-cut into the footwall to see if there is anything in it. In the 160-ft. level west we are sinking the winze and the ore is looking well. In the Martin shaft we are stoping on the east side, and the vein is improving in size, now 10 ins. wide, and the gold shows well in the pan. On the west side the shoot is getting longer and improving in quality.—F. H. Mauney.

NUNDYDROOG (Apl. 1).—Report of work done for month of Mar.—The 520 cross-cut east from Taylor's: Distance driven, 40 ft., making a total length of 60 ft., by three Italians with a rock-drill, when the lode was cut. The 520 north from same: Distance driven, 12 ft. 6 ins. by the above men; the lode has opened out well, being now 5 ft. wide, and worth 3¼ ozs. per ton; we have commenced to drive south also; the lode looks very well. The 450 winze in bottom: Distance sunk 8 ft., making a total of 70 ft., and 520 south from same,

distance driven 19 ft., by two Englishmen with a rock-drill; the lode is about 1½ ft. wide, and worth 1¾ ozs. per ton. The 450 north stope in back No. 2: Ground stoped, 2 fms. 3 ft., by 24 coolies at Rs-15 per ft., and 3 fms. by two Italians with a rock-drill, working one week only; the lode averages over 2 ft. in width, and worth 1 oz. 2 dwts. 18 grs. per ton. The 450 north rise in back, stopes north and south of rise: Ground stoped, 19 fms. by six natives with two machines; the lode looks well, being 3 ft. 6 ins. wide, and assaying 2¼ ozs. per ton. The 450 south from Webb's: Ground stoped, 9 fms. 1 ft. 6 ins., by one Englishman with a rock-drill. This is now suspended owing to water. The 370 north cross-cut west: Distance driven, 22 ft., making a total of 85 ft., by two Italians with a rock-drill; there is no improvement in the ground, and this cross-cut has been suspended temporarily, as we are very short of labour. The 370 south from cross-cut: Ground stoped 18 ft., by 18 coolies at Rs-15 per ft.; the lode is 4 ft. wide, and worth 3½ ozs. per ton. The 370 north stope in back: Ground stoped 9 ft., by 12 coolies at Rs-15 per ft.; the lode is 2 ft. wide, and worth nearly 3 ozs. per ton. The 300 north stope in back: Ground stoped 6 ft., by 12 coolies at Rs-15 per ft.; the lode is about 1½ ft. wide, and assays 1¼ ozs. per ton. Taylor's shaft: This shaft was sunk 5 ft., making a total depth of 527 ft., and 6 fms. of ground were cut for a cistern plat, &c., by one Italian with a rock-drill; we shall resume sinking as soon as the cistern and lift are fixed. North shaft cross-cut west: Distance driven, 19 ft., by two Italians with a rock-drill; total distance, 62 ft.; there is no change. Kennedy's shaft: Distance sunk since re-commencing, 4 ft. 6 ins., by two Italians; the ground is very loose and jointy, and there is a fair amount of water; no change in the rock. Mill: the mill is running well, but we cannot keep running full time, owing to difficulties with labour; the amalgam is rather more than last month, and I hope we shall have a better return. Health: We have experienced great difficulty in keeping the work going regularly this month, owing to the cholera; it seems now to have considerably abated. Mill samples: Rough quartz through stonebreaker, 2 ozs. 15 dwts. 6 grs. Smalls, 2 ozs. 6 dwts. 18 grs.—F. W. Grey.

OOREGUM.—Superintendent's report for the fortnight, dated Apl. 1.—I beg to hand you the mine report for fortnight ending yesterday.—Wallroth shaft: Sunk 15 ft. 6 ins.; total for the month, 25 ft. 3 ins. It is now 90 ft. 8 ins. below the 280-ft. level; lode, 4 ft. wide, assaying 2 ozs. 18 dwts. 7 grs. per ton. The 280-ft. level south advanced 4 ft. 6 ins.; total, 561 ft. 6 ins.; lode, 1 ft. 3 ins. wide, assayiug 2 ozs. 3idwts. 13 grs. per ton. No. 1 winze, bottom 280-ft. level south, sunk 1 ft. 5 ins.; total, 43 ft. 5 ins.; lode, 2 ft. wide; value 5 ozs. 1 dwt. 13 grs. per ton. No. 1 winze, sunk 5 ft.; total, 67 ft. 10 ins.; lode, 3 ft. wide; value, 5 ozs. 3 dwts. 7 grs. per ton. No. 1 winze, bottom 280-ft. level north, sunk 3 ft. 6 ins.; total, 71 ft. 10 ins.; lode, 3 ft. wide; value, 1 oz. 5 dwts. 10 grs. per ton. No. 3 winze, bottom same level, sunk 1 ft. 4 ins.; total, 35 ft. 6 ins.; lode, 6 ins. wide, assaying 10 dwts. 21 grs. per ton. Probyn's shaft: Sunk for the fortnight 19 ft. 6 ins.; total sunk for the month, 30 ft. 9 ins.; now 60 ft. 6 ins. below the 450-ft. level. The lode shows an improvement in size and quality since last report; now 4 ft. wide, assaying 5 ozs. 8 dwts. 21 grs. per ton. The 450-ft. level south advanced 31 ft.; total, 136 ft. 6 ins.; lode 3 ft. wide, value 2 ozs. 3 dwts. 13 grs. per ton. No. 2 winze, bottom 366-ft. level south, sunk 3 ft.; total, 9 ft. 3 ins.; lode 2 ft. wide, value 2 ozs. 6 dwts. per ton. Stopes—Wallroth's shaft: Cut in back 280-ft. level south 4 fms.; lode standing averages 2 ft. 9 ins. wide, assaying 1 oz. 15 dwts. 20 grs. per ton. Cut in bottom 215-ft. level 7 fms.; lode averages 2 ft. wide; average value, 4 ozs. 4 dwts. 9 grs. per ton. Low's shaft: Back 270-ft. level south cut 15 fms.; lode standing averages 3 ft. wide, value 1 oz. 12 dwts. 16 grs. per ton. Back of 350-ft. level south cut 21 fms.; lode standing 3 ft. wide, assaying 2 ozs. 3 dwts. 13 grs. per ton. Probyn's shaft: Bottom 300-ft. level south cut 18 fms.; lode standing 4 ft. wide, value 2 ozs. 4 dwts. 15 grs. per ton. Bottom 230-ft. level south cut 19 fms.; lode standing 5 ft. wide, value 3 ozs. 15 dwts. 10 grs. per ton. Back 230-ft. level south cut 2 fms.; lode standing 4 ft. 6 ins. wide, value 1 oz. 12 dwts. 16 grs. per ton. There have been a few cases of cholera on the field during the past week, and it is generally thought that the epidemic will not be got rid of until the rains set in. We have two new lines of bungalows in course of erection for the occupation of the Moplahs, which we hope will be finished next week, and unless there is another outbreak of cholera we shall then send for the maistries to bring back their men. The extra accommodation will prevent overcrowding. We are cleaning up the mill to-day, and anticipate the return for Mar. will be about 3,000 ozs. of gold.

ORITA (Mar. 19).—The following are the details of the operations during the month of Feb.:—Mondeco: I cleaned up here on the 3rd. 200 ft. of sluice, which gave $1,000.85; reblocked, and started washing again. The bank is quite soft. The porphyry rocks here are in poor dirt, and resting on bedrock, and do not appear to indicate the presence of a channel. Their appearance here and in lower mine are quite different, as in the latter they are found in good blue gravel. Branch sluice: Yesterday we turned on water here, and are uow washing at this section while we pass our monitors at Mondeco ahead. Four opening: I have now ready the greater part of lumber for sluice, and clearing partly burned. We will soon be able to lay frames for sluice, but till the 18-ft. pipe is here and rivetted, we cannot well make a start. I will keep you informed of each step for progress of this work. Deep cut: I have now frames in place for 84 ft. of sluice at head of main, and at same level. In ground sluice we are working in very hard rock, but have every hopes we will soon cut into better ground. We cannot now put in over eight men at the hard piece, as the work is beginning in the level. We have the sides opened out sufficient for present wants. Channel: As soon as the work in ground sluice is advanced to give extra grade, we will turn on water here. I hope by end of this month to be ready. I am opening a new pipe-line to see if we can get up an extra monitor, and must get up the fork pipes you sent. There is at present the greatest difficulty in getting up stores from coast to Honda.—H. J. Prender.

OSCAR (Apl. 17).—Report from the mine:—Hodgkinson lode: The lode in the shaft is at present of a somewhat disturbed appearance, the quartz being much mixed with country rock, and carrying but little mineral. Assays show the quartz as having value 4 dwts. 13 grs. gold per ton. We have delayed the starting of new levels until clear of disturbance. In the 200-ft. level north we have a lode 5 ft. in width, with about 3 ft. quartz; the quartz is of a well mineralised character, and by assay shows value 13 dwts. gold per ton. The lode in the 200 south has narrowed to 4½ ft., the greater part being quartz. Thequartz itself is divided into two bands, one of which, about 2½ ft. in width, is of the white crystalline character, showing value for gold 2 dwts. 14 grs; the other band is a hard, b'ue striped quartz, containing copper pyrites, and assaying 1 oz. 12 dwts. 16 grs. gold per ton. Hewlett lode; The quartz in the level driving south is of the same width and character as when reported on last week, although the assays have shown an increased value for gold, 11 dwts. 13 grs. The level north is carrying a quartz leader 4 ins. wide, of a mineralised character, and assaying value for gold 1 oz. 6 dwts. 3 grs. Other places no alteration.

PAHANG CORPORATION.—Mr. Becher, writing to the directors on Mar. 17 last, reports that in the course of the re-construction of a new road about 4,000 yds. south of Mount Siam, Mr. Hone, the resident superintendent, had made a further important discovery, giving 2-oz. prospects. The details of this discovery are expected by next mail.

PARKER.—The manager in the course of his report states:—When the new steel pipe line is fixed we shall be in a position to run the pumps to their full capacity, delivering at the mine at least 1,520,640 galls. in 24 hours, thereby allowing of a 2½ in. nozzle to our monitor working under a full head of at least 125 ft.; this will enable us to remove quite half as much ground again as we have hitherto been able to do and at less cost, the greater pressure of water keeping the riffle boxes clean, and so dispensing with a certain amount of manual labour. Gulch: I am pleased to say the character of ground here has greatly improved, and I have every reason to think that as soon as we can run our monitor under a full head, it will take us but a short time to cut through the remaining bar or ledge of dead ground; we shall then have a depth in the face before us of about 35 ft., which will enable us to wash on the course of the various rich stringers and veins known to exist on the apex of the Red Hill. When once this point is reached we shall also be able to furnish our stamp mill automatically with some of the richest ore yet sent to the mill. Some of the richest beds of grit on the company's property are known to exist on the top of this hill, but owing to the want of sufficient fall in our gulches, we have not been able to hydraulic this portion. This difficulty will be entirely overcome by the cut now being run, and we shall hope soon to be at work on one of the richest parts of your mine. Flint Spring: I desire specially to call your attention to this part of your property, which up to the present you have allowed to remain unworked. It is possible to do this by bringing in a separate line of pipe from the river to hydraulic the rich grit here, or, if this is not practicable, it would be better to dispose of it to some independent company who would work it, and give you a royalty on the returns, rather than allow such valuable ground to remain idle.—H. A. Judd.

PESTARENA (Apl. 14).—Mid-monthly report:—No. 1 lode: The 160 fm. end north is following a divisionary line, which comprised the lode. The country rock adjoining shows patches of quartz, but gives no ore to value. In the 150-fm. cross-cut the rock has become a little more calcareous. In the winze sinking under the 130-fm. level the lode has improved, and now shows a mixed lode 80 centimetres wide, and is estimated to produce 10 tons of ore per fm., worth 14 dwts. per ton. The 90-fm. end south shows a quartzose lode 1.30 metres wide in the roof, narrowing to 50 centimetres in the bottom of the level, and producing 10 tons of ore, worth 15 dwts. per ton. Caunter lode: In the 90 end west from old cross-cut the lode has still a very flat underly to the north; it is of a fairly good size, and produces about 5 tons of ore per fm., worth 14 dwts. per ton. The cross-cut driving south at this level has traversed a vein of pyrites 5 centimetres thick. The 70-fm. end east carries a good divisionary line enclosed by sterile schist, whilst the end driving west shows a rather irregular vein. Neither of these ends produces ore at present, and if the latter does not improve shortly we intend to suspend it. The 55-fm. end east is going forth in a lode 60 centimetres wide, and produces about 7 tons of ore per fm.; worth 15 dwts. per ton. The quality of the ore has somewhat improved. In the western end the lode is small, and produces only 3 tons of ore per fm.; worth 10 dwts. per ton. The 46-fm. end is following a well-defined division, carrying with it a little lodey matter, and the accompanying rock frequently shows patches of quartz and pyrites. The stopes continue to produce about the same quantity of ore as when reported on the 3rd inst. The water in the Anza has increased a little, and all the mills (28) are now running full speed. The returns for the month will be about 420 ozs. Val Toppa Mine: In the rise stope over Zero level on eastern lode, the vein spoken of in the last report as having died out has been found standing in the footwall, and is about 40 centimetres wide, chiefly quartz. On the western side it is of much the same size, and carries a fair quantity of pyrites. The lode produces 8 tons of ore per fm., worth 8 dwts. per ton. The stope over and around No. 1 level is still producing a fair quantity of average ore. The intermediate drift between No. 2 and 3 level shows a little more of the country rock, intermixed with the quartz; otherwise there is no further change.—W. Roberts, W. H. Trelease.

PORT PHILLIP.—The following advices have been received, dated Clunes, Mar. 10:—Mine: North shaft has been sunk 15 ft. since the commencement, and is now 35 ft. below the No. 17 level. No. 17 level: The diorite dyke was reached on Feb. 28, at a distance of 221 ft. from the shaft; 18 ft. has been driven in the dyke, but has not yet reached the west wall. No. 5 level: The drive north has reached the Yankee ground; the lode is strong, but no gold has yet been seen in it. Criterion ground: 123 tons of quartz has been raised from the level at this portion of the mine; the gold obtained just about meets the expenditure connected with the same.

YURUARI.—The secretary advises receipt of the monthly mail from the mines, dated Chili, Apl. 3, in which Mr. Pryor confirms telegram reporting favourable change in the water shaft, but states that operations are not yet sufficiently advanced to commence crushing with the full mill in terms of his instructions. Mr. Pryor adds: I am delighted to see the lode improving with depth, as I prophesied it would. In the mine report enclosed for the month of Mar., Capt. Rogers states: The water shaft has been sunk 55 ft. during last month, which is exceptionally good work. The lode continues to show improvement, so much so that we have never seen it look so well, carrying a splendid hanging wall. We have now about 15 ft. further sinking to be on a level with No. 9, Cenicero. P.S.—Since writing the foregoing I am pleased to report that the lode in bottom of water shaft shows still greater improvement, and has increased in width to 5 ft.—W. R.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers THE COMMERCIAL BANK OF AUSTRALIA.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

Board.

B. B. TRENCH, Esq., Chairman.

Sir Charles Metcalfe, Bart. | Major J. W. M. Cotton.
L. Balfour Burns, Esq. | Richard Smith, Esq.

South African Office.

NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business :—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD.
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

ARTHUR FORBES & CO.,

AUSTRALIAN INVESTMENT AND MINING AGENCY,

BRISBANE, QUEENSLAND,

And at 16, CORNHILL, LONDON, E.C.

Telegraphic Address:—"ORPHARION, LONDON."

Have special business in Australian Securities generally, and in the following Australian Mining Stocks :—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

K. D. (Salisbury).—The directors have the power you state, but we feel sure they will not go to the extreme. Explain by letter your case to them.
Lawyer.—Sell 3, 4, and 8. Hold 2, 5, and 6. Others are wound up with exception of No, 12, but shares are unsaleable.
D. D. D.—The buyer will have to pay the call, therefore you had better hand the call letter over to your broker. Closing prices will be found in other columns.
Country Reader (B. R. J.).—The meeting is fully reported in our present issue. After being read by the shareholders it will, we think, encourage them to hold on.
Russian.—As you do not wish to support the proposed scheme we advise you to sell out while a fair price is obtainable.
P. A. J.—We believe the rumour is well founded. There is likely to be a call.
Florence.—It is purely nominal. The company pays no dividend, and is not likely to.
O. P. (Hamburg).—We understand that the dividend warrants will be posted to-day. Always a free market here for the shares.
Anemone.—Cannot advise you to have anything to do with the "system" or the parties connected with it.
Sexton (Southsea).—You should sell them.
Primrose.—Have nothing to do with it. Simply an old friend in a new dress.
General (S. B.)—Yes. It is also our opinion that the shares will go better. The meeting was most satisfactory.
Nervous.—Do not be misguided. The shares are worthless.
R. Manning.—For one reason the price is too high, and another too speculative to suit you.
Inquirer.—We recommend you to have nothing to do with Mount McClellan shares.
Mount McClellan.—Sell every one.

The Mining World.

LONDON: SATURDAY, April 25, 1891.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

A BITTER PILL FOR SILATI DIRECTORS.

We thought that a week ago we had said our last word, at all events for some time to come, on the Silati affairs, but no. The letter of Captain James Williams, the original manager of this so-called mine, necessitates some further remarks. It is short in comparison with the wordy harangues of the geological Mr. Conybeare, but it smashes, pulverizes, and reduces to finer powder than ever Silati quartz can be brought to that gentleman's astounding assertions, and throws a blaze of light upon the report of the trio of experts, whom he now delights to honour. The explorations pursued by Capt. Williams, were approved by Mr. Alford. Capt. Williams states that he was unable to bring gold out of the quartz for the simple reason that it was not there. It might be there in a sufficient quantity to pay prospectors, but not a public company with a thumping capital like that of Silati. The mine is a poor one he says, "not worth the paper the prospectus was printed on." So far from there being plenty of timber he denies there are 50 trees that could produce a plank 8 ft. long, and the residue is simply scrub. As to the supply of water, one of the experts seems to have been misled by a thunderstorm, for Capt. Williams says "there is not enough for drinking purposes." He also adds that, although he wrote voluminous reports to the board pointing out the character of the property, not a line was sent to the shareholders. Possibly this, too, may be explained by some "geological theory." The general concensus of opinion will be that from this struggle Mr. Alford and Capt. James Williams retire with the honours of war.

Capt. Williams, we happen to know, is a Cornishman, who has had a thoroughly practical training in the mines of Redruth and Camborne. He has achieved his present position by the exercise of care, industry and intelligence. He was for some time engaged in gold mines in America, and when he left them his testimonials were satisfactory both as to integrity and ability. He was also manager of various properties in India, and the result of enquiries we have made into his conduct there, is to the effect that he showed himself to be a good practical miner; that he was always steady and industrious, and careful in the expenditure of shareholders' money; and that he was of simple and sober habits, and deserved the trust placed in him. It is not possible to recognise in this Capt. Williams the sort of mining demon he is described as having been during his connection with Silati We prefer to think of Capt. Williams as his friends know him, and not as his enemies paint him. We prefer to think of him as a man who did his best, and whose work was endorsed by the practical mind of Mr. Alford. We prefer to think of him, indeed, as a man to whom was set the impossible task of bringing ounces of gold from quartz that only yielded pennyweights, and of making dividends for Silati shareholders upon capital absurdly high out of a property the value of which, according to all showing, is absurdly low.

THE OUTLOOK FOR INDIAN MINES.

The strong position occupied by Indian mines in the public estimation is exemplified by the bold manner in which the Nine Reefs directors are dealing with the financial position of that concern. The company has passed through a trying experience—trying to the shareholders, and particularly so to the directors, who, in addition to being very large shareholders (Capt. McTaggart holds between 10,000*l.* and 12,000*l.* in the concern) have had all the cares and responsibilities of management, and, in the eyes of certain people, the odium of failure. Still, notwithstanding its chequered career, the directors feel strong enough to restore the financial equilibrium by an issue of preference shares, instead of proceeding along the tortuous path of re-construction, which has come to be considered in most cases the only panacea for impecunious mines. Into the merits of that scheme we do not need to go. The directors are not the men to have proposed it, without feeling pretty confident that the ground upon which they are treading will bear them, and we regard the successful issue of these preference shares as a foregone conclusion. The useful visit to the Colar Goldfield, from which Mr. W. H. Rowse has lately returned, proved an exceedingly timely one so far as Nine Reefs Co. is concerned. In regard to the workings hitherto carried out at Nine Reefs, Mr. Rowse reminded the meeting of the existence of three lodes, the first being Malleson's, the second the Champion lode (Mr. Rowse has no doubt as to its identity), sunk upon Vyvyan's shaft, and the lode at Hodgson's shaft, now being worked at Balaghat. The most extensive workings have hitherto been carried out upon the Malleson lode, and the justification of the board for spending so much money here lies in this—that extensive native workings indicated it as a most promising spot, and the lode itself from first to last has proved to be one of the most tantalising on the field—at one time giving as many ounces by assay as at another time it gave dwts. Mr. Rowse thinks this shaft should be deepened from the 310 another 100 or 150 ft. and the lode tested at that depth by levels, and that the works at Hodgson's shaft should be left in abeyance for a time. But most decidedly is he of opinion that the greatest amount of money and energy should be expended on Vyvyan's shaft, where the Champion lode is well defined, and where he has no hesitation in saying "great riches will be found." This programme lacks nothing from the side either of hopefulness of promise or directness of purpose. The mine is well equipped, and shareholders will hear with relief that no property to the west will have to be bought, as has been the case with other companies. Of course the very thought of abandoning the property cannot enter into the mind of any shareholder who has a thorough mental grasp of the facts.

We could stop here, but there are two points in Mr. Rowse's speech to which we wish to draw special attention, and both of them are embodied in his opening sentences. In regard to the most promising of the companies, Mr. Rowse demonstrated, with the precision of logic and of fact, that "their value to-day is in proportion to the amount of development in depth and length that has taken place upon these respective properties." The Mysore, upon which most work has been done, is selling at 1¼ millions sterling; Ooregum, which comes next in regard to the amount of work done, is selling at 600,000*l.*; and Nundydroog, upon which the extensions have not been so great, is, as we believe, grossly undervalued in market estimation at 250,000*l.* In fact, as he pointed out, the greater the work done the greater the value of the properties, and the greater their appreciation in market estimation. The second point is one of great encouragement for those companies not on the direct line of the Champion Reef. He truly said that a prejudice exists in the minds of some persons as to the value of the lodes parallel to the Champion Reef, "which is wholly unwarranted," because no operations, except in one instance, have yet been carried out to any considerable depth upon these parallel lodes. The opinion of Mr. Rowse is that as these parallel lodes are worked in depth, and developed in length, experience in regard to them cannot differ largely from that in connection with the Champion reef. The Nine Reefs meeting brought out many points of interest peculiar to that company itself, but it also emphasised the two we have named, which apply generally to the Colar field, and which coming from the source they did, ought to be carefully weighed by the investing public.

PROFESSOR VINCENT TRIUMPHANT.

The world has hitherto seen Prof. Vincent militant; it now beholds him triumphant. There may have been other mines like Flagstaff, but they never had a high-priest like Prof. Vincent. He has worked for Flagstaff by day; he has dreamed of it by night. He has begged for it, borrowed for it—we had almost said he has done everything but blaspheme for it. He has borne the rigours of a Utah winter in its behalf, and he has suffered the heat, and even a sunstroke of a Utah summer in its defence. The storms of the Atlantic have not prevented him from crossing again and again to its assistance, and malice, hatred and all uncharitableness have been insufficient to damp his ardour when in the service of this god of his idolatry. In the case of Flagstaff, Prof. Vincent has shown the courage of a martyr and the zeal of an apostle. If now he is seen to emerg

(followed by his faithful Flagstaff band) from the dark cloud which has for 18 weary years enveloped him, into the sunshine of a prosperity, the first fruits of which are seen in the 15,000*l*., worth of ore ready to be sold when the markets can be reached, what man is there amongst us, except the hard-hearted "bears," who will refuse to pay to his indomitable energy and devotion a tribute as graceful as it is deserved. Some of the shareholders may possibly see Flagstaff dividends as in a glass darkly, but the professor beholds them with all the reality of an inspiration, The success of Flagstaff may not be assured in the eyes of some, but to the professor it has become one of the articles of his faith. We cannot think of Flagstaff without at the same time thinking of the professor. The Flagstaff Mine without Prof. Vincent would be like a watch without a movement—a ship without a helm. For 18 years he has been trying to impart to others the faith in its future that he himself has felt. The very earnestness of the man may be said to have kept Flagstaff in existence. When all hope was lost as regards the mine, there was still the remnant of faith in the professor himself, and by means of this he was able to keep it on its financial legs. Time would fail to mention the people who, by his own force of character, have been made to believe in Flagstaff. There was Mr. Hopkins, for example, who wanted to have nothing to do with Flagstaff, but who reckoned without his professor. The importunate widow in the parable was but feeble in her appeals for justice compared with the professor when on a begging mission for Flagstaff. The end of it was that Mr. Hopkins took 5,000 shares, instead of the 500, which at first he thought would satisfy the tormentor, and on Thursday last Prof. Vincent crowned his former efforts by leading that gentleman triumphantly into the presidential chair. And now, after a sort of Childe Harold pilgrimage for 18 years, Prof. Vincent beholds his justification, and the near prospect of his reward in the present position of the Flagstaff Mine. Read his speech; and let all who set store by honest work, faithfully performed in the midst of difficulties of which he has never complained, and in the teeth of misre presentation, that he has only treated with merited contempt, rejoice with him upon what looks uncommonly like a successful result to his labours. It was upon his report that Flagstaff was originally bought, and in the course of a short time yielded the enormous dividends he named; and who shall say that upon the report he gives now it shall not renew its youth and reward those shareholders who have been kept together as a company by the sole invocation of his name. This would be a fitting termiuation to what, on the whole, has been a comedy, but which sometimes has degenerated into a farce, at other times into a drama, and occasionally has been perilously near a tragedy, but which has always had Prof. Vincent as its hero.

DIRECTORS' LIABILITY.

The directors of the Valley Gold Co. are to be congratulated upon the result of their appeal in the case of Angus *v.* Clifford. After arguments occupying the whole of two days the Court of Appeal, consisting of Lords Justices Lindley, Bowen, and Kay, on Saturday last unanimously reversed the decision of Mr. Justice Romer, given in Dec. last, and which caused a great deal of astonishment in legal and commercial circles.

The facts are these: The company was registered on Oct. 25, 1886, and the prospectus issued two days afterwards contained the following statements:—"Full reports on the property have been prepared for the directors by the following eminent engineers:—Mr. Jackson, Mr. Pearson, Mr. Rodda, and Mr. Delmar. These gentlemen have personally inspected the property, and Mr. Delmar has advised the board as to the means to be adopted for working and developing the same to the best advantage. These reports have convinced the directors that the estate is a rich one, and they have no hesitation in recommending the shares to the public as a genuine investment." The plaintiff said he applied for 2,000 shares on the faith of this prospectus, that these statements were untrue, as the reports had been prepared on the instructions of the vendors or their London agents, and not on the instructions of the directors, and that he had lost his money. The evidence showed that the reports of Jackson, Pearson, and Rodda were, in fact, made a considerable time before the defendants were asked to become directors; the reports of Delmar, on the other hand, were made for the use of the defendants, and were addressed to them, and it was chiefly on Delmar's reports that the plaintiff and defendants relied, and it further appeared that the dates of the earlier reports were not known to the defendants. The defendants swore that their attention was not particularly directed to the words relied on "for the directors," and that the meaning they attached to them was, "prepared for the use or information of the directors." The plaintiff did not prove, or allege, that the reports were untrue in fact, and so the defendants claimed that if there were any misstatement, the same was immaterial, because the reports were true, and not even exaggerated, and if the plaintiff had lost his money it was in consequence of insufficient working capital, and not in consequence of any failure in the property itself. Upon these facts Mr. Justice Romer found that the plaintiff's interpretation of the words "for the directors" was the right one, that the reports had not been prepared for the directors in any fair sense, that the statement was material, and the plaintiff had sustained some damage. Accordingly he gave judgment for the plaintiff, and directed an inquiry as to damages.

It was argued before the Court of Appeal that since the Plymouth Tramways case of Peek *v.* Derry, decided in the House of Lords, directors could not be held responsible for a misstatement contained in a prospectus unless such misstatement was made (1) knowingly, or (2) without belief in its truth, or (3) recklessly, not caring whether it was true or false—in other words, *fraudulently*, and as the Court below had not found that the statement was made fraudulently, the judgment could not be maintained, and this was the view taken by the Court of Appeal, and the action was accordingly dismissed. No one who knows the defendants could for a moment suppose that they would be parties to a wilful misstatement, and it is important to remember that they had nothing to gain by misrepresentation, for they were investing their own money in the mine, and it was not disputed that they fully believed in it. We cannot help regretting, however, that so little care was exercised in the choice of the language of this prospectus. It is, of course, easy to be wise after the event, but we think they might have been wiser before, and we cannot now regret that they have been left to pay their own costs of the defence. One question of importance was discussed by the Appeal Court and unfortunately not decided—the reports being true, was the misstatement material? Lord Justices Lindley and Kay evidently thought not.

The Valley Gold Co. has hitherto been most unfortunate; perhaps now the corner has been turned. The manager's recent reports from the mines show an abundance of water, and that the gravel now being hydraulicked is worth an average of 3s. per yd., as against the 1s. 6d. stated in the prospectus.

THE BUDGET.

The Budget, owing to the apparent pandering to popular agitation, is considered in the City as weak. Although the surplus of 2,000,000*l*. was not sufficient to take a penny off the income tax, as hoped would be the case, it was quite expected that the surtax charged on spirits and beer would have beenallowed, and that some other benefits or concessions might have been conferred. It is felt that the Budget betrays more of the Radical instinct than might have been expected from a Conservative Government, and is open to the suspicion applied by opponents, that the retention of office was the regulating motive.

THE VAGARIES OF FOUNDERS.

"For ways that are dark, and for tricks that are vain," we are assured by one who ought to know, "the heathen Chinee is peculiar." It is scarcely to be wondered at, therefore, that such a comparative novelty as the principle of issuing founders' shares has "caught on" in the Celestial Empire. British investors have recently been appealed to for a round half-million of capital to provide the native merchants of Hong Kong and the principal Treaty Ports of China with a banking institution of their own, in the shape of the National Bank of China, among the first directors being Chan Kit Shang and Tuan Ho Chun, while agreements have been entered into, the prospectus informs us, with the first of these gentlemen, and also with Kuk Shan and See Fong Chi. We need not go into the question of the *raison d'etre* for such a bank, beyond saying that it is not the kind of venture in which we should be disposed to invest. The point to which we would draw attention is that for a monetary payment of 750*l*. the founders stipulate that they shall receive one-half of the profits after 8 per cent. has been paid to the ordinary shareholders, and a reserve fund has been provided for. They do not sell anything, nor even pay the preliminary expenses; those are to be settled for out of the 10s. premium that the founders have been obliging enough to offer the shares at. But it is obvious that the Chinese merchants are not the only people who are to benefit from this enterprise, for it is to be noted that Messrs. Russell and Co., of Hong Kong, who figure prominently in the prospectus, fix themselves into the positions of permanent secretaries of the bank in the East for a period of 50 years, at a maximum remuneration of 15 per cent. of the annual net profits, and there is the further stipulation "that the senior partner of Russell and Co., at Hong Kong and Shaughai respectively, shall be the chairman of these respective boards." How exceedingly nice for Russell and Co. Whatever happens they will be the gainers; but what about those who find the half million sterling with which the profits are to be earned? This is one of the latest illustrations of the modest requirements of the *genus* founder.

Another, and even more amusing, example is furnished by the appeal that has been put forth by the Trustees' and Bankers' Securities Co., Limited, for an issue of 600 founders' shares of 10*l*. each on behalf of the British Ballarat Gold Exploration Co., Limited. The former of these great undertakings was started with a capital of 3,000*l*. in Feb. last year, with a programme wide enough for a capital of more millions than the directors were able to raise in thousands. The Trustees' and Bankers' Securities Co. has not made much of a splash so far, and we are afraid that it will not derive much advantage from this British Ballarat business. The directors of the Gold Exploration Co. frankly enough point out that "this is entirely a speculative venture, and cannot be looked at in the light of an

investment; on the one hand the whole of the money may be lost, but on the other hand these shares (one-tenth of the nominal capital) take one-half of the balance of profits, which, if gold is found in any properties exploited by the company in paying quantity, will be worth an enormous premium." The *naiveté* of this introduction almost disarms criticism. The British Ballarat Gold Exploration Co. was, we are told, incorporated on the 13th day of June, 1890, "and a private issue of both ordinary and founders' shares" (we are "not informed how many) "was made principally to take over a contract for the purchase of 240 acres of freehold land at Ballarat, Australia; but as the subscriptions was not sufficient to purchase the land, and the vendor refusing to allow tests, except at a price the directors could not agree to, the whole of the subscriptions were returned in full."

In the interval, the would-be vendor, Mr. Matthew Henry Sumner, does not seem to have been able to persuade anybody to purchase his land, and he has now, it is stated, extended his original option and made the terms more reasonable. Hence the offer of 6,000*l.* in founders' shares. The land has, of course, been reported upon favourably, and yet, after making their tests, the company is to have the privilege of acquiring it at "considerably less than the value of the land as building land." Intending subscribers are assured that other properties offered look equally promising, which is not saying much for the other properties. Altogether, the prospectus is a very amusing document, and it is useful as a veritable *reductio ad absurdam* of the founders' share system in its later developments.

ROMAN GRAVELS.

THE progress made at Roman Gravels Mines has been of a very encouraging character, from two points of view. In the first place, the shaft has been sunk in an extraordinarily short space of time from the 125 to the 155—in fact the work has been doue in a few months that would formerly have taken two or three years. There is a better chance for home mining when those conducting it wake up to a sense of their responsibilities to such an extent as this. In the second place, with depth the lode has been found to improve, and this is a great point in a mine that has been so exceptionally rich in the past. The statements made by Mr. Peter Watson, the chairman, and by Mr. Arthur Waters, the manager, were very gratifying, and the latter is proving himself to be the worthy son of a worthy father. The name of the late Capt. Arthur Waters will ever be associated with the past triumphs of Roman Gravels Mine, and it remains to be seen whether similar success will distinguish that of his son. Judging from all that was said at Wednesday's meeting, the signs are not wanting that the brilliant past of Roman Gravels will be repeated in a future that is neither dim nor distant. The impression produced upon the shareholders who attended the meeting was distinctly favourable, and we shall be very much surprised if a similar effect be not the result upon the shareholders' absent, who do themselves the service, and the management the justice, of reading what was said at the meeting.

EARL OF DUDLEY'S ROUND OAK IRON AND STEEL WORKS, LIMITED.

THE well-known iron works, which were established by the Earl of Dudley some 30 years or more ago, have been taken over by the above company, by which they will in future be worked. The works, as most of our readers are doubtless aware, are situated at Brierly Hill, in the county of Staffordshire, and the brands produced are well and favourably known all over the world. The business, as we have said, has been established for upwards of 30 years, during which time, by the excellency of its produce, it has worked up a trade connection of no mean order, having amongst its customers the British and Indian and Foreign Governments, as well as some of the chief engineering and railway firms both at home and abroad. It appears that the manufacture of steel has lately been introduced at these works, and it is believed that the business is capable of great extension in this as in other departments. Under these circumstances, we think the prospectus deserves the consideration of investors, and on carefully going over this document we cannot but regard it as a satisfactory one. In the first place, the property, which is freehold and embraces an area of about 30 acres, is in close proximity to the Great Western Railway Co.'s system, and, in fact, is connected with it by sidings, the works being thus brought in connection with every part of the kingdom; in the next place, the company takes over a going concern, admirably equipped in plant and machinery; and, in the third place, the public is put in possession of actual facts as to what the company is doing, in that the sales from Sept. 15 last (the date from which the company will take over the concern) have realised the sum of 46,978*l.* These three facts in themselves would lead one to look favourably on the concern, but there are other statements in the prospectus which are worthy of mention. It is stated that arrangements have been made with the Earl of Dudley for the supply of mine pigs which are being produced at his lordship's level new furnaces, thereby ensuring a continuation of the present quality of the brands now manufactured. Mr. Blakemore, the consulting engineer of Cardiff, has reported upon the property, and states: "The directors will be justified in assuming that an average profit of 1*l.* 10s. a ton has been realised on these sales, and which, being reduced to figures, gives the sum of 7,744*l.* 13s. 2d., which is equivalent to a present annual increment of profit of 15,489*l.* 6s. 4d., that is, if the same prices are maintained and no additional working expenses incurred. This gentleman considers the property to be worth 190,000*l.* The price to be paid for the property is 160,000*l.*, of which the Earl agrees to allow 50,000*l.* to remain on mortgage, and 50,000*l.*, other part thereof, on mortgage, or mortgage debentures, at his lordship's option, both securities carrying interest at 5*l.* per cent. per annum, the principal being reducible by yearly instalments of 5,000*l.*, commencing from Jan. 1, 1893. The balance (60,000*l.*) is payable in cash. The share capital is 202,000*l.*, divided into 20,000 ordinary shares of 10*l.* each, and 200 founders' shares of 10*l.* each, entitled to half the surplus profits after payment of 10 per cent. to the ordinary shares and providing for a reserve fund. The present is an issue of 16,000 ordinary shares. The subscription list will close on or before Monday next.

FIFESHIRE MAIN COLLIERIES, LIMITED.

THIS company has been formed to purchase the right to work for minerals in three leasehold properties situate in Fifeshire, to work the underlying coal field, and further develop the several seams of coal, ironstone, fireclay, and other minerals. The coalfield is said to have an area of about 2,000 acres, and the leases have 31 years to run from May last. The property has been surveyed and reported upon by Mr. F. H. Cheesewright (the consulting engineer of the company) and Mr. T. Currie Gregory, F.G.S., M.E., C.E. Mr. Cheesewright, in his report upon the property, states that "four workable seams of coal have been opened up, and from it a supply of good marketable coal can at once be raised." This gentleman speaks very highly of the quality of the coal produced, and also of having seen "bands of splendid fireclay, which will be a source of great revenue to the company." The access to the markets (a very important consideration for a colliery) is apparently exceptionally good. A branch of the North British Railway is connected with the estate by sidings, and the Kirkcaldy and District Railway Co. are applying to Parlirment for powers to build a line which will pass within half a mile of the present pit. Mr. Gregory estimates the amount of common coal in the leaseholds at over 25,000,000 tons. He concludes his report by saying:—"In every respect I consider this a most valuable mineral field, and one which ought to pay well under prudent management, and which may be worked up into a most successful affair by energy and skill." The price to be paid for the property is 75,000*l.*, of which 25,000*l.* will be taken in fully paid preferential shares, and 25,000*l.* in fully paid ordinary shares, the balance being paid in cash. The capital of the company is 150,000*l.* divided into 15,000 8 per cent. cumulative preferential shares of 5*l.* each and 15,000 ordinary shares of 5*l.* each. The amount available for working capital is, therefore, 75,000*l.*, which is deemed more than sufficient. The board is a strong one, and the estimated profit appears to be based on a solid foundation. The company we think stands a very fair chance of success. The subscription lists will close on Monday next.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE fears of a 4 per cent. Bank rate have not yet been realised, and although it is far from improbable that they may, there is no present justification for them. Nevertheless, both the discount and the stock markets have acted in view of such a contingency, which in the present position of affairs financial, has a wholesome effect, and will go far towards preventing even the result feared in supporting the Bank rate with the business done in bills and loans, and, therefore, influencing the foreign exchanges in our favour. checking withdrawals of gold, and leading to the imports of the metal so precious at the present time. As a fact the exchanges have materially improved so much so, that gold is now tonly going to Germany direct from New York. Discount has still kept firm, and is now $3\frac{3}{8}$, $\frac{1}{2}$ per cent, or practically Bank rate, while meney is dearer at fully 3 per cent. The Bank return shows a further reflux from the Provinces in taxes and dividends, and the reserve is consequently larger by half a million, and the proportion by 2 per cent. at $36\frac{5}{8}$ per cent. Apparently the private deposits have been drawn upon to redeem private securities, but the Government Securities, although the Bank Broker has borrowed upon Consols, show no change.

It was not to be expected that a collapse like that of such a firm as Baring's could pass over without having some effect on the markets. Its reactionary effect is now undoubtedly being felt, and those who grumble at the torpid condition of things little comprehend what the position might have been had the firm been allowed to fail. So far from all being over by now, we should scarcely have measured the effects in the wide-spread ruin which would have resulted, and the greater, therefore, is the cause for thankfulness that the evil day has been averted. A recognition of this is again to be found in the re-election of Mr. Lidderdale as Governor of the Bank, as confidence, so important at present, is promoted by the "man at the helm." The markets, dull and depressed as they have been, still show signs of recovery. This is partly, in the speculative markets, due to the repurchases by operators for the fall. The Funds which fell have rallied as the rate was not further advanced, and the Bank return was favorable. Foreign Stocks have also been slow, particularly South American, Argentine, Brazilian, and Chilian, all being better. Home Railways were steadier, and American, in spite of checks, have had an upward tendency.

Money was required to-day at $2\frac{3}{4}$, $3\frac{1}{4}$ per cent. for the time being, and about 4 was sometimes paid for loans over the settlement. Stock Exchange advances are therefore likely to be dear to-morrow. Three months bills were not discounted under $3\frac{3}{8}$ in the open market.

There were no bullion operations to-day at the Bank of England. Bar silver recovered to 44, Rupee loans were firmer, and the India Council sold 200,000*l.* in bills this afternoon at improved rates.

The Stock markets were active to-day, and prices ruled steady. The Funds receded $\frac{1}{4}$, but India Three per Cent. improved, and a rise was also shown in Rupee Paper, International Stocks were dull, with exceptional flatness in Portuguese, which left off $\frac{3}{4}$ down, as sales pressed on Continental account in anticipation of the failure of the new issue; rumours were also circulated of forced liquidations. Spanish Fours lost $\frac{1}{4}$, and the rest, $\frac{1}{8}$ to $\frac{1}{4}$.

All River Plate securities again exhibited firmness, a large investment order in National Cedulas raising prices ½ to 1½ per cent. The premium on gold at Buenos Ayres has declined to 248 per cent. In the Home Railway market the feature has been the demand for Metropolitan, and also the District Stocks, which rose 1¼ to 1½ per cent. American Railroad securities ruled firm throughout, the day closing at the best, Milwaukee, Erie Preferred, Illinois, and Atlantic Firsts heading the movement with advances ranging from $1½ to $2. Grand Trunk stocks were unchanged, but Mexican, after being firm, gave way, closing at a loss of ¼ to ½ per cent. Banks continued weak, but a better tendency prevailed in the Miscellaneous market, Breweries also participatiug.

Annexed are the final quotations to-day :—Consols Account, 96, 96⅛; Egyptian Script, 91¼, 91¾; Egyptian Unified, 98⅛, 98⅜; French Four-and-Half per Cents., 104¼, 104⅜; Hungarian, 91⅜, 91⅝; Italian, 92½, 92¾; Mexican Six per Cent., 88¼, 88¾; Peruvian Corporation, 9¼, 9¾; Peruvian Preference, 26¾, 27¼; Russian, 1873, 98½, 99; Portuguese, 53¾, 54; Spanish, 75, 75⅛; Turkish, 1871, 98, 98½; Turkish Defence, 93½, 94; Caledonian Railway, 117⅜, 117⅝; Great Eastern, 95½, 96; Great Western, 157⅞, 158⅛; Brighton "A," 154, 154¼; North Western, 172⅝, 172⅞; Metropolitan, 85, 85½; Metropolitan District, 32¼, 32¾; Midland, 150½, 150⅝; North British, 45, 45¼; North Eastern, 162, 162¼; South Eastern "A," 95, 95¼; Mexican Railway Ordinary, 41½, 41¾; Grand Trunk, 8 15/16, 9 1/16; Grand Trunk First Preference, 60⅞, 61⅛; Grand Trunk Second, 40, 40¼; Grand Trunk Third, 22¼, 22½, Canadian Pacific, 81¼, 81½; Denver Preference, 61¼, 61¾; Erie, 21½, 22; Milwaukee 65¼, 65½; Lake Shore, 115½, 116; Louisville, 81¼, 81½; Atlantic First, 34, 34¼; Ontario, 18⅛, 18⅜; Ohio, 34, 34¼; Norfolk and Western, 54½, 55; Reading, 17⅝, 17⅞; Reading Bonds, 55, 56; Union Pacific, 52¼, 52½; Wabash Preference, 23¾, 24; Ottoman Bank, 14, 14⅛; Anglo-Telegraph, 47¼, 47¾; National Telephone, 4¼, 4½; Hudson's Bay, 17¾, 18; Suez Canal, 99¾, 100¼; Guinness Ordinary, 310, 313; Allsopp's Ordinary, 30, 33; Bryant and May, 13¾, 14¼; Eastmans, 8⅝, 8⅞.

BALAGHAT MYSORE GOLD MINES, LIMITED.

MINE LOOKING BETTER THAN IT HAS EVER DONE.

The gold produced during the year has been 3,555.608 ounces. realising 13,827*l*. 8s. 6d. Other receipts make the total revenue 14,112*l*. 5s. 2d. The ordinary expenditure, including the expenses in England, has been 14,214*l*. 0s. 7d. Capital account : The sum of 20,865*l*. 17s. 2d. has been expended on new machinery, buildings, and plant in the sinking of Haines' shaft, and in the prosecution of the new works recommended by the managers. The return of gold for the past year may be considered satisfactory. The workings in the bottom of the mine are approaching the western boundary of the property. In order to ensure the future of the company, it will be desirable to acquire a block of the adjoining land belonging to the Gold Fields of Mysore Co. The directors propose to lay the matter before the shareholders at the forthcoming meeting, for without first consulting them the directors did not feel justified in entering into any negotiations.

ROBURITE EXPLOSIVES CO.

A SATISFACTORY REPORT BY THE COMMITTEE OF CONSULTATION.

The committee of consultation appointed at the general meeting of the company, held on Mar. 9, 1891, have issued their report. A very minute and careful enquiry into the position and prospects of tbe company was made by the shareholders' representatives. In accordance with their recommendations, the committee have agreed upon economies which, in conjunction with others previously decided on by the directors, will reduce the annual charges for establishment by nearly 1,000*l*. The report of the shareholders' representatives states that in their opinion the site of the company's factory is admirably suited to the peculiar requirements of the business ; the buildings and plant are of excellent construction, in thorough repair, and well adapted to their purpose ; and the mode of conducting the company's business, both home and foreign, is quite satisfactory. The shareholders' representatives having satisfied themselves as to the position and prospects of the company, were enabled to give their assent to the terms of a scheme of re-construction. This scheme provides for the registration of a new company, with a capital of 125,000*l*. preference and 125,000*l*. ordinary shares. the new company taking over all the assets and liabilities of the old company. In the interest of the company, the committee strongly urge the shareholders to give their assent to the re-construction scheme either by proxy or in person.

THE PIGG'S PEAK ESTATE AND GOLD MINING CO., LIMITED.

MR. MURRAY SENDS AN IMPORTANT REPORT.

Mr. Arthur Chambers, one of the directors, is about to proceed to the property in Swaziland, and will return as quickly as possible, with a view to enable the board to lay the fullest and most recent information before the shareholders at a general meeting, which will be held immediately after his arrival in England. Mr. Murray, in a lengthened report, dated March 11th, states :—During the year prospecting was carried on vigorously, and numerous new discoveries were made on different parts of the concession. At the Peak the work showed that three reefs ran through the mine, as shown on map. the battery returns giving good results. In view of the good results of the crushing of ore from Gilbert's winze, at the Peak, he advises that a low level drive be put in immediately. The work should be done by contract for not more than 30s. per foot. There is no use in trying to keep a battery employed by taking the ore from the present levels. In his opinion, in depth he will find a better defined reef than now shows in the main level. Work should also be carried on at the Pirate Reef, Devil's Reef. Durnin's Reef, England's Reef, No. 1 Works, and Gold-bearing Reef, Boundary B. As the battery now stands, and at such a distance from the mine, it takes all profit from low grade ore, and it would require a considerable amount of money to put the remaining 20 stamps in order, as they would have to be taken down and reset. It will be found cheaper to put in electric plant, and move the battery close to the mines. The amount of cash required to carry on the above works, exclusive of re-erection of battery, would be about 1,000*l*. monthly. Mr. Edgar Taylor and Mr. Murray have advised the board to purchase a diamond drill for prospecting the reefs to a greater depth. The drill can be laid down for about 200*l*., and would more than pay for itself in a very short time. The total work for the year has comprised 10,586 ft., which no one can consider other than a good record.

THE NUNDYDROOG GOLD MINING CO., LIMITED.

DIRECTORS ISSUE A GRATIFYING REPORT—GOLDFIELDS PURCHASE.

The sales of gold for the year were 15,096 ozs., realising 58,911*l*. 18s. 1d. The profit for the year has been 30,009*l*. 10s. The balance standing to the credit of profit and loss at the close of 1889 was 2,535*l*. 18s. 9d., making together a disposal balance of 32,545*l*. 8s. 9d. This has been dealt with as follows :—Dividends : third dividend, 9,969*l*. 13s. 8d. ; fourth dividend, 11,250*l*.—21,219*l*. 13s. 8d. Vote to Capt. Plummer at general meeting, Mar. 25, 1890, 525*l*. Written off : Depreciation of machinery and plant, 1,000*l*. ; preliminary expenses, 865*l*. 19s. 10s. ; reserve fund, 500*l*.—2,365*l*. 19s. 10s. ; total, 24,110*l*. 13s. 6d. Balance to be carried forward, 8,434*l*. 15s. 3d. ; total, 32,545*l*. 8s. 9d. Out of this sum of 8,434*l*. 15s. 3d. a balance dividend for 1890 of 1s. per share, absorbing 7,500*l*., was paid 26 Mar., making the total dividends for the year 28,719*l*. 13s. 8d. During the year the sum of 16,404*l*. 9s. 9d. has been spent upon new works in connection with Kennedy's and the New North shafts. The directors have considered it desirable, in the interests of the proprietors, to negotiate with the Gold Fields Co. for acquiring mining rights on the block of land adjoining the western boundary, comprising about 110 acres, extending for the entire length of the sett, and for 1,500 ft. wide. The consideration has been agreed subject to confirmation by the shareholders, at 20,000 fully-paid shares in this company ; and in view of the absolute necessity to this Company, in order to secure permanence and security in working, the directors have every confidence in recommending the purchase. The directors propose that this be provided for by an issue of 20,000 1*l*. shares fully-paid, and that to provide the necessary capital for the development of the mines a further issue of 30,000 1*l*. shares be made at a premium of 5s. per share, and that such shares be offered *pro rata* to the existing shareholders, being in all an increase of 50,000*l*., in 50,000 shares of 1*l*. each, making a total capital of 200,000*l*.

The Mining World is a storehouse of mining information. Among the "good things" to which it calls attention, are Tolima "A," and Mount Zeehan, a mine in Tasmania, which is rich in silver-lead. —*Shareholders' Review.*

Belcher Consolidated.—Defferari : New shaft 125 ft. and drifts will be run into the vein about 50 ft. Diamond shaft sunk in the vein, which will supply 40 to 50 tons per day ; 30 tons from this vein have been crushed, yielding $30 free gold per ton, exclusive of yield of sulphurets. About 500 ft. of levels are run in the two mines, and when the junction of the veins occurs, good returns may be anticipated as they have same dip.

The Nitrate Railways Company, Limited.—The gross receipts from all sources have been 986,474*l*. 17s. 5d., as against 887,623*l*. 1s. 5d. in 1889, 761,682*l*. 7s. 9d. in 1888, 674,205*l*. 9s. in 1887, 455,963*l*. 2s. 8d. in 1886, and 351,615*l*. 0s. 8d. in 1885 ; and the net receipts, after payment of working expenses, cost of administration and maintenance of the permanent way, are 573,911*l*. 9s. 11d., as against 484,704*l*. 15s. 4d. in 1889, 414,069*l*. 19s. 2d. in 1888, 379,646*l*. 4s. in 1887, 183,264*l*. 17s. in 1886, and 103,110*l*. 0s. 7d. in 1885, showing a continuous and satisfactory increase. Two interim dividends of 10 per cent. each, amounting together to 276,000*l*., were paid in July, 1890, and January last, leaving a balance of 157,259*l*. 15s. 10d., which having regard to the present condition of affairs in Chili, the directors recommend should be carried forward. Recent troubles in Chili have necessarily reduced the receipts of the company during the present year, but the traffic receipts for the first half of April are 7,600*l*. in excess of the corresponding period of last year ; thus showing that the line has received no permanent damage.

Nerbudda Coal and Iron Company, Limited.—The output for the year was 5,528 tons, obtained chiefly from the South River workings. The sales were 4,227 tons, and the colliery consumption 1,301 tons. The revenue account exhibits a loss of 1,960*l*. 13s. 7d. whicb, after crediting exchange on remittances with 445*l*. 11s. 4d., reduces the deficit to 1,515*l*. 2s. 3d. After charging profit and loss with 62*l*. 6s. 0d. for income tax, writing off 285*l*. 8s. 0d. for rods lost some time since in boring operations, and a further sum of 1,500*l*. for depreciation, also the deficit from revenue, namely, 1,515*l*. 2s. 3d., there remains to the credit of profit and loss the sum of 199*l*. 17s. 9d. to be carried forward. In order to thoroughly prove the surrounding district for new coal, a complete boring rig, capable of working to a depth of 1,000 feet, has been purchased (at a cost of nearly 1,000*l*.) and dispatch to the mines. It has safely reached its destinatiou, will be erected and put in operation forthwith. The directors trust that the expectation of the manager of finding coal by this means in other parts of the company's property will be realised.

REPORTS OF MEETINGS.

NATIONAL BANK OF INDIA.

A NET PROFIT OF £118,125.

The ordinary general meeting of shareholders in this company was held on Wednesday, at the Cannon Street Hotel.

Mr. R. C. Campbell

presided.

The General Manager read the notice convening the meeting.

The Chairman said: Gentlemen, we are happy to meet you again under favourable circumstances, and to be able to submit to you a report which in every line of it bears evidence of progress and prosperity. I think I may at once venture to congratulate you on the result of the year's operations, that result being a net clear profit, including the balance brought over from the previous year of 118,125*l*. 16s. 8d., or a sum equal to 23½ per cent. upon our paid-up capital. (Cheers.) In rising to propose to you the adoption of this report, and of the accompany statement, I think it may not be out of place if I remind you that the year covered by these accounts, was, perhaps, one of the most remarkable in its financial aspects of any year in recent experience. I think I need only point you to the extraordinary fluctuations in the value of money alternately in India and this country, to the unprecedented rise in the value of silver, and the equally sudden fall of silver, and carrying with it all securities representing silver; and to crown all there were these startling events that convulsed our money market in Nov., culminating in the intervention of the Bank of England to ward off the greatest public calamity, and to sustain public credit. These things must be fresh in your memory, and I only allude to them now because we think that it reflects great credit upon our executive—our chief manager and managers abroad—that under the circumstances they succeeded in taking advantage so successfully of the opportunities that presented themselves when working our exchange business, and thereby turning these opportunities to the best account. Well, gentlemen,

THE YEAR HAS BEEN ONE OF EXCEPTIONAL PROSPERITY,

and what is more, promise for the future. We have had to reckon with some losses, and to provide for them, and this has been done in the most ample manner. After all our accounts exhibited, as I have said, a clear net profit, including what we brought over from the previous year, 118,125*l*., or close upon our paid-up capital. This sum we propose to deal with as explained in the third paragraph of our report. For many years, as you know, our persistent efforts to build up an effective reserve were in consequence of the depression only partially successful. Now, however, the profits of the past year, supplemented by those of the previous one, when we carried 40,000*l*. to the reserve fund, have enabled us to place our rupee capital on a sterling basis at the rate of 1s. 6d. per rupee, which was about the rate on Dec. 31, leaving our reserve fund at 100,000*l*. We have no doubt you will consider this a very satisfactory arrangement of a long-standing difficulty. We have now practically closed up the hiatus caused by the depreciation of the rupee as stated in sterling, thereby adding 216,000*l*. out of the undivided profits to our paid-up capital, while distributing year by year a dividend of 5 per cent., now to be supplemented by a bonus of 1 per cent., making the dividend for the year 6 per cent. Gentlemen, I do not propose to enter into a detailed reference to the different items of our balance-sheet: they speak for themselves; but I think it may be interesting to you if I compare one or two of the most significant items in the balance-sheet with the corresponding figures of the previous year. I have already referred to our capital and to the reserve fund. The next item on the debit side of the account I will allude to is the amount due on current and fixed deposits and other accounts, 4,256,262*l*., against, in 1889, 2,937,527*l*., showing in 1890 over the previous year of 1,318,435*l*. On the credit side of the account, the first item—cash on hand, at call and at bankers, together with bullion—amounts to 1,544,000*l*., against 852,000*l*. in 1889, showing an increase in 1890 of 692,000*l*. This is a very large sum to have in cash, and I should, perhaps, explain that this large cash balance of over one and a half millions sterling, held at the close of last year, was due, in a great measure, to the peculiar circumstances of the year. In India, for several months towards the fall of the year, money was so abundant and so cheap that it was difficult to employ any amount for 1 per cent., while on this side the Argentine difficulties so painfully reflected on our money market as to make it essential to keep ourselves strong in view of any emergency. Take again the next item on the credit side of the account—rupee securities, which, reduced to sterling, amount to 396,290*l*., as against corresponding figures in 1889 of 362,736*l*., showing an increase in 1890 of 33,554*l*. The sterling securities in 1890 amount to 317,140*l*., as against 225,000*l*. in 1889, showing an increase of 92,000*l*., and taking the two together we have an increase in 1890 of 125,694*l*. Indeed, in every department of our business there has been a great development, as you may gather from the figures at the foot of the balance-sheet, showing that the volume of our transactions were 6,858,295*l*., against 5,657,000*l*. in 1889, showing an increase in 1890 of 1,200,840*l*. You will observe that we propose to appropriate 2,500*l*. out of the profits to the commencement of

A PENSION FUND FOR OUR OFFICERS.

This is a matter that we have had in contemplation for some time, but it is only now that we have been able to see our way to make a commencement. The main object is, of course to provide a superannuation fund, but we have reason to believe that it will be not only a great boon to our officers but a great benefit to the bank, indirectly forming a tie between it and its *employés*, leading them to identify themselves with the interest of the bank, and to stimulate their loyalty and to hold out inducements to them to qualify themselves for the higher offices in the service. Gentlemen, a definite resolution will be proposed to you on this subject. With regard to the proposition to increase our paid-up capital to 500,000*l*., I may state that this was the amount which it was originally intended to call up, and you will recognise at once certain inconvenience and incongruity in the figures, both in the number of shares and the amount which they represent. By the issue of 2,680 new shares our capital will be represented by 40,000 shares, and we can very well find profitable employment for the amount which we shall receive in respect of this increase of our capital. You will observe, gentlemen, that in common with many banks and kindred institutions, both in London and elsewhere, we joined the Bank of England in subscribing to a fund formed to guarantee the due liquidation of Messrs. Baring's liabilities. We felt it to be our duty, in the very exceptional circumstances, to go in this arrangement when invited to do so by the Governor of the Bank, and this we did, as we informed you, to the extent of 100,000*l*. I can assure you that it was only after the most careful consideration of all the circumstances that we took this step, and I am authorised by the Governor of the Bank to state that forming his judgment upon the best information at his disposal, and upon a very recent and careful examination of all the circumstances of the case, he has no reason to alter the opinion which he formed, and has expressed more than once that the liquidation will go on successfully and that no claim will arise under the guarantee to any of the guarantors. (Hear, hear.) I think, gentlemen, that is a satisfactory statement. Gentlemen, I do not like to leave this subject without expressing our high appreciation of the public spirit of the Governor of the Bank of England in intervening on this memorable occasion so promptly and so efficaciously to avert what would have been a great public calamity. Before moving the adoption of our report I have to refer to a matter which is not mentioned in our report but which we consider one of very great importance to us—I mean

OUR NEW BANK PREMISES AT 47, THREADNEEDLE STREET.

When last I addressed you I told you that from the increase of our business and the consequent necessary increase of our staff at the head office we had, under the pressure of absolute necessity, to find larger and more convenient offices, and that we had succeeded in securing the premises which we now occupy. It had often been a subject of remark of our customers and our shareholders coming from the East, that while the National Bank of India occupied a leading position in Calcutta and in Bombay, and held palatial offices at both places, we at the head office seemed to be content to take a back seat, to use an expressive Americanism, occupying premises which were totally inadequate to our wants, and which had the additional disadvantage of being up two flights of stairs. Now I am thankful to say that we are in possession of a place of business, arranged according to our plans, in the most convenient and suitable situation, with a public office entering from the street, held on a long lease, and on terms which we have reason to think are advantageous and reasonable. Gentlemen, I think you will admit that that has been in every respect a desirable change, and that we have made a good commencement in our new premises. The resolution I have to propose is as follows: "That the report of the directors and the statement of accounts for the year ended Dec. 31, 1890, now presented, be received and adopted, and that a dividend at the rate of 5 per cent. per annum for the half-year ended Dec. 31 last, together with a bonus of 1 per cent., making a total distribution of 6 per cent. for the year, be paid upon the shares of the company registered at this date, the same to be payable free of income-tax, on and after Apl. 25."

Mr. Borradaile seconded the motion.

Col. Bolton then addressed the meeting at considerable length, and concluded by moving the following amendment:—"That this meeting is of opinion that the capital of the bank is now, and always has been, sterling capital, as shown more particularly by the liability for the unpaid half of shares; but that as capital has always been employed in India, and must continue to be employed there, it must be subject to variations in value, according to the fluctuations in the relative value of gold and silver, and this meeting, recognising the fact that there is at present a depreciation of value in that portion of the bank's capital, which may or may not be temporary, approves of the policy of the directors to make provision for it, to the extent of the actual depreciation. The meeting, however, considers that no alteration should be made in the original value of the bank's paid-up sterling capital, but that the appropriation of 76,625*l*. should be added to the reserve; and that the provision for depreciation may best be made by a special sub-head of the reserve fund, showing the sum placed apart as a set off for estimated depreciation, and this amount can be raised from time to time as fluctuations in silver require, by adjustments with ordinary reserve, without interfering with the total of the reserve fund."

Col. Ross seconded the amendment.

Mr. Harvey congratulated the shareholders and directors on the abnormally successful year which they had experienced. (Cheers.) As regarded the question mooted by the last speaker, he would merely say that it was impossible to imagine that theirs was the first bank to write down its rupee capital on a sterling basis. It was well known that one of the leading banks pursued that very process with the greatest possible success. With regard to the question of capital, he had always considered that the amount put down under that head, namely, 466,500*l*., was misleading and anomalous. Their capital was raised in rupees, and rupees had depreciated, therefore that was not the amount of their capital. The amount set aside for reserve fund also was not a reserve fund proper, available for losses, but merely a reserve fund to provide for the depreciation of the rupee. Therefore, they were working with a hypothetical capital, and not a correct reserve fund. The directors now proposed to do away with those anomalies. They had had an exceptional year, in which they had made 30 per cent., and he did think that if the directors had failed to grasp the present situation they would have made a great mistake. (Cheers.) He considered that by acting as they had done the directors merited their gratitude, and he only hoped they would support them. By their present action the directors had taken giant strides in advance, and they placed the bank in

THE VERY FIRST RANK OF INDIAN BANKS.

(Cheers.) He thought there could be no difference of opinion with regard to creating an officers' pension fund. He dared say that some shareholder might have thought that in view of the magnificent year that they had had that it would have been better to have given a larger dividend, but he did not hold that view, indeed, he would have been satisfied with 5 per cent.

Col. Graham having suggested that the company should pay an increased dividend,

The Chairman: Well, gentlemen, we have heard a very long and

elaborate lecture upon the state of our capital and our reserve fund, and I think I can answer it in a very few words. It is, in fact, an auditors' question. When the head office of the bank was transferred to England the exchange was somewhat over 2s. per rupee. It was necessary, when shifting the bank to England, that the capital should be stated in sterling, and we took it at the exchauge of the day; but, as everyone knows, there has been a great depreciation in the value of the rupee, and it was necessary in building up a reserve that we should, to such an extent as necessary, hold our reserve as available to make up capital, so as to bring it to the sterling value of the capital in the East, and our capital has remained in the East, and there it is intact. But as our capital was stated in sterling it was necessary to provide some means for equalising it. You might have observed in recent reports that this was all clearly stated, and there can be no doubt that it is not only expedient, but highly desirable and necessary that we should as soon as possible place our capital on a sterling basis, and this we did at what was the exchange when our accounts were made up. We have added, including the reserve, 214,000*l.* to the paid-up capital by the process we have adopted.

The amendment was then put and lost, and

THE REPORT AND ACCOUNTS WERE ADOPTED.

The Chairman then moved: "That 2,500*l.* be set aside towards the formation of an officers' pension fund."

Mr. Borradaile seconded the motion, which was agreed to.

The retiring directors, Messrs. J. Murdoch, J. Borradaile, and Sir Stuart S. Hogg, were re-elected, and Messrs. F. Cooper and W. Stansfield were re-appointed auditors at the remuneration of 75 guineas.

The proceedings closed with a vote of thanks to the chairman and directors.

UNITED MEXICAN MINING CO., LIMITED.

IMPORTANT EXPLORATORY WORK—AN ADDITIONAL INTEREST ACQUIRED IN EL CUBO—BETTER RESULTS CONFIDENTLY EXPECTED.

The ordinary general meeting of shareholders in this company was held at Winchester House, on Monday.

John Grove Johnson, Esq.,

presided.

Mr. W. L. Hunt (secretary) read the notice convening the meeting, and the minutes of the previous general meeting, which were confirmed. The directors' report was taken as read.

EXPENSES REDUCED.

The Chairman: Gentlemen, the directors are very sorry to have to come before you again, and not to be able to recommend a dividend. That is a matter of regret to you no doubt, but it is still more a matter of regret to the directors themselves. Every effort has been made to arrive at this desirable result, but, although our prospects are hopeful, we cannot recommend a dividend to-day. With regard to the balance-sheet, one or two suggestions were made by shareholders at the last meeting, and in consequence more details are now given of the expenses of management. It is satisfactory to notice that the expenses in Mexico and London, for 1890, are very considerably less than they were for 1889—more than 2,000*l.* less. That has been the result of a re-arrangement of the staff. We have saved money without sacrificing efficiency. A suggestion was also made that the auditor should be present, and, I believe, he is here to-day. Now, with regard to the report, I have just a few remarks to make, which I will make as briefly as possible. It must be remembered that our property, although one property, consists of two undertakings—we have our San Cayetano, and our Cubo properties. I will refer to them separately, because we work them under different conditions.

THE SAN CAYETANO PROPERTY.

Our San Cayetano property, from which we have drawn a lot of money in previous years, has becomc unprofitable; but we have a reserve fund which we are bound, according to our charter with the Mexican partners, to employ for the further development of the property until it is all exhausted. That reserve fund, at the present rate of expenditure, will last us for several years. We have used 4,000*l.* of it in the year 1890—that is to say we have made a profit out of the mines, but we have spent that profit, and with it 4,000*l.* of our reserve fund. The San Cayetano property is, we believe, a very fine property, if we could only find out where the ore bodies are. We believe several very important ore bodies exist there, and we may fall upon one or more at any time; but it is quite impossible for me to prophesy when that desirable event will occur.

THE CUBO PROPERTY.

With regard to the Cubo property—we work that under quite different circumstances. Since we met last year our position with regard to the Cubo property has altered. At that time we were in equal partnership with Mr. Parkman, but since then we have acquired his share on what we hope and believe will turn out to be very advantageous terms. We have given him for the whole of his half interest 80,000 shares out of 150,000 shares, which were created some time ago for the purpose of acquiring the interests of other parties in our property, and we think we have expended those 80,000 shares well in giving them to Mr. Parkman for his interest in Cubo. We have agreed to facilitate the sale iu this country of one-half of those shares. There is, however, no hurry about the sale of them. Mr. Parkman is our debtor for a large amount. He buys our ores for his tender, and we need not, therefore, hurry ourselves about the matter.

A GOOD GUARANTEE.

When I tell you that about one-fifth of the whole interest of the concern is represented at the board table to-day you may easily understand that nothing will be done by the board which is at all likely to injure the value of our share property. The best possible guarantee, I think, that the shareholders can have is the fact that the board have such a large holding. With regard to our position in Cubo, the change in our position between 1889 and 1890 is this: In 1889 we were still spending on capital account, aud making no profits; in 1890, in the month of Aug., we began to make profits. We had finished our adit, and our profits for the last four months of last year were in round figures about $10,000 a month. Considering that we spent on Cubo something over 100,000*l.*, $10,000 a month is not at all a bad profit to make. But we must not run away with the idea that that $10,000 a month can be devoted entirely to paying dividends. We have still some work to do in Cubo, which, although not compulsory, is very advisable; and certainly some proportion of the profits, whatever they be, will have to be spent upon further exploratory work. We hope, however, that some portion of these profits will be able to be devoted to a dividend, but I almost hesitate to say anything more about it in case it should be considered as a promise on my part, and it is uusafe to make promises We are

EXTREMELY HOPEFUL

about our Cubo property, and we believe we have a good future before us; but the speculative nature of mining enterprise must never be forgotten. I may say also that our mill is beginning to pay better, apart from the mining undertaking. With reference to the loss which we have sustained by the death of our manager, Mr. Pleace, the report deals with that subject very fully, and therefore it is not necessary for me to say more than that we thought it advisable in the circumstances for Mr. Grothe to be sent out to Mexico to re-arrange the staff, and at the same time we have requested him to give us his honest opinion as to whether we might not very reasonably attack our ores in Cubo very vigorously, in order to increase our weekly returns and profits. We have a great quantity of ore, and we are auxious to extract as much as we possibly can, bearing in mind, of course, that we must not work our ores unfairly. If we were to make a great attack and come to the end of our ores suddenly, it would not be judicious, and it would also probably be very misleading. When I say "misleading," I mean that if we had a large quantity of ore, and were suddenly to utilise it all and show very good results, and at the end of a twelvemonth find that we were getting very short of ore, it would be considered that we had not been judicious in our management. Therefore, Mr. Grothe is to give us his honest opinion as to what further exteut we might attack vigorously our ores in Cubo. There is one other thing for me to mention.

A MEXICAN AUDITOR.

At a previous meeting something was said about the auditing of our accounts in Mexico. We have now succeeded in getting one of the largest shareholders in Mexico to undertake the audit of the accounts there. He represents a large house out there, and has a very considerable interest, and it will be satisfactory to the shareholders to know that the auditing of the accounts has been taken up by this gentleman—I refer to Mr. Phillippe. The chairman concluded by offering to reply to any questions.

QUESTIONS.

Mr. Horncastle: In the first paragraph of the report where you deal with capital and finance, you say that you bought an interest in a property for .88040 of a barra. I presume the San Cayetano property is referred to. I want to know why, when the chairman has just acknowledged that the San Cayetano is not profitable, we should buy another interest in that property, particularly as we do not appear to have disposed of all our partners? With regard to our investments in Canada Three-and-a-Half per Cent. Inscribed Stock, and Two-and-Three-quarters per Cent. Consolidated Stock, amounting to 13,511*l.* 13s.—I think the auditor should state the amounts separately, and give us the cost price of each. The chairman seemed to be rather hopeful that we might pay a dividend soon, but I see there is a loss of 22,318*l.*, and until that has been wiped off there can be no question of dividend.

Mr. Alten: I do not wish you to bind yourself to promise us a dividend, but I should like to know if it is your intention not to take anything more from the Cubo Mine than you propose to spend on explorations? Can the output be increased? What is your iutention with respect to the 40,000 shares you have referred to? Will you place them on the market if the price goes higher? We do not want to be saddled with these shares to please the Parkman family. Has Mr. Grothe taken up a further property for us; because I read to-day an extract from a Mexican paper, which stated that a concession had been granted to Messrs. Esteban Benecke, successors in representation of Mr. Alberto Grothe, for the exploration and operation of mines in the State of Durango?

A PROSPECT IN SAN CAYETANO.

The Chairman: Mr. Horncastle has raised the question: If San Cayetano shares are worth nothing, why did we buy them? We have always a prospect in San Cayetano, and we have made the purchase accordingly. We have given very little indeed for what we have bought—we gave only a few shares—and we consider the acquisition worth having. In the present state of affairs we did not give anything like the number of shares for the property that we did three or four years ago. As the San Cayetano property gets less valuable we give less for its shares; but we think them well worth buying at the present low price. As regards the iuvestments—the question is one for the auditor.

INVESTMENTS.

Mr. Charles J. Palmer (director): If Mr. Horncastle wishes to know the present value of the investments—the value this morning is 15,095*l.* against 13,511*l.* in the balance-sheet.

The Chairman: The auditor has ascertained for himself that we possess all these investments, but I will make a note that in future they shall be stated separately. The next question is as to the loss of 22,000*l.* That is made up largely in cousequence of the difference iu exchange, which has been explained at previous meetings. I do not think it will be absolutely necessary to wipe out that item of 22,000*l.* before we pay a dividend; but when we are making profits it will be time enough to consider how we shall deal with them. In reply to Mr. Alten—first as to Cubo. We have urged upon Mr. Grothe to give us his honest opinion as to the extent to which we can increase our attack upon the Cubo ores in order that we may be able to pay dividends.

NOT WORKING ENTIRELY FOR POSTERITY.

It is not the intention of the directors to work entirely for posterity if they can help it, but judicious exploration must be

continued in order to develop the property. We are very anxious to pay a dividend, and are doing our best to achieve that result. With regard to the 40,000 shares—we have done nothing to please the Parkman family, as Mr. Alten has suggested ; what we have done has been to please ourselves. We have acquired his share, because we thought it advisable to do so, and we had the opportunity of doing it at a very moderate rate. We can do what we like about the 40,000 shares ; how we shall facilitate their sale we have not yet decided. We discussed the matter, however, at a board meeting, and I may tell you that a large proportion of those shares the board will be willing to take up, if they are not taken up by anyone else. (Hear, hear.) As to what Mr Alten has said about Mr. Grothe's connection with Messrs. Benecke—Mr. Grothe acts on his own account now as a mining engineer as well as consulting engineer to the company, and it is in consequence of his undertaking business on his own account that we have been able to reduce the expenditure as much as we have done. 2,000*l.* is a large amount to reduce in one year, and that has been done partly by retaining Mr. Grothe, at a moderate fee, as our consulting engineer, and he, at the same time, conducts his own business ; so that the application which Mr. Grothe has made in Mexico in connection with Messrs. Benecke Brothers has nothing to do with this company. In fact, the directors have decidedly set their faces against any new work at all. We believe we have got a fine property, and

WE INTEND TO STICK TO IT,

and not go further afield. What we are trying to bring about is a state of things which will mean regular dividends. If we do not succeed it will not be our fault, but our misfortune ; for we shall do our utmost to succeed. (Cheers.)

A Shareholder : I think now that we have a Mexican auditor it would be satisfactory to the shareholders to receive the Mexican accounts every year. The chairman made the remark that Mr. Parkman used to hold one-half interest in Cubo is the other half the property of the company ouly, or

ARE THERE OTHER PARTIES INTERESTED,

and, if so, to what extent? Last year there was a question of some heavy item of exchange—I suppose that is the item the chairman has referred to. Is the amount of 416*l.* for salary of consulting engineer a fee paid to Mr. Grothe? How is it that we pay income-tax when we have made a loss?

The Chairman : No one else is interested with us now in the Cubo property. With regard to the item of exchange, that subject was referred to last year. We were in a difficulty last year in consequence of Mr. Bishop, our auditor, being away in the United States. I hope that will not occur again ; it was not our fault. The sum of 416*l.* referred to is the fee paid to Mr. Grothe for 10 months. As to the income-tax, we have to pay upon the average of three years, and during that period we made a profit.

A Shareholder : Is the item of 216*l.* for pension paid to the late secretary a yearly amount? Are our ores refractory? Of course, we use the best process for reducing them?

The Chairman : The 216*l.* is a yearly allowance to our late secretary who served us for 40 years, aud the directors did not consider they could turn him adrift. We have, however, reduced the amount as we are not making profits.

ORES NOT REFRACTORY.

With regard to our ores, I should not consider them refractory. They are treated now by the Boss process, which is believed to be the best for this class of ore. I should certainly not class our ores with refractory ores ; at any rate, if they are, they are only moderately refractory —not rebellious ores.

The Chairman then moved the adoption of the report and balauce-sheet.

Lieut.-Genl. J. W. D'Oyly (deputy chairmau) seconded the motion, which was carried unanimously.

The Chairman next proposed the re-election of the retiring directors—Messrs. D'Oyly and Runge.

Mr. Lewis H. Perry (director) seconded, and the motion was agreed to *nem. con.*

On the motion of Mr. Alten, the auditors, Messrs. Turquand, Youngs, Weise, Bishop and Clarke, were re-appointed, and their remuneration was fixed at 42*l.*

A vote of thanks to the chairman terminated the proceedings.

WHEAL BASSET.

CALL OF 6s. PER SHARE.

A twelve-weeks meeting of the adventurers in Wheal Basset was held on the mine on Tuesday.

Mr. W. McKeand

(chairman of the committee) presided.

The accounts showed that the labour costs for the quarter had been 3,619*l.* 0s. 5d. ; coal, 1,642*l.* 9s. 2d. ; timber from stock, 23*l.* 11s. 7d. ; carriage and charges, 101*l.* 13s. 3d. ; timber from merchants, 19*l.* 11s. 9d. ; other bills, 755*l.* 1s. 3d. ; rates, 55*l.* 9s. 5d. ; stannary assessmeut, 5*l.* 13s. 3d. ; total debits. 6,222*l.* 10s. 8d. Black tin sold, 78 tons 9 cwt., for 4,204*l.* 15s. 9d. ; carriage, 8*l.* 8s. ; discounts, 53*l.* 14s. ; spare materials, 99*l.* 2s. 9d. ; total debits, 4,366*l.* 0s. 6d. ; loss on the three months' working, 1,856*l.* 10s. 2d.

CHEER UP MR. MCKEAND.

The Chairman, in proposing the adoption of the accounts, said : He did not know that he had ever met them when he was so much out of heart as he was that day. Again they would have to make a 6s. call, and it was very disheartening, after labouring year after year to get a good mine, they were once more called upon to sanction such a demand. But they knew what mining was. They knew its vicissitudes and uncertaiuties, and in Wheal Basset they were hoping and hoping almost against hope.

The accounts and report were then passed.

Mr. Trembath moved a call of 6s. per share.

The resolution was adopted.

KLERKSDORP GOLD ESTATES, LIMITED.

MR. MOCATTA OBJECTS TO THROWING GOOD MONEY AFTER BAD —A POLL TAKEN, AND A SCENE ENSUES,

A special meeting was held on Monday for the purpose of winding up and and re-constructing the company.

Mr. Donald Macdonald

(the chairman) presided.

WORK AT THE MINE.

The Chairman : We possess a very large property, comprising some 2,000 acres, upon which we have hitherto only been able to sink three shafts, of very moderate depth. We have still some two miles of reef unexplored, and of course, undeveloped. This reef outcrops on the surface, and is traceable from end to end of the big Mynpacht. It is intended that the money to be raised by this re-construction shall be spent in sinking shafts on lower levels of the reefs than any yet touched in the prospecting which has been carried out. It is generally believed that reefs which are poor on the surface show better results on lower deposits, but we have not yet been able to ascertain what our reefs are to a greater depth than 75 ft. Since we commenced milling in October last, we have crushed some thousands of tons of ore, which have reallsed 1,472½ ozs. of gold, the yield per ton being 4¾ to 5 dwts. This yield has been sufficient to pay working expenses, aud anything over 5 dwts. would be a clear profit to the sharcholders. We possess, on the property, a complete mining plant for working a 30-stamp Saudycroft battery ; could we be but find some slightly richer grade ore we should soon be in a position to render you a more satisfactory account of the property. Since the adjourned meeting, we have consulted the majority of the larger shareholders as to the best course to pursue, and the scheme before you is the outcome of that consultation. Of course, in a scheme such as the present one it is very difficult, iu fact impossible, to draft a plan of reconsiruction which will meet with the approval of everybody concerned, but the directors themselves are anxious to raise the larger amount of money.

2s. A SHARE.

What we propose now is to raise 2s. per share, which is the proposal which we think will receive the best support. I may mention that at one of the meetings of the shareholders I have referred to, some of those present suggested that unless the gold now in crushing was earning a fair profit over and above the working expenses, the mine should be shut down. Mr. Francis, the solicitor to the company, is present, and I will ask him to explain the draft agreement referred to in the circular, which really contains the gist of the whole matter. He will also explain any point in the scheme which may not be perfectly understood by the shareholders. I move the first resolution, which is : (1) "That the company be wound up voluntarily under the provisions of the Companies Acts, 1862 to 1890, and that Donald Macdonald, Esq. (the chairman), and A. J. May, Esq. (the secretary), be, and they are hereby appoiuted liquidators for the purposes of such winding-up."

Mr. George Reid seconded the resolution.

A SHAREHOLDER'S ADVICE.

Mr. Mocatta : I was asked to attend a meeting of large shareholders a little while ago when we fully discussed the possible prospects of the company. Since then I have taken the opportunity of trying to find out from the spot what is thought of this property, and as far as I and my friends can learn there is not the slightest justification for throwiug good money after bad. Thiuk of what has been done in this company. There has beeu a considerable amount of money spent on that portion of the property which was universally considered to be that from which the best results would be obtained. We found the Whittaker's reef from which we had assays of an agreeable description—was a reef which would certainly yield payable results — but we find, to our disappointment, that this is not the case, aud that the manager, who was then there, either deceived us or was himself deceived. The assays are very difficult indeed to reconcile with the results of the crushing. We find that Whittaker's reef is good for nothing, and that our company is in debt to a considerable sum, and we are now askiug a good deal more to explore the other reefs which were less kuowu and less thought of at the time. This compauy was brought out at a time when people were very sanguine, and the result is disappointment in this case as in many others. We have lost our money aud we had better not lose more. Under any such scheme there might be a hope of not letting the property pass out of our hands if we had the kind co-operation of the gentleman to whom we are iudebted. I think it is a pity that directors allowed the company to go into debt. It puts shareholders to such a terrible disadvantage when they are told, "You must do something or the mine will pass out of your hands." The best way is to treat the property as if it were your owu, and iu that case what would you do? You would shut it down at present. The company does not require this mouey. All it wants is to have the leases paid so as to keep the property in our own hands, aud I believe that amounts to about 500*l.* a year. The machinery ought to be taken care of and these gentlemeu should have debentures giveu them, and the property be let alone until such time as the railway come to that part of the country, when no doubt expenses will be greatly reduced, and when it may be possible to get other people to prospect for you instead of doing it yourself. If such a thing were carried out, I would support a plan to raise a shilling a share so as to pay curreut expenses, but meanwhile I beg to move that the present scheme be not adopted.

Mr. Lindo thought it would be desirable for the shareholders to vote for or againat the directors. (Hear, hear.) With regard to the desirability of carrying out the scheme, it seemed to him to depend upon one fact, and that was whether the company was in a position to proceed without funds being raised in some form or another. What he suggested was to pass the resolutions, and

APPOINT A COMMITTEE

consisting of three shareholders to confer with the directors as to the dates when the payments should be made, and the purposes for which the same and proceeds of the debentures should be applied.

The Chairman : The directors are williug to have this committee of shareholders to coufer with them.

Mr. Mocatta said he was not anxious to wind up the company, but he did not wish to support the scheme, because he considered it unsatisfactory and not worth a moment's attention.

Mr. Francis pointed out that the directors had invited the largest shareholders to consult with them, and the scheme was the consensus of their opinion.

Mr. Spicer moved as an amendment : "That this meeting be adjourned, and that a second meeting be called, at which Mr. Leask shall be invited to attend, when this re-construction scheme shall be considered." He observed that the scheme was not satisfactory because they had not been shown what good could be done, and it was useless throwing good money after bad.

The amendment having been seconded by Mr. Powell.

The amendment was then put and declared carried.

Mr. Vincent : I demand a poll.

Mr. Spicer and other gentlemen protested against a poll being taken then.

The Chairman stated that a proper notice had been handed to him demanding a poll, and he, therefore, ordered it to be taken at once on the question whether the meeting should be adjourned or not. He then asked Mr. Lindo to act as scrutineer for the board.

A SCENE OF CONFUSION ENSUED,

in the course of which several shareholders protested against the poll being taken at once without giving them an opportunity of using proxios in support of the amendment, while

Mr. Mocatta asked those gentlemen who had supported the amendment to abstain from taking any part in the poll.

Scrutineers were appointed, and the poll was proceeded with, but

ONLY A FEW SHAREHOLDERS VOTED.

After a short interval, the Chairman said the result was as follows :—For the adjournment, 330 votes ; against, 4,597. He therefore declared the amendment lost without using the proxies.

At this declaration several gentlemen left the room, protesting that the poll was a farce.

The Chairman then put the first resolution, which was agreed to.

The Chairman next proposed : "That the said liquidators be, and they are hereby authorised to consent to the registration of a new company, to be named the Klerksdorp Estates Co., Limited, or by some other suitable name, with a memorandum and articles of association, to be approved by the directors of this company."

This was seconded by Mr. Jones, and carried.

On the motion of the Chairman, seconded by Mr. Anderson, the following resolution was also agreed to :—"That the draft agreement submitted to this meeting and expressed to be made between the liquidators of this company of the first part, this company of the second part, and the new company of the third part (the draft being also signed by the chairman of the meeting for the purpose of identification) be, and the same is hereby approved ; and that the liquidators be, and they are hereby authorised, in accordance with Section 161 of the Companies Act, 1862, to enter into an agreement in accordance with such draft, or as near thereto as may be."

On the proposition of Mr. Lindo, it was resolved :—"That a committee, consisting of three shareholders, be appointed to confer with the directors as to the dates when a call of 2s. per share on the 150,000 shares shall be made, and the purposes for which the same and the proceeds of the debentures shall be applied ; and also on all matters in connection with the re-construction of the company."

On the motion of Mr. Lindo, the following resolution was agreed to :—"That the committee consist of Messrs. J. W. Anderson, Sullivan, and Lindo, and that all proper disbursements, if any, be provided by the company."

The adjourned general meeting was then held.

The Chairman formally moved the adoption of the report and accounts to June 30, 1890.

The motion was seconded by Mr. Reid, and carried.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

To the Editor of the Mining World and Engineering Record.

SILATI AFFAIRS.—CAPT. JAMES WILLIAMS DEFENDS HIS MANAGEMENT.

Sir,—I had no intention of publishing anything in the papers concerning the Silati River Gold Mining Co. ; but after such a sweeping condemnation of the management I could not refrain from sending a few lines.

I am not going to vindicate myself, but would prefer to leave this for others to judge.

Mr. Henderson, the local director, to his credit, candidly confessed he knew nothing of mining, and left everything to the so-called experts ; but five minutes' conversation would be sufficient to convince any practical man how unsuited they were for the duties of inspecting a gold mining property ; but, notwithstanding, I believe they are well calculated to suit the purpose of a certain class of people.

With your permission, we will first see what the management was during my term of service with this company.

On July 22, 1890, I received a letter from Mr. Alford, which reads as follows :—

(Copy.)

Dear Sir,—I am instructed by cable from London to inform you what message I send to the London office of my firm regarding Laing's reef. I beg, therefore, to inform you that I have cabled as follows :—"Laing's reef a poor prospect ; details will be sent on my return."

I may add, for your information, that I do not consider either that, or the deposit known as the Swiss reef, to be in any degree reliable, or likely to develop into deposits of a payable nature.

I fully approve of your present scheme of exploration, and shall be glad if you will push on the work with all possible dispatch, so that on my return here, in about two weeks, I may be able to re-examine the place, when we shall be in a position to gather further information. As it stands now, there is certainly nothing of any consequence available for the mill ; therefore, use your own discretion as to hurrying on with its erection.

I am, dear sir,
Yours faithfully,
Charles J. Alford.

Capt. James Williams,
Silati River Gold Mining Co.,
Zoutspansberg.

Would you think it was bad management after what was said above by Mr. Alford ? If he had thought the company's funds were being squandered recklessly, on useless explorations, with no object in view, would he not have exposed me, being an entire stranger ? but instead of condemning my method of working, he fully approved of it, as will be seen above. Further, I do not consider Mr. Conybeare, or the three experts, capable of giving an opinion of how a mine ought to be worked. All practical men will agree that a certain amount of work has to be done in starting a new property, such as finding the dip of the reefs, extensions, &c., before laying out a mine for permanency. Mr. Alford knew there was no other way of working without machinery, and there was none of this on the mine.

Much has been said about the uselessness of the adit tunnel, but it is a most important piece of work, and could not be over-estimated, if only for draining off the surface water, which would otherwise find its way to the bottom. But the driving of this tunnel had far greater aims ; our object was to prove the value of the Swiss reef down to water level. This work was done with as much expedition as was possible, and revealed the grand secret of the much talked of Swiss reef : that instead of being worth 600,000*l*., in my opinion it was not worth 600,000 pence.

Mr. Drew, who came back from the Silati last Jan., said he does not remember seeing any quartz of a payable character hauled from either shaft on the Swiss reef since I left, although it has been stated to have produced several ounces of gold to the ton.

The small patch of quartz which we discovered in No. 2 shaft lasted until it came in contact with the hard rock, about 50 ft. from surface ; at this point it disappeared altogether, and I think it is doubtful if it will ever be found again below.

Laing's reef appears to have a more uniform bearing for 150 ft. in length, but after that it is very difficult indeed to trace on the surface, and has every appearance of pinching out in the bottom, 50 ft. below surface. The quartz is also of very low quality ; of four samples assayed from the reef they did not average more than 4 dwts. of gold to the ton.

If the property is so rich as it is represented to be, there need not be so much talking and writing about it. Why not take out this rich stone, crush it, and send home the gold ? This will satisfy the public immediately, and restore confidence as to the value of the property. I can fancy someone saying this is not so easily done.

It must still be fresh in the memory of the public that this company was floated with a brilliant prospectus, and now you are having placed before you brilliant reports. *Beware!* These reports should be received with caution.

If I remember rightly, I do not think there have been more than two crushings since I left the mine, and these were both taken out before I left. Any person may reasonably ask why is it there is not more doing with such a large force, impelled by such energetic men. These things speak for themselves.

CLIMATE.

The delay on the road was occasioned in the first instance by swollen rivers, but in March and April sickness and death abounded in all directions in the low country. Government officials left it for three months, and all that could possibly get away did so. The Silati staff did not enter that country until by a doctor's order.

WATER.

My friend, Mr. Wrey, the principal expert, is a very clever fellow. Just imagine a man gauging the quantity of water on the estate during a thunderstorm. He says the shafts filled with water in one night. Everyone who has travelled knows what a thunderstorm means in a tropical climate. It will wash away anything unless it is properly protected. No person could blame him for saying there is water enough for motive power. But, strange to say, there is not water enough during seven months in the year, even for drinking purposes.

MILL.

Whatever may be said regarding the site of the mill, no person, however ignorant he may be, could possibly make a mistake in this particular. As there was only one very small stream of water on the estate, this is the spot where it was erected. A water-race was made to get it high enough to enter the pan of the Huntingdon mill. One would think it was a big job to make, instead of a few days work by natives. It is a wonder they did not say the mill was erected upside down.

WOOD.

This important article, so necessary for mining purposes, is scarce ; indeed, in the whole of 5,000 acres I do not think there are 50 trees that would produce a plank 8 ft. long, and being so crooked are almost useless for mining ; the residue is simply scrub, and only suitable for fuel for driving light machinery.

Mr. Henderson said he met me with a long face, but he did not say what I said to him. I told him after he was satisfied with his inspection of the property, and also its value, he should return to England and call the shareholders together, and ask them if they were willing to spend their money on a property with so little prospect of success.

Other companies have always published my reports, but in this case, although two or three hundred pages have been written, as the letter book on the mine will show, not a single line that I have seen has ever been published. I should be glad to know the reason of this, but I expect it did not suit the directors' purpose to do so.

I can assure you that everything went on as merrily as a peal of bells, until the reefs were attacked, and the results made known to the London office. This led to Mr. Alford's inspection. The onslaught made on the management by Mr. Conybeare does not affect me in the least. I rather feel inclined to favour it. It will now give

me a chance of expressing my opinion of the mine, which I had not the opportunity of doing before, having been satisfied with the money paid me by the company. And I should have been satisfied with Mr. Conybeare if he allowed matters to rest with the experts. Mr. Conybeare says Mr. Alford himself has described the manager sent out by his own firm as absolutely incompetent, and unfit for the post. I do not believe a word of it. This is a little bit of his own manufacture, as the public will see from Mr. Alford's letter, written above. Further—if Mr. Conybeare can get Mr. Alford to write a letter to the papers to this effect I will publicly apologise and give five pounds (5*l.*) to the Redruth Miners' Hospital. The fact is, they did not send out the right man. If I had said there was gold and water in abundance I might have been there to this day ; but I never did lend myself to any misleading statements, and never will, and if the speech at the meeting is as logical as what is said about the management, the public may judge it for what it is worth.

In fact, the mine is a poor one. It may do for a few months for individual prospecting, where a man may possibly take out an ounce or two of gold to pay his expenses ; but for a mining company, with a large capital, it is not worth the price of the paper the prospectus was printed on.

As I told Mr. Conybeare a few weeks since, if he will only have patience Mr. Alford's report will eventually prove as true as the sun will shine ; but I do not think that any person would please them who would not say there is abundance of gold. *Truth, take a back seat*, while we talk about gold.

There are several men in England who can corroborate every word said in this letter, and if any person doubts it, I will send their names and addresses to them that they may correspond with them direct. Or, there is one in London who could be interviewed at any day ; this person was on the mine for seven months, and worked out the Swiss reef in question, and when he left it it was almost as poor as Job.

By giving publication in your valuable paper I shall feel extremely obliged.—I am, &c.,

James Williams.

10, Falmouth Road.
Redruth,
Apl. 21, 1891.

VICTORY SHARES.

Sir,—Pray excuse me troubling you with an enquiry. Some time ago I opened an account with a London broker for a considerable number of Victory shares, and in this previous account he advised me to take them up, which I then did, and during the currency of that account paid him for them, and stating to send me the transfers for the lot, which he has promised all along to do. Last Saturday he sent me a transfer for 50 only, my quantity being 300, and that the remainder would follow so soon as he can get them in, but have never seen another one yet. I have written him a pretty stiff letter to-day, insisting on having it at once. Now, does not this look as if he and others had been selling against the public, and as I suspect he is a bear, what should I do ? It looks not so bad I fancy for the mine, and as if they are being firmly held by present holders. Could not the directors push forward their arrangements and send off Mr. Nichols at once, and have these bears properly caught?—I am, &c.,

A. B.

Apl. 21.

FLAGSTAFF MEETING.

Sir,—Evidently by an oversight it has been omitted to propose a vote of thanks to Mr. Swope, the mining captain ; for no man has more contributed than he has to the present success of the mine.

If one comes to think that right through the bitterest of winters, helped by a very few men, he has managed to open up a vast amount of ground ; got the very best part of the 1,400 tons of ore extracted, while leaving in sight eight or ten times as much to be extracted later on, and all this at a trifle cost, it would be the depth of ingratitude for the shareholders and directors not to render justice to such an admirable result, and, in fact, I suggest that a testimonial in the shape of a small present should be subscribed to him by the shareholders, and if so, I have no doubt that the secretary would only be too pleased to act as a treasurer on this occasion.—I am, &c.,

Shareholder.

London,
Apl. 24, 1891.

"THE SILVER MINES OF LA LUZ."

Sir,—If I were asked to state the most patient individual on the face of the earth, I should unhesitatingly say the mining shareholder. The title of the above company, any one who has the merest linguistic skill knows, is Spanish for "The Light," and ever since my first unfortunate connection with the concern I have always felt that a good deal *more light* was needed as to its operations than has yet been shed upon them. I, along with a friend, took up shares, when they were being boomed, about a couple of years ago, at 10s. to 11s., and, of course, the price shortly commenced to dwindle, until in June last there was the inevitable re-construction, although the old "*Gold and* Silver Mines of La Luz" Co. only came into life in Nov., 1887. There is a capital of 210,000*l.*, and 9,000*l.* of debentures, and under the re-construction there was a further assessment of 2s., half of which has since been called ; and yet the shares are not saleable for even this half of the assessment. But what has suprised me more than anything else, even in the history of this notorious company, is to be told officially—through my fellow shareholders—that the call of 6d. due this month's end is *already fully mortgaged* !

I ask, why not call up the remaining small amount at once, and let us know definitely whether there is anything to be *got out* of the mine, and, if not, wind the concern up at once ? I have no hesitation in asserting that there will never be another re-construction of this flagrant affair. The "Stock Exchange Year Book for 1891" laconically states : "No machinery has yet been sent out to the mine." The question is, "Has *anything* been done there ?—I am, &c.,

More Light.

Levenshulme, Apl. 23, 1891.

MINING IN CARDIGANSHIRE.

Sir,—Alterations are being made in this as well as all other mining countries, and I am happy to say that in this immediate neighbourhood they are for the better. I have written about these mines from time to time for nearly 50 years, and so far as my memory serves me I have never said anything to injure or cripple the industry but the reverse. I trust they may continue to improve, and increase in number and in wealth, which I firmly believe they will. From the Esgair Hir Mines in the far north-east, to the old Frongoch in the south, all are much improved, and are at this time supplying the markets with monthly parcels of lead and blende ores. Long may they continue to do so, and also their neighbours—East Darren, South Darren, as well as the Cwm-Erfin and Bronfloyd Mines. As regards the old Goginan, a strong energetic company of gentlemen have visited the property with the intention of working the virgin lands about the district. Will the valley again ring, and rejoice with the long shouts of "Goginan for ever" as we used to hear near 50 years ago?—I hope so—There is but a hedge between the old mine and the land that I have offered to any party who will join with me in working it. I do so still in hope that I may not be compelled to leave this country after so many years of hard struggles in mining, but without that assistance I, too, must go further in search of something to support me and mine for the little period yet left to me. This will likely be my last letter that will ever appear in your paper, and I can but thank you, Mr. Editor, for all your kindness in assisting me by publishing my letters from time to time. I faithfully believe in a successful future for the properties I allude to, but not yet, perhaps, and it may be other generations will spring up to reap the benefits when I shall have been called away. Farewell, then, to all friends—for ever wishing success and prosperity to all the mining interest of Cardiganshire.—I am, &c.

Sampson Trevethan.

DICKENS CUSTER.

Sir.—"The spring has come, with sunshine bright, Hurrah, hurrah, hur—". All right, sir, I have done with poetry, and will at once come to business, remembering that I am addressing the editor of a mining newspaper. Still, I merely wished to lead up to the remark that the "time of the singing of the birds" is pre-eminently the commencement of the harvest season for the American group of mines, such as Dickens, Emma and Esmeralda. Although in all these properties they have such huge subterranean chambers that they are able to work to some extent in even the severest winters, yet the snows in those parts accumulate to such a great extent that it is impossible to get the ore to the smelter until at least the month of May. However, with the advent of spring not only are the winter's accumulations brought to market, but greater activity prevails in the mines generally, hence now is the time for big rises in the quotations of the shares, and in one or two cases the jump has already been somewhat sensational, even in mining. Of the three mines named above, Emma has had a fair preliminary rise, but Custers, I think, have been rather overlooked, in view of the fact that I learn officially that there are *2,000 tons of good ore* at grass waiting crushing, and of the recent splendid assays. Whilst by no means wishing to depreciate the value of the Emma Mine, I would just point out that I think the difference in the quotations of the two concerns is hardly warranted. Emma has half a million of 5s. shares, 3s. 6d. paid, and 30,000*l.* of debentures, yet the shares have been recently over *par*, reckoning the liability of 1s. 6d. Custer, on the other hand, has been selling at 2s., say a valuation of only 21,000*l.* on a capital of 420,000*l.*, and there is only 6d. liability on the shares, and *no debentures*.

I have referred to the rich assays which have lately been published in your paper. I would just point out one or two items. Writing on Mar. 7, the mauager referred to the starting of a stope from which he was getting some good results, that the streak of ore was in places "very rich," and that samples taken from two different parts assayed respectively : (1) $915.75 silver to the ton ; and (2) $79.00 silver , and $35.20 gold ; being for the two assays *an average of $565 to the ton*, against previous assays of $300.

Even admitting that these are phenomenal results, there have, as you are aware, been many instances of bonanzas being opened out quite equal in bulk to the values named. As we are told that in another stope, 20 ft. long, the whole of the floor is in "good ore," and that "the dip of the little or south vein is shaping its course more and more towards the big or north vein," and that it is expected the two veins will shortly come together, it is quite on the cards that what was supposed to be a "used-up mine" by the celebrated Nick, Treweek and Co.—who, it will be remembered, owned the Lucky Boy Mine, which they kindly persuaded us to lease from them on their pessimistic report on Charles Dickens—is likely to turn out a very good thing after all ! Remember, we are just in the position of the old Guston Co. ; and there are more unlikely things than that, in the Dickens Mines, such a find should be made as that which took place in Guston, which now pays 80 per cent. per annum to the shareholders. Anyone selling Custer at 2s. is surely most foolish.—I am, &c.,

A Believer in Dickens Custer.

Manchester, Apl. 21, 1891.

MOUNT ZEEHAN MINE.

Sir,—May I ask you to publish the following extract from a letter dated Mar. 14, 1891, received by last mail from a gentleman well known in Tasmania in reply to enquiries regarding the Mount Zeehan Silver Mining Co. It will supplement the information you gave a fortnight ago :—"In reference to Mount Zeehan I hardly know which mine you mean, and I am unable at the moment to verify the numbers you give as I cannot leave my room. The Mount Zeehan Co. marked in the enclosed sketch map is a local company, and is doubtless a valuable mine. They had at least 15,000*l.* worth, according to assay, on the ground in Jan. last when I was there. I visited Zeehan then, and have been there several times since the place was discovered, and am greatly impressed with the evidences of its abounding wealth which only needs better means of access to develop it. The lodes are visible on the surface, and abound, varying from inches to feet in breadth, and assaying from 20 ozs. to 200 ozs. or 300 ozs. of silver to the ton, and from 30 to 60 per cent. of lead. Altogether, if the lodes live to a depth, the output in the course of two years, when the mines get into full work, will be something fabulous.

At the present moment there are about 4,000 people on the spot, for whom the coming winter will be a very trying one. I hardly see how they are to be maintained, as I do not think the railway can be completed till late in the year."—I am, &c.,

X. Y. Z.

THE AUSTRALIAN BROKEN HILL CONSOLS, LIMITED.

(FROM THE "MELBOURNE HERALD" OF MAR. 6).

A NUMBER of gentlemen, including Mr. Howell, the manager of the Proprietary Mine, visited the Australian Broken Hill Consols this morning. The mine is looking better than on any previous occasion. The shoot of ore which is being worked looks as if it will continue down. At the 287-ft level, the ore in the rise is 14 ft. wide, and 15 ins. high. For the width of 5 ft. and the depth of 5 ins. the lode consists of solid native silver, while the remainder of the lode is sulphide of silver, the whole lode averaging nearly 25 per cent. of silver. The lode has been followed down 30 ft. below the level, and although not showing so much native silver, is extremely rich. The shaft is down 520 ft. on the underlie. Cross-cutting for the lode is proceeding at the 380-ft. level. The output for the fortnight was 4 tons, the ore containing 32,000 ozs. The lode is a lateral shoot from the Proprietary Mine, and continues through the Consols Extended, on which work has been commenced in a shaft on the continuation of the outcrop.

WENTWORTH GOLDFIELDS PROPRIETARY CO., LIMITED.

THE latter part of the late cable from the advisory board in Sydney, viz.—"'Jackass' have struck brown vein of great value"—may not have been very well understood by those not cognisant with the property. The "Jackass," as you are aware, is a small section of the Wentworth Proprietary Co.'s Freehold leased to the "Jackass" Co. at a 10 per cent. royalty of the gross gold obtained. It adjoins the north-western workings of the Proprietary mines. It had always been supposed that there were no more veins to the north-west of this as they did not outcrop on surface. The "Jackass" Co. have been cross-cutting to the north-west and have struck what they call a rich brown lode close to their boundary, which will run into your property. By brown vein they mean a vein of gossan or oxide of iron, this being the nature of all the outcrops on the property. They have evidently struck the cap of a blind vein 100 ft. below surface. This discovery is most important to your company, as you have at least a mile in extent to your north-western boundary, and it is highly probable that a large number of valuable veins will be discovered in it. The cause of the veins being blind—that is not outcropping on surface—on this section of the property, is because there is a layer of basalt 100 ft. thick covering the surface, which was caused by the flow when the adjacent volcanoes were in an eruptive state. The old men had not sufficient scientific knowledge to search for the veins below this basaltic rock. A shaft must be sunk on this section at once, and the ground thoroughly prospected. Nothing in the cablegram pleased me so much as this discovery in the "Jackass," and it must enhance the value of the Proprietary Co. immensely. I have received the gold button rom the ore I had assayed by M. Claudet: the gold button weighs nearly 2½ ozs. and the assay result of the ore is 9,500 ozs. per ton. I broke this piece of ore out of the bottom of the Crinoline vein and as you will remember it was exhibited by me at the statutory meeting.—J. J. COOPER, M.E.

TRANSVAAL GOLD EXPLORATION AND LAND CO., LIMITED.

PROGRESSIVE CHARACTER OF THE RETURNS.

THE directors announce that they have given given notice to the debenture-holders of their intention to pay off, out of profits, on Friday, May 1 next, the balance of the debenture debt (9,362*l.* 10s.) with interest thereon to the 30th inst. It will be remembered that a similar amount was paid off on Jan. 31 last. Instructions will then be given to cancel the mortgage bonds, which, you are probably aware, was passed in the Transvaal, as security for the repayment of the debentures. Your property will then be free and unencumbered. The board submit the following table of bullion produced since the re-construction of the company in 1885, which shows at a glance the steady progress that has been made:—

May, 1885, to Aug., 1886 391 ozs. Oct., 1888, to Sept., 1889, 4,297 ozs.
Sept., 1886, to Sept., 1887 1,091 ozs. Oct., 1889, to Sept., 1890, 5,822 ozs.
Oct., 1887, to Sept., 1888, 2,424 ozs. Oct., 1890, to Mar., 1891, 7,200 ozs.

At the present time native labour is plentiful, and mining and prospecting operations are being vigorously prosecuted, the number of natives employed being greater than at any previous period.—C. E. WELLS, Secretary.

LETTERS of allotment in the East Broken Hill Consols, Limited, have been posted.

COAL TRADE OF LONDON.—The enormous growth of the coal trade of the metropolis has been brought out very prominently in the evidence submitted in support of the Manchester and Sheffield extension to London. In 1863, the year when the extension of the Midland line to London was sanctioned, the total amount of coal brought into London by all the railways was 1,775,000 tons. The Midland line was completed to London in 1868, and in the following year the quantity of railway-borne coal entering London was 3,341,000 tons. In 1879 this quantity had increased to 6,547,000 tons, and in 1889 it had risen still further to 7,877,000 tons. The sea-borne coal has not increased at anything like the same pace, but still it has materially expanded. In 1863 the amount which came into London by sea was 3,335,000 tons, and in 1889 it was 4,765,000 tons. We have thus a total of 12,637,000 tons coming into the metropolis in a year.

THE ROBINSON TAILINGS.—In connection with the 1,574 ozs. of gold got from the Robinson tailings in Feb. by the Macarthur-Forrest process, and in regard to which, remarks appeared in these columns on Saturday attributing these grand results to the tailings rather than to the process used in treating them, it now seems that the credit is wholly due to the process, which has, from the heap treated—by no means a 2-oz. one, as stated—extracted over 80 per cent. of the assay value. This is an excellent result, proving to what perfection the Macarthur-Forrest process has, under Mr. George Darling's immediate superintendence, been brought. Even higher results could, it seems, be obtained, it being merely a matter of expediency whether or not the additional percentage of gold won is calculated to compensate time, trouble, and cost. These Robinson results, which we understand were got at a cost well under 15s. per ton, stamp the process as the premier one on the Randt. There may be others equally as good, but as yet they have got to prove themselves so; as, so far as results have been got, they still continue in the experimental stage.—*Standard and Diggers' News*, Johannesburg, Mar. 14.

MINE CAPTAIN WANTED for an established Gold Mine in the Colar Gold Field; an experienced Mining Captain, thoroughly competent to superintend all underground operations and mill work. Apply, stating experience and salary required, to B. H., c/o Bates, Hendy and Co., Advertising Agents, 37, Walbrook, E.C.

THE SCOTTISH AUSTRALIAN MINING CO., LIMITED.

NOTICE IS HEREBY GIVEN, that the HALF-YEARLY GENERAL MEETING of the Shareholders of the Scottish Australian Mining Company, Limited, will be held at Winchester House, Old Broad Street, London, on FRIDAY, May 1, 1891, at Twelve o'clock at noon precisely, to receive the directors' report and accounts, declare a dividend, and transact the other usual business of the Company, and

Notice is also hereby given, that, immediately after the conclusion of the business of the Half-yearly General Meeting, a Special General Meeting of the Shareholders of the Company will be held at the same place, to increase the capital of the Company

The share transfer books will be closed from Thursday, the 23rd inst., until Friday, the 1st prox., both days inclusive.

By Order of the Directors,
F. W. TURNER,
Secretary.

Winchester House,
Old Broad Street, London,
April 21, 1891.

RIO TINTO COMPANY, LIMITED.

DIVIDEND ON SHARES TO BEARER.

HOLDERS OF SHARE WARRANTS TO BEARER are informed that they will receive PAYMENT of the DIVIDEND declared at the General Meeting held on the 17th inst., at the rate of Eighteen Shillings per share, free of income-tax, on and after WEDNESDAY, May 20, 1891, on presentation of Coupon No. 25, either at the Company's Office in London, or at the Société Générale, Rue de Provence, 54, Paris, or at the Deutsche National Bank in Bremen.

Coupons for payment in London must be left four clear days previously for examination, and may be deposited on or after the 27th inst.

By Order
GEO. N. THOMSON,
Secretary.

REPORTS OF MEETINGS.

NINE REEFS, LIMITED.

MR. ROWSE EXHAUSTIVELY REPORTS ON THE MINE, AND SPECIALLY RECOMMENDS THE SINKING OF VYVYAN SHAFT ON THE CHAMPION LODE—SHAREHOLDERS WISE AFTER THE EVENT—CAPT. McTAGGART RECAPITULATES—ALL THE RESOLUTIONS, INCLUDING THE PREFERENCE ISSUE, CARRIED UNANIMOUSLY.

THE ordinary general meeting was held at the Cannon Street Hotel, on Wednesday.

Col. G. B. Malleson, C.S.I.

(chairman of the company), presided.

Mr. W. H. ROWSE (secretary) read the notice of meeting.

EVENTS SINCE THE LAST MEETING.

The CHAIRMAN: Gentlemen, I beg to propose "That the report now presented, with the balance-sheet to Dec. 31, 1890, be received and adopted." In asking you to pass this resolution, I would say that the report gives a general summary of the action of the directors since the last meeting. Since then we induced the eminent firm of Messrs. John Taylor and Sons to accept the management of the company. That occurred at the end of July last, and almost our first act afterwards was to accept the offer they made to send Mr. Rowse out to India to examine the property, and, before I put this resolution to you for approval, he will tell you the condition in which he found our mine. He will tell you we possess a considerable length of the Champion reef, which furnishes splendid dividends to the Mysore Co, and which has caused recently a transfer of a portion of the Colar field to the Mysore Co. for about 150,000*l*. Well, in the possession of that reef we have a property the value of which it would be difficult to over-estimate, hut I am sure you would rather hear the details from Mr. Rowse, who has seen the mine, and recently returned from it, and who visited it in company with Capt. Scantlebury, than from me.

ACCOUNTS EXPLAINED.

I will therefore devote myself to explaining one or two points of the accounts which may have attracted the attention of shareholders. These accounts, bear in mind, represent 14, and not 12 months' expenditure. I daresay the first item which will attract your attention will be the debenture interest, which amounts to 1,335*l*. 7s. Now that was a sum which it was absolutely necessary to pay, as being the accrued interest on the debentures which were taken up principally by the shareholders to carry on the working of the mine when the old company existed, and when we came to our first re-construction. The next item I call attention to is directors' fees, as to which I shall be able to give you a very satisfactory explanation. Those fees, as authorised by yourselves, were 1,100*l*. a year, and appear in this account at 1,283*l*. 6s. 8d., representing 14, and not 12 months; but

THE DIRECTORS HAVE NOT DRAWN 550*l*.,

which amount is still in reserve. (Cheers.) The moment the directors found that the company with its existing capital was not likely to work to a successful issue unless it could procure more funds, they stopped drawing their fees. (Hear, hear.) Should further explanations be required I am ready to give them. The main point we have to consider to-day is not the accounts (which have been audited and found correct), hut rather the value of the property, as to which, as I said before, Mr. Rowse will enlighten you, and, therefore, I shall strictly content myself by proposing the resolution. (Cheers.)

Mr. JOHN T. LAWRENCE (director): I second the motion.

The CHAIRMAN: Mr. Rowse has come here at great personal inconvenience. He is suffering from an attack of Indian fever, which he contracted when he visited the mine.

EXHAUSTIVE EXPLANATION OF THE POSITION AND PROSPECTS OF THE MINE.

Mr. W. H. ROWSE, who was cordially received, said: Gentlemen, the last observation of the chairman makes it unnecessary that I should say what I intended to have done, and that is to ask for your indulgence, owing to the attack of Indian fever from which I have been suffering during the last two or three days. It has, amongst other inconveniences, attacked my voice, and so I am not so well able to speak to-day as on some other occasions. Gentlemen, you will see that we have on the walls to-day three maps—one representing the principal mines upon the Colar goldfields, another representing the works upon Malleson lode, and the third the works at Vyvyan shaft upon the Champion lode. I was anxious that the first of these maps should be placed before you in order that you might realise the actual position of the property in relation to the more important mines on the goldfields. You will see that the Nine Reefs property is situated at the north end of the map; on the south end is Mysore; between that company's property and your own are situate Champion Reef, Ooregum, Nundydroog, Tank Block, and our nearest neighbour, Balaghat.

A VERY IMPORTANT POINT.

There is a very striking circumstance in connection with the prosperous companies on the field which I should like to indicate to you, and it is this, that their value to-day is in proportion to the amount of development in depth and length which has taken place upon the respective properties. The Mysore Co. is 800 ft. deep, with their operations extended north and south for a considerable distance, and to-day that property is selling at 1¼ million sterling. Ooregum, with a less depth, but with considerable extensions laterally, is selling at 600,000*l*. Next, Nundydroog, at about a similar depth to Ooregum, but with extensions north and south, not so great as in Ooregum, and that property is selling at 250,000*l*. Balaghat (where operations are at present confined to works at one shaft), the market value of that property is consequently so much less. That is a point which I strongly commend to those who are interested in the progress of the mines upon the Colar goldfield. The fact is, that as these mines are deepened and developed, so their value evidently increases. You cannot look upon that as a mathematical certainty, but so far as experience on the field has gone at present this has been clearly demonstrated. (Cheers.) In our Nine Reefs property we have certainly three lodes—the one known as Malleson's; the lode upon which Vyvyan shaft is sunk—in other words, the Champion lode of the field; and on the eastern portion the lode now being worked upon in Balaghat. You will see by the plan that the whole of the three lodes are pretty well parallel with each other. I know that there exists in the minds of some people a sort of prejudice as to the value of the lodes running parallel with the Champion lode. Now, I think that prejudice is wholly unwarranted, because no operations (except in one or two instances) have been carried out to any considerable depth upon any of these parallel lodes. These lodes possess the same indications as exist upon the Champion lode. Upon the Champion lode, as you are aware, there are large old workings, and on the parallel lodes there exist also old workings. This is especially so on Malleson lode in your property. The map indicates old workings to the extent of some hundreds of feet in length, and there is no doubt in times gone by, when the field was worked by the ancients, that from that particular spot a large quantity of gold must have been extracted. I think he must be a bold man who would undertake to say that these parallel lodes will not or cannot be productive. Personally, I should be very sorry to take up that position.

PARALLEL LODES AND THEIR OUTLOOK.

My belief is that as these lodes become worked in depth and developed in length, great riches may be found in them as well as upon the Champion lode itself. The principal workings upon Nine Reefs have been confined to the development of Malleson lode. This lode has been proved to be of great strength. It has averaged at least 4 ft. in width. It has in most instances been found encased in two good well-defined walls, and has seldom or ever been without quartz. It is true that the quartz has been of low yield, and has contained what is known as iron pyrites, making the ore refractory.

MAIN SHAFT.

The principal shaft upon Malleson lode is the Main shaft, which has been sunk to a depth of 310 ft. I should point out, however, that it was sunk vertically to the 185, and from thence to the 310 on the underlie of the lode. If you take 185 from 310 you get 125, which is the extent which the lode has actually been proved. Bearing in mind the statements I made just now with regard to Mysore, Ooregum and Nundydroog, I would point out and you must at once see that anything like a development of 125 or 130 ft. upon the lode in depth cannot be looked upon as sufficient proof that it will not be by and by profitable and productive when greater depth is attained. The operations at this shaft have proved that you have two shoots of quartz—one to the south and the other to the north of the shaft, as indicated on the plan. With reference to the southern shoot, the richest part was found in No. 3 stope. From this stope quartz of a high assay was frequently obtained—as many as 3 and 4 ozs. to the ton. I myself broke away some rich stones of quartz containing visible gold from the bottom of this very stope. The shoot which is on the north side of the shaft contains quartz which is the most refractory, and which is not so valuable as the ore contained in the southern shoot. The levels which have been driven north upon the lode at the 250 and 310 have proved that quartz exists at these deepest points, and the recommendation I make to you (which has been confirmed by Capt. Scantlebury, who accompanied me), and which I urge upon

you is that the development of this lode should be continued by sinking the main shaft below the 310, say another 100 or 150 ft., and that levels should be put out both north and south upon it, in the full belief that as depth is attained the quartz will become richer, the pyrites may possibly disappear, and that it will be proved that this parallel lode may be as rich even as the Champion lode itself. Certain works have been conducted at Hodgson's shaft which at preseut are not of very much importance, and I do not know that I should advise just now that any further operatious should be carried on there, but so far as the Malleson lode is concerned I shonld confine the operations to sinking Main shaft, aud the driving of levels both north and south. Although, gentlemen, as I have said, I have a good opinion of the prospects upon the Malleson lode, I have no hesitation in saying that my chief reason for recommendiug you to find the necessary capital, for the continuance of the operations of your company, is based upon the

VALUE I SET UPON THE LODE AT VYVYAN SHAFT.

(Hear, hear.) You will observe thc red line upon the plan, representing the position of the Champion lode. The bends in the line of the lode can be easily explained, if necessary. Great care was taken whilst I was on the property to trace the Champion lode, in so far as it might affect your property, and I have no hesitation in expressing my opinion that the Champion lode is in your property and in the shaft which is now known as Vyvyan's. That shaft has been sunk 237 ft. perpendicularly to the depth of 145 ft., and from that point it has gone down on the underlie of the lode. When I made my inspection the lode in the bottom of the shaft was about 18 ins. wide, and contained gold, ascertained by an assay which I caused to be made by an independeut person, of about 1 oz. to the ton. I should tell you that in subseqnent assays made, during the sinking of the shaft, quartz up to 8 ozs. and above was found. I was forcibly struck with the similarity of the quartz found in the bottom of the shaft with that which I had seen in the Mysore Mine. I have brought both here for your inspection. They are so much alike that it is impossible to detect any difference. The quartz on this lode is entirely free from pyrites, as in the case of Mysore, Ooregum and Nundydroog.

THE LODE IS EXCEPTIONALLY WELL-DEFINED,

and is contained within two very distinct and positive walls. Old workings exist also south of Vyvyan shaft to a considerable extent. A level at the shallow depth of 145 ft. has been driven south upon the lode, during the whole distance of 115 ft. the lode has averaged from 12 to 15 ins. wide, and has always contained visible gold. I do not disguise from you the fact that I look upon this shallow level as being no manner of proof whatever as to thc value of the lode itself, because from your knowledge of the other mines you will be aware that no good discoveries of rich ore have been made until greater depths have been reached. Therefore, we cannot look upon the work done at the 145, as any test of the value of the lode. Hence I strongly recommend that

VIVIAN SHAFT SHOULD BE DEEPENED AT LEAST 300 OR 350 FT.,

and that a level should be driven south upon the lode, when I have no doubt a rich lode will be laid open. (Cheers.) The Champion lode, as you will see, is very much at the eastern end of your property. I have not the exact figures, but I believe the distance from Vyvyan shaft to your western boundary will be from 6,000 to 7,000 ft. I mention this in order that yon may feel comfortable with regard to any immediate or future probability of having to pay a big price for acquiring any property which may be lying to the west, as has been done lately by other companies. Yon have sufficient ground from Vyvyan shaft to the western boundary to last—Capt. MacTaggart says for 100 years—but I will say 50. (Laughter.) Having spoken of these two lodes I shonld like to draw attention to the third, which is now being worked in Balaghat. Probably this lode is a portion of the Champion lode itself, but there is the fact that in Balaghat we are working upon a lode which must pass through your property. I do not think that sufficient has been done to enable me positively to say that the Balaghat lode has been found, although certain pits were put down at the time I was there, which gave us reason to believe that it had been touched, but the pits had to be suspended at the time of the stoppage of all the works upon the miue. Nevertheless, I have no doubt whatever that the Balaghat lode does exist in your property, and when its position is ascertained I recommend that a shaft be pnt down west of the lode, in order that you might attack it about 200 ft. Something will be said about the Balaghat lodc at the meeting next week, and it is not right I should anticipate it but

GOOD NEWS FOR BALAGHAT SHAREHOLDERS.

I may be allowed to say that in the bottom of the Balaghat Mine the lode is wider aud richer than it has ever been in the history of that company. (Cheers.) Having briefly run through your properties so far as the operations already carried on are concerned, and having expressed my opinion upon the prospects for the future, permit me to say, in conclusion, that I do hope you will see your way clear to support the directors in their efforts to raise the required capital for a vigorous development of your property. You have the history of three or four big companies to encourage you. You know that before they entered into profits and achieved the value evidenced by the prices of their shares in the market to-day they had to develop their lodes at much deeper points than you have developed yours. It seems to me that the conditions surrounding Nine Reefs are so favourable, and so identical in many points, with the conditions subsisting in the other mines, that there is every justification for prosecuting the operations. and I believe it would be little less than a calamity if you allowed your property to drift into liquidation, or in any way to pass out of your hands.

A PERFECTLY EQUIPPED MINE.

Before sitting dowu I should like to mention that you have upon the property a most extensive and valuable plant of machinery, tools, buildings of every description, with bungalows for your officers and European workmen—in fact a complete establishment, and so far as future expenditure upon those particular items is concerned, you need have little apprehension. Any money you may receive from the preference issuc may be almost exclusively devoted to the development of the three lodes to which I have referred. (Loud cheers.)

A SHAREHOLDER TAKES A GLOOMY VIEW.

Mr. Thorn: At previous meetings we have been treated to a very long description and a rosy account of the property in the same way that we have it to-day. We have beeu told of the immense value of the property we possess, and, if memory serves me, the shares were once as high as 3*l*. or 4*l*. each. I hardly know what they are to-day, but we were asked then to believe in the value of the property, and told we had only to put a little more money into it, and, as the showman says—"we should see what we should see." We did put money in for debentures, and the balance-sheet tells you (very unsatisfactorily) how the money has gone, though I have no doubt the accounts are correct. How the directors for year after year recommend us to put more money into that sunken well I do not know. We are told of the valuable properties near us, but we have nothing to do with that, as we are now speaking of Nine Reefs. We have been going on, and I see last year the gold produced actually amounted to 2,300*l*., and it cost something like 27,000*l*. to get it. Why we could buy it more cheaply at the Bank of England. I do not think shareholders have any right to ask directors to work for nothing, but I am very pleased to hear that they have refrained from drawing 550*l*. It remains a question whether we should put more money into this concern after the misfortunes we have undergone. It may be very pleasant for gentlemen on that side of the table (I do not say they ought not to be paid) who draw their fees, but at the same time I do not think I shall put another farthing into the concern. I think we have put money enough into Nine Reefs, and it is quite time that the whole thing were sold up and that someone else had it.

MR. ROWSE'S SPEECH.

Mr. Henry Hugh Thompson: I rise, first of all, to express my satisfaction with the very interesting report of the mines which Mr. Rowse has given us. (Cheers.) I do not quite sympathise with my old friend Mr. Thorn in his remarks, for he has made the error of imagiuing that a mining company can be managed in the same way as an industrial company, and I know he is connected with one or two which he has managed with remarkable success. (Hear, hear.) Mining companies, for the most part, start over-capitalised, and we almost invariably find that during the earliest years success does not attend the management. It is no use to look back upon the past; what we have to deal with is the present and future. In former times nearly all mines were worked under the cost-book system which is now almost, if not quite, a thing of the past; and, under the limited system, the only way of getting more money is by re-forming the company, or issuing preference shares or debentures. There can be no doubt that up to quite recently this mine has been unwisely managed, and that pretty nearly all the works shown on the diagrams represent so much money wasted. It seems to me that as soon as the directors were firmly conviuced that the Champion reef, which has been successfully shown to run through our property, their efforts should have been devoted to sinking Vyvyan shaft, and proving the lode in depth. It is my belief that if that had been done we should now have been making returns. There is, however, an old saying, "It's never too late to mend," and I think we should now amend. I quite

ENDORSE THE REMARKS OF MR. ROWSE,

that that shaft should be immediately pushed down until it reaches paying ground. I do not think we ought to push on the other works suggested, at all events, until we have some good results from Vyvyan shaft. I, therefore, support the proposition as to the preference share issue, and think it probablc that the mode in which it is proposed to raise the money may be the best—at all events, I do not know that I can suggest a better. (Cheers.)

Mr. Archibald J. Smyth: I think Mr. Thompson has most ably replied to Mr. Thorn's remarks, and that any further discussion on his suggestion should be ignored. I think we should prosecute Vyvyan shaft in the full assurance that in depth we may expect to have returns similar to those made by the other mines. That is Mr. Thompson's belief, and I happen to know it is shared by others who have considerable mining experience. (Hear, hear.)

Mr. Bincks: I followed the lucid and interesting explanation of Mr. Rowse, but am disposed to support the views so ably put forth by Mr. F. Thorn. Hope told a flattering tale two years ago through the mouth of Capt. McTaggart. The tale told was that if the shareholders would consent to a further contribution (compulsory then to the extent of 5s. per share) we might anticipate the best. I, for one, paid that sum, in addition to the purchase price of the 50 shares I hold, with the result that I am so much poorer, and that the much vaunted mine is not one whit the better.

SHAKESPEARE AS QUOTED.

I am the last in the world to use strong language, but really I am reminded of some words tolerably familiar, which I will vary a little:—"Be these plausible directors no more believed, who dally with us in a double sense—who make the word of promise to the ear and break it to the hope." (Laughter.) That word of promise has been made to the ear over and over again, but has been broken to the hope. I very much doubt if this further contribution will see us through our difficulties. If these expectations were well founded with reference to the Champion reef, why has it not been worked before, instead of money being spent uselessly on other shafts. I have read the Indian mining reports carefully, and amongst the others, we used to get one from Nine Reefs, and so far as Aug. 24, 1889, back there appeared a report by Capt. Bennetts, which buoyed me up considerably, stating that the vein was 6 ft. wide, and assayed 11 ozs. 4 dwts. 16 grs., and this was accompanied by a leaderette in a financial paper, assuring us that our sufferings were over and that there was every prospect of the original market price being restored, which, I think, was 3*l*. or 4*l*. (Laughter). They have, however, never been beyond 7s. 6d., though, the other day, under some influence, they were quoted at 6s. 6d., but are now back to 2s. 6d. to 3s. 9d., though what they may be as the result of this meeting it is not for me to forecast. At all events, for some time I have missed the report, the reason being, I suppose, that there has been nothing to report. Then comes this report of the directors, and the preference share scheme, the only merit being that there is nothing compulsory in it. My shares will, by this scheme, be knocked down to 10s., and there will be a preference given to the others which will remain for ever. (Cries of "No." I think we should far rather "bear the ills we have than fly to others that we know not of."

PAST OPERATIONS DESCRIBED.

Capt. McTAGGART: Gentlemen, it is always a pleasure to me to meet shareholders, and hear everything they have to say. I thank you one and all for the very open way in which you have stated your minds, and I hope you will allow me to state mine in a similar manner. As regards the mining operations of the past there seems to be a misapprehension. Several gentlemen (wise after the event) have said, "Why did you not attack the Champion lode?" Now, I will tell you. When the Nine Reefs Co. was formed the Colar field was absolutely new and unexplored, beyond the fact that it was known there were reefs, and also old workings. The Mysore Co. tried at random and put down a shaft which proved most disastrous, and for months and years could do nothing until they were on the point of being wound up. The Nine Reefs Co. commenced operations a little later when the Mysore Co. was in the middle of its unsuccessful prospecting operations. The site for a shaft was carefully selected on what appeared to be one of the best reefs on the field, and, as far as surface indications went, the operations on the lode selected by Capt. Johns were just as likely to be successful as at Mysore. Mining operations were carried on, but I should explain there is a distance of some miles between us, and it was not known or supposed that the reefs continued through the field, or, if known, that they could be traced. Operations were commenced at Malleson lode, and continued there because the indications at times were of a very encouraging character. The lode was stronger than the Champion reef, and was 6 ft. wide, and although the ore was pyritous, yet lodes change in depth, and although poor at the surface it was anticipated that we should find richer portions lower down, and so we did. It is quite true that there were assays up to 11 ozs., and very frequently we had them up to 4 and 3 and 2 ozs. to the ton. But, unfortunately, whenever we struck rich ore it never lasted. We cut through it in a few feet, and the consequence was that the average that went through the stamps proved unremunerative. That is part of mining adventure. You cannot expect certain results from mining, as from Consols. But if a mine pays at all you expect it to yield 100 per cent., and if it does not pay you know you run the risk of losing all you have put into it. When the course of the Champion lode began to be discovered the board sent out orders for it to be looked after, and it was looked after, and the operations were conducted with all the energy possible. Rock-drilling plant was sent out; a tramway was laid to carry the ore to the mill and the work pushed on as fast as possible, but it was about four or five years behind the other company, because the existence of the Champion lode in our sett was not known, and it had to be traced from surface. You are now asked to find a little more money to develop, not a lode for which you are searching, but which you actually possess. You are down upon it 230 ft., and it is rich in the bottom. An equivalent portion of property is now selling at 50,000*l*., to strike the lode at a depth of 1,000 ft., and all our shareholders are asked to do is to provide 37,000*l*. to develop the lode towards which they have gone a great distance. If it turns out as we expect, the mine will be in a dividend position before 12 months are over. There is only one objection I have to the criticism that has been made.

NO CLASHING OF INTERESTS.

It has been directed rather to this, that there is antagonism between the shareholders on that side of the table and the shareholders on this. The

DIRECTORS ARE VERY LARGE SHAREHOLDERS,

and we have always found a large amount of money whenever required. We are not asking you to do anything we have not done ourselves. This is my own matter, but the sovereigns I have put into this concern I do not mind telling you total up in shares and debentures to quite 8,000*l*., and that does not represent one half the interest the board have in this company. (Cheers.) Thus, at all events, whatever we may be blamed for, it cannot be said that we have been playing with your money, and not with our own. A gentleman said—"After this meeting I do not know what the price of the shares will be."

A REBUKE.

As far as I can see, if he be successful in the line he is taking, they will be worth nothing. (Loud cheers.) This gentleman, and the other one (Mr. Thorn) have done everything they can to depreciate the value of their own property, instead of making the best of it, as they would do if they were wise. There is no compulsion about this preference issue, but not only are these gentlemen themselves unwilling to help, but they have done their best to prevent anybody else helping to make their property of value. (Cheers.) For my own part, I have not the slightest hesitation in recommending the shareholders to disregard the advice of these two gentlemen and to accept that of the board, and also to follow their example. (Cheers.) The only criticism I ask for is as to the manner in which this money shall be raised and used. Mr. Thompson has expressed approval of our scheme, though whether it be the best or not I do not know, but in drawing it up we have tried to make the proposals attractive enough to gather in subscriptions both from the shareholders and the outside public if necessary, and we have also tried to protect the interests of those holders who are unable or unwilling to find more money. (Cheers.) So far from being an eternal preference, our object has been the reverse, for we propose that when dividends have been received to a certain amount the preference will cease, and the new issue rank with the old. (Cheers.) As to writing down existing capital, I think it is bad to have an unwieldy capital, and this writing down does not affect adversely the real value of the shares. We shall have a capital of 112,000*l*. to pay dividends upon instead of 175,000*l*. But the directors do not wish to press this point, and desire to be guided by your views. When these shares are offered to you we hope there will be a hearty response, and should there not be, an appeal will be made to the public and to others interested, but our object is to secure the money, so that there may be no delay in the work.

COMPANY IN A FULLY PREPARED STATE.

You have a lode in the bottom of the shaft, which runs from 1 to 7 ozs.; the mill is ready, the tramway is laid; you can sink the shaft in six months and drive the levels, but with it all mining never ceases to be a speculation. It is not an investment in Consols. We can only tell you what we hope and believe, and all we say now is that the circumstances warrant your putting your money into this fresh effort. It is for you to say whether you approve of this scheme for the issue of fresh capital, or whether you will abandon all hope, and allow the thing to go into liquidation, when probably you will not get back more than 6d. or 1s. per share. If the property is sold the debenture-holders have the prior claim, and must be paid off first. (Cheers.)

Major WEST said that a great deal of common sense lay in what the last speaker had said, and he certainly did not blame the directors for not being successful, although he must confess he was disappointed. He thought the directors might for a year or two waive their fees.

The CHAIRMAN: I have been a heavy loser through having joined this board, and so have all my colleagues. Directors are always expected in an emergency to put their hands in their pockets, and when the company was in that emergency two or three years ago, and debentures were issued, and were not taken up, we had to buy shares at 2*l*. to an amount which would swallow all that we had ever obtained during the past years for our unremitting services. The operations were suspended for two years, and then the directors drew not a single farthing, and since they were resumed they have devoted their whole energies to the work, and are considerably out of pocket. I feel sure the shareholders desire that the agreement should be maintained, into which they entered with the directors, in return for which the latter have given their best service to the company.

A POINTED QUESTION EXPLICITLY ANSWERED.

A SHAREHOLDER: Will the money now to be raised be devoted wholly to Vyvyan shaft? I think it most desirable that it should be.

The CHAIRMAN: I have great pleasure in replying in the affirmative. The scheme suggested to us by Mr. Rowse is that we should go down and prove the lode in Vyvyan shaft, and make it payable before we touch Malleson lode again. That is the course we hope to adopt, with the assistance of Messrs. John Taylor and Sons.

Mr. BARNETT asked whether the directors cancelled the amount due to them for fees.

The CHAIRMAN: No; we waive our claim till the company is in a better position. (Hear, hear.)

The report was unanimously adopted.

A NEW DIRECTOR.

The CHAIRMAN said that letters had been received suggesting that Mr. Draper should be a director.

Mr. THOMPSON proposed the election of this gentleman as a large shareholder, and a good business man who could devote plenty of time to the work.

Mr. GARLAND seconded the motion.

Mr. DRAPER explained the circumstances under which he had been asked to become a director by several influential shareholders, and said his policy would be to confine attention to the Champion reef—the Malleson reef having been the one upon which the company had been twice wrecked. (Laughter.) It had, however, been very alluring, and he was not surprised the directors had followed it, for sometimes the returns amounted to 600*l*. a month.

The CHAIRMAN explained that no additional cost would be entailed by Mr. Draper's election, and the motion, being put to the meeting, was carried unanimously.

The auditors, Messrs. J. and A. W. Sully, were re-elected at a remuneration of 20 guineas.

EXTRAORDINARY MEETING.

An extraordinary general meeting was then held for the purpose of submitting the following resolution:—

"That the capital of the company, which now consists of 150,000*l*., divided into 150,000 shares of 1*l*. each, be reduced to 75,000*l*. divided into 150,000 shares of 10s. each, and that such reduction be effected by cancelling paid-up capital to the extent of 10s. per share on each of the 150,000 shares which have been issued, and by reducing the nominal amount of all the shares in the company's capital from 1*l*. to 10s. per share."

Mr. W. H. ROWSE (secretary) read the notice.

The CHAIRMAN: All that has been said by the various shareholders, and Capt. McTaggart, renders it unnecessary for me to say more than a few words. This scheme has been submitted, after a careful consideration, as the one presenting the greatest advantages to the company. It does not matter whether the shares are nominally 10s. or 1*l*., but it is a great advantage to reduce the capital, because the dividends will be proportionately larger and the shares more valuable. Still, I am ready to listen to any alternative scheme, but meanwhile propose the resolution as read.

Capt. McTAGGART seconded the motion.

Mr. WILLIAMS objected to the watering of the capital of the company, and could not see the object of cutting down the shares. Where it had been done in other companies it had been attended with bad results.

The CHAIRMAN repeated what he previously had said, and added that recently the shares rose to 8s. in the market, and the board had thought it advisable to regulate them to something like the market price to which at that time they were tending.

The resolution was carried unanimously.

In reply to a cordial vote of thanks, Col. MALLESON said: I am always pleased when shareholders speak exactly as they think. We (the directors) have the gratification of knowing that we have done our best, but a still greater gratification is to know that we have received your approval.

ROMAN GRAVELS MINE.

RAPID AND ENCOURAGING WORK—INTERESTING ACCOUNT OF THE MINE BY MR. WATERS—SHAREHOLDERS SATISFIED WITH THE PROGRESS AND PROSPECTS.

THE annual meeting of this company took place at the Offices, No. 30, Finsbury Circus, on Wednesday.

Mr. Peter Watson, C.C.

(chairman of the company), presided.

Mr. FELIX F. WILSON (secretary) read the notice of meeting.

OPERATIONS DESCRIBED.

The Chairman: Gentlemen, we meet to-day to submit the statement of accounts to Dec. 31, and also the directors' report. We have also printed the report of the manager, which gives an explicit account of what has been going on since the re-organisation of the company. We have done an enormous amouut of work in siuking the shaft 30 fms. and driving various levels. In Dec. last we gave you a full and explicit account of the operations up to that time, and the report of the manager carries matters down to Mar. 24, whilst his verbal statement will hring them absolutely to date. Mr. Arthur Waters is here, and will explain the position as he found it only so late as yesterday. When we first commencod sinking the shaft from the 125 (the shaft had not been sunk for many years below that level) we anticipated an improved lode. An improvement actually took place in the 140, and, so far as we have seen it to the 155, there is still an improved lode, and the whole of the strata is looking very promising indeed. The levels underneath the ore ground we have above are also looking well. The 140 and 155 show a considerable improvement upon the state of affairs in the 125. Our expenditure has becn considerable because

WE HAVE WORKED VIGOROUSLY,

and, as the report tells you, have done in the last two ycars by rock-drills what it would havc taken us from three to four years to accomplish by hand labour. We have incurred great outlay in sinking the shaft, and the new pitwork has altogether come to about 2,000*l*. Then the new timber, cylinder, and rock-drills have cost another 1,000*l*., and the driving of the various levels, &c., has cost about 2,000*l*. more. Theu there has been machinery and repairs, a new cage to the shaft, all of which have causcd considerable expense. Then, also, the price of coal has greatly affected us, for we have something like six or seven steam engines almost constantly at work. Although we have gone through some considerable bunches of ore in the 140, and have very good indications at the 155, we still consider that in deeper sinking we shall have a much better state of things to revcal to you. I would rather the details came from the manager, as he is here, than from me. The price of lead during the last three or four months has been against us, but that for blende has been in our favour, and I trust we shall see better quotations for both. The auditor retires, and as his colleague, Mr. Stewart, died somewhat suddenly, he will be presented alone for re-election, as one auditor will be sufficient. I also retire and offer myself for re-election. I now move "That the report of the directors and statement of accounts be received and adopted."

Mr. Tufnell Southgate (director): I second the motion.

VIEWS OF THE MANAGER.

Mr. Arthur Waters: I will speak to you first about the operations that are going on in the back of the 80-fm. level, which is the highest point in the mine at which we are working south of the maiu shaft. There we are driving out, and, as you will see by the plan, above the level proper, and arc doing that because the 80 forebreast is in unproductive ground; but in bringing forward the stopes in back of the level we found that thc lode produced ore up to and beyond the said forebreast. Then instead of going down to drive the forebreast, we continue to drive at the bottom and on a level with the ore ground in the stopes, and so lay open the ground as we should otherwise have had to do by driving the level proper. That bunch of ore continues to go forward as far south as the level is shown on the plan, and the first two stopes at the present moment are producing 3 tons each of lead ore and 1 ton of bleude to the fm. Behind the stopes we are rising, and find that the ore ground still goes up, to what extent we cannot possibly tell, but it is our opinion that it will go above the 65 level.

The Chairman: That was one of our richest levels in the old mine.

Mr. Arthur Waters: This will show that the deposits at Roman Gravels, as far as we are able to judge, are, as it were, in flats, and not shoots. At the 50, for instance, where, when the original company first worked the mine, the bunches of ore only reached up to the level here and thcre, but when the 65 was reached there the great course of ore was fouud which made the mine so famous. Hence we get from an unproductive zone into a productive one, and *vice versâ*. Below the 110 on either side of main shaft thc vein has been for several fathoms comparatively unproductive, and the inferuce therefore is that the 125 has been driven for a considerable distance in an unproductivc zone. The section will show you the zone of which I am speaking. Directly we commcnced to sink below the 125 we found the country rock improving in character, and when wc reached the depth required for the 140 level, and drove out upon the lode, it was made evident to us that an improvement in the rock had taken place. That improvement, I am glad to say, is still greater at the 155, although we have only driven 10 to 12 fms. on the lode. By the coming in of the caunter vein (as is the case in nine iustances out of ten) there has been a dislocation of the main lode. By driving south-east upon the caunter we hope to come in contact with the other divisions of the main lode which we intersected in the eross-cut, two of which we have not seen since the cross-cut was left. By extending south-east wc hope to meet with these divisions, and also lay open, of course, the caunter lode, and discover eventually which is the chief division, and the proper oue, of the main lode upon which to drive.

Mr. Don: What about the shale and winze?

Mr. Waters: The winze is in the 135 level. We work that by compressed air engines, and have had to pump the water out, and so send it back to the new enginc shaft, and pump it a second time there. That was causing great extra expense, and ought to bc done away with. A very good bunch of lead has gone down below the 155, which we shall reach by driving the 140.

The Chairman: Is the water iu the winze lessening in driving the 140?

Mr. Waters: It is slightly less.

The Chairman: So that in a short time we may expect to get the winze clear.

Mr. Waters: If we could cut into the open joint which brings the water into those workings in the 140 we should have it down at once, and nobody can tell how soon that may be done. We shall get into ore ground before we get there. The bunch shown in Morgan's winze and Lewis' winze, and then in Edward's we calculate to be about 90 fms. long before it reaches those workings, and it turns out

AN AVERAGE OF 1½ TO 2 TONS.

Of course the rocks are dipping south, and they dip north also, so that it almost seems that at a point half way between the two shafts is the place where they begin to dip away from each other. Although I said that the ore ground was found in flats there is a certain inclination, and we have to go down there also at the main shaft to get into the same ground that we meet with in driving south. With regard to the north level, we drove beyond the first winze about 70 or 75 fms., and found that the lode there was in two divisions. We continued (as explained in my report) on the western 4 or 5 fms., and then it turned to the east, where a lode or division came in which made the bunch of ore that I reported on some time ago, where at the point of intersection it was worth 3 to 4 tons to the fm. We have not been doing much work in the forebreast lately, because we have had to put through the winze. Directly that was through we continued driving there, and yesterday the lode was worth 1½ to 2 tons per fm., which will pay.

Mr. Don: How many men arc working altogether?

Mr. Waters: About 180.

Mr. Carson: Is there a possibility of getting a larger output?

Mr. Waters: I hope so, as the lode seems to be improving. We are opening fresh ground in the back of the 80, which will help us.

Mr. Carson: Is there an early prospect of outlay and income balancing each other?

The Chairman: We have accomplished the work of sinking 30 fms., according to the lease. We have 300 tons of ore in the stulls, and in a short time that will come in to help us.

The Secretary: There are 15 fms. between each of these levels?

Mr. Tredgold: To the south, I gather, is the most promising part of the mine?

Mr. Waters: We have sunk 10 fms. to the 35, and know a bunch of ore has gone down, worth 4 tons per fm. In driving the 125 there were one or two places where we extracted ore above the level, and we hope in driving the 140 level to find a further improvement.

THE SHALE.

The Chairman: We thought that the end of the mine would come with the dip of the shale, but found that when we got to the shale it would go to a greater incline, but it has not done so. My opinion is that the shale has gone away, and that we have, comparatively speaking, a new mine, and of course you know South Roman Gravels is included in our sett. There will be no occasion for another shaft for a long time to come.

A Shareholder: Does the water increase or diminish?

IMPROVED MACHINERY SAVES MONEY.

Mr. Waters: It has increased during the last 18 months, and if we had not put down the new machinery, we should not have been able to contend with it. Although the price of coal has gone up, we have saved at least 400*l*. worth of coal in 1891 as compared with 1888, owing to improved boilers, the new cylinder, and the new pit work, which is now 14 ins. instead of 9 ins.

RAPID WORK.

The Chairman: Old shareholders will remember that it used to take us 12 to 13 months to sink a lift of 15 fms., but we sank from the 135 to the 140 in 10 weeks, and from the 140 to the 155 between Oct. 20 and Dec. 22, which was something like nine weeks. (Cheers.) I do not hesitate to say there is no mine; I am aware of where there has been quicker development than that. We hope we are at the commencemeut of opening out a good mine again.

The report was unanimously adopted, and on the motion of Mr. Don, seconded by Mr. Saunt, Mr. Peter Watson, in complimentary terms, was re-elected a director.

The auditor, Mr. Edward Ashmead, of No. 2, Drapers' Gardens, was also unauimously elected, and the proceedings closed with a vote of thanks to the chairman, which was proposed by Mr. Don.

LATEST REPORT.

Apl. 23: The 155 south-east ou Caunter lode is now driven 2 fms. 2 ft.; the lode here is split into two parts, but we are only driving on the hanging-wall division as we expect the two parts will be in junction in from 3 to 4 ft. ahead. We value the lode to-day, which is 1½ ft. wide, at 1 ton per fm. for blende. The 140 south is driven 91 fms. 5 ft.: the lode in forebreast is 2½ ft. wide and worth 1 ton lead ore per fm., and saving stuff for blende. The 140 south-east on Caunter lode is worth 1 ton per fm. for blende, and the lode also contains good stones of lead ore. The lode at the 140 north, on the south-east vein, is 1½ ft. wide and worth 1 ton per fm. for lead ore, and saving stuff for blende. The 140 north is worth 1¼ tons of lead ore per fm., the lode being 4 ft. wide. We have put the men here to cross-cut west to prove whether there be any more lode on the footwall side. Two stopes in back of the 140 north, the one south of Jones', and the other south of Sandle's winze, are together worth 2½ tons lead ore per fm. The forebreast at the 125 south to-day contains good stones of lead ore and shows signs of improvement. The winze in this level, south of main shaft, is now down 8 fms. 5 ft. 6 ins..; we have not yet got the whole of the lode here, but the portion in sight contains good stones of lea l ore. Four stopes in back of the 125 south of main shaft, three north, and one south of Lewis' winze, are together worth 5½ tons of lead ore per fm. The middle level in back of 110 south of Watkins' winze, south of main shaft, is worth 1 ton lead ore per fm. Two stopes in back of 110 south of Watkins' winze, south of main shaft, are together worth 3 tons lead ore per fm. A stope in back of 110 south of main shaft is worth 1 ton lead ore per fm. The middle level in back of 80 on east lode, south of Glover's winze, north of main shaft, is worth 1½ tons lead ore per fm. Three stopes in back of 80 south of Jones' winze, south of main shaft, are together worth 6½ tons of lead orc and 2 tons blende per fm.—A. Waters.

THE RIPANJI QUICKSILVER AND SILVER MINES CO., LIMITED.

£20,000 TO BE RAISED TO CARRY ON A SCHEME OF DEEP MINING, AND THE CHAIRMAN IS CONFIDENT OF SUCCESS.

AN extraordinary general meeting of this company was held at Winchester House on Wednesday last, under the presidency of

Mr. Clifton Shield

(the chairman of the company), in order to consider, and if deemed advisable, pass the following

RESOLUTIONS:—

"That the capital of the company be reduced by cancelling the 10,000 preference shares which have not been taken or agreed to be taken by any person." "That the capital of the company be increased by the creation of 25,000 new shares of 1*l*. each, to be called preference shares, to which there shall be attached the special rights and privileges following, that is to say:—(1). The holders of such preference shares shall be entitled to a cumulative preferential dividend at the rate of 10 per cent. per annum on the capital for the time being paid up on such share respectively, with the right of conversion at par at any time into the ordinary share capital of the company. (2). The capital paid up on the preference shares shall not be liable to cancellation or reduction in respect of loss or depreciation. (3.) In the event of the winding-up of the company, the holders of the preference shares shall be entitled to have the surplus assets applied, first in paying off the capital paid up on the preference shares held by them respectively; secondly, in paying off the arrears (if any) of the preferential dividend aforesaid to the commencement of the winding-up, and thereafter to participate ratably with the holders of other shares in the residue (if any) of such surplus assets which shall remain after paying off the capital paid up on such other shares. (4.) Every holder of preference shares shall have one vote for every preference share held by him. (5.) The preference shares shall be offered in the first instance to the members in proportion to the existing shares held by them, and otherwise the directors may dispose of the same in such manner as they may think most beneficial to the company."

The SECRETARY read the notice calling the meeting.

The CHAIRMAN: Gentlemen, after the exhaustive statement I made on the last occasion, I have very little to say to-day. I think we might take the minutes of the last meeting as read, or if you prefer it I will ask the secretary to read them.

The SECRETARY then read the minutes of the last meeting.

The CHAIRMAN:

YOU WILL REMEMBER,

gentlemen, that a committee of shareholders was appointed at the last meeting, and we have had several communications with those gentlemen. The result of those communications is contained in the circular addressed to you. I may say that it is the wish of every member of the board that the views of the committee are carried out in their entirety. The chairman of the committee paid a visit to the mine without any remuneration whatever; he is a gentleman of great mining experience, and he takes very favourable views as regards the property. He criticises the policy that has been pursued by the board, and in some respects his criticisms are very fair. I must, however, call your attention to one sweeping statement which he makes when he says that the works have been carried out without any apparent policy. Practically, we have had a very distinct policy in what we have done, and it was the only possible policy, having regard to the funds which we had in our possession. Our policy was to explore a very large tract of country, hoping, by a certain amount of exploration and sinking, that we might

PROVE THE VALUE OF THE VARIOUS CONCESSIONS,

and to subsequently form subsidiary companies. Our policy was to get as far as the old men before us had got down on the lodes. We did not anticipate to get any further, but we wished to be able to show that the lodes were there, so that we might have been able to say, Here are the lodes of such-and-such a width, of such-and-such richness, and of such value. We carried out that policy, and by the report of Mr. Candler we carried it out with some success, and in one instance did get below the old mine. On the other side of the property we were not so successful. I may say that it is possible we may have carried on too much driving in the high levels, but the object was to open up the ground and find the lodes. The policy was the only one which we could follow with any chance of success, and what we wished to do all along was to prove the lodes, and then form subsidiary companies. They were indebted to the chairman of the committee, Mr. Candler, who had visited the mine without any remuueration, and he considers we have a valuable property. What we want is increased capital, and, in justification to the board, if they need any justification, I may say that we have all along followed the opinions of experts, and we have taken pains to get the best men we could to advise us. We have arrived at a point, as Mr. Candler says, when we may get valuable results by the expending of 20,000*l*. To prove that we could not do that before, I may mention that we had only 20,000*l*. in all as working capital.

Mr. GREEN: What was the original capital?

The CHAIRMAN: 20,000*l*. was the original working capital.

Mr. GREEN: What was paid-up?

The CHAIRMAN: 20,000*l*., and subsequently we subscribed 5,000*l*. more. That was all we had at our disposal, and, I think, I have clearly proved that the policy which we pursued was the only one open to us. We did conduct mining operations to a considerable extent, but we could not put up heavy machinery to extract the ore, and we really never hoped to do more than explore and show the lodes. On the whole the company's money has not been badly expended. I think that what you want is to have on the board some gentlemen more distinctly conversant with mining matters. The present directors are not mining experts. I hope the board will be fortified with some gentlemen with thorough mining knowledge. You will see by the circular that the object in calling you here to-day is for the purpose of raising 20,000*l*. On the part of the board—and we are all large shareholders—I may state every man is prepared to subscribe his quota for the success of the company, and we expect that the shareholders will respond in the same manner. It is to your interests as well as ours to do so. I should like to call on Mr. Barrett to tell us what the committee have done, and also Mr. Candler, to give us his opinion of the property that we have, and this I think I had better do before the resolutious are put. (Hear, hear.)

Mr. BARRETT: Gentlemen, on being appointed on your committee, the first thing was to consult with Mr. Finney, who had recommended the raising of 6,000*l*. to put the property in a good condition. It was the unanimous opinion of the committee that not only were the plans unsatisfactory, but that 6,000*l*. would not be sufficient, and in 12 months' time we should have to call you together again for more capital. Mr. T. C. Candler was appointed chairman of the committee, and as some further information was necessary, Mr. Candler offered to go out, without remuneration, and inspect the property on behalf of the committee and the directors of the company. The directors were consulted in this matter, and they agreed with the recommendation that Mr. Candler should proceed to the mine. Mr. Candler therefore proceeded to and inspected the property, and his report which he made to the committee compares with the report which was made two years ago and issued to you. These reports agree—that is

THE TECHNICAL REPORT AND THE PRACTICAL REPORT—

in every respect. The question is, why this report and the plans contained was not carried out? and the only reason we can find is because that there was not enough capital. If the money required had been raised two years ago we might have been receiving a good dividend. We had the advantage of the opinion of a practical engineer who had seen the property, and in every instance he agreed that there was a very valuable property there. Mr. Candler will be able to give you more details than I can, but it is quite certain that with the expenditure of 20,000*l*., with the amount of lead on the property, it must be a good concern. One thing has been overlooked in the policy of this company. The Romans were very clever miners, and they took out the lead above the water level, therefore if we want to get the lead we must go below the water level.

THEY MUST HAVE TAKEN OUT THOUSANDS OF TONS OF ORE

above, but there is an enormous quantity below which they had been unable to get at owing to the want of proper appliances. If therefore you want to make the company a success you must subscribe the necessary funds to enable us to get below.

A SHAREHOLDER: How do you know that there is anything below?

Mr. BARRETT: We have taken 50 tons of ore out. We consider that you have a very valuable property, but this cannot be properly developed under 20,000*l*. We also think that you should have a competent engineer, and also that the offices of the company should be moved to London, so that any shareholder can get any information which he wished to obtain by applying at the offices. Those, gentlemen, are what I believe to be the views of the whole committee. (Applause.)

Mr. T. E. CANDLER: Gentlemen, I am much obliged to Mr. Barrett for his speech, as he has saved me a great deal of my work. You have already heard that I went out both in the interest of the board and in your interests as shareholders. I stayed seven or eight days at the mine, although it is really more than a mine, being two large concessions. There are very exhaustive old workings, and there is no doubt that if the object which the board had in view had been carried out, and subsidiary companies formed, it would have been very successful for the parent company. The way that the works were carried on they always found in the upper levels that

THE ROMANS

had done as much as they had. In the Luita Strana property a shaft has been sunk from which it has been estimated that 50 tons of lead ore has been taken out, but I think if I say 200 or 300 I shall be nearer the mark. He had brought over a few samples if any shareholder would like to see them after the meeting. That was not the only reef on the property; there are five or six, but they are all worked down below water level. As far as the present exploration and workings of the company had been carried on, they had not gone below water level on the old workings. When we get below the old workings the ore we get out I think I can estimate at 20*l*. per ton, and we may reasonably expect to get out 15 or 20 tons per day, which will give a very good result. Although the present engineer has recommended that you should put up dressing machinery, I cannot think that the mine has been developed enough at present, and I think we should have 1,000 tons of ore before we should be justified in spending 1,000*l*. upon expensive machinery. The deposits of ore do not carry any limestone; limestone deposits are very uncertain, and any moment they may cut out. I have come to the conclusion, from the inspection which I have made of the Luita Strana property, that the lode which I traced for over a mile upon the surface is composed of porphyritic rock, in which no deposit had been found except in the form of

THE TRUE FISSURE VEIN.

As regards the slag, our property for about 10,000 acres is covered. You cannot walk upon the ground except upon this slag, and that shows the enormous amount of ore which the Romans must have got out of the property.

Mr. GREEN: Has the slag been analysed?

The CHAIRMAN: Yes, it has been, and we have been somewhat disappointed. The first gave 4 ozs. of gold, but the anticipations we formed have not been carried out. There was no large amount of lead, and I cannot hold out any prospects from the slag. We were very disappointed; we thought ourselves it was something valuable.

Mr. CANDLER: If gold has been found, there has been no quantity of it, but when we are continuing sinking it is possible more gold may be found, but I do not anticipate it.

Mr. GREEN: I asked the question, as at the time the old workings were discovered in Derbyshire a considerable quantity of lead was got from the slag.

Mr. CANDLER: I did not trouble much about the slag, but I should think that there were thousands of tons on the property. Whether it will be of any value I cannot say. As regards the Ripanji concession, works have been carried on at two places. There is a mountain there about 1,500 ft. high, and on the other side the property belongs to the Avala Quicksilver Co., who are exporting a certain quantity

per month, and expect shortly to increase their output. A tunnel or adit goes through our property for which they have a special permit. At some little distance away an adit had been driven, from which we have obtained a quantity of low grade ore, but at present I do not think it would be profitable to work it, as it would only fetch about 3*l*. 10s. per ton, although a fair profit might be made from that. I do not think, however, that it is necessary to work this low grade ore, as when we have passed through these old workings, we shall develop something better than what we have at present. As regards the

QUICKSILVER,

there has been a large amount taken out in various quantities which gave some 8 per cent., and some 1 per cent. or 2 per cent., and I am very hopeful that we shall find some large deposits of quicksilver.

A Shareholder: Have you any information that the Avala is doing sufficient to make it pay?

Mr. Candler: That I cannot say.

Mr. Green: It would be no use our thinking of making a profit from quicksilver if no profit is being made by that company. The question is—will it pay to work it?

Mr. Candler: I strongly advise at present that we give our best endeavours to the Luita Strana, which will give us large profits, I think, in a few months.

Mr. Reed: What is the cost to get the ore?

Mr. Candler: The cost will be very low as compared with other mines. The labour is very cheap, and the labourers are the best

HUNGARIAN MINERS,

who are sent to Africa, America, and all parts of the world on account of their skill in mining. They work for about 2f. per day. I should think that it would cost 10s. or 15s. per ton for extraction, and about another 10s. per ton for treatment; so you see that if you get 20*l*. per ton, you have a very wide margin for profit; and if you only got 3*l*. or 4*l*. per ton, it would give a good profit.

Mr. Green: Where can the ore be sold at that price?

Mr. Candler: At 20*l*. per ton?

Mr. Green: Yes.

Mr. Candler: At Swansea; but the cost of transport and other dues would be so heavy that it would be better to treat it on the spot. To develop the mine for the next year only 5,000*l*. would be required, but when we have 1,000 tons of ore we should want dressing and smelting plant, and we should want to put up a water jacket and furnace. Therefore it would be injudicious not to have sufficient money. The board, however, would not call it up unless it was necessary, and not until it was required.

Mr. Reed: If we smelt the ore what would it then be worth?

Mr. Candler: About 35*l*. per ton.

A Shareholder: Is there any sale for it?

Mr. Candler: Yes, for as much as ever we can get.

I VISITED THE PROPERTY IN A PROFESSIONAL CHARACTER,

and you have had the advantage of any professional assistance I had. I may mention again that the whole of the 20,000*l*. you are asked to raise is not required for the development of the property, but it will be required to put up the dressing plant and other machinery for dealing with the ore and quicksilver. (Applause.)

A Shareholder: How long will the development go on before the water-jacket furnace is necessary?

Mr. Candler: Not before nine months, as it will take two or three months to erect the plant and pumping machinery.

A Shareholder: Are there any other companies in the neighbourhood?

The Chairman: With the exception of the Avala and the Ripanji, there have been no other companies formed in Servia. There have been, however, private companies and enterprises who have got a concession, and having extracted 20,000*l*. worth of metal and expended 5,000*l*. or 6,000*l*. in expenses, have pocketed the profit and left the country.

A Shareholder: Is that from old workings?

Mr. Candler: I do not know—I have never visited the place.

Mr. Ellis: I understood that there was coal to be found on the properties—is that so?

Mr. Candler: I do not know; I have confined my remarks to the concessions I visited.

Mr. Candler said if there were no more questions he would like to refer to one personal matter. Those present on that occasion had perhaps seen articles in the *Financial News*, which were attacks upon himself, and he thought that he was entitled on that occasion to refer to them.

THE "FINANCIAL NEWS" HAD VALUED HIS THOUGHTS AT ONE PENNY,

but he would give them without that magnanimous gift. Mr. Candler then went on to point out instances when the *Financial News* had written what he considered was utterly misleading, and concluded by saying that if they credited the statements of that paper before his remarks, when he had given his personal attention to the property, and if they thereby lost the concession, the fault would be theirs and not his.

A Shareholder: What is the present capital of the company?

The Chairman: The capital at the present moment is 85,000*l*.; of that amount 25,000*l*. is the subscribed capital, and we have 60,000 shares unallotted and unissued.

Mr. Silbermore: How were the vendors paid?

The Chairman: The vendors were paid wholly in shares; they received no cash.

Mr. Silbermore: How do you propose to raise the additional capital?

The Chairman: We look to the shareholders for it, and we hope that they will all subscribe.

Mr. Barrett: I think we have got a very good property, and it is for us to raise the capital. I think, however, it would be a good thing if the following words were added to paragraph one, "with the right of conversion at par at any time into ordinary share capital of the company." That would give us a right to convert into ordinary shares at any time we pleased when the ordinary shares were getting more than 10 per cent., and I think that we preference shareholders, if we become so, should have that right. (Hear, hear.)

The Chairman: What time do you propose should elapse?

Mr. Barrett: I should think they ought to be convertible at any time.

The Chairman: I do not see that there could be any objection to that.

A Voice: When the shares are fully paid.

The Chairman: Certainly. Has any gentleman any further questions to ask, if not, I will put the resolution, and I shall be very happy to adopt the words of Mr. Barrett, and will add them to the first paragraph. You see there are two resolutions, but I will move them as one. The chairman then read the above resolutions, and

Mr Reed seconded.

A Shareholder: If the preference shares share with the ordinary shares any dividend above 10 per cent. I do not see that the words added to the resolution make any difference.

Mr. Barrett: I think it will give the preference shareholders an advantage.

The resolution was then put, and carried unanimously.

The Chairman: In the course of a few days we shall issue a circular to you, asking you to subscribe for your shares, and I hope you will all pull together and do your best to get the required amount. We shall continue to rely on the assistance of Mr. Candler, and he has up to the present shown a considerable amount of judgment and ability in the affairs of the company.

A Shareholder: I should like to propose a vote of thanks to Mr. Candler for his services.

The Chairman: We are all very much indebted to him. I will put it to the meeting. I am sure you will all second it—carried, Mr. Candler.

A vote of thanks to the chairman and board of directors closed the proceedings.

LISBON-BERLYN CO., LIMITED.

THE CHAIRMAN REPLIES TO PRESS CRITICISMS—SHAREHOLDERS RESOLVE TO PURCHASE A NEW FARM—AN ESTIMATE OF 100 TONS PER DAY FOR 100 YEARS!

The second ordinary general meeting of the above-named company was held at the City Terminus Hotel, on Wednesday, when the following resolution was submitted to the shareholders:—

"That the capital of the company be increased by the sum of 62,500*l*., divided into 500,000 shares of 2s. 6d. each, to be considered as part of the original capital; the proceeds thereof to be used for the purchase of the farm Frankfort in the Lydenburg District of the South African Republic, of machinery and plant, for the erection of such machinery and plant, for developing the resources of such farm, and for the general purposes of the company, or for any of such purposes, and that unless and until the company shall by special resolution otherwise determine, such shares, or any of them, may be issued by the directors from time to time, in one issue or more than one, and either at par or at a premium, and generally in such manner and upon such terms, and to such persons as the directors shall think fit."

R. Macklin, Esq.,

presided.

Mr. C. P. Simpson (secretary) read the notice calling the meeting, and the report was taken as read.

THE CHAIRMAN ON HIS DEFENCE.

The Chairman: Ladies and gentlemen, in referring to the accounts there is one point I wish particularly to draw your attention to—namely, that it covers, as our report states, a period of nearly 18 months. I think it right also to read again what is printed at the top of the accounts, although it is in large type, and could hardly be passed over by anyone—"Development and general expenditure account from July 29, 1889, to Dec. 31, 1890." You will see that that covers a period of some 18 months. I find many of our shareholders have failed to read the voluminous matter that we sent them, and have left much to their attendance at this meeting. Many of them have come to me and said they considered the expenditure was outrageous—(hear, hear)—and upon my appealing to them and asking them to point out any items, they have referred me to the item of 3,640*l*. for salaries and clerical work, printing, stationery, stamps, cablegrams, rent and general expenses, which they have told me is "at the rate of 11,000*l*. a year." In the first article of a financial paper the writer commented upon these accounts as covering a period of 12 months instead of 18. Two days afterwards they had a further article, and they commented upon these accounts as covering a period of only five months, and they pointed out that the expenditure in London amounted to 3,640*l*. 3s. 2d.; so the expenditure for five months was at the rate of over 11,000*l*. a year. Gentlemen, I need not tell you that it amounts to under 3,000*l*. a year, because these accounts extend over 18 months. They then refer to the directors' fees for five months as 1,088*l*. That covers 18 months. Now, these statements must have been made deliberately by the paper referred to.

LONDON EXPENDITURE.

So far as the expenditure in London is concerned, I must point out to you that it is undoubtedly high, but we keep it down as much as we possibly can. You must look to the fact that we have 3,000 shareholders, and that entails an enormous amount of correspondence. In our registrar's office the dealings in these shares are far in excess of any company that you could name; in fact, our auditor says that in the whole course of his experience he has never seen such an item, looking to the size of this company and its capital, as 1,281*l*. for transfer fees. The caution that is necessary in keeping the transfer books, and also the need that exists for having a thorough expert as a registrar, necessitates high wages. Our staff includes only the registrar, his assistant, and one clerk, and our excellent friend Mr. Simpson, whose salary I am sure no one will grudge. (Hear, hear.)

EXPENDITURE IN THE TRANSVAAL.

As regards the expenditure in the Transvaal, I will willingly grant that the item for prospecting, mining, water-races, dams, &c., and development expenses, including transport, salaries, wages, &c., 10,435*l*., covering a period of 18 months, is very heavy; but I must point out to you that our fields are very extensive. We have 22,000 acres. There is not one man on that staff whom we can spare. It is possible that they might not be fully employed at all times—especially

during the rainy season—but I cannot see, and we have considered over and over again, how we could cut down that expense and do justice to our fields. It is with that object that we propose to you that we should take over this Frankfort farm—looking to the fact that it could be worked by the same staff, by the same machinery—35 or 40 heads of stamps which are now lying idle—and our workshops which are not at present fully employed. This Frankfort property is no new thing to us; for some years we have had our eye upon it, and have been aware of its value. The terms suggested, however, when we have attempted to get hold of it have been so onerous that we could not entertain it. Even so recently as Dec. we were asked something like 60,000*l.* or 70,000*l.* for it; and it was only by the most cautious negotiations, only by our keeping quite in the background and not showing that it was the Lisbon Berlyn Co. who were after this property, that we were enabled to acquire it.

DIRECTORS' LIABILITY.

You have read what Mr. Rickard has said about the property, and in view of the Directors' Liability Act, I do not feel disposed to make any statements myself which would enable a "wrecker," holding five shares, to drag me through all the Courts up to the House of Lords without any proof whatever, on the ground that I had made statements, not being at the time an expert. I am not an expert, and I am therefore not entitled to make any statements to you when I ask you for that money. Mr. Rickard is, however, an expert, and one whom I am sure you can fully trust, and the best judgment you can have as to the value of the Frankfort property is to be found in a comparison of his cold-blooded reports upon that and the Lisbon-Berlyn farms. Shareholders have come to me and said, "When you have got 22,000 acres, why do you ask us to acquire a fresh property?" (Hear, hear.) That is a very reasonable question, and I hope to be able to meet it. We have most expensive machinery lying idle. No one on this board is responsible for its purchase, for it was purchased by the original company. We have about 40 heads of stamps lying idle; we have workshops capable of very great work, and the necessary staff, and all these could be utilised on the Frankfort property. The results of our working at the Lisbon and Berlyn are more or less speculative, and must be so until we come across something that will be paying. In the Frankfort property we have a positive certainty. Whilst we are developing the Lisbon Berlyn property,

WE HOPE,

by means of the Frankfort, to pay the expenses of developing the Lisbon and Berlyn Farms, and at the same time to pay you 10 per cent. on your capital. This is only a beginning, Mr. Rickard informs you. I do not give it to you *ex officio*, but I am informed that there is more than sufficient stuff there to crush 100 tons a day for 100 years. As regards the increased capital—it is true 500,000 shares is an excessive number so far as our present requirements are concerned; but Mr. Rickard tells you, in his report, that this first installation of 35 heads of stamps is only a beginning. We may in the course of the next few months find it necessary to supply another 70 heads of stamps, and for that purpose we are anxious for you now to give us powers in case they should be required. The first issue of 400,000 shares will be sufficient to pay for the property—that is to say, the 14,000*l.* and the 500*l.* and the 2,000 shares, and Mr. Rickard puts the cost of plant at 15,000*l.* That does not include stamps; we have stamps on our property. A large portion of that sum will be spent in probably the MacArthur-Forrest process. There is very great difficulty in treating this ore—it averages 1 oz. 2 dwts. to the ton. By the mill operations about 5 dwts. only have been recovered; but by the MacArthur-Forrest process we have got over 80 per cent. of the gold. That process will absorb about 15,000*l.*, and we ask you to let us have, say, 18,000*l.* for working expenses, to include any extra plant that we may require. You may say, "Do not ask for it now, but come to us again." We never come to you but what you find your shares are knocked about in the market owing to the attacks made upon us. At once the hope is raised in the minds of "wreckers" that they can get in and do something.

A BAD NAME.

I am aware that outside the company has a bad name, but nothing would please me more than to see all the books dragged into the Court of Chancery and thoroughly scanned. I do not think there is any company where the books are kept in better order, and where directors can give a better answer to the calumnies that are thrust upon them than we can. (Hear, hear.) It has been stated by an anonymous writer that it is absurd to buy the shares at the present price when you can go to the office and get as many as you like for half-a-crown. That is a mean, scandalous thing for any editor to allow to go into a paper without inquiring at the offices first as to whether it was a fact. We have never issued one single share to anyone at half a crown except in exchange for certificates in the old company which we were bound to do. Seven shares were taken by the signatories, and the directors took them—one each. Had we been the swindlers that it was attempted to make us out, no law could have stopped us from taking 20,000 or 50,000 shares apiece at half a crown when they stood in the market at a guinea. (Loud applause.) The chairman then moved the adoption of the report and accounts.

Mr. Sutherland (director) seconded the motion, which was carried unanimously, without discussion.

The Chairman proposed the re-appointment of the auditors, the fee being 35 guineas.

Mr. Kenyon Stowe (director) seconded, and the motion was carried.

The Chairman then moved the resolution (see above) authorising the purchase of the new farm, and the raising of additional capital.

Mr. Sutherland seconded.

AN EXPERT'S VIEW.

Mr. Thomas Rickard said that the Lisbon-Berlyn was a large property, but largeness in matters of gold did not always signify value. This property was a most striking instance of an almost systematic neglect of making the best of the chances underground. Until the appointment of Mr. Wylie as manager, the real essential work of any miners in a place like that—namely, the development of any symptoms or indications of ore, or the searching for new horizons of ore—was not done to the extent of 1 per cent. of the share capital of the company. During the last few years, however, the work accomplished had been intelligently done, although no permanent benefit had resulted. As regarded the Frankfort property—the manner in which the ore cropped out in the sides of the hill, and the extreme regularity of the beds, combined with the facilities for working them, were such as he had very rarely seen. The property was 5,000 acres in extent, and if the gold, which cropped out at different places along the gorges, ran all through the property—which it was fair to assume was the case—then they would possess a property which would give them food, not only for their own operations, but for subsidiary companies.

EARLY RESULTS FORESHADOWED.

They would be able to decide, and operate in that direction in their first year. These were already thousands of yards of "face" exposed by the workings. This was a fairly tried enterprise, and one which had extremely little chance of disappointing the shareholders. (Cheers.) As regards water-power, the present water, with about half the fall, had been driving the five stamps without cessation during the dry season as well as the wet one. There was plenty of wood on the farm for fuel purposes supposing the water had to be supplemented by a steam engine. (Cheers.)

The resolution was put to the vote, and carried, with three dissentients, amidst cheers.

A vote of thanks to the chairman terminated the proceedings.

LINARES LEAD MINING CO., LIMITED.

DIVIDEND AT THE RATE OF 40 PER CENT. PER ANNUM—DIRECTORS CONFIDENT AS TO THE PERMANENCE AND STERLING VALUE OF THE PROPERTY.

The half-yearly general meeting of the shareholders of this company was held at 6, Queen Street Place, London, E.C., on Thursday.

Richard Donagan, Esq.,

presided.

Mr. H. Swaffield (secretary) read the notice convening the meeting.

The Chairman: It is a subject for congratulation that the company has been enabled again to declare a dividend of so satisfactory an amount as 12s. a share—12s. a share paid in Sept. in respect of the first half-year, and, again, 12s. in March for the second half-year, makes a total of 1*l.* 4s. per 3*l.* share for the year 1890, being at the rate of exactly 40 per cent. This time last year I referred to a tabular calculation which had been made, showing that up to Dec., 1889, dividends amounting altogether to 332,537*l.* 10s. had been paid during the 38 years of the company's existence, an average dividend of 19.44 per cent. on the company's capital. This year a similar tabular statement shows the total dividends paid now amount to 351,537*l.* 10s. in 39 years, being an average dividend of 20.03 per cent.; so that this 40 per cent. dividend has had the effect of raising the average dividend by .47, or nearly ½ per cent. It will be observed that on this occasion we have not put so much to the reserve fund as on the last two occasions, viz., 250*l.*, instead of 500*l.*, but there was a reason for this, and such reason was, that during the half-year under review a larger sum was spent on the mine in vigorous exploratory work than was the case in either of the two previous half-years, and, of course, it is only fair that when the returns of any given period have borne the cost of heavy development work, the profits remaining after such developments have been paid should not be again taxed with so large a sum to reserve, as might under other circumstances have been put to it. And, after all, the 250*l.* was more than in Sept., 1879, when 150*l.* only was put to reserve. There has been a slight decrease in the quantity of the sales of the produce of the mines, the quantity appearing in the accounts being 2,324 tons, against 2,432 tons, being a drop of 108 tons, and besides that, there was a decrease in the stock on hand at the close of the half-year. The carbonates sold were more—772 tons, against 674 in the previous half-year, which was itself an increase on the half-year before that, and they were sold for 2,702*l.*, against 2,437*l.* for carbonates in the previous half-year. The total receipts in the accounts were 34,439*l.*, against 33,475*l.*, or an increase of 964*l.* Mr. John Taylor being present, he will, no doubt, give us, as usual, his views as to the mines, their variations in the recent past, and their prospects in the immediate future, and so on that subject I need say nothing further except to express the unabated confidence of the board in the permanence and sterling value of the grand property possessed by this company, which there is every reason to believe will be a source of substantial profits for many years to come. In conclusion, therefore, I will only refer to the advantage which has been secured in the altered arrangements with regard to the managers. Hitherto such appointment has been that of Mr. John Taylor personally, but now such appointment comprises the appointment of the firm of Messrs. John Taylor and Sons, whereby Messrs. Frank and Robert Taylor have an authoritative voice in the various matters arising out of the management, and their skill and experience are, directly brought to bear upon the several details, but which, I may add, makes no difference in the rate of remuneration paid. I think I have now touched upon everything that called for comment on my part, and I will therefore move "That the report, now taken as read, together with the accounts and balance-sheet, be received and adopted." (Applause.)

Mr. Samuel J. Wilde: I have great pleasure in seconding that. I do not think I have any remarks to make, for everything seems to be going on so well. I should like to hear, however, from Mr. Taylor what he has to say about the work of the past half-year and also since Jan. 1 this year—whether things look as well now as they did in the corresponding period. As regards the appointment of Mr. Taylor's firm as managers—it is only in accordance with what has been the usual practice in this company, for as long as father and uncle lived they were both managers of the company, and if we may judge by the past history of this firm we cannot do better than follow the tradition.

WORK ACCOMPLISHED.

Mr. John Taylor: A perusal of the agents' report, gentlemen, will make very clear to you, I think, the reason for the statement in

the directors' report that the vigorous opening of the mines is being continued, as it has been continued for many years past. An immense amount of exploratory work has been done, and you will, probably, have noticed that the rate at which the sinking and drifting has been done has been highly satisfactory. Mr. Tonkin has succeeded in getting a most extraordinary rate of speed in drifting and sinking without the aid of rock-drills, which is remarkable, with foreign labour and with the very hard rock that we have in the Linares district. I had hoped at our last half-yearly meeting, six months ago, to be able to tell you on this occasion of some important discovery in the 145-fm. level east of the Santo Tomas's shaft in the Pozo Ancho Mine. At present, although the lode is described as being "wide and powerful, consisting chiefly of calcareous spar, and sometimes good stones of ore," and as being "at one time worth ½ ton to the fathom," no very rich bunch, such as we had in the upper levels of the mine in the neighbourhood of this shaft, has been met with. This is a disappointment to us—but we are pushing on the level at a high rate of speed, and we can only hope that more productive ground will be reached as we go further east. We propose to drive that level further east, to come under Taylor's shaft, which is within 300 or 400 metres of the eastern boundary, and then we intend to cross-cut to the other lodes that we know we have on the property, unless, before doing so, we reach a rich bunch of ore. That might alter our plans. The result of the drivage of this level has been to

OPEN UP A LARGE AMOUNT OF GROUND,

which we are making excellent use of just now, and, as Mr. Tonkin tells us, the tributers will contribute largely to the profits for a long time to come. Mr. Wilde has asked for some recent information. The last report, dated Apl. 15, speaks of an improvement in the bottom level of Warne's—the 178-fm. level east of Warne's cross-cut, which is now yielding a little ore, although not much to talk about, and letting out a large stream of water.

Mr. Wilde: That is a good sign, is it not?

Mr. Taylor: Yes. On the north lode we have opened up a good quantity of productive ground in the 120-fm. level west of Peill's. In the 178-fm. level east and west of Peill's—that is, on the north lode—it has not been so rich, but still it is worth about a ton. The lode is very regular, and it emboldens us to sink Peill's shaft; for we hope for an improvement here. In the Quinientos Mine a long piece of valuable ground has been opened up, worth about 3 tons to the fm., in the deepest level—the 130-fm. level. The sinking of Taylor's shaft below this level was commenced in Oct. and completed, to the 150-fm. level, in Feb. The cross-cut will be driven as rapidly as possible—it will take about three months—and when this is done, I think we may fairly expect to find a good lode at this increased depth. The same remark, with regard to the tributers, applies also to the Quinientos Mine.

BRIGHT OUTLOOK.

I think that as far as the mines are concerned they are in a most satisfactory condition, and I consider the outlook at the present time as good as it has been for many years past.

Mr. Wilde: But what about the price of lead?

Mr. Taylor: I cannot deal with that question. We are able to make nice profits with the present prices.

The Chairman then invited questions or comments, but no shareholder responded.

Mr. Wilde: I would merely say, as auditor of the company, that I have been to the Bank of England, and have seen that all the stocks and monies there are in proper order.

The motion was carried unanimously.

DIRECTORS RE-ELECTED.

The Chairman: The next resolution I have to move is: "That Robert Henty, Esq., be, and is hereby re-elected a director of the company." I am sure that no words of mine are necessary in support of this resolution, for Mr. Henty is well known to you all.

Mr. Frederick H. Simmonds (director) seconded, and the motion was carried.

Mr. Simmonds: I have to propose: "That Richard Donagan, Esq., be, and is hereby re-elected a director of the company." You have heard how ably he has explained to you the position of affairs, and I can only myself testify to the extreme care and attention he pays to the concerns of the company, in which we are all so much interested. I have great pleasure in proposing his re-election.

Mr. Edward L. Agar (director) seconded the motion, which was carried unanimously.

Both gentlemen briefly returned thanks.

AUDITORS.

Mr. H. R. White proposed, and Mr. Tredcroft seconded, the re-appointment of Messrs. James W. Jepps and Samuel J. Wilde as auditors for the ensuing year.

This was agreed to, and

On the motion of Mr. Wilde, seconded by Mr. Hooper, a cordial vote of thanks to the chairman and directors was passed.

The proceedings then terminated.

THE ALAMILLOS CO., LIMITED.

THE MINE LOOKING WELL IN ITS LOWEST LEVELS—GOOD PROSPECTS FOR THE FUTURE.

The half-yearly general meeting of the shareholders of this company was held at the Office, Queen Street Place, on Thursday, Apl. 23, at 2 o'clock p.m.

Robert Henty, Esq.,

presided.

Mr. H. Swaffield (secretary) read the notice convening the meeting.

A LARGE BODY OF ORE IN THE 145-FM. LEVEL.

The Chairman: Gentlemen, the report here is very short, and so clear, that it does not leave much to be said upon the subject. You will see the principal feature in the mining work has been the opening up of a considerable body of ore in the 145-fm. level, and that has been at times a very rich lode indeed. It has varied considerably, and that is a feature in the mine which excites very considerable interest on the part of shareholders, as well as the directors and manager, because the Alamillos Mine has, in many respects, decreased in value as it has gone lower, but now as we are getting in the very deepest levels of all we find there is a certain amount of revival that is very encouraging, and especially as the tributers are falling off in their returns. The surface work is considerably exhausted, and we depend now upon the lower levels. This statement, which has been laid upon the table, does not show quite so favourably as the others—it is only 9 per cent. for a period of 24 years, but when we see how many worthless things are palmed off upon the public, we cannot but feel satisfied and happy at the long course of profit which has followed this work. It has been universally profitable. I believe it has

NEVER FAILED TO MAKE A PROFIT,

though it has varied considerably, and as I have before remarked, the lower levels having shown considerable improvement, gives us hope that we can still look forward to a considerable period of prosperity. (Cheers.) I do not think there is anything more that requires observation, except, perhaps, the paragraph stating that the directors have appointed the firm of John Taylor and Sons as their managers in lieu of Mr. John Taylor, who has held that position for a great number of years. It was thought more advantageous and beneficial that the firm should take the place of the individual. It makes no difference in the expenditure, because the remuneration remains as before, but for their convenience and the convenience of the directors that proposal has been made and agreed to. If any gentleman has any questions to ask I shall be happy to answer him.

Mr. Wilde: How do the reserves of ore compare with previous years?

The Chairman: Only 50 tons less.

OPERATIONS AT THE MINE.

Mr. John Taylor: There is only one portion of this report which really calls for any special mention from me, and that is the one which deals with the deepest working west of Taylor's shaft. The exploratory works have been pushed on very energetically, and Mr. Tonkin tells us of the great length of rich lode he has driven through in the bottom level—the 145-fm. level west. The lode was unproductive at the time of the last meeting, and continued unproductive till Nov. It then improved to 2 tons to the fm.; a little before Christmas the lode was valued at as much as 6 tons, the average for the half-year being about 2 tons to the fm. Since then, the lode has varied in value from 1 up to as much as 5 tons. There is a good lode in the winze which is not shown on the plan. The winze is being sunk from the level above the 130, in which there is a very good lode, and, therefore, we may expect again an improvement in the deepest level. With the object of following up this ground, Taylor's shaft has been sunk at a very rapid rate to the 160-fm. level, and we are now informed that work is just completed. The level, of course, will be driven west at this depth as fast as possible to get under the rich shoot of ore spoken of by the chairman. Mr. Tonkin tells us of an

IMPROVEMENT LATELY IN THE WESTERN SECTION

of the mine, that is the 70-fm. level west of Judd's, and the latest report (Apl. 15) speaks of opening up good stoping ground at this point. I think, taking it all together, the condition of the Alamillos is, perhaps, more satisfactory now than it has been for several years past. (Hear, hear.)

Mr. Death seconded the motion, which was carried unanimously.

The retiring directors were then re-elected.

On the motion of Mr. John Taylor, seconded by Mr. Death, the auditors were re-elected.

Mr. Wilde proposed a vote of thanks to the chairman and directors, which was carried, and the proceedings closed.

THE FORTUNA CO., LIMITED.

MINES YIELD A SATISFACTORY RETURN OF ORE—DIVIDEND OF 3s. 9d. PER SHARE, OR 18¾ PER CENT.

The half-yearly general meeting of the shareholders of this company was held at the Office, 6, Queen Street Place, E.C., on Thursday.

Robert Henty, Esq.,

presided.

Mr. H. Swaffield (secretary) read the notice convening the meeting, and the report and accounts were taken as read.

UNFAVOURABLE TURN IN THE LEAD MARKET.

The Chairman: Gentlemen, I have very few observations to make because the reports are so clear, and at the same time, I may say, satisfactory, that they require very little to be said on my part. However, with regard to the dividend, of course, it is a matter of regret it is somewhat diminished; not that that is to my mind anything at all to discourage one or to make one think the worse of the mine, because there are circumstances which fully account for this small diminution. One is, of course, one that we are always subject to; the price of lead varies as well as of other commodities, and not only have we been affected by the price of lead and other things, but we have been influenced during the past year by the commercial difficulties which have existed in this country and throughout the world. Still, we have made a fair profit, notwithstanding these circumstances. There is another item which has somewhat diminished our returns and profits. We have been

SINKING ONE OR TWO VERY IMPORTANT SHAFTS.

The heavy expense of these shafts has been charged to the current accounts, and not one farthing has been charged to capital or taken out of the reserves. So that against the diminished returns there is some satisfaction in having this work done. Provision had been made on a former occasion to put up machinery of greater power than was absolutely required; so that when these shafts had to be sunk there

was no necessity for any extra machinery. Of course, too, there is this to be considered in sinking these shafts—that for the moment it is naturally a little incubus upon the company, but the object is to secure lodes which are known to exist under the levels already worked out; and therefore in the course of time we expect we shall get under, or into, those lodes, and we then hope to have a very considerable quantity of profitable ground to work upon. That will, I think, explain sufficiently the amount of dividend that we seem to have lost. The only thing we can say is that it is a matter of wonder that our profits have not diminished to a greater extent, considering the circumstances. Our produce does not vary so much as that of some other mines; nor do our shares. We have got these cumbrous "pigs," which are certainly not so nice to look at as those "ingots;" but when we look at the returns we have made during the period that the company has been in operation—although we do not come before the public with startling dividends—still, I think, we may say in our case that

SLOW AND STEADY WINS THE RACE.

We have every reason to be satisfied with what we have done during the 29 years of the company's existence; and during the whole of that time I have had the honour of being one of your directors. (Cheers.) I beg to move "That the report and accounts be received and adopted;" and I shall be pleased to answer any questions that shareholders may care to put to me.

Mr. Samuel J. Wilde seconded the motion.

Mr. John Taylor: In this report upon the Canada Incosa Mine, dated Mar. 4, you will see the 130-fm. level west of O'Shea's, which is now as far west as any lode of value, was found in the upper levels, has lately been unproductive, but the most recent report, dated Apl. 15, tells us of an improvement here, and that the lode is worth

1 TON TO THE FATHOM.

That is important, because this 130-fm. level is the deepest point in the mine, and it is important because we are sinking the shaft for another level (150-fm. level), which we expect will be completed by the end of this month. In the Salidos Mine the sinking of Taylor's shaft below the 200 was begun in Nov. and completed to the necessary depth for another level (212-fm. level) in Jan. This has been a very large undertaking, and has cost a considerable sum of money. It has been done at a moderate expense, and most speedily, and as Mr. Tonkin has done the work I do not doubt but that it has been well done. The lode has been intersected at this depth (212 fms.), which is the deepest point in the Linares district. The level is being pushed on as fast as possible, but Mr. Tonkin informs us it will take about two months to get under the run of ore ground. The 200-fm. level has yielded for a considerable distance an average of ¾ ton to the fm. The end of that level is now in disturbed ground, and we have a considerable length of broken country to pass through before we can expect to reach the rich shoot of ore we have in the level above. In the 188-fm. level the lode had yielded from 1 ton to 3 tons, and the last report, dated Apl. 5, states there is a lode worth

1½ TONS TO THE FM.

So that you see we are still going on there in a very satisfactory way. The mine is not, perhaps, as rich as we have had it in years gone by, but I think you can look forward with considerable satisfaction to the future. I consider that the mine is quite in a healthy condition, and in the coming half-year I think we shall open up a considerable quantity of ore ground. I hope, as we have done in the past half-year, to maintain the reserves. (Applause.)

FORMAL BUSINESS.

Mr. Donagan proposed the re-election, as directors, of Mr. Robert Henty and Mr. E. L. Agar.

Mr. Simmonds seconded, and the motions were carried unanimously.

On the motion of Mr. Hooper, seconded by Mr. Garland, Mr. Wilde was re-appointed auditor, and his colleague (Mr. Francis S. H. Judd) was also re-elected, on the motion of Mr. Lewis, seconded by Mr. Hooper.

A vote of thanks to the chairman and his colleagues terminated the proceedings.

THE VOGELSTRUIS GOLD MINING CO., LIMITED.

RESOLUTIONS CONFIRMED—PROSPECTS OF EARLY CRUSHINGS.

AN extraordinary general meeting was held at the Terminus Hotel, Cannon Street, on Thursday, when the resolutions, which were passed at the extraordinary general meeting of the company held on Wednesday, Mar. 25, 1891, were submitted for confirmation as special resolutions.

RESOLUTIONS.

(1.) "That the capital of the company be increased to 300,000*l*. by the creation of 50,000*l*. shares of 1*l*. each." (2.) "That the new shares be called preference shares, and that the holders thereof be entitled to be paid out of the profits of each year a preferential dividend for such year at the rate of 10 per cent." (3.) "That the new shares be offered to the members in proportion to the existing shares held by them, such offer to be made in such manner as the board shall approve; and subject thereto, such shares may be disposed of in such manner as the board think most beneficial to the company."

Notice was also given of the following resolutions:—(1.) "That in the event of the company being wound-up, the holders of the preference shares of the company shall be entitled to have the surplus assets of the company applied in the first place in repaying to them the amount paid up on the preference shares held by them respectively, but shall not be entitled to any further participation in such surplus assets." (2.) "That any holder of preference shares may give the company six calendar months' notice in writing of his desire to convert the preference shares held by him or any part thereof into ordinary shares, and upon the expiration of such notice the same shall be deemed to be converted accordingly, and shall thenceforth confer the same rights and privileges as the other ordinary shares in the company's capital."

Mr. Jasper W. Johns, J.P.D.L.

(chairman of the company), presided.

Mr. C. Lewis Bennett (secretary) read the notice of meeting.

The Chairman: I do not propose to keep you long to-day, because we have nothing fresh to tell you, and we have only to ask you to confirm the resolutions that were passed at the last meeting. I have seen large shareholders since then, and they quite understand that the whole of this business will be of a confirmatory nature, and therefore they say "you have our votes, but you will not have our presence," and that accounts very much for the smallness of this meeting. We are not sorry to see it, because it shows that

WE STILL HAVE THE CONFIDENCE OF THE SHAREHOLDERS,

and that they think what we are doing is in the right direction; therefore, I shall propose that "The resolutions you have just heard read, Nos. 1, 2, and 3, be and are hereby confirmed."

Mr. P. A. Molteno seconded the motion, which was carried.

A VALUABLE OPTION.

The Chairman: I now propose the following resolutions, namely, Nos. 1 and 2, which are necessitated by the conversation that took place last time with regard to what should be done with the money in the event of our deciding at any time to wind up and a portion of it being unspent. That is simply to protect the preference shareholders in the use of that money, that it is subscribed for the development of the mine and is theirs, and that if there is any winding up, and any of it remains unspent, they will have a first charge upon it, and whatever is unspent, will be returned to them before anybody else can have anything to do with it. The second one is to give the preference shareholders the valuable option of converting their shares into ordinary shares at any time they think fit, which they will do naturally when they see larger dividends being paid than they can get out of their 10 per cent. preference. It is simply a privilege which they can exercise at any time as long as the company may last, and which I need not tell you may become a valuable option.

Mr. Molteno seconded the motion, which was carried.

The Chairman: That concludes the business of the meeting, and by the time of the confirmatory meeting for the two last resolutions, which it will be necessary to hold, we hope to have some satisfactory news from the mine, and that we shall also be able to speak of one or two crushings that will have taken place between that time and then. (Hear, hear.)

A vote of thanks to the chairman closed the meeting.

FLAGSTAFF, LIMITED.

GRATIFYING POSITION OF THE COMPANY—£15,000 WORTH OF ORE ON HAND—IMPORTANT DISCOVERIES AND DEVELOPMENTS—IGNORANT CRITICS AND WICKED "BEARS"—IMPORTANT SPEECHES BY THE CHAIRMAN AND PROF. VINCENT.

The adjourned ordinary general meeting was held at Winchester House, on Thursday, "to receive the report of the directors and the statement of accounts to Dec. 31, 1890, to fix the remuneration of the directors in conformity with the articles of association, and to transact the general business of the company."

Mr. George Hopkins, C.E.

(chairman of the company), presided.

Mr. R. S. Archbold (secretary) read the notice of meeting.

A DELAYED MEETING.

The Chairman, who was received with applause, said: I think it only due first of all that I should offer some explanation of the delay which has taken place in holding this meeting. At the former meeting, held in Dec., it was intended that we should adjourn until the end of Jan. About the end of the year I had a most severe loss—(hear, hear)—which prevented me from attending to any business for a long time, and on my return to business, when I looked into the accounts of this company with a view to preparing the balance-sheet I found there was a great deal more work to do than I anticipated, for consequent upon the numerous re-constructions that had taken place the liabilities had been handed down from one company to another until the whole of them rested upon this company. That involved a considerable amount of work on the part of the accountants, auditor, and directors. The last Flagstaff balance-sheet dates as far back as June, 1887, and the interval has been filled up with liquidations and re-constructions, all of which had to be looked into and verified. That, I hope, will be a sufficient reason for what I admit is the long delay that has taken place in the holding of this meeting. (Hear, hear.) The present is the first report submitted since the incorporation of the company in June, 1889, and in it the directors have endeavoured to give a succinct account of all that has since taken place. The late board, which remained in office until Nov., 1889, were, of course, responsible for the management up to that time. Since then the present board have been responsible, and in my remarks I hope it will be distinctly understood that I do not wish or intend to throw blame upon the previous directors for anything that has been done. The majority of the late board took office at my request. You will remember that they, with myself, were appointed by you a committee to enquire into the affairs and see what was best to be done. When they took office they were very anxious that I should join them, but my engagements were such that I had respectfully to decline. However, at the meeting on Nov. 23, 1889 (at which I was not present), it pleased you by a unanimous vote to elect me a director. There were at that time I might almost say two parties in the camp, and they were both good enough to express confidence in me, and to press me to take the seat which I now occupy. (Cheers.) I was unwilling, and hesitated to do so for some time, but felt that having recommended this last scheme of re-construction and promised to assist the board in any way I could, I felt a duty was cast upon me, and that, in justice to you, I could not very well decline to take office. You elected, as my colleagues at that meeting, Mr. Singleton,

Mr. Stidstone, Prof. Vincent and Mr. Stott, and all consented to take office, except Mr. Stott.

STATE OF AFFAIRS WHEN THE BOARD TOOK OFFICE.

On taking office, what did we find? An empty exchequer, and money wanted on the other side. We found that 12,000*l*., which was half the working capital of 24,000*l*., had been expended. When on the committee we were informed that the whole of the debts and liabilities (which under the agreement fell upon this company) would not be more than between 5,000*l*. and 6,000*l*., but the balance-sheet shows that they actually amounted to 8,001*l*. The remainder of the money had been sent out to the mines to provide for their working, to lay in supplies, and for other things. Our first duty was not the very agreeable one of having to make a call, which we did of 6d. per share. A considerable difference of opinion existed as to the course to be pursued at the mine. Capt. Stephens (who, I am sorry to say, is no more), in conjunction with Capt. Mitchell, thought the main shaft was in such a bad state and so dangerous, that the right thing to do was not to attempt to repair but to abandon it, and in pursuance of that opinion they proceeded (I rather think without the consent of the directors at that time) to remove the hoisting works which were fixed at the top of the main shaft. Well, I had a very strong opinion myself, and so had Prof. Vincent, and I think the old directors had too, that it would be suicidal on our part to abandon the shaft, which is the only entrance we have to the mine, and to be dependent for entrance to our property on the good feeling and kind offices of our neighbour, the Vallejo Co.

A SERIOUS STEP.

When Capt. Stephens removed the machinery he entered into an arrangement (a very proper one) with the Vallejo Co. that we should take all our ore and waste through their tunnel, but I had a strong opinion that under no circumstances whatever ought we to abandon our shaft and be dependent on other people for access to our mine. (Hear, hear.) Those were Prof. Vincent's views, and he enforced them very strongly, and in the result we made an arrangement with him to go to the mines to put the shaft in order, to re-instate the winding and pumping machinery where it was at the top of the shaft, to repair the air-compressing machinery which is situated outside the mine and adjoining the engine-house, to repair (or purchase), as might be required, new boilers, to clear the shaft of water, if possible, and to resume sinking the main shaft, which was one of the things that was urged most strongly at our last meeting, which ought to be done at the earliest possible moment.

PROF. VINCENT RIGHT.

Prof. Vincent always contended (and the result shows that he was right) that the shaft could be put in order for a moderate amount, and the machinery restored to its former position. The professor undertook to remain there to do these works two months, but the amount of snow that winter (I think it was from 12 to 14 ft. deep) was so great, and the winter began so early, that he was obliged to stay there six months instead of two, and only returned to London in the middle of July, 1890. We were congratulating ourselves that so far we had got rid of our troubles, and were on the high road to prosperity; on May 24

CAPT. MITCHELL STRUCK A FINE BODY OF ORE,

which was opening up very rapidly. We thought we saw the end of the long and dreary lane the shareholders had traversed, and we with them, when to our dismay we received a telegram on July 4, a few days after the professor had left the mine, to say that the engine-house and machinery were destroyed by fire. Now, gentlemen, we have a strong idea that that was the work of an incendiary. We think we can almost put our hands upon the man who did it, but we have not sufficient evidence to lead to a conviction, and, therefore, we can simply do nothing but entertain those opinions, which are something more than suspicions. This, of course, was a serious matter. When the professor came back he was about as ill as a man could be. He had been suffering from sunstroke, and those of you who saw him must have commiserated very much with him at that time, and we could not get access to him for some weeks to consult him as to what was best to be done, but after a time

HE OFFERED TO GO OUT AGAIN

to set the machinery right and rebuild the engine-house. Here, again, he was confronted by a very severe winter, and had soon to return to England without accomplishing his object. The ore was struck on May 24, 1890, and you will have followed the weekly reports from the manager as to the different works of development, and how the ore was opened out. Prof. Vincent is anxious to say something to you on that subject, so that I will not detain you upon it. (Cheers.) I shall, however, deal with two points, and they are the quantity and value of the ore.

THE ORE IS THERE.

As regards the quantity, there can be no doubt. (Cheers.) Every body of ore that is taken down, although it is not weighed, is put into waggons which contain a fixed quantity, and we can tell within a fraction exactly the weight of the ore. As regards the value, that is a more difficult subject, for assays, although instructive, are more often than otherwise misleading. The only real assay is the result of the mill. (Hear, hear.) However, we have had many assays and tested the value by them, and by what similar ore has been sold at in the neighbourhood, and are quite sure that the amount we have put down in the report as the value of the ore is a proper and fair one. (Cheers.) The ultimate value, I need scarcely tell you, must be dependent upon the price of silver and lead at the time of sale Subject to these fluctuations, over which we have no control, you may rest assured that the ore which we have taken down is of the value mentioned in the report, of

FROM 12,000*l*. TO 15,000.

(Cheers.) As to the future, what we propose is this:—As soon as the snow is cleared away and the tramway open, which is the only outlet from the mine, we shall commence sending the ore down and selling it as fast as we can. We shall increase the number of men at the mine so as to break down a larger quantity, because, for reasons which I shall mention presently, we have restricted the number of men in the mine. I think that policy will commend itself to you We have also to re-erect the engine house, and put up the machinery which could not be completed last year. We have about 500 or 600 tons of ore lying in the Vallejo Co.'s bins, which is accessible directly the snow disappears, and we shall deal with that first. There is another point in our policy which will interest you, and particularly those who are familiarly known as "bears," and that is the question of a call.

NO CALL TO BE MADE.

It interests you, and you are anxious that it *should not* be made; it interests the "bears" and they are anxious that it *should* be made. Now, early in the winter, the directors came to a conclusion that they would not make a call. They were sure to see their way without it, and that is their policy to day—*they are not going to make a call.* (Loud cheers.) It will be very disappointing to the "bears," but still, although they would not have to pay it as they have not the shares, they will not like it. (Loud laughter.) I should conclude here, but we have on the board some younger members who are very jealous of the integrity and honour of the Flagstaff Co., and who think I ought not to close without making some reference to the infamous statements which have been published respecting this company. (Loud cheers.) I suppose most of you, if not all have been freely supplied with the publication which I will not name. The proprietor has lately made himself very prominent in more ways than one, and in some positions in which I should think he does not feel altogether comfortable. In that publication there are most scurrilous attacks upon our solicitor. Now,

MR. SNELL, I THINK, IS QUITE ABLE AND COMPETENT TO TAKE CARE OF HIMSELF,

and to deal with this gentleman in the way he thinks best, and I suppose Prof. Vincent can do the same—at all events he is big enough. (Laughter.) The language used about him is not complimentary, but so far as I can make it out the gravamen about the Professor is that he has been unloading on the public, or, as the writer puts it, "robbing the public." So far as I have any information it seems to me that the Professor from time to time is so fond of this Flagstaff Mine that he keeps on increasing his holding—(cheers)—and at the present time is

THE REGISTERED HOLDER OF NOT LESS THAN 33,000 SHARES

—(renewed cheers)—so that I do not see where the unloading comes in. I am dealt with, I admit, more tenderly. It is alleged that I also am a large holder. Unfortunately (seeing how I got and lost my shares) I am, or rather I was. I subscribed to the bulk of them when the directors could not place the capital. Prof. Vincent came and asked me to subscribe for some Flagstaff shares, and I said that he might put me down for 500. He said. "That won't do at all, you must take 5,000." Well, he has a great deal of persuasive power and I took 5,000. (Cheers and laughter.) I held them through three or four liquidations and reconstructions, paying the contributions of 2s. 6d. or 2s., whatever it was, upon the shares, and, in addition to that, on one occasion, when there was a re-construction (as you who were debenture-holders well remember), we took for every 100*l*. worth of debentures 300*l*. of ordinary shares, valued at 6s. 8d., although the shares were selling in the market much below that price. With the rest of the debenture-holders I took my proportion of shares in lieu of debentures, and that is how I increased my holding. I will tell you how it has decreased. When this present company was formed, partly through my own fault and partly through the action of the previous directors—because I did not send my application in time the whole of my

6,800 SHARES WERE CONFISCATED,

I was a little surprised at this, because I had recommended the re-construction—I had recommended the payment of that 2s.—I had said, "I will do all I can to assist you and take up my own shares, though it will cost me 600*l*.;" and I did feel a little annoyed when those shares were confiscated, the limited number I hold to-day I had to buy at a premium. Now, it is for such actions as these that one gets accused of "rigging the market," unloading, and doing all sorts of improper things. For the information of this gentleman, I will say I never sold a Flagstaff share in my life, I never bought one except what I hold at present, and which I bought at a premium. I never had a dealing of any sort whatever in Flagstaff shares, and yet we are accused in this way. I should not have alluded to this, but for the urgent wish of my co-directors that I should refute these assertions. A letter received this morning called my attention (otherwise I should not have seen it) to the circular of a broker in which Flagstaffs are severely spoken against (quotations were read). One sentence states that "an expenditure of 10,300*l*. on the mine, with 820*l*. for charges in London, has produced an amount of ore which realised the magnificent sum of 51*l*." Now that ore was raised long before any of that expenditure took place, and the unfairness of the remark lies in this, that, he says, for the expenditure of 10,300*l*. we have had a trumpery 51*l*. worth of ore. The writer ignores altogether the 1,400 tons we have in the mine, which we have not sold simply because it is impossible to sell ore in the winter time. With these remarks I beg to move the adoption of the report. (Loud cheers.)

Mr. Ernest S. Inman (director) seconded the motion, and said: I desire to endorse as the youngest member (as regards joining the directorate) what the chairman has said, that we have felt very keenly the aspersions that have been cast upon our chairman and Prof. Vincent because we knew them to be entirely groundless, and as scurrilous as groundless, and therefore we urged him to say something on this matter. We have tried in the report and accounts to give the simple facts, and what is said therein can be verified, and will be verified, by our sales as soon as the work permits them to be made, which is generally the first week in June. For the proceeds you must abide by the result of the milling—the only true test as the chairman has said. We have gone to great pains and trouble in estimating the value of the ore, and we stand by what we have put down in the report. Our energies are devoted to getting the ore out of the mine, and we soon hope to make a return to the shareholders who have had to wait so long. (Cheers.)

PROF. VINCENT'S CONNECTION WITH FLAGSTAFF.

Prof. Vincent, who was received with great applause, said: Gentlemen, if I had not one word that was good or of an encourag-

ing character to communicate to you to-day I could still say from my heart that I meet you with the greatest possible pleasure. That pleasure arises from the retrospect of the last twelve years. During 11½ years of that time I have had the honour of being elected by you year after year and of presiding as chairman of the company. I have on more than one occasion told you how highly sensible I was of the great honour that you had thus conferred upon me, seeing that I was not a British subject but an American. I do not wish to import more personality into the matter than is compulsory, but I feel I must say, as an American who has lived amongst you for nearly 30 years, and who has occupied, by acclamation year after year, the position of chairman of an English company—I must say, as an American, that that is not only to my mind exceptional and significant, but is a standing record of the great and profound depths of the tolerance, charity and benevolence of Englishmen. (Cheers.) I would not be so sensible of the compliment had I during this period been paying dividends year after year. You might then be supposed to put up with almost anybody, but the reverse has been the fact, and it adds, I repeat, to the significance of your kindness, and to the intense depth of my gratitude. (Cheers.) In the chair of the Flagstaff Co., I, for 11½ years, have been struggling with adverse fate, but all that time you have been believing in me and endorsing and adopting my methods, not only by your sentimental support, but by your cash subscriptions whenever I have suggested to you that it would be wise to make them. True, I suppose that a portion of this continued endorsement and wonderfully sustained compliment to me was due to the fact that

YOU BELIEVED I WAS HONEST,

though sometimes that honesty, in the opinion of some, deserved the name of enthusiasm — but still when I asked you for the thousands of pounds, which I have been compelled to do on more occasions than one, you have always responded. I say, in view of such a retrospect as that, so exceptional and so signal, I cannot commence my observations with regard to the mine *per se* without alluding to it in an emphatic and distinct manner. (Cheers.) It is no mean victory to have achieved to have kept a struggling company afloat for 11 or 12 years, especially under continued stress of circumstances and divers difficulties, but during that time, as our mine was gradually becoming more and more encouraging, and as at one time we had to resort to raising debentures to the amount of about 23,000*l*., that debt had accumulated as a thick cloud over us, and I remembered in past times when we formerly had a debenture debt, and when I had the troublous position of being a director—that the very moment some show of yield of ore came about, the so-called bears exclaimed "Yes; but even supposing you get fairly good ore the debenture-holders will take it all and the shareholders will get nothing." I thought that was not at all an unfair argument, but was one which might weigh too heavily upon the minds of shareholders, and so I then determined, if possible, to try and get rid of that great incubus. At that time our shares were 5s., and I had myself advanced a considerable sum on debentures. I took the lead by saying, "I will take shares that are worth 5s. at 6s. 8d. if I can get some of my friends to follow suit." Good fellows as the Flagstaff *clientèle* have always been, they did follow suit, only one or two (perhaps through being out of the country) hesitating to take shares at 6s. 8d. when the market price was only 5s., thus giving up a first mortgage simply at my suggestion. I need not tell you how much pleased I have been during the last two or three months to receive the congratulations of shareholders who somewhat reluctantly had acquiesced in my proposition; and to-day, in the very flattering aspects of the mine,

WE APPEAR WITHOUT 1*l*. OF DEBENTURE DEBT

upon the property. (Cheers.) There is no kind of mortgage whatever, and we are practically out of debt. (Cheers.) But the chairman having made clear the company's position I do not intend to touch further upon that, as I prefer dealing with the mine. I will, however, observe that we have estimated what our indebtedness will be up to the end of June—namely, 1,000*l*. We have not sent a penny from London to Utah since last Oct. (Cheers.)

OPINION HELD BY THE FLAGSTAFF BANKER IN UTAH.

Our banker is a friend of mine of more than 20 years' standing, who knows the mine almost as well as I do, and is a practical miner, and he said to me: "Flagstaff looks so splendidly, that you may depend upon me to carry you through till next spring, if you do not wish to make a call." Each miner then was earning for the company many times the money it was paying him in wages, and our banker being on the spot, or within 28 miles, knew the facts, and I mention with pleasure his conduct in the matter. (Cheers.) Though our balance in the bank in London is small, it is larger than it was last Oct. Whilst on this subject, our latest statement from our banker in Utah was Mar. 1, when we owed him 370*l*., and when I say that 1,000*l*. will carry us to the end of June, you will understand that we are working with close economy, and withal we have a splendid staff of men (not many in number), who are doing wonderfully effective work, and no doubt the sum I have named will carry us beyond what we require for the miners' pay roll. So much for the representation that we are thousands of pounds in debt. Turning to the mine, I commenced by saying I would have had pleasure in meeting you to-day in memory of Auld Lang Syne, even if I had not had a word of good news for you; but, gentlemen,

I HAVE SOMETHING TO SAY THAT IS GOOD NOW

—not in the form of predictions and indications as in the past, but in the more concrete, and satisfactory form of good ore. I have drawn a map of the mine, which I only completed this morning, showing approximately the localities from which the ore of past times was taken. I had the honour of being sent from London in Sept., 1871, to report for a group of English gentlemen upon this mine. The Flagstaff struck me at once as being the most remarkable mine that it had ever been my privilege to inspect. It was so remarkable that I told my friends at that time (Lord Montague was chairman of the group) that for once I had seen a mine that I would allow to go to work without 1*l*. of working capital. This is the only mine that I have ever allowed to do so. The mine was purchased upon my report in Nov., 1871, and went to work, and within the next 12 months we were able to

PAY THE SHAREHOLDERS 122,000*l*. IN CASH.

(A Voice: I hope we shall get it again.) I followed the output of the Flagstaff till it reached nearly 59,000 tons. Our ore sold for an average of 16*l*. per ton. I do not mean to put that forward as a criterion, because there are certain collateral facts and incidental conditions that always hang about silver and lead mines such as the changing market values of those two metals; but those are well-known facts, and there is no getting away from or disputing them. The point at which the ore was first discovered was at the apex of the mountain, and protruding above surface, to the height of about 2 ft. If you were to visit the mine to-day you would see a mass of ore still standing above the ground. I have protected that from 1871 till now, and when I was out there in Nov. last I saw the historic boulder of ore which was still intact. From that point downwards the ore has gone irregularly, as the map shows, and it also shows what has been the locality and course of the great bonanzas. We have had many other great ore bodies in the mine, but these have been more of a ferruginous and less rich character, and therefore I have not specially delineated them. The map shows the series of bonanzas, from which we took millions of dollars. The last bonanza furnished.

166,000*l*., OR $800,000, IN LESS THAN THREE MONTHS.

It was a wonderful find, 30 ft. wide, first-class ore, and the richest we have had. That was discovered between levels 3 and 4, but going down towards the sixth it was lost. Mr. Hirschman, who at that time had charge, and was the lessee, from circumstances I do not allude to now, drove the sixth level expecting to cut another bonanza, as experience had shown that bonanzas got stronger with depth. He cut an iron seam where he expected to cut rich ore, and cut iron further on with only about 2 ozs. of silver in it. A little further he got into forbidding ground and stopped. After his lease expired I became chairman of the company. The Vallejo had then sunk deeper than we, and had got very much better ore, so I determined to get the shaft down as fast as possible. I always suspected there would be something very valuable lower down, because of the increasing richness of the ore bodies we had had above. My view was to drive the seventh level, and if nothing of sufficient importance was there found, to go deeper, for I

FELT SURE WE SHOULD CUT SOMETHING GOOD SOONER OR LATER.

This brings me to the date of Capt. Mitchell's appointment. The shaft being abandoned all below the sixth level, was under water, and being so we could not get relieved of either waste or mineral, because there was no means of raising it to the sixth level. The level we are working now is the sixth, coming through the Vallejo property. Capt. Mitchell was compelled to work in the sixth level, and started where Hirschman left off, and in only 100 ft. driving struck another iron seam. I was snowed up in Salt Lake City at the time, but men on snow shoes came to me daily with his reports.

THE LATE DISCOVERY.

I wrote to him to start out towards the hanging-wall, and he had not gone far before he cut the first ore in that direction on May 21 last. The ore, which subsequently to that time, had been going upwards, turned backward towards the line of the old productive bonanzas. But some time previously we had run the 7th level till we had cut the same seam of iron which connects with the present ore. Capt. Mitchell, after finding the ore coming down into the 7th level, raised up along this iron seam and soon reached the good ore just above the 7th level. Since the ore was struck on May 21 there has not been one minute that we have not been realising rich ore, and are doing so at the present time. (Cheers.) It looks as though this ore at present is leading into a great mineral region, and which will prove to be a continuation of the series of bonanzas, from which millions of dollars have been realised. (Cheers.) There is one point where the present foreman (Mr. A. L. Swope, who is a capital man), is now sinking below the 7th level which promises important results. Capt. Mitchell, I should tell you, left in Oct. last, owing to the severe winter —preferring to be with his wife and family in Cornwall.

PRESENT MANAGER.

I selected as his successor Mr. A. L. Swope, who has carried out all the expectations and hopes Capt. Mitchell and I had formed of him to the present time. The Vallejo property—which immediately adjoins—lies to the south-east of Flagstaff, has been worked to greater depth, and at lowest points, and has had very rich ore. The experience of adjoining mines is very important to us, and is by no means extraneous to the question. (Cheers.) Connection has been made between the levels of Flagstaff and Vallejo, and that shows the immediate contiguity and the close relationship of the two properties. What we found at a certain horizon in the Vallejo is, to a certain extent, a guide to us — we cannot say an infallible guide—that we will have equally rich ore at the same depth. Still, as our ore is getting richer, it looks as if it were only a question of proportion, and the *à priori* process of reasoning that we may have similarly rich ore at similar depth seems a fair one. The Eclipse—adjoining us—to the north-west has also gone somewhat deeper than we with very good ore, but not so exceptionally good as that of the Vallejo. I think the latter represents the maximum richness of the whole of the great Flagstaff lode. We have the Emma further still to the south-east, which marks the commencement of the great lode—which extends for nearly two miles; or from the Emma to the Reed and Benson Mine. This last-named property has produced millions of dollars' worth of good ore. A tunnel here, 2,700 ft. long, has recently cut the Flagstaff lode at the perpendicular depth of 1,200 ft. That is a very important work, and is a sort of guide to Flagstaff, the Vallejo, and to Emma. (Cheers.) We occupy the apex of this section of the mountain, and though we have gone down nearly 1,200 ft. on an incline of 44 degs., it does not bring us as low as either Vallejo or Eclipse. At the present, our prospects are so very encouraging, from the fact that we are finding ore which seems to be getting better and better. Some of the last pipes struck represent almost solid silver-lead. (Cheers.) We are going to extend operations more rapidly and extensively. We have driven 300 ft.

horizontally, in what is not a pipe of ore, but what ramifies out into a space representing over 300 ft. in extent. Capt. Swope having recently struck rich ore 200 ft. further to the south-east, the appearances generally of the locality of our present ore-getting are of the most assuring description. In the meantime the region about the immediate bottom of the shaft should not be lost sight of, especially as some very good ore has been found there. Capt. Palmer has seen this portion of the mine and I have not—in fact. I have only seen about 20 ft. of the ninth level. Capt. Palmer has had about 20 years' experience of Utah mines, and there is no one on whose judgment I should rely on a question concerning Flagstaff and Emma more than on his. Fifteen years ago he was engaged by the courts to make a survey of Flagstaff, and he has recently stated that the appearances at the bottom were just as good as the appearances were at times in the midst of the great bonanza yields, I mean after the temporary pinching out of the ore. Therefore, knowing Capt. Palmer personally, and his great experience as a practical geologist and mining man, his statements and deductions deserve a great deal of acceptance from us. As regards the last body of Vallejo ore, it realised as much as $600 a ton. It had blue bromide ores, none of which we have, and also yellow chlorides. It is to be supposed that lower down we will have some of these special types of ore. I am most confident that our present ore will coutinue, and have not the least doubt that before we meet in Dec. we will have far greater results to announce than any we have achieved up to this moment. (Loud cheers.)

VIEWS OF SHAREHOLDERS.

Mr. J. V. Smedley: How long will it take to erect the machinery and rebuild the engine house? What will the work cost, and to what extent will ore be ready for extraction as soon as sufficient men can be sent in for the purpose? Could the board give us an idea as to the weekly or monthly production during the summer, for you know there is an old proverb, that we must "make hay while the sun shines."

ANOTHER PROVERB.

The Chairman: Yes, and there is another which says "you should never prophesy unless you know." (Laughter.) I am told two months will be sufficient to erect engine house and machinery. We have ready now 1,400 tons. and it is not so much a question of being able to get men into the mine as hoisting machinery to draw out the ore. We have thought it wise, seeing that the roads are blocked with snow, not to do much stoping, as we could not remove what we took away. The tramway is open about the first week in June, and we have till Nov. following to work.

Mr. Jay: Do you expect to be troubled with water?

Prof. Vincent: Not at all.

A POINT MADE CLEAR.

Mr. J. H. A. Smith wished the point to be made perfectly clear that the indebtedness to the end of June, which the Professor estimated to be about 1,000*l*., was wholly exclusive of the 1,400 tons of ore mentioned as ready for shipment when the roads became passable. The latter was a distinct asset to set against the debt of 1,000*l*.

Prof. Vincent: That is so, and in my calculations I made no reference to the sales whatever.

The report was unanimously adopted.

FEELESS DIRECTORS.

The Chairman said the directors had received no fees, and did not intend to ask for any at this meeting, but would leave the subject to be dealt with at the next meeting which would probably take place in December.

Prof. Vincent proposed the re-election of the chairman, and said that Flagstaff, with all its misfortunes, had achieved some notable triumphs, but one of the greatest was in having secured Mr. Hopkins as chairman of the company. He was, to quote a classic writer, "the soul of honour and the slave of duty." (Cheers.)

WHO IS "JIM THE PENMAN?"

Mr. Smedley seconded the motion. He had great confidence in this mine, or otherwise he would not have stuck to his shares and joined the periodical re-constructions. He was afraid to say how many times it had been re-constructed. He did not attach the slightest importance to what the circularising brokers were saying against the mine, including "Jim the Penman." (Loud laughter.) He believed the present discovery meant the beginning of a great bonanza, and attributed it mainly to Capt. Mitchell, to whom scarcely justice had been done.

PROF. VINCENT NOT THE DEMON BUT THE ANGEL OF FLAGSTAFF.

He wished the whole Stock Exchange had been present to-day to hear the speeches of the chairman and the technical explanations of the working of the mine of Prof. Vincent, for the latter, instead of being the demon of Flagstaff, had been its angel. When this company was first taken into the office of their greatly-esteemed friend and secretary, Mr. Archbold, he said, "I should like someone known to me to go over and look at that mine," and it was through his instrumentality that Capt. Mitchell was sent out. It was Capt. Mitchell who assisted in driving the 6th level, and greater justice should be done to him for having found the ore there. When he heard the present chairman had joined the board he had greater faith in it than ever, for it was one thing to have a good mine, and another to have it well managed.

Mr. Urwick said the credit of the discovery was due to Capt. Stephens, who was sent out by the late board, and Mr. Mitchell had acted under his iustructions.

Prof. Vincent said he appreciated very highly Capt. Mitchell's services, and he knew him to be a good miner, but that gentleman would not take credit for having struck the ore in the sixth level. What he did give him credit for was having crawled into the higher levels, and gone into places in which he (the Professor) would not have risked his life, in order to see the conditions of those chambers, and to try and get some sort of law to deduce from them. He was astonished at the intelligent way in which Capt. Mitchell mastered the physical phenomena of the upper portions of the mine, and he was one of the finest men to collect facts about a mine that he had ever known.

The motion was carried unanimously.

The Chairman, in replying, said he meant to do his best to make Flagstaff a success. Flagstaff is a monument of the patience and perseverance essential to miniug.

On the motion of Mr. Berthoud, seconded by Mr. Sayer, Mr. Sydney W. Jackson was unanimously re-elected auditor, and a cordial vote of thanks to Mr. Hopkins for presiding was carried by acclamation.

LATEST REPORT.

Apl. 6.—Sixth level: This is now in 68 ft.; there is no change here since my last. The seam of iron still continues to go upwards, and is very good-looking second-class ore; can see, now and then, some of the yellow crystallised carbonates mixed through it. South drift: Have made connection with sixth level; this will help me a great deal in getting the ore and waste out without the use of the windlass. There are five of those pipes, but I cannot work more than two at a time as the men would be in the way of each other. They run first one way and then another, but their general course is to the west. Seventh level: The shaft is now 28 ft. deep; have started a drift off to the south-east at the bottom of shaft to see if the seam of iron will not improve; present height 10 ft. Number of tons mined the past week, 20—14 first-class and six second-class.—A. L. Swope.

THE FRONTINO AND BOLIVIA GOLD MINING CO., LIMITED.

EXCESS OF RETURNS FOR FEB., 2,717*l*.

The directors have received advices from the mines, dated Feb. 23, 1891, and Mar. 7, 1891. Also a letter from Messrs. Restrepo, dated Feb. 12, 1891. In confirmation of the circular to the shareholders, dated Mar. 9 last, giving the estimated excess of returns for Feb. month at about 2,700*l*., as telegraphed by the manager, these advices show the produce and cost for that month, as follows, viz.:—1,311 tons of ore produced—bar gold, 2,088 ozs.; tributers' gold produced—bar gold, 568 ozs.; bar gold, 2,656 ozs. Also 4,532 lbs. of sulphurets containing 364 ozs. of bullion. Estimated value of the gold and sulphurets, 7,080*l*. 11s. 6d.; estimated value of 14 bars of copper bullion, 139*l*. 6s.; total, 7,219*l*. 17s. 6d. Cost at the mines, Medellin, and in London, 4,501*l*. 18s.; estimated excess of returns, 2,717*l*. 19s. 6d. It will be seen on reference to the manager's report, under date Mar. 7, that he states as follows:—"The mines throughout look well, and the produce of the mills since Feb. 25 is such that a fair remittance may be hoped for. The past month has been one of the best, as far as returns and profits are concerned, and we have had fairly good luck. With the extraordiuary dry season, it cannot be hoped that the current month will in any way equal it. I must not discourage you, or hold out any bad future, but until we have raius only a very small remittance in comparison to the past few months must be expected."—J. Jameson Truran, Secretary.

Holloway's Ointment and Pills.—Old Wounds, Sores and Ulcers.—Daily experience confirms the fact which has triumphed over all opposition for more than fifty years, viz., that no means are known equal to Holloway's remedies for curing bad legs, bad breasts, sores, wounds, diseases of the skin, erysipelas, abscesses, burns, scalds, and, in truth, all maladies where the skin is broken. To cure these infirmities quickly is of primary importance, as compulsory confinement indoors weakens the general health. The ready means of cure are found in Holloway's Ointment and Pills, which heal the sores and expel their cause. In the very worst cases the Ointment has succeeded in effecting a perfect cure after every other means had failed in giving adequate relief.

ABRIDGED PROSPECTUS.

THE EARL OF DUDLEY'S ROUND OAK IRON AND STEEL WORKS, LIMITED.

THIS Company has been formed for the purpose of taking over, as a going concern, as from September 15, 1890, and working, and extending, the Earl of Dudley's well-known "Round Oak Iron Works," situated at Brierley Hill, Staffordshire, including the very valuable goodwill, and the well-known brands, trade marks, &c. In addition to the manufacture of an exceptional quality of iron, the manufacture of steel has recently been introduced at these works, and as hereinafter mentioned, it is intended to largely increase the production of this material, of which the higher grades are in great demand.

This business was established by the late Earl of Dudley upwards of 30 years ago. The iron produced has been proved by long experience under severe tests to be of the highest class. The brands are well known throughout the world, and have obtained a leading position in the principal markets for purity, strength and excellence of finish, and have acquired in all respects a high reputation.

THE EARL OF DUDLEY'S ROUND OAK IRON AND STEEL WORKS, LIMITED.

The business is capable of great extension, and it is proposed to at once lay down additional plant of the newest and most approved designs for the manufacture of steel. The Company will then be in a position not only to supply the demands of their own connection, but also to tender for orders which are continually on offer, but which exceed the present capacity for production.

The property, which is freehold, embraces an area of 30 acres, or thereabouts, abutting on the north sides upon the Great Western Railway Company's Line (with which it is connected by sidings) and on the north-east and east upon the Birmingham Canal—the Works being thus—through the London and North Western and the Midland Railway Companies' Systems—brought into direct communication with all parts of the United Kingdom. The Works are admirably fitted up with costly plant, engines and boiler power ; in fact, no outlay has been spared to bring the whole into the highest state of efficiency.

From the fact that the Round Oak Works were one only of the numerous trading concerns of the Earl of Dudley and his predecessors in title, and that the bulk of the material used in the works has been supplied from other portions of the Earl's estate, it would be difficult to ascertain from the Earl's books the profits earned exclusively thereat.

The actual sales from September 15, 1890—the date from which the Company take over the works—to March 15 last, and the prices realised, as certified by Messrs. Mayo, Powell and Thompson, of Birmingham, chartered accountants, by their certificate dated March 31, 1891, are as follows :—

	Quantities. Tons cwt qr lb	Amount Realised	Av. Price Per Ton
Sales from Sept. 15, 1890, to Mar. 15, 1891 ...	5,163 2 0 11	£46,978 11 1	£9 2 0

Mr. William Blakemore, of Cardiff, consulting engineer, in his report, says :—

"The directors will be justified in assuming that an average profit of £1 10s. a ton has been realised on these sales, and which, being reduced to figures, gives the sum of £7,744 13s. 2d., which is equivalent to a present annual increment of profit of £15,489 6s. 4d., that is, if the same prices are maintained and no additional working expenses incurred."

THE EARL OF DUDLEY'S ROUND OAK IRON AND STEEL WORKS, LIMITED.

The property has also been inspected and reported upon by Mr. William Blakemore, who, in his accompanying report, dated March 11, 1891 (acting on the instructions of the Lancashire Trust and Mortgage Insurance Corporation, Limited), in reference to the value of the Works, states (*vide Report*) :—

"With all appurtenances, including machinery, buildings, railway sidings, brands, goodwill, the valuable concession made by his Lordship, freehold land, and the extremely favourable situation, I consider these celebrated works to be worth £190,000. It is understood that everything in and about the works is included in the purchase, except the convertible stocks, which are to be paid for at a fair valuation, to be made by a competent person."

"Having regard to the excellent condition of these magnificent works their extremely favourable position for transit of fuel and materials, the high repute in which the Earl of Dudley's brands are held, the suitability of the fuel and the materials of the district for the manufacture of 'Open Hearth Basic Steel' ; I consider that when you have completed the proposed new steel plant, and with energetic and economic management, it will become one of the best concerns in the Kingdom, and being a sound and healthy undertaking, I conscientiously believe it will pay well."

Mr. Blakemore's report, after pointing out the great advantages likely to result from laying down additional steel plant at an estimated cost of £50,000, proceeds as follows (*vide* report).

Taking Mr. Blakemore's low rate of profits—over an average period of good and bad years—of 10s. a ton, and assuming his estimate of 82,000 tons annual production to be a reasonable one, the following results are shown :—

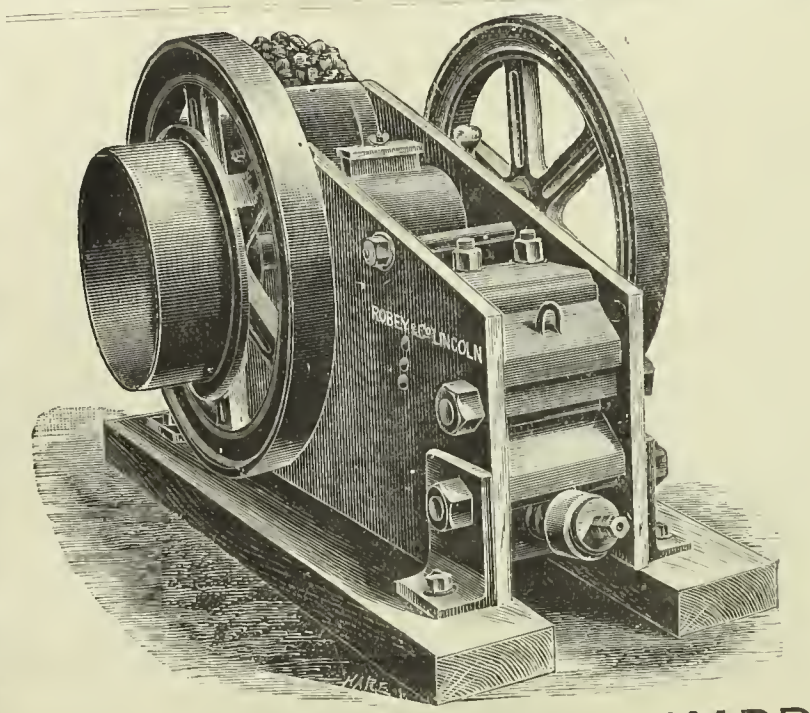
Annual net income		£41,000
Interest on £100,000 Mortgage at 5 per cent. will absorb	£5,000	
Dividend on £160,000 Ordinary Shares at 10 per cent.	16,000	
		£21,000
Leaving Surplus of...		£20,000

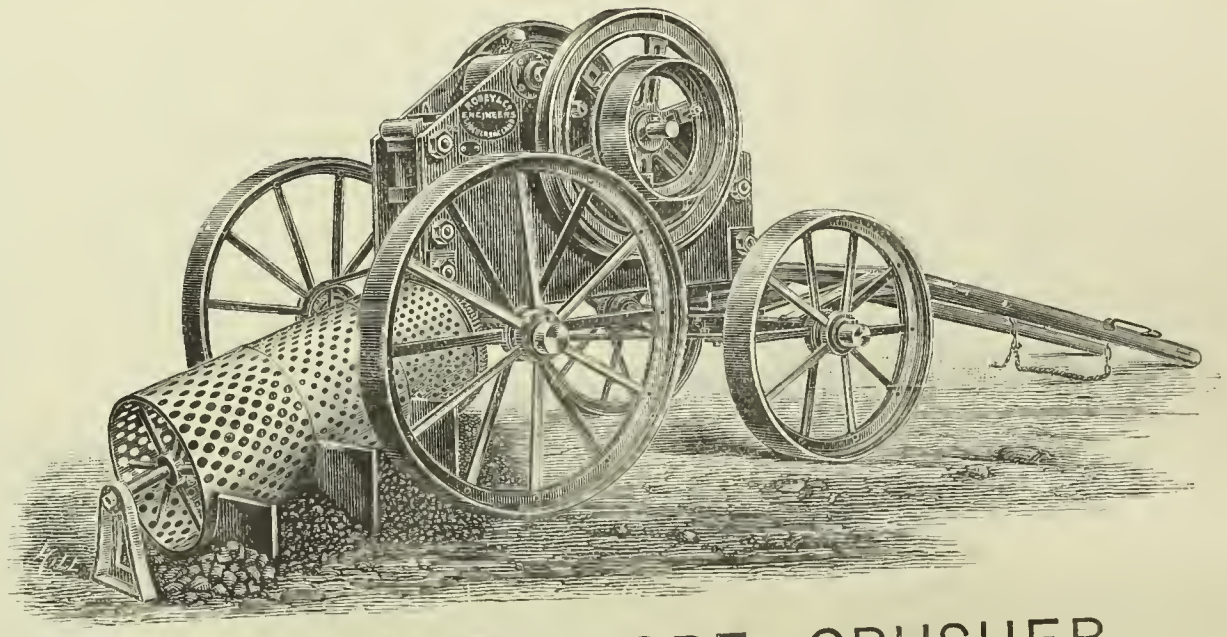
which should be ample for meeting all business contingencies—paying off the mortgage referred to in clause 10 hereof, and for creating a reserve fund.

Application for shares may be made to the Company's bankers, accompanied by a remittance for the deposit.

Prospectuses, with forms of application for the shares now offered for subscription, can be obtained at the Offices of the Company, or from its bankers, brokers, or solicitors.

ROBEY & CO., Globe Works, LINCOLN.





ROBEY & CO.'s IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

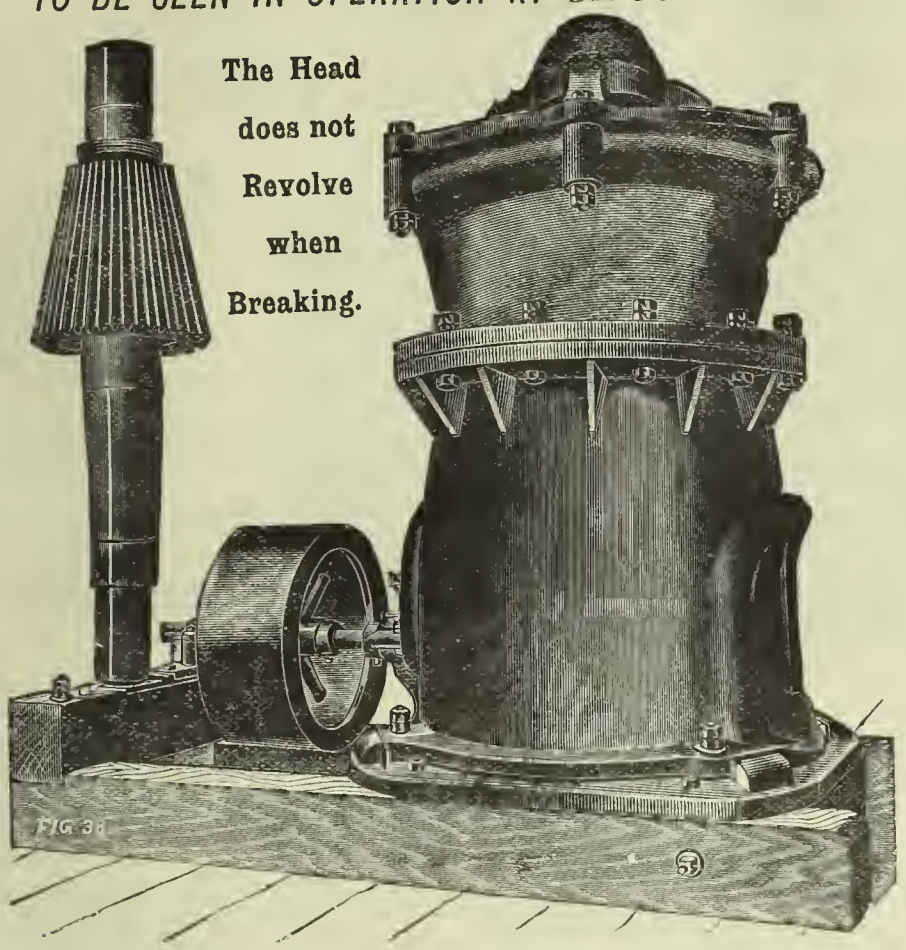
The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

ROBEY & CO., Globe Works, LINCOLN.

Gates Rock and Ore Breaker

TO BE SEEN IN OPERATION AT LONDON OFFICE.



The Head does not Revolve when Breaking.

Capacity in Tons of 2,000 Pounds.

Size	0	...	...	...	...	2 to	4	tons per hour

WATERWORKS & GASWORKS SECURITIES CORPORATION, LIMITED.

INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1890.

CAPITAL - £2,000,000,

Divided into 199,800 Ordinary Shares of £10 each, and 2,000 Founders' Shares of £1 each.

ISSUE of 99,800 ORDINARY SHARES. The International Trustee, Assets, and Debenture Corporation, Limited, invite Subscriptions for the above 99,800 Ordinary Shares, payable as follows:—5s. per Share on Application; 5s. per Share on Allotment; 10s. per Share 60 days after Allotment; total, £1. It is intended not to call up more than £1 per Share; and to constitute the remaining £9 per Share reserve capital, under the Act of 1879, no part of which can be called up except in the event of and for the purposes of the Corporation being wound up. The Ordinary Shares will be entitled to a preferential dividend of 8 per cent. out of the profits of each year. The Founders' Shares will then be entitled to half the remaining profits, and the other half, subject to provision for Reserve Fund, will be available for a further dividend on the Ordinary Shares. The subscribers for the Founders' Shares have guaranteed the subscription of £700,000 of the capital, and pay the whole of the preliminary expenses of the Corporation down to allotment, except the registration fees and Government duty.

PROSPECTUS.

THIS Corporation has been formed principally for the purpose of purchasing, holding, disposing of, and making advances upon the shares, bonds, and other securities of waterworks and gasworks, and other lighting companies, and for obtaining and dealing with concessions relating to such undertakings, particularly in the United States of America and Canada.

It is intended that the operations of the Corporation shall be restricted to water and lighting undertakings, unless otherwise sanctioned by the shareholders in general meeting.

The securities of water and lighting companies are generally considered to offer an extensive and profitable field for investment of capital, and to be of the soundest character, such undertakings being less liable to competition than most other forms of securities; they also rank amongst the most remunerative of public works. The growth of cities, more especially in the United States, has been so rapid that many of these companies have earned large percentages upon the capital invested, and there are, at the preseut time, numerous growing cities and towns requiring either the erection of new works or the enlargement of existing ones.

The directors believe that the present issue of capital can be employed in purchasing the securities of established Water and Lighting Works, aud in dealing with concessions for new undertakings upon terms likely to prove both safe and remunerative, and they feel justified in anticipating that the risk will be reduced to a minimum by restricting investments to this class of security, as is shown in the case of waterworks bonds by the following extracts from a Manual issued by the Maverick National Bank of Boston, Mass., U.S.A., dated July 1, 1887:—

"In the whole history of waterworks there have been but three instances of foreclosure of first mortgage bonds, and in these cases no loss was sustained by the holders.

"It is evideut that no other class of securities can show such a record of immunity from risk. This Bank has placed many loans of water companies, and has yet to learn of a dissatisfied investor.

"Water company bouds are a mortgage upon productive property, of which the productiveness is constantly increasing."

It is proposed, where practicable, to obtain a controlling interest in the share capital of the local companies, which, it is believed, will prove an important safeguard by enabling the Corporation to secure such good management, as will iusure the largest return upon the capital invested.

The Manual of American Waterworks for 1889-90 states that, during the 14 months ending May 1 last, no less thau 193 new waterworks were completed, or put under construction, in the United States, of which 121 were undertaken by companies.

As additional capital is required, the Corporation will issue debentures or debenture stock, on the security of its undertaking and investment. The difference between the interest paid by the Corporation on its debentures or debenture stock and the interest and dividends received on investments should form an important part of the earnings of the Corporation.

The Corporation has also power to take part in making public issues of the securities of water and lighting companies, to guarantee subscriptions to the same, and to negotiate the sale of securities and shares of such undertakings.

The directors have under consideration the appointment of boards in the United States and Canada, with a special knowledge of water and lighting properties in those countries, but such boards will act only in an advisory capacity, and whenever expedient the English engineers of the Corporation will be called upon to report upon properties submitted for investment.

The whole of the 2,000 founders' shares will be subscribed by, and allotted to, The New Founders' Shares Syndicate, Limited, or their nominees, who are the founders of the Corporation, and who have in consideration of such subscription being reserved to them, entered into an agreement with the Corporation, dated April 27, 1891, whereby they undertake to defray the whole of the preliminary expenses of the Corporation, except Government duties and registration fees, down to allotment, and guarantee the subscription of 70,000 ordinary shares at par.

Beyond such issue of founders' shares, no promotion money has been or will be paid by the Corporation, and no contracts or commitments, with regard to any properties or securities, have been entered into.

The New Founders' Shares Syndicate, Limited, have entered into an agreement, dated April 30, 1891, with the International Trustee, Assets, and Debenture Corporation, Limited, with reference to the present issue, and into agreements with third parties for guaranteeing the subscription of a portion of the capital offered, to which the Corporation is not a party. Applicants for shares will be deemed to have notice of such agreements, and to have waived the insertion hereiu of the dates thereof and the names of the parties thereto, or any further or other compliance with section 38 of the Companies Act, 1867, than is contained herein.

A Stock Exchange quotation will be applied for in due course.

Copies of the memorandum and articles of association, and of the trust deed for securing debentures or debenture stock can be inspected at the offices of the solicitors to the Corporation.

Applications for shares should be made on the form accompanying the prospectus, and sent, with the deposit of 5s. per share, to one of the bankers of the Corporation. If no allotment is made, the deposit will be returned in full.

Prospectuses and forms of application can be obtained from the International Trustee, Assets and Debenture Corporation, Limited, 13, George Street, Mansion House; or from the bankers, brokers, solicitors, or auditors; and at the offices of the Corporation.

May 1, 1891.

MINING MARKET.

City, Friday Evening.

A SHORT BUT GOOD STORY—FEATURES OF THE WEEK—POETRY FOUND WHICH SOME WILL DEEM PROSE—BALAGHAT, NUNDYDROOG, AND OTHER MINES SPECIALLY MENTIONED—STOCK EXCHANGE HOLIDAY.

The story of the Mining Market, continued from our last issue, came to an abrupt close yesterday evening. The Stock Exchange, in its wisdom, decided to close its doors to-day and to-morrow, and the Mining Exchange has had to follow its example. Brokers have, therefore, been carried whither they would not, and have been banished from the haunts they love so well. Gamblers have had leisure afforded for repentance, but the chances are that they will only return with still greater zest to the conflict on Monday. Be that as it may, the Mining Market this week has had but a short shrift, though a good deal of business has been done, and, judging from what brokers say, of a fairly profitable character.

Those of their clients who took good advice are now reaping the big profits derivable from Australian Broken Hill dealings; those who took bad advice, as in the case of Harnhalli, are forwarding the endorsements of their repentance (otherwise called cheques) with an anguish to which no words can give expression. The following lines were found during the week close by the mining door. Why they should have been sent to an unpoetic paper like the Mining World we cannot say, but we haste to assure the reader that the eyes of our own poet laureate have not this week been "in a fine frenzy rolling;" in fact, his muse is silent. Possibly he has neglected our advice, and bought Harnhallis at 15s.

When bold investors stoop to folly,
And listen to what post cards say,
What cheques they sign in melancholy,
What falls they witness in a day.

The bloom is most decidedly off the Harnhalli rye this week, as we warned our readers it would be. The shares, when we cried "woe to them," stood at 15s., and to-day they are about 7s. 6d. The paving stones this company is digging up do not even warrant such a quotation as this. Fancy putting the market price of Harnhalli on a par with Balaghat.

As no ordinary man can answer the question we are about to put, the appeal must be to someone with special wisdom, and gifted with more than ordinary penetration—some mining soothsayer or prophet of the superior Baxter order, to tell us why it is that when a company holds a good meeting, the shares almost always fall upon it? Is it that they have risen too much in anticipation? Is it that the "vaulting ambition" of the speakers "hath o'er leaped itself?" Is it that their speeches are attuned to too high a musical pitch? Would the shares rise if they sang in a "minor" key? These are problems which we have tried to solve by day and to explain by night, but the 47th proposition of Euclid is child's play in comparison. We have obeyed the established mathematical rule—that of proceeding from the known to the unknown, but have soon lost ourselves in the mazes of conjecture and in the wilds of mental speculation. Time after time we have known the shares of companies fall upon meetings at which brilliant telegrams have been read, eloquent orations delivered, plans described, new discoveries announced, and the like, but a fall in the market price of the shares has followed it all, and the voices of the speakers have been like those crying in the wilderness.

Happily there are exceptions. Nundydroog was one this week, and Balaghat was another, for the shares of both concerns "firmed up" upon the respective meetings. Fancy these shares at the prices we quote them to-night, after the statements made by persons who can be trusted, and who veritably speak of the things that they do know. Balaghat has solved its crucial problem, for the lodes become wider with depth, and the value of the mine may be said to be proved. Then there is Nundydroog. How a neglectful market and an undiscriminating public can leave these shares at the price they are this deponent knoweth not. Ignorance before to-day might have been pleaded, but with the columns of information we give this week that excuse will no longer suffice.

Balaghats and Nundydroogs especially look uncommonly good purchases, and considering the sales that Goldfields of Mysore Co. is making, the shares should not be left on one side. Of the various sections into which the Mining Market is divided, the Indian department this week has been the fairest and the fattest of them all. All the shares are up, notably Goldfields of Mysore, Nundydroog, Mysore, Ooregum Ordinary, and there was yesterday some good buying of Nine Reefs.

The Australian market has not been without a history, although it has been of the chequered kind. At one time, it is true, Australian Broken Hills fell to 2¼, but speedily recovered, and close about the price we quoted them last week. The priority shares of Wentworth Gold have also been in demand, and there is a steady inquiry (leading in many cases to business) for Mount Zeehans. We gave full information about this company a few weeks ago, and need not repeat it now. Gympie Great Easterns have lacked support.

The Copper section has figured less favourably, though Rio Rintos have topped 23, and Copiapos and Quebradas have both improved. The Copiapo directors must utter "curses not loud but deep," as regards both the Revolutionary and the Government parties of Chili, and in the bitterness of their hearts cry out with Cromwell, "Begone ye knaves, make room for better men." The calculations in regard to copper supplies have been much disturbed by this horrible struggle.

In the African section there has been a good deal of business without much alteration of prices. Shebas continue slowly but steadily to rise. From all we know of this company (and our knowledge is pretty complete) we think it worthy the confidence of investors, which is a good deal more than can be said of nine out of ten of its contemporaries. Salisbury is about to engage in the financial operation of reducing its capital to 100,000*l.* in 1*l.* shares, by an arrangement under which shareholders will receive one share for every five now held, and the balance will be kept in reserve. It is time Robinson did something of the same kind. De Beers continue to fall. The Land section during the week has been without feature.

In the General Foreign market the sensation of the week has been the actual making of the Loma call, which we foreshadowed in our last. The call of 1s. was wholly unexpected by the general public, by the shareholders, and by the market. Figuratively speaking, it knocked Lomas into a cocked hat, and confidence in them for the time—only for the time—has been lost. A call of 6d. would have been borne with a grumble, and, possibly, a bad word or two, but to make a full-blown call of 1s. has been sufficient to cause

the shareholders wish for their directors all the Egyptian plagues rolled into one, followed by a sousing in the water they are now laying on to the mine. At the same time the board gave the reason the call has been made, and when passion has been allowed to subside, and when the shareholders have cried like Miss Chick, "Down, temper down," the explanation will seem reasonable enough, whilst the extracts from the report of the manager are encouraging, and go far to sweeten the rod with which the shareholders have been chastised. The near approach of active operations at Golden Gate and Golden Feather has caused a good demand for these shares, which have risen on the week. The clearing away of the snow from many of the American mines, notably American Belle and Yankee Girl, Emma and Flagstaff, coupled with the important discovery in the latter mine, has created fresh interest in these shares, and in the two first-named cases a rise of price. Other shares have fallen, and notably Fortunas, but these are now quoted "ex-div." instead of "cum. div." as a week ago. Golden Leafs fell upon the most satisfactory meeting the company has held for many a day—thus illustrating the rule to which we called attention just now. Don Pedro is better on the issue of the report, but Tolimas have lost somewhat of their recent rise, and Frontinos have once more dropped.

The Venezuelan Austin directors have issued their appeal under the new debenture scheme authorised at the meeting on Mar. 16. The terms are highly advantageous. The debentures form a first charge on the property, and each 10*l*. debenture is issued at 6*l*., and is to be redeemed at par out of the net proceedings of working the mines, or the sale of any portion of the company's property. We agree with the directors that this is the most satisfactory way of raising the money, and trust the shareholders will respond. A more legitimate appeal on behalf of a genuine and well-managed mining enterprise was never issued, and we cordially commend it to the shareholders. Failing the shareholders, we, with equal cordiality, commend it to the notice of the general public. The new discovery on the company's concessions (there are several of them) has given 16 dwts. per ton. The manager has formed a higher opinion of this lode than of any he has yet seen on the property. There are other lodes which, in his opinion, ought to be worked, and one of them shows visible gold.

In the Home section, as a rule, shares have declined, and were helped on the down-grade by the 3s. call made by Prince of Wales. Carn Brea and Tincroft notably have fallen, but in one or two descriptions there has been a rise.

Next week promises to be an active one for business. In regard to buying, Indian shares look tempting; but as to selling, it is difficult to give advice, for prices seem in most cases to be abnormally low.

African Land Shares.

There has not been much business in Land shares, if we except Oceana, Exploring, and Transvaals. The last mentioned have fallen while the others have risen on the week.

Business.—The only rises are in:—Exploring of ¼; Goldfields of South Africa, 1/16; and Oceana. ⅜; whilst a fall has to be noted in Horo Concessions of ⅛; London and South African ¼; and Transvaal Lands, ⅛.

3/16	Zoutpansberg	3/ — 4/

Kaffirs.

There has been almost an entire lack of dealing in this market, and whereas some time since this was the most active market in the House, now there are only about 10 or 12 dealers left who will make a price. Robinsons have risen slightly, while Crown Reefs, Durban Roodepoort, Jumper and Simmer and Jack all show a loss.

Business.—A rise is shown in Sheba of 2s., Robinsons (De Villiers) ⅛, and Vogelstruis 6d., whilst a fall is recorded in Crœsns of 6d.; Crown Reef, ⅛; Durban Roodepoort, ⅛; Glencairn, 1s.; Jumpers, 1/16; Luipaards Vlei, 6d.; Salisbury, new, 1s.; and Simmer and Jack, 1/16.

Diamonds.

There has been little or nothing doing in this market, and when shares have changed hands it has been at lower figures.

Business.—No rise to record, whilst the only falls are in De Beers of ⅛ and Burma Ruby, 1/16. Others remain as last quoted.

Australians.

A very large business has been done in this class, and amongst the foremost have been Australian Broken Hills and Wentworth.

The former closed last week at 2 7/16, 2 9/16, then up to 2¾, and up and down to 2¾, 2 5/16, closing the same as last week. There are rumours of another 1s. dividend. Wentworth, after being lower, close 3/16 higher on the week. Bonnie Dundee, Gympie Great Eastern, Day Dawn Block and P.C. are all now very low, and should be bought to hold for a rise. Mount Zeehans are coming into favour, and there is no doubt that good ore will be found when the water is out of Argent's shaft. The shares close ¾, ⅞; 15s. paid.

The settlement, which closed on Tuesday, passed off without any failures, and the number of tickets passing showed a larger increase of business than on any account this year. There was again heavy business in several favourites, such as Australian Broken Hill, Wentworth, &c. The market still appears to be short of stock, and in the Indian section great difficulty was experienced in borrowing shares.

Business.—A rise is shown in Bonnie Dundee of 3d.; Day Dawn, P.C., 3d.; New Queen, 6d.; and Wentworth Proprietary, 3/16; whilst the only fall to note is in Gympie Great Eastern of 1s.

INDIANS.

A fairly large amount of business has been transacted, and after the favourable meetings of Nundydroog and Balaghat the market hardened slightly for most descriptions. Mysore Harnhalli, which closed last week at 10s. to 11s., have been going down until they reached 6s., 7s., and then had a slight spurt and leave off 7s. 6d., 8s. We still advise our readers to have nothing to do with them at any price. Mysore Goldfields have changed hands at 45s., but although not closing quite so good, still appear a wise purchase and should go higher. The cable news from Mysore Gold announcing the striking of a lode worth 4 ozs., should have put the shares much better; there can be no doubt about these being a good solid investment. Nine Reefs have been 2s. 3d., 2s. 9d., and close 3s. 9d., 4s. 3d., while Ooregum, both Ordinary and Preference, have been in demand.

Business:—A rise has taken place in Goldfields of Mysore of 2s. 6d.; Indian Consolidated, 3d.; Mysore Gold, ⅛; Nine Reefs, 3/16; Nundydroog, ⅛; and Ooregum Ordinary, ⅛.

Those down are Mysore Harnhalli, 3s.; Mysore Reefs, 6d.; Mysore West, 3d. (now call paid); and Mysore Wynaad, 6d.

COPPER.

The market for Copper shares has been somewhat dull, and Tharsis have fallen as much as 10s., while Capes and Tintos are slightly off. Copiapos have risen, and the market generally does not close at the worst.

A rise is shown in Copiapo of ¼, and Quebrada close firm; whilst the following have fallen: Capes, ¼; Rio Tinto, 1/16; and Tharsis, ½. Others remain as last quoted.

GENERAL FOREIGN SHARES.

A fairly large amount of business has been transacted, but the upward movement was damped somewhat at the commencement of the week by the settlement, and at the end by the holiday on the Stock and Mining Exchanges. An inquiry has sprung up for Almada, American Belle, Elmore, Golden Feather, Golden Gate, Palmarejo, St. Augustine, Yankee Girl, all of which showed a slight rise, and leave off with a firmer tendency.

Don Pedro, there has been some good buying in these shares, and it is rumoured that the prices will still further improve. The report is satisfactory.

Lomas are lower on the announcement of 1s. call, which is made payable on May 4.

Golden Gates have again come into favour at higher prices, and some dealers believe they will see much higher figures than those at present ruling.

A rise is shown in American Belle, 3s.; Dickens Custer, 6d.; Don Pedro, ¼; Golden Feather, 6d.; Golden Gate, 1/16; Graskop, 3d.; Orita, 6d.; Palmarejo, 3d.; Pinos Altos, 6d.; Silver Mines of La Luz, 3d.; West Argentine, 3d.; and Yankee Girl, 1s.

The following have fallen:—Amador, 6d.; Balkis, 3d.; Callao Bis, 3d.; Colombian Hydraulic, ⅛; Colorado, 3d.; Elmore, 3d.; Emma, 3d.; Fortuna, ½; Frontino and Bolivia, 1/16; Golden Leaf, 6d.; Kapanga, 3d.; Loma, 9d.; New Gold Hill, 3d.; Old Lout, ⅛; Tetuan, 3d.; Tolima, ¼; Venezuelan Austin, 3d.

LATEST FROM THE MINES.

INDIANS.

MYSORE.—Telegram from Capt. Gilbert:—"Rowse's shaft through dyke; 780 north, lode 2 ft. wide, assaying 4 ozs."

COLONIAL MINES.

BONNIE DUNDEE.—Cablegram from the managing director at Charters Towers:—"Reef still continues of fair size, and good quality in the winze."

BRITISH BROKEN HILL.—The return for the week ending 23rd inst., of the furnace at the mine, was 601 tons of ore treated, yielding 156 tons lead, containing 6,611 ozs. silver.

BROKEN HILL PROPRIETARY.—A cablegram from Melbourne states:—"The yield for the week ending Thursday, 23rd inst., was 5,125 tons of ore treated, yielding 923 tons of lead, containing 174,250 ozs. of silver."

CROMWELL.—Cablegram from the mine, dated Dunedin Apl. 27:—"Have struck reef in 520-ft. level, showing rock containing visible gold; reef 18 ins. thick. The body of ore is increasing in width. Ore improving in quality as developed."

DAY DAWN BLOCK AND WYNDHAM.—A cablegram from the manager gives the result of the crushing for the fortnight ending 25th inst.:—"372 tons crushed, yield of gold 750 ozs.; approximate value, 2,570*l*. Fortnight's expenses, 790*l*."

MILL'S DAY DAWN UNITED.—Fortnightly crushing, Apl. 25:—"820 tons, 607 ozs. gold; approximate value, 2,080*l*."

MOUNT MORGAN.—Messrs. Laughland, Mackay and Baker have received the following telegram from the Mount Morgan Gold Mining Company, Limited, Queensland:—"We pay 37,500*l*. on Saturday, being dividend of 9d. per share (free of dividend tax) for the month of April."

MOUNT LEYSHON.—A cablegram, dated Apl. 27, from the manager at Charters Towers, gives the fortnightly crushing:—"790 tons crushed, 280 ozs. gold. 20 stamps mill ran 288 hours. Value, 690*l*."

NEW QUEEN.—A cablegram, dated Charters Towers, Apl. 25, gives result of crushing for the past fortnight:—"260 tons, yielding 405 ozs. gold."

WENTWORTH GOLDFIELDS PROPRIETARY.—Telegraphic advices from the Local Advisory Board state:—"Detention in transit has prevented the shipment of 10 tons rich crude ore per s.s. Parramatta. Portion shipped per s.s. Austral, leaving a week later. Phœnix Mine is improving."

FOREIGN MINES.

ANGLO-MEXICAN.—From cable advices just received, the superintendent at the mine reports that the Mar. output amounts to $47,037.

Callao Bis.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained dnring the month of Mar., which realised 3,641*l.* 17s. 7d.

Castillon (Pyrenees).—The company has sold 50 tons silver-lead ore to Messrs. Quirk, Barton and Co. at 8*l.* 11s. 6d., f.o.b. Bordeaux.

Elkhorn.—Cable information from the manager:—"Bullion shipped for week ending Apl. 25 was $8,600."

Elmore.—Test return yield per ton $3; 20 stamps running on Star lode. Letter sent explaining.

Emma.—Cablegram from the manager at Salt Lake City:—"Communication just open. Superintendent has written every week (since Mar. 2) except two; then no mail from mine. Report from mine says: 'Improving.'"

Flagstaff.—The following cablegram was received from the mine on Tuesday:—"We have struck, last night, 4 ft. first-class ore, sixth main level, 4 ft. wide, 3 ft. high.—Swope."

Ketchau (Pahang) Corporation.—The company received by last mail from Australian miners in Singapore offers to take prospecting claims on the Ketchau estate upon advantageous terms, approved and recommended by their consulting engineer.

New California.—Cable from the mine manager:—"Mar. output, 860 tons; yield, 430 ozs. of gold; value, 1,510*l.*; costs, 980*l.* (mining profit, 530*l.*); expenditure on new claims, Governor Adams and Rhode Island, and general development account, 430*l.*—Rickard." The following message was received from the manager on the 8th:—"Bottom of shaft, 2 ft. of ore, 6½ ozs. of gold per ton. 2,000 stopes rich.—Rickard."

New Pierrefitte.—The company has sold 250 tons blende to J. F. Kimmel, Esq., at 4*l.* 8s. 6d. per ton f.o.b. Bordeaux.

Pinos Altos.—Advices state that the out-turn for the week ended 18th inst. was $9.450.

Quebrada Railway, Land and Copper.—At a meeting of the directors it was resolved, subject to audit, to deal with the balance at the company's revenue account on Dec. 31 last, viz., 100,207*l.* 6s. 3d., as follows, viz.:—After writing off the floating balance against the capital account at the end of 1889, 34,179*l.* 16s. 10d.; expended during 1890, 15,158*l.* 0s. 9d.; together, 49,337*l.* 17s. 7d.; and, after providing for other small contingencies, the board will propose a dividend of 10 per cent. per annum on the preference shares, also a dividend of 5 per cent. per annum (equal to 3s. per share) on the ordinary shares of the company, the latter free of income-tax. This will leave a surplus of 7,821*l.* 1s. 8d. to be carried forward to next account. The annual meeting is fixed for May 22, and the report will be issned in due course.

Tolima.—The superintendent reports the returns for the month of Mar. at 105 tons of export ore, estimated to yield a profit of 6,000*l.*

Home Mines.

English Antimony.—Apl. 25: The lode in the level driving south of the cross-cut is still looking very promising, carrying some good saving work for antimony. The lode in the level driving north of cross-cut is daily improving. We are raising some good antimony from this point. I am pushing on the driving as fast as I possibly can.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN AND HOME MINES

SEE PAGES 698 AND 699.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

George Goch Amalgamated.—The company advises the receipt of 369 ozs. of gold.

Witwatersrandt (Knight's).—The company advises the receipt of 343 ozs. of smelted gold.

North-Eastern Bultfontein.—Telegraphic advices announce "1,700 carats of diamonds for 7,450 loads washed."

Village Main Reef.—The transfer of the property having now been effected, transfers of fully-paid shares can be accepted at the offices of the company, 8, Old Jewry, E.C., for registration.

Oriental and Sheba Valley. — Cablegram: "60 stamps running 27 days crushed 2,600 tons; yield, 720 ozs. gold and 5½ tons concentrates, assaying 21 ozs. per ton."

Sheba.—Cablegram from general manager: "1,057 tons crushed, yielding 1,061 ozs. Otto wire ropeway will start work in a few days. The stopes are looking better. The mill was working for 17 days only.

Gie Appantoo.—The directors have received advice by cable from the mines as follows:—Prestea concession have struck a body of rich ore. Gie Appantoo: Everything at the mine is going on well. Prestea: 287 ozs., result of crushing for half month April. The result of March crushings were 250 ozs. for Prestea; 102 ozs. for Gie Appantoo; together, 452 ozs.

Salisbury.—A meeting of shareholders was to have been held at Maritzburg on Apl. 29, to consider the following business:—Reduction of the capital of the company to 100,000 pound shares, present shareholders to receive one for every five shares held by them, and the balance to be held in reserve. The reduction scheme, which has the support of the board of directors, meets with general approval in South Africa, and the work incidental to completing it will be carried through without providing promotion or any other profit.

Cerro de Pasco.—The following advices have been received from Mr. Howse, the manager, dated Barberton, Mar. 30:—The past week having been taken up with the usual Easter holidays, there is not much to report in the actual work done in the mine, which is, however, being pressed forward as quickly as circumstances will permit. We have to report another change in the 500-ft. level middle reef, where we have encountered a bar of foreign rock, which is apparently cutting out the richer ore recently met with. It is too early yet to be able to say how this may influence the true course of the reef, which can only be determined by further development.

Transvaal Gold Exploration.—Advices to Mar. 30:—Mines—Ophir Hill, Theta vein: Ore extracted, 30 tons; assay value, 5 ozs. 2 dwts. per ton. Brown's Hill, Nu vein: Ore extracted at Nos. 1,211 and 1,216, 40 tons; assay value, 2 ozs. 13 dwts. per ton, and at No. 1,209 (120 yds. east of No. 1,216) 70 tons; assay value, 8 ozs. 18 dwts. per ton, and 5 tons, assay value, 10 ozs. 11 dwts. per ton. Fine rich ore separated at No. 1,209 during Mar. 23 tons; assay value, 21 ozs. 4 dwts. gold per ton. Prospecting: The party who were at work on Brown's Hill had been required to fill sacks all week at the mine. Mill: The battery and pans ran satisfactorily throughout the week. The weather having improved, transport of ore was again active.

Akankoo.—The manager writes on Mar. 30:—Progress for fortnight: 100-ft. level driven 5 ft.; distance from shaft, 103½ ft. Winze A sunk 7 ft.; total depth, 46 ft.; winze B sunk 7 ft.; total depth, 18 ft. South-west end of adit driven 8 ft., and completed to end, and rails laid. The mill ran all Saturday without giving any trouble, and we are gradually getting the plates into condition again. The 10 stamps I am using are farthest from the engine, and there is no necessity for the renewal of them at present, the foundations being as good as when I was here three years ago. Huntingdon mill: We have everything now to complete it, and as soon as the stonebreaker is erected and a building put over it to protect belts and plates we can begin crushing.

Edwin Bray.—Manager's report for week ending Mar. 28:—Mine: Quarrying above No. 2 drive: We did comparatively little work at the mine during last week, most of the natives being employed on the ropeway; but still we have extracted a large quantity of ore, some of which is of a very good quality. I am glad to say the reef at the eastern end of the quarry is looking well, and close to the hanging-wall we have met with a vein of quartz about 18 ins. wide, which carries a large amount of visible gold, and prospects remarkably well. Ropeway: The repairs to the hauling wire of the ropeway are nearly completed, and, in all probability, we will be able to recommence work in two or three days. Mill: Our reserve of quartz at the mill being finished we had to stop crushing on Sunday, the 22nd, and most of the white men and natives were sent up to the Sheba Hill to help repair the ropeway. There being no chance of crushing again before the end of the month I had the monthly cleaning up done; and the battery is now ready to start immediately the ropeway is in working order. N.B.—Since the above was written a cablegram has been received (on Apl. 15) stating that the ropeway was again in working order.

Piggs Peak Estate (Mar. 29).—The English mail has not come to hand this week, consequently no letter from you. I wrote you last on 23rd inst. Mining work has been going on satisfactorily during the week. All the ore now being carted to the battery is surface dirt, and prospects very regularly from 12 to 15 dwts. Devil's reef: Drift on top of the hill driving south-east drove for the week 10 ft.; total, 56 ft. Ground harder. Bottom cutting 240 ft. shows gold in panning. Winze in bottom drive sunk 6 ft.; ground much the same. You will note that we are putting in a drive from the north-west side of the hill and driving south-east, but as no gold was found at the 120-ft. level, I deemed it advisable to put in the drive nearer the top of the hill; we are now in 56 ft. At this level we will have a further distance of 70 ft. to run, when we will have succeeded in cutting the hill completely through. Remaining boys filling bags, getting out dirt, and loading waggons. Fair weather all the week, and waggons working every day. Peak—Drive No. 2 south: Drove for the week 4 ft.; total, 21 ft.; ground very hard. Work is going on slowly, owing to the hard nature of the ground. I will have to drive another 20 ft. before striking ore. No. 1 works: Drove for the week 35 ft.; total, 55 ft.; ground very soft, and requires timbering; 100 ft. yet to drive before striking the reef.

The Anaconda Copper Mines.—A Baltimore despatch says:—"William Keyser, vice-president of the Anaconda Copper Company, sails for England in May to complete negotiations for the sale of the company's mines at Butte, Montana, to a syndicate created by Rothschild. The syndicate has already paid 4,000,000 dols. on account of the purchase, which amounts to 25,000,000 dols."

New Route to Norway.—To meet the growing tourist traffic to Norway a new direct service of fast passenger steamers, belonging to Messrs. T. Wilson, Sons, and Co., Limited, of Hull, will commence running on June 5, *viâ* Harwich. The new route will afford increased facilities for visiting the country, this being the first time that the Norway traffic has been placed on the same footing as the first-class continental services. During June, July, and Aug. the steamers will leave Harwich every Friday night on arrival of the express boat trains of the Great Eastern Railway from London, the Midlands, and the North. Passengers leaving Liverpool Street at 8 p.m. on Friday will reach Christiania on Monday morning, and leaving Christiania on Thursday afternoon are due in London on Saturday evening.

West Argentine.—The directors have the pleasure of communicating the latest advices received from the Silver Ledge Group of Mines, situated in the Red Mountain district of Colorado, in which the company is now interested, by cablegram from the manager dated Apl. 10. "An explosion has occurred. Engine part shaft house destroyed; have started repairs." Cablegrams have also been received from Mr. Jennings, who left on Apl. 1 on a visit of inspection to the company's property. Mr. Jennings informs us that those well acquainted with the district have a high opinion of the Silver Ledge Group of Mines. He also says "That the mine shows better prospects; the mine has plenty of low grade ore. Explosion damage to machinery trifling; assess damage 100*l.* Indications in the mine show that we must be near first-class ore.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Apl. 30.)—Wheal Maria, Capel Tor Lode, Eastern Shaft: In the 112 west, the lode is 3 ft. wide, composed of capel and quartz, with a little copper and mundic ores. Watson's Engine Shaft: In the 172 west the lode is of good size, 5 ft. wide, composed of capel and quartz with fluor, and saving work of copper and mundic ores, and a little tin. In the 160 east, the lode is 4 ft. wide, very promising, and is yielding 3 tons of copper ore per fm.—I. RICHARDS.

EAST GRASSINGTON (Apl. 29.)—Report from the mine manager: —Hammond Shaft: The 47 west has been advanced 17 ft. 6 ins., and stoped 8 fms. 1 ft., giving 11 fms. 6 ins. of ground removed here, up to date this month; the lode in the end is 2 ft. wide, yielding 21 cwt. of lead ore per fm. We are now entering into whole ground westward beneath the shale beds. We have commenced cutting winze flat preparatory to sinking below, and with every prospect of proving the lode increasingly productive in the lower measures, as the richest ore ground for the past 23 fms. in length, is going down in the soles of our level. Stope in back of level yields 10 cwt. of lead ore per fm.; two stopes in back of intermediate and 37 levels, worth respectively 10 and 12 cwt. of lead ore per fm. Harris main engine shaft: The lode in the 47 east has considerably improved since my last, and is now 18 ins. wide, carrying gossan and calcspar with two branches of lead ore forming on the foot and hanging walls, worth together 12 cwt. of lead ore per fm., and letting out a strong feeder of water. Two stopes in back of level worth respectively 10 and 12 cwt. of lead ore per fm. The 37-fm. level has been advanced 33 ft. 6 ins. east of No. 2 heave, in a lode 1½ ft. wide, yielding 8 cwt. of lead ore per fm., and promising for an early improvement. Winze is down 26 ft. below the 37. Two stopes in back of level worth together 21 cwt. of lead ore per fm. Excellent progress is being made in the preparatory work towards sinking the main shaft to the 65-fm. level. Surface: Dressing and smelting operations pushed with energy.

LEADHILLS (Apl. 28).—Brown's vein: Five men are set to drive the 145-fm. level, now 147 fms. 5 ft. 2 ins. north of Jeffrey's shaft, at 120s. per fm; vein above 4 ft. wide charged with strong quartz and ore worth 35 cwt. per fm. Five to stope above the 145 north of Jeffrey's shaft at 42s. 6d. per fm., worth 30 cwt. of ore per fm. Four to No. 1 stope above the 145 south of Wilson's shaft at 42s. 6d. per fm. worth 35 cwt. of ore per fm. Four to No. 2 stope at 35s. per fm. worth 35 cwt. of ore per fm. Four to stope above the 145 north of Wilson's shaft at 40s. per fm. worth 25 cwt. of ore per fm. Five to drive the 130-fm. level, now 178 fms. 5 ft. north of Jeffrey's shaft at 115s. per fm., vein above 4 ft. wide well mixed with quartz, and shows a nice wetness but without ore. Five to No. 1 stope above the 130 north of Jeffrey's shaft at 40s. per fm. worth 30 cwt. of ore per fm. Four to No. 2 stope at 47s. 6d. per fm., worth 35 cwt. of ore per fm. Five to No. 3 stope at 45s. per fm., worth 25 cwt. of ore per fm. Four to rise above the 130 north of Jeffrey's shaft at 120s. per fm., worth 10 cwt. of ore per fm. Four to stope above the 130 south of Jeffrey's shaft at 42s. 6d. per fm., worth 30 cwt. of ore per fm. Two to stope above the 130 north of Wilson's shaft at 40s., worth 20 cwt. of ore per fm. Five to drive the 115-fm. level, now 34 fm. 2 ft. 6 ins. north of Jeffrey's shaft at 110s. per fm.; vein 3 ft. wide, well mixed with kindly quartz, and is damp and improving, ore worth 5 cwt. per fm. Five to stope above 115 north of Jeffrey's shaft at 50s. per fm, worth 20 cwt. of ore per fm. Two to stope above the 115 south of Wilson's shaft at 45s. per fm., worth 30 cwt. of ore per fm. Two to drive the 100-fm, level, now 13 fms. 5 ft. 6 ins. north of Jeffrey's shaft, at 105s. per fm.; vein about 4 ft. wide, charged with kindly quartz, but rather dried for producing ore. Two to drive the 85-fm. level, now 212 fms. 1 ft. 6 ins. north of Jeffrey's shaft, at 125s. per fm.; vein 3½ ft. wide, showing a rib of quartz 1 in. wide, with occasional spots of ore, but it keeps too hard and dried for productiveness. Four to drive the 70-fm. level, now 63 fms. 2 ft. 6 ins. south of Wilson's shaft, at 85s. per fm.; vein 4 ft. wide, and although mixed with nice-looking quartz, keeps without ore; we, however, look for an early improvement here. Four to drive the 35-fm. level, now 80 fms. south of Flat-rod shaft, at 100s. per fm.; vein above 4 ft. wide, mixed with kindly stone and quartz joints and ore, worth 20 cwt. per fm. Four to stope above the 35 south of Flat-rod shaft, at 32s. 6d. per fm., worth 35 cwt. of ore per fm. Sarrowcole vein: Eight to clean out broken ore from stope above Gripp's adit north of George's Roust vein.—T. NEWBIGGING.

LEEDS COPPER (Apl. 16).—On my return to your mines I find the various points at work during the past two months looking very satisfactory indeed. Kent's shaft: The 20-fm. level driving west of this shaft has been extended 28 ft. in vein of ore, worth 4 tons per fm. The 20-fm. level driving west of Saint shaft has been extended 5 ft. 4 ins.; vein similar to west drive. The 10-fm. level driftiug east of shaft has been just started in a vein 3 ft. wide, with copper ore throughout. Steam drill stope is being started by full gang of men in good copper ore. We are to-day starting a stope in the back of the 15-fm. level. Shall be in a position to give more particulars in my next. Am arranging to put a pump in the adit level to fork out some old work, which has produced lots of ore. Everything is looking very satisfactory in the mine. Surface: Owing to the snow being still on the ground, our surface work stands in abeyance; everything is being done to facilitate dispatch of work as soon as the snow leaves. —J. R. RAVEY.

MID-DEVON.—Report for week ending Apl. 25.—Surface: The machinery throughout continues to do good duty. A shaft: The influx of water is still gradually abating, and is beiug kept drained to bottom of 80-fm. level. C shaft: The 60-fm. level has been driveu obliquely 1 fm. 4 ft. 6 ins. towards the south wall of lode; total distance from shaft, 94 fms. 4 ft. 6 ins. On Wednesday night, when 6 ft. had been driven, a cross-course was intersected which has proved to be a large one, 3 ft. wide, very porous, composed of boulders of compact garnet, surrounded by friable garnet, a little chlorite, flookan, sulphur mundic, and a few small streaks of ore; we have made one advance to the east of it, the strata being composed of capel and compact garnet. The point on which the men are working east of winze at the 60 following small branches of ore shows no material changes; the branches are small, but continuous, and embedded in congenial strata, which is sufficient to warrant a further prosecution, and the indications are greatly in favour of an improvement in the yield of ore.—J. NEILL.

PHŒNIX UNITED (Apl. 29.)—The setting report shows that there are at various points 7 pitches at tributes varying from 7s. to 10s. in the £ for tin.—J. WILLIAMS, J. RUNDLE, W. MANLY, J. HOSKING.

ROMAN GRAVELS (Apl. 30).—The men are now cutting ground for lodge room at the shaft in the 155 cross-cut, and doing other preparatory work for the casing and dividing of the shaft, fixing guide rods, &c., for the working of machine cage to the 155-fms. level. During the carrying out of this work all driving upon the vein at this level has to be suspended, but as soon as it is completed driving will be resumed and the vein opened out upon both north and south of the cross-cut. We expect to open up productive ground at once in the first-named direction. The vein at the 140 south is now in two divisions, which are together 3 ft. wide and producing 1 ton lead ore to the fm., and saving stuff for blende. The 140 south-east is in a vein 6 to 7 ft. wide, producing at present 1 ton of blende to the fm. and good stones of lead ore. We are day by day expecting the lode to improve in this drivage, but the forebreast is so very wet that progress is slow. At the 140 north we are cross-cutting west to prove the vein, which is in two divisions. The forebreast proper is still worth 1½ tons per fm., and the portion which is being driven upon in a direction east of south is also worth 1½ tons per fm. The 80 forebreast south in back of the level proper is again improving, and producing good lead ore and blende stuff, and the stopes throughout the mine are looking quite as well as when last fully reported. The 50 tons lead ore sold to-day realised 410*l*.—A WATERS

SOUTH CONDURROW (Apl. 29).—We have intersected what we consider to be the north lode in the 40 cross-cut, it is about 2 ft. wide, dipping slightly towards the north, and carries a little tin. We shall begiu to open on it west to prove it under the tin ground seen in the level above. We hope to have Marshall's shaft down the 15 fms. by the end of next week, when we shall begin to open at the bottom and intersect the lodes as quickly as possible. The 123 end east of Marshall's is worth 8*l*. per fm. The stope in the back is worth 10*l*. per fm. There is very little alteration to notice in the stopes and pitches in the eastern part of the mine.—W. RICH, W. THOMAS.

VAN (Apl. 29).—The following points are now in operation throughout the mine, viz.:—A stope over the 90-fm. level east of Seaham's shaft, by four men; lode producing 1 ton of lead ore per fm. A stope in the back of the 105-fm. level west of Seaham's shaft, by two men, in a lode worth 1 ton of lead ore per fm. Another stope over the same level (and still further west of shaft) by two men, lode yielding 18 cwt. of lead ore per fm. A stope over the 150-fm. level east of Edwards' shaft, by four men, in a lode producing 1 ton of lead ore per fm. A drift is being driven eastward from the eastern end of the last-mentioned stope by four men, in a strong lode, worth 10 cwt. of lead ore and 10 cwt. of blende per fm. At the 150-fm. level the cross-cut to drive south for the new, or south lode, will be resumed by six men with rock-drills on Monday next. The remaining distance to drive to intersect this lode will be about 36 fms. On the south lode at the 135-fm. level a stope is being worked by four men, which is turning out 1 ton of lead ore per fm. for a short length. We are now clearing some stuff along the 135-fm. level, where stopes have already been worked up in several places to heights varying from 2 to 4 fms., and shall then proceed to put in the usual timber for stalls, and recommence stoping at these points. The ground in sight is not rich, but will yield about 1 ton of lead ore per fm. Seaham's winze sunk perpendicularly opposite Seaham's shaft and 10 fms. to the south of it, is now being sunk by nine men, and has reached a depth of 26 fms., after auother 6 feet sinking we shall widen out there for a good "water lodge," and then at 25 fms. deep cross-cut north into and through the lode, and when the footwall is met with contiuue the level east to prove the lode underueath the 120 fms. level above. The 120-fms. level has been extended east of Seaham's shaft 65 fms., now driving by six men, and for the last 3 fms. driven the lode has been producing fine stones of lead ore and a strong mixture of blende. The lode in the end to-day looks very well, and like improviug. A short distance behind the forebreast we have put two men to cross-cut the lode to the south, and as soon as this is accomplished we shall turn them in the other direction, and prove the width of the lode standing north of the level. Ore stuff is now being broken in the mine at several points, and the dressing of ores will shortly be resumed.—J. PAULL.

WEARDALE LEAD.—Report on Weardale Co.'s mines for week ending Apl. 25:—Ore raised for week, 92 tons; ore dressed for week, 107 tons; ore and slag smelted for week, 140 tons, producing 72 tons of pig lead.

WEST WHEAL GRENVILLE (Apl. 28).—The 120 cross-cut driviug north of the engine shaft is extended 103 fms. 4 ft. This end is in a well-defined grauite rock. The 120-fm. level driving east of cross-cut is exteuded 27 fms. 4 ft. In this drivage during the past week we consider the No. 2 vein has united with the main lode. We have cut through the same, and are now driving on its course, and for the distance driven from the point of junction the lode is 5 ft. wide, well defined, of a tin-bearing character, letting out water, and producing good stones of tin ore, and looking promising to improve.—J. SKEAT, N. TEMBY.

WHEAL CREBOR (Apl. 28th).—During the past month we have, as previous reports will have informed you, cut through the lode east of the winze at the 156, and continued the cross-cutting south until it iutersected the couutry rock. This cross-cut and the one previously put out north-west of winze makes it very plain that we now have east of the shaft at this level the main lode with all its branches. We are now, as stated in last week's report, driving east on the north part of the lode, taking about 4 ft. 6 ins., which is the width of the end. This part is yielding 4 tons of mundic per fm., but we expect it will do a great deal better as we go further on. The end is being driven by six men at 5*l*. 10s. per fm. The stope west of winze in the bottom of the 144 has lately fallen off iu value, and will now scarcely pay to work on tutwork; we think it best to stop it, and at some future time let it on tribute. The lode is still of good size, but will require a great deal of selection when breaking. The stope east of winze in the bottom of the 144 is yielding 4 tons of copper ore and 4 tons of mundic per fm., and is looking well, going east. This stope is worked by 4 meu at 3*l*. per fm. The stope west of cross-cut in the back of the 144 is worth 4 tons of copper ore and 4 tons of mundic per fm., and is let to four meu at 3*l*. per fm. We have two men stoping the back of the 132 west of shaft on the south part of the lode at 4*l*. per fm. The lode is worth 2 tons of good quality copper ore per fm. Iu diffcreut parts of the mine we have 10 men working on tribute, varying from 12s. to 13s. 4d. iu the £. The quantity of mundic we have now ready for sale is the total quantity raised up to the time of the last copper ore sampling—that is to say, it was up out of the miue by 10th inst., but it has taken us

until the 24th to get it dressed and ready for sale. Our copper ore sale realised 198*l*. 18s. 2d., and our mundic sale 290*l*. 0s. 5d., and we estimate that we have mundic now ready for sale which should realise 300*l*.—P. D. HOLMAN.

FOREIGN MINING INTELLIGENCE.

ARGENTELLA (Apl. 23).—Report from the manager at the mines.—No. 2 Marine, driving east: On the hanging wall we have a very kindly mineralised flookan, lettiug out a great deal of water; the ground is uot difficult for driving. Quartz reef, cross-cut south: Without change; easy for driving. Ogliastroue Valley, driving east: This point has improved considerably. We have cut into a large quantity of pyrites, with strong spots of copper. I must say that there is more encouragement this week than I have seen before. I do not remember ever seeing a more promising lode so near the surface, and I think with perseverance and patience we shall find a mine at this point. No. 3, Rowe's workiugs, cross-cut south: No chauge to notc since last report. Strong spots of silver-lead occur every day.

ASIA MINOR.—Production to Apl. 10, 1,850 tons crushed, yieldiug 77 tons rich silver-lead. The cross-cut from No. 4 stope has just interscctcd the Savalan lode. We are as yet only a foot into the lode, and have 5 ius. of solid silver-lead, which may safely be valued at 2½ tons per fm. The value of the lode for its entire width will be proved as speedily as possible and ends commenced east and west. It is too soon yet to forin any idea of the extent of this ore body. The telegram from the mine mentioned at the general meeting referred to this point.

AUSTRALIAN BROKEN HILL.—The mining manager reports by mail for the fortnight endiug Mar. 19:—Engine shaft: Sunk 15 ft.; total, 540 ft. Formation as wide as last reported, and lode dipping faster. The 280 level west: Driven 24 ft.; total, 388 ft.; no change. Rise on rich vein: This vein has still further improved during fortnight, output being 4¾ tons of rich ores (principally sulphide of silver and native silver), containing 38,675 ozs. silver, all of which is being cased for shipment to London. A good body of similar ores is now being uncovered for next breaking. Incline following rich vein: Driven 4 ft.; total, 33 ft. In breaking lode fahlerz, containing a little native silver, has beeu struck, and some bags of same raised. Rails are being laid down incline, and site for air winch is being got ready by maans of the rock-drills, which are doing excellent work. North-west cross-cut driven 3 ft.; total, 20 ft. Now in far enough to arrange shoot, ore showing as before in good body of calespar. The 180 level stopes: Better ore is now coming in. Block 95: Shaft sunk 7 ft.; total, 117½ ft. Passing through soft seam of flookan. Block 97: North shaft sunk 8 ft.; total, 34 ft. Formation getting more defined. Surface: Rock-drill machinery all completed and working satisfactorily.

AVALA (Apl. 20.)—Report for Mar.:—Shaft No. 7, owing to difficulties with water, was only sunk 5 metres, the bottom is in good ore. Levels No. 9 and 34 struck good ore. Total length driven, 62.3 metres. Ore produced, 154 tons (wet). Reduction works treated 231 tons wet ore.—W. E. FRANKS.

BRATSBERG.—Report for week ending Apl. 18.:—Hoffuung Mine: The lode at No. 2 adit level is for the present poor, but we are meeting with some good patches of ore occasionally. We continue to fiud a good lode in the back of No. 2 adit level, No. 1 rise being now worth ¾ ton per fm., No. 2 rise 1 ton per fm. No. 3 adit level is now yielding 1 ton per fm., and the rise going up in the back about ¾ t on per fm. At No. 4 level we have recently met with some good patches of ore; otherwise the lode remains unchanged in value. The trial level at Murchison's section is producing 1 ton per fm. Johannes Mine: The value and general outlook of the developing points here is the same as when last reported. Surface work and remarks: We hope to start dressing ore in the machinery to-morrow; tramming of ore from the sorting house to the machinery will be commenced to-day. The remaining work on the inner section of the machinery will, I hope, be completed by the end of this week, so that we shall be able to commence treating the winter stock of sorted ore as soon as the weather permits. Temperature continues exceeding low for the seasou of the year; one of the steamers, however, is being got ready for running, but the opening of navigation is evidently very distant yet.—J. D. HOLMAN.

COLORADO (Apl. 15).—Report from the manager:—The mines are at present beiug actively worked at 25 different points, and some of the drifts are lookiug exceedingly well. The new ground on the W. H. Browu lode has encountered some spleudid mineral, the vein carrying considerable solid ore. Last sales realised 408½ ozs. silver per ton, and 34 per cent. lead, and 105 ozs. silver per ton. Work has also been commenced on the West Terrible, by drifting east on the main lode, and solid ore is beiug found. The 8th level west of main shaft: Driven 497 ft.; mineral vein continues to show steady improvement. Last sale 115 ozs. silver per ton, and 12 per cent. lead. The 9th level west: Driven 412 ft.; lode, 4 ft. to 5 ft. wide; vein, 2 ins. to 3 ins. Coin lode: Main drift advanced 12 ft. in the fortnight; now in a distance of 500 ft. from junction with the Brown, and looks exceedingly well. Brown adit level: Two men stoping. Last sales realised 166 ozs. silver per ton, and 18 per cent. lead; 79 ozs. silver per ton; 78 ozs. silver per ton, and 13 per cent. lead. North vein on Coin—Mammoth tunnel level: Two men stoping. Last sales: 203 ozs., and 125 ozs. silver per ton. Brown lode—Rockwell adit level: Four men stoping. Last sales: 14 ozs. silver per ton, and 26 per cent. lead; 73 ozs. silver per ton. Another stope on same level: Two men employed. The last sales were 361 ozs. silver per ton, and 39 per cent. lead, and 120 ozs. silver per ton, and 13 per cent. lead. Brown tunnel level: Two men stoping. Last sales gave 464 ozs. silver per ton, and 30 per cent. lead; 172 ozs. silver per ton, and 10 per cent. lead. The last sales from the upper levels of the Terrible Mine realised 517½ ozs. silver per tou, and 219 ozs. silver per ton. The teuor of the whole report indicates a decided improvement in width of ore and value.

ELMORE (Apl. 10).—Since writing you ou the 4th, we cut into the Alturas ledge about 10 ft. from the Elmore. The vein is strong and about 10 ft. wide, all quartz. Some of the quartz prospects in gold. We are now cutting out for a station, and will drift ou the veiu. Will make a mill test of ore from the big vein. What ore there is in sight is low grade; but the chances are the ore will improve as we drift east and west on the vein. The vein looks splendid, is compact, and well defined. The two veins are only 10 ft. apart. If these ledges would pay, or average $10 per ton, in my opinion the company would have a good paying mine. The Confederate Star vein improves as we drift on the ledge. We have now about 20 tons of ore saved from the drift; will put a couple of stopers on in a few days. This ore prospects very well. Prospects are quite encouraging at present.—J. MCCORNICK.

ESMERALDA (Apl. 14).—The manager reports that the ore shoot has increased to 30 ft. in leugth, and from the indications it appears to continue downward. At the time of writing the stopes had a better appearance than during most of the past week, which is encouraging, although the streak of rich ore is not so wide. They were down 40 ft. from the poiut where stoping was commenced, and the assays of standard gold per ton for the week were as follows:—19 dwts., 2¼ dwts., 1 oz. 9 dwts., 1 oz. 9 dwts., 1 oz. 2 dwts., 3 ozs. 19 dwts., 11 ozs. 6 dwts. The cross-cut has been started from the Durand to cut the Live Yankee vein, which runs parallel with the Durand vein. This, it is expected, will be completed by the time the chairman of the company reaches the property.

— Mr. S. Crowder, the chairman of the company, sailed this week from Liverpool for America, aud will visit the miues with Governor Colcord, the superintendent.

ETHERIDGE UNITED (Mar. 2).—Fortnightly report:—My has report was dated Feb. 18. During the last fortnight the work last been confined to the Caledonian Miue. I have now succeeded in getting into the sinking of No. 1 shaft. I have made a water lodgment at the 80-ft. level, which catches all the water the pump taking it from there, and now we shall be aole to sink comparatively dry. There has been a water lodgment made, and 9 ft. added to the depth of the shaft, making the total depth of shaft 102 ft. Wheu passing through the reef in the shaft it was 5 ft. in thickness. The country rock in shaft at present is a hard grauite. I have also two men driving the south level at the 80 ft., which started on Mar. 2; the reef in the level is small yet. From No. 2 shaft there has been 100 tons of ore raised and crushed for a yicld of 56 ozs. gold. This surface work I have discontinued, and all work is coufined to sinkiug and driving in the deep ground. Stoping done in No. 2 shaft since last report, 20 ft. by 30 ft. I wish to give you the following information for the benefit of some of the shareholders who do not seem to kuow that the Lady Franklin Mine and the Ropewalk Mine are all ou the one reef or lode. These mines were formerly in two leases aud had two names. These I abandoned and took up again in one lease, now called Ropewalk Mine. There are others that the company had called Elektron Mount. These are all the same reef or lode. There is no difficulty in tracing the reef all along the surface.—M. FERGUSON.

GREAT EUKABY (Mar. 24).—Weekly report.—Bird-in-Hand Mine: The Victoria shaft has been deepened 2 ft. 6 ins.; No. 5 level south has been driven 6 ft. 9 ins. since the 18th inst.; total distance from cross-cut, 77 ft. 9 ins. The vein in this end is disordered at present, and is composed chiefly of soft clay, slate, mixed with a little quartz and pyrites. Engiue and pitwork working well.—J. M. CRAZE.

GYMPIE GOLDEN CROWN.—Report for fortnight ending Mar. 12:—I have to report that driving and stoping north on the March reef at the 240-ft. level is being carried on as usual; the reef is small, but continues to show a little gold. A rise is being carriod up to cut the top slate, which should be met with at about the 120-ft. level. No work north of the shaft has been done on the reef at this level. The rise is now up 90 ft. from the 240-ft. level. There is a good, strong reef on the footwall, but not showing any gold, as the enclosing country is not favourable. Work on the Crown reef has been discontinued for the present, as the stone is very poor. Owing to the injunction being granted on our tailings area, I had to cut a bywash to carry off the storm water to prevent flooding the South Lady Mary and New Zealand Co.'s Mine; 300 ft. of shoots has also been madeand erected for carrying the railings to a suitable place. Lease No. 777: Two-mile: The cross-cut east from main shaft at 210-ft. level is now extended a total distance of 287 ft. The country continues very hard, boulder conglomerate. On the Peter and Paul reef stoping north and driving south is being continued, and during the past week the reef above the break has been broken down for a length of 20 ft. by 10 ft. in height. The reef is from 6 ins. to 1 ft. in thickness, and shows very good gold on the break. At the Easter shaft the Peter and Paul reef was cut yesterday, in the western cross-cut, at a distance of 87 ft. from the shaft; the reef is 18 ins. in thickness, but is not showing any gold, as we are some distance below the slate country. The eastern cross-cut is now extended a total distance of 87 ft. Several small veins of quartz have just been met with in this.—T. RAMAGE.

HARRIETVILLE (Mar. 20).—Mons Meg Mine: The rise on new shoot north of tunnel J has advanced 11 ft.; total, 32 ft. We are here rising on the footwall portion of the lode, which continues to carry a little gold. Sinking is suspended below tunnel J on the main shoot pending arrival of small pump to cope with influx of water. The 170-ft. level north above tunnel J has been extended 18 ft.; total, 100 ft. The lode here is 4 ft. wide, and carries good gold. The south drive 100 ft. above tunnel J has advanced 23 ft.; total, 193 ft. The lode is small and poor. The north rise at the back of the 100-ft. level is up 10 ft. We have here a continuation of the lode on which the 170-ft. level is being driveu showing a little gold. South Mons Meg Mine: The rise at the back of the drive south of the lower tunnel has advanced 20 ft.; total, 180 ft. We have here met with a lode 3 ft. wide, showing fair prospects of gold. Guerdon Mine: Tunnel J has been extended 26 ft., making a total of 466 ft. from the Mons Meg lode. We have just reached another lode iu the end of this cross-cut of which, however, nothing can be said until it has been traversed. Tiddledee Mine: The drive south of tunnel D towards Mons Meg has advanced 25 ft.; total, 977 ft.; the lode has become smaller, and is poor. New lease: The winze ou the new shoot south of tunuel D has been sunk a further distance of 9 ft.; total, 48 ft.; the lode is 3 ft. wide, aud carries payable gold. The drive south-east of tunnel C has been extended 48 ft. towards the new shoot; total, 225 ft.; the lode still continues small aud poor. The drive south-east of tunnel B towards new shoot has advanced 34 ft.; total, 217 ft. We have here met with a lode of very promising appearance, although at present it carries no gold. Surface: The cross-cut east of drive north of the shallow tunnel near tunnel D has advanced 6 ft.; total, 13 ft. As yet there is no change in this direction. Machinery: All the mining and milling machinery is working satisfactorily. Pyrites: The furnaces and amalgamators are working day and night on the accumulated pyrites. We have added a concentrator to our pyrites

works and thus reduced our loss in tailings from treatment of pyrites to only a slight trace of gold per ton.—T. G. DAVEY.

INDIAN GOLD (GLASGOW) (Apl. 7).—Koorumber tunnel has been driven 5 ft. 6 in., making total length 1,030 ft. 3 ins ; lode 3 ft. wide. Some good ground has been passed through; assays 4 dwts. 23 grs. No. 1 A stope : 5 ft. stoped ; reef 5 ft. wide ; assays 8 dwts. 3 grs. No. 1 C stopes : 4 ft. eleared ; lode 5 ft. wide ; assays 6 dwts. 12 grs. No. 1 D stopes : Ground stoped 2 ft. 8 ins. ; lode 4 ft. wide ; assays 1 oz. 6 dwts. 3 grs. No. 2 A : 4 ft. stoped ; lode 6 ft. wide. No. 3 B side stope : 3 ft. cleared ; lode 3 ft. 6 ins. wide. Irregular ; good in places. Nos. 9 and 10 : 8 ft. stoped. Lode 4ft. 3in. wide. Quality hardly up to average. About 30 tons cleared from south end pillars. Ore of good value, prineipally pyritie. Understopes Nos. 2 and 5 : A peeuliar formation of ground. Pyrites occurring in pockets. of 20 to 30 lbs., and quite soft ; 8 ft. 8 in. stoped in 5 ft. lode. No. 11 north : Better progress making. Some very good ground passed during week ; 4 ft. 6 ins. driven, totalling from cross-cut, 54 ft. 6 ins. ; assays. 13 ozs. 1 dwt. 8 qrs. No. 11 south : 5 ft. 6 ins. driven ; making total from cross-cut, 80 ft. 6 ins. ; assays, 19 dwts. 14 grs. No. 11 face stopes : 3 ft. 8 ins. stoped, taking 4 ft. 6 ins. of reef ; assays, 1 oz. 9 dwts. 20 grs. Mill tailings : Assay, 9 dwts. 19 grs., and indicate refractory nature of ore. All reserved for future treatment. Transmission working well ; power and labour plentiful. The blower is in position for ventilating No. 11, and the whole will be fixed as fast as time permits, after arrival of a pipe bend.

JAVALI (Apl. 28.)—Our produce in the past month was 96 tons from Nispero, and 138 tons from western shoot, total 234 tons of quartz treated by 10 stamps, working on an average of 23 days, yield from stamps 148 ozs., and from tailings 7½ ozs. ; total, 155½ ozs. of gold, valued at 40*l*. 4s. ; total cost for Feb., 29*7l*. 4s. Pim's tunnel was driven 15¼ varas on the north part of the lode, the last five varas in a poorer bar of ground, which we hope to soon pass again into the better quality ore beyond. We also rose 3¼ varas, and drove stoping level 5 varas, but have not yet met with the rich nails as seen in the cross-cut above, consequently the quartz here from all places now open so far on the western shoot gives yet but an average of about only 10 dwts. of gold to the ton. In the present month we have commenced a rise on the lode under where the samples were taken for England, to try to keep up our returns of gold during the present dry season. There are also other shoots further west that we worked from above, which, I calculate, for future seasons, and by taking away all the lode here as it comes, will, I believe, pay very well during the wet seasons. There is nothing more in the Nispero that we can now find to pay, and not yet having sufficient ground open on the western shoot to give a fair chance for keeping up our small returns of gold in the past month.

MOSMAN (Apl. 25).—A cable from the manager states :—"Have crushed 338 tons of quartz for a yield of 580 ozs. of gold. The value of this crushing is approximately 1,990*l*."

MYSORE REEFS (Apl. 8).—Fortnightly report.—Harvey's shaft : During the past two weeks this shaft has been sunk 9 ft., which makes a depth of 44 ft. 2 ins. below the 460-ft. level ; the rock is still very hard and difficult to blast. Winze below the 460-ft. level has been sunk 3 ft. 3 ins., now 21 ft. 6 ins. below the level ; we are still going down in a mass of low grade quartz, a sample of which, according to assay, gave 2 dwts. 14 grs. of gold to the ton. 400-ft. level south has been extended 6 ft., now 83 ft. 11 ins. from shaft : we are driving in a mass of quartz ; a sample of same gave, according to assay, 3 dwts. 22 grs. of gold to the ton. Prospecting shaft north of Harvey's : The cross-cut east from the bottom has been extended 19 ft. 2 ins., now 36 ft. 8 ins. from shaft ; we are still in the formation, and have not up to this met with any quartz.—M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED.—The mining manager reports for the fortnight ending Apl. 8. :—North shaft : This shaft has been sunk 8 ft. 6 ins., making a total depth from surface of 144 ft. 9 ins. ; the water is very quick here, and has hindered the sinking very much during the past week. The rock-drill is working satisfactorily, and I hope to do much better during the coming fortnight. South shaft : The first week was taken up in completing the timbering of the shaft. A rock-drill was started on the 2nd inst., and 2 ft. 9 ins. have been sunk, making a total depth of 71 ft. The drill is doing very well here, but some time at the start was taken up squaring down the shaft. I hope to sink 5 to 6 ft. per week here in future. Everything is going on satisfactorily.

NEW CALIFORNIA.—Mine report for first half of Apl.—Shaft : Sinking below the 2000-ft. level down 2,163 ft. After an interval of a few days the contract to sink has been re-let under the same conditions as the last. As I mentioned when last reporting, we are now sinking with a view to reaching the 2,200-ft. level before starting levels in the ground between this depth and the 2,000 levels. The appearance of the lode in the bottom of the shaft is very fine, being now 3½ ft. wide, and ribbed with smelting ore, assaying between 6 ozs. and 7 ozs. of gold per ton. The 2,000-ft. level west, stopes east and west of No. 2 winze : These stopes continue to yield well, and the ore is of good grade. The 2,000-ft. level east—Prospect rise and stopes on foot-wall branch : The vein here, which at first seemed to have promise of value, has pinched and does not hold out. The 2,000-ft. west drift in 777 ft. : The lode in the end has again recovered, and is now 18 ins. wide, whieh will pay to mill. It is letting out considerable water, which is a good indication for "pay" close by. The 1,900-ft. level west, stopes east of No. 3 winze : The lode is 2½ ft. wide along the rise, which will connect the stopes with the main tramming level, and open up another block of good stoping ground. 1,600-ft. level west : Cross-cut north at 254 ft. from shaft : The object of this working is to reach the vein which has been worked to good advantage in the level above in the last few months. 1,500-ft. level west : South branch, drifted stopes in 75 ft. : The stopes at this point are yielding 6 tons of good milling ore per fm., but the drift is pinched just now. 1,500-ft. level west : South vein east : This working is as at time of last writing. 1,400-ft. level east : B lode : The test lot from this working has proved to be good pay, which makes this a valuable prospect. 1,100-ft. level east : Drift in 433 ft. : Work at this point was resumed early in the month. The vein on the breast is of no value yet.—A. RICKARD.

NEW DEVALA-MOYAR (Apl. 7.)—Bottom winze : We have sunk 4 ft. during the week, carrying both walls of the reef with us. The reef is 6 ft. wide, and is making good stone in the bottom ; depth of winze, 39 ft. The 116-ft. level drive west : We have put a drill in this end to resume driving west. The stope in the back of this level still carries a large reef of good quality. Some visible gold has been seen in the quartz lately from this point. The 78 level, back stope : Reef shows fair percentage of pyrites, and hand drillers are at work here. Underhand stope : The stone is improving as we get eastwards. A stull is being put in here to enable us to fill up with waste rock. During the week 120 trucks of quartz have been hoisted, sorted, and sent to the mill. The boiler has been tested, and crushing was resumed yesterday. Everything is working well, and the general health for the season of the year is fairly good.—R. B. JOHNSTON.

NEW EBERHARDT.—(Apl. 12) The mine manager reports :—Total weight of ore extraeted for the week and placed on the ore dump, 40 tons ; assay value of same, as per mine sample, $37 per ton. The general appearance of the mine is not quite as favourable as reported last week, the grade of the ore having dropped some $3 per ton. Mill : Our mill is running steadily, we having started up on Monday, 6th, at noon. Total weight of ore crushed, 74 tons ; assay value of same as per battery sample, $4,242 per ton.

PARKER (Apl. 18).—Extract from manager's report :—New pipe : I wired you that I was continuing to hydraulic with the old line whilst re-construction was going on, as you had so specially informed me that I was to devote all my time, &c., in getting the new line in, and that as quickly as possible. Up to the present date the roads have been impassable, hence the impossibility to get the pipes hauled ; all I could do, therefore, was to get them upon ground ready to haul, and in the meantime I continued to hydraulic here. As soon as I can get suffieient pipes delivered on our line I shall immediately stop hydraulicing, and take up our existing line and commence laying in the 20-in. pipe. The incessant rain which we have had all this spring has not only rendered the roads impassable, but has thrown the farmers all round so far behind time in getting their crops in that now, when at last I think it is going to clear up, it is next to impossible to get many of them to leave their farms to do our hauling. I have ridden over 30 miles a day for the last two or three weeks all over the country getting the promise of as many teams as possible, and I hope now, if the fair weather will only last, to be able to commence getting in our new line. I have had to raise my price of hauling in order to get any teams, and shall under that item somewhat exceed my estimate, but I hope to be able to keep well within my total amount. Gulch : In our gulch I am pleased to say our ground has greatly improved, and I hope soon to be out entirely of the rock and into washing ground. We have about 8 ft. deep of ground in our cut which still requires to be blasted. From that depth to surface we are able to wash satisfaetorily ; we are getting but very little gold as yet. I look for the ground to greatly improve before long.

YURUARI.—The secretary advises receipt of a further letter from Mr. Pryor, subsequent to the report last published, as follows :—You will observe we have already attained a depth of 112 ft. below No. 5 level, water shaft. We estimate that from 12 ft. to 15 ft. further sinking will bring us to the same depth as No. 9 level at Cenicero. As soon as this is accomplished, we shall then sink an additional 25 ft., which is necessary, so as to enable us to arrange for a platform. We estimate the whole of this work will be completed by the end of this month (Apl.), and after that a new level, No. 6, will be commenced to the westward and pushed forward with all possible despatch.

KILLIFRETH.

LORD FALMOUTH AND THE DUES.

A SPECIAL MEETING of the adventurers in Killifreth was held at Tabb's Hotel, Redruth, on Monday, to consider the arrangements made with regard to the new lease.

Mr. Tregoning

(the purser) presided, and there was a large attendance.

Mr. DAVEY said the new proposal was a great improvement on what they had before, but it was not of so much importance to the public whether they obtained one-twenty-fourth or one-twenty-fifth, What they wanted was an application of the principle "No profits. no dues." (Applause.)

Mr. NETTLE seeonded.

Mr. H. TREVETHAN proposed that Lord Falmouth's terms be aceepted.

Mr. A. LANYON was inclined to support the proposition of Mr. Davey, for he thought it would be wise, instead of accepting the lease at once, to appoint two or three gentlemen to aet with the executive in asking for something further, and in requesting that the principle, "No profits, no dues," should be recognised.

Mr. TROUNSON also supported the resolution.

Mr. G. S. BRAY supported the amendment.

After further discussion, a vote was taken ; 18 voted for Mr. Trevethan's amendment, and 7 for Mr. Davey's resolution, and the former was declared carried.

REVIEWS.

BRITISH AND FOREIGN PRESS GUIDE. James Willing, jun., 162, Piccadilly, London. 1s.

The eighth issue of this annual is in every way equal to its predecessors. The number of newspapers and class journals now being published in the United Kingdom is shown to be 2,596, 698 being issued within 6 miles of Charing Cross. The number of periodicals is 1,343, and annuals 605, making a total of 4,544, which is slightly under that of last year. London can boast of no less than 29 daily papers.

HOLLOWAY'S PILLS AND OINTMENT.—The attention of all sufferers is drawn to these well-known remedies, for they possess conspicuous advantages as a safe and reliable aid in all those emergencies to which travellers, emigrants and sailors are so especially liable. They have been largely patronised by wayfarers by land and sea, and, in fact, by all classes of the community, to their very great advantage. The Pills are beyond all doubt one of the most effective remedies ever discovered for cases of obstinate constipation, confirmed indigestion and colic, complaints which are engendered by exposure and irregular feeding. The Ointment will be found of the very greatest service in cases of piles, abscesses, erysipelas, and all kinds of local ulcerations.

REPORTS OF MEETINGS.

SCOTTISH AUSTRALIAN MINING CO

EFFECTS OF THE STRIKE—THE CHAIRMAN EXPRESSES HIS FAITH IN THE FUTURE OF THE COMPANY—ENCOURAGING PROSPECTS—DIVIDEND OF 10 PER CENT. PER ANNUM.

The half-yearly general meeting of the shareholders of the Scottish Australian Mining Co., Limited, was held yesterday, at Winchester House, Old Broad Street, E.C.

George Smith, Esq.,

presided.

Mr. F. W. Turner (secretary) read the notice convening the meeting, and the report and accounts were taken as read.

THE END OF THE LABOUR TROUBLES.

The Chairman: Gentlemen, when we had the pleasure of meeting you six months ago, it was my unpleasant duty to have to speak to you upon the subject of the violent struggle between capital and labour that had then been going on in the Australian colonies for some three months, and had drawn into its vortex the New South Wales colliers, who, although having no differences with their employers, could not resist the order of their union leaders to lay down their work. I was, however, then able to state that I thought the strike was approaching its end, and this, happily, proved to be the case. The firm and united stand made by employers, combined with the plentiful supply of labour ready to take the places of the malcontents, and the protection afforded by the authorities to those men who would work against molestation by those who would not, had the effect of gradually breaking the strike down, and putting the machinery of business and manufacture by degrees into its normal condition of activity. The Lambton colliers got to work on Nov. 7. This was the earliest day on which it was possible to begin; in fact, it was the very next day after the settlement with the men. Many of the other collieries did not begin until several days after. A colliery is a complicated organisation that requires continual thought and attention, and, if stopped for close upon three months, both men and machinery are apt to become a little stiff for working when the time comes. It therefore does Mr. Croudace, the colliery manager, credit that he had kept matters in such a condition as to be able to be in full work the very next day after a settlement had been come to with the men. I hope we may now dismiss the subject of labour disputes for a time, and set ourselves to repairing the mischief that they so frequently do. In the present instance business has been a good deal directed to other sources of coal supply. People must have coal, whatever the labour leaders may think, and they will, under necessity, go to outside sources to get it. This happened, of course, during the strike, and I think that all the business so diverted has not yet come back again, to the mutual disadvantage of the capitalists who own the Newcastle collieries, and the coalminers who earn their living by working on them. This is one of the reasons why business is slack now, and another is to be found in the question of available tonnage for carrying coal to foreign ports, which has been scarce, and to the very low rates of freight to such ports from this country, which makes English coal, although higher in price than Australian, hold the Eastern markets to a very large extent. But I do not fear for the future of our trade. We have an excellent coal, ample facilities for raising and shipping it, a good harbour that is always being improved, and can now take vessels of very considerable capacity; and last, but not least, good managers in Mr. Shannon, the general manager, and Mr. Croudace, the colliery manager. The present depression will, I believe, in due time pass away, although we shall always be subject to fluctuations in our business. On the whole I think we may calculate upon a fair amount of prosperity in the long run.

THE NEW COLLIERY.

The report has informed you that we shall be shortly taking steps to equip the new colliery, called Durham. The two shafts are sunk to and through the coal, and headings are being driven. We must now begin to get the necessary machinery and appliances, and for this purpose money will be wanted. We therefore propose to call up the balance of the new shares, and to create and issue 50,000 additional shares. These will be issued at par, and only 2s. 6d. per share will be taken upon them in the first instance. Looking forward, I should say that more than that 2s. 6d. will ultimately be wanted, but it will be some time yet before that is the case. You can therefore take your respective allotments of these new shares with ease. They will be allotted in the proportion of one new share to every four of the existing shares. Acting upon the views expressed in their last report, concurring as these did with the opinions of the shareholders at the last meeting, all work involving outlay of capital on the Cadia properties has been stopped. I have, therefore, no reason for taking up your time by remarks on this subject. The properties are very extensive, and contain numerous lodes, and we must by no means conclude because the small efforts we have recently been making have not given us what we hoped for, that the properties do not contain a paying gold reef. We know that gold has been got from them again and again, and we have the evidence of our large nuggets as the basis of this knowledge. We hear, too, of gold discoveries in properties not very far off, and it is quite possible that the time may come when accident shall reveal to us what our limited search has hitherto not succeeded in finding. In the meantime we encourage tributors to do what they can, and we are getting the copper ores that have been raised, smelted and turned into money. I think, gentlemen, that we may be very fairly satisfied with the position of our affairs. A 10 per cent. dividend from the trade of a half-year, during which the colliery was shut up compulsorily for nearly half the period, is not a bad result, and if the future calls for the exercise of prudence and caution, it should also, I think, inspire us with confidence and hope. (Applause.) I beg to move the adoption of the report and accounts.

Mr. F. P. Ward (director) seconded the motion.

SHAREHOLDERS SATISFIED.

Mr. H. D. Hamilton Ferguson: Mr. Chairman and gentlemen: I may assume that we were all much pleased at the termination of the strike. As we have already been told, it was a most unreasonable strike, not originating in any grievance of the men, but merely in sympathy with other strikers. Such a strike ought always to be met, as it was met in the present instance, by the unbending opposition of all employers. If, unfortunately, we ever in future have a strike, I hope it will be met as firmly as was the recent one; our local manager continuing to be, as I have no doubt he has always been, just and liberal to the men. I have no doubt that we all consider the report and the chairman's address to be as satisfactory as possible. Indeed, when we remember that the colliery had been disorganised so greatly by the strike, that it was at work for only three and half months instead of six, it seems to me very satisfactory that the dividend is at so good a rate as 10 per cent., and I hope we may never, under any possible circumstances, get less. I have no doubt the depression in the Australian coal trade will pass away: and of this I feel sure that our coal is so good that it must in time be as much in demand as ever it was; and we may confidently trust our board and local agents to push it energetically. I will say nothing about the Cadia properties, because I feel sure our directors may be trusted to resume the work of exploring those properties if and when they may consider it prudent to do so. In conclusion, I may say that Mr. Croudace appears to me to deserve praise for the excellent state of readiness for work which enabled him to resume active operations at the Lambton Colliery so soon after the strike had collapsed.

FORMAL BUSINESS.

The Chairman: I beg to propose, "That Charles Joseph Lindsay Nicholson, Esq., be re-elected a director of this company." He is a valuable member of the board, and, I hope, will add to the prosperity of the company.

Mr. Frewer seconded the motion which was carried unanimously.

Mr. Nicholson: I beg to thank you for the kind way in which you have re-elected me. So long as I have the confidence of the shareholders, I shall devote my best energies to increase the prosperity of this great and important company.

The Chairman: The next resolution is that Richard Byam Ottley, Esq., be re-elected a director of the company. I have much pleasure in proposing it. He is a valuable colleague and a very old Australian.

Mr. Ferguson seconded the motion, which was carried unanimously.

Mr. Ottley returned thanks.

Mr. James Shand proposed the re-election of the retiring auditor, James Russell Frewer, Esq.

Mr. Williams seconded the motion, which was also carried.

Mr. Frewer expressed his thanks for re-election.

A resolution fixing the auditor's remuneration at 20 guineas each was duly passed.

SPECIAL MEETING.

The meeting was then made special for the purpose of passing a resolution for increasing the capital of the company.

The Secretary read the notice convening the special general meeting.

He also read the resolution to be proposed, as follows, viz.:—

RESOLUTION.

"That the capital of the Scottish Australian Mining Co., Limited, be, and hereby is, increased by the creation of 50,000 new or additional shares of 1*l.* sterling each, to be numbered consecutively from 200,001 to 250,000 both inclusive. That the said 50,000 new or additional shares shall be offered in the first instance at par to all persons who, on this 1st day of May, 1891, are registered shareholders in the said company, in equal ratio to the number they at present respectively hold of the 200,000 shares, the present capital of the company. That the sum of 2s. 6d. per share shall be payable on all such new or additional shares on or before the 1st day of July, 1891, and the remaining 17s. 6d. per share by such instalments and payable at such times as the directors may determine. That the holders of the said 50,000 new or additional shares shall be entitled to participate, as respects the said first payment of 2s. 6d. per share, in all dividends to be paid by the company after the 31st day of December, 1891, and, as respects subsequent payments, in all dividends to be paid by the company after the close of the half-year during which such subsequent payments shall respectively be made, in proportion to the amount of such payments respectively. That the allottees of the said new or additional shares shall hold the same in all other respects upon the same footing as the said 200,000 shares forming the present capital of the company. That, in issuing the said 50,000 new or additional shares, no fractional part of a share shall be allotted to any person, but all such fractional parts as shall remain after making the allotment, together with any such shares which may not be accepted and paid for by the allottees, shall be disposed of by the directors in accordance with the articles of association of the company."

The Chairman proposed the above resolution.

Mr. Ward seconded the motion.

CALLS.

Mr. Ferguson asked whether terms could not be arranged so that shareholders could pay for their shares in full and get interest.

The Chairman: We do not want to call the money up until we require to use it. We are expecting our colliery manager, Mr. Croudace over here, and we shall have to consult with him as to what is necessary in fitting up the plant of the new Durham colliery. We do not wish and shall not make any further calls until we want the money, and I hope that will be some considerable time. (Hear, hear.)

Mr. Roberts said he had visited the colliery when recently in Australia, and he was sure the workmen had entered into this strike from no willingness to do so, but feeling bound to do so in loyalty to their union. The men had learned a lesson—the strike had deprived them of a good deal of pay, and they were wiser and sadder men. Under the circumstances he thought Mr. Croudace had acted very judiciously. (Cheers.)

The motion was then put to the meeting and carried unanimously.

A vote of thanks to the chairman closed the proceedings.

TILT COVE COPPER CO.

A HOPEFUL FORECAST.

THE third ordinary general meeting of the Tilt Cove Copper Co., Limited, was held on Wednesday, at 6, Queen Street Place.

Col. J. W. Young

presided.

The CHAIRMAN, referring to the working arrangement which had been made with the Cape Copper Co., Limited, expressed his opinion, founded upon a connection with the Tilt Mine going back to 1869, that the property was one of the highest capability. He believed that it possessed a mass of ore which very few copper mines could show, and that it would tax the energies of the Cape Co. in getting it out as rapidly as it could be sent into the market. His belief was that on the western side they would come across rich pockets which had been left behind. He was convinced, indeed, that there was an inexhaustible supply of ore, the lower-grade portion of which would be available for flux. He had no doubt that, with the assistance of the Cape Co., and the valuable advice of John Taylor and Son, the Tilt property would, in a comparatively short time, become a dividend-paying concern.

Mr. J. C. LEAVER, who seconded the adoption of the report, stated that the Tilt Co. would in a short time be able to bring regulus over to this country at 7s. per unit.

Mr. J. TAYLOR gave reasons for the belief of the chairman as to the productiveness and paying qualities of the mine, about the western portion of which he thought very good news might be reasonably expected in a very short time.

The motion for the adoption of the report was unanimously carried, and Col. Young and Mr. J. R. Francis were re-elected directors.

THE UNITED LANGLAATE GOLD MINING CO., LIMITED.

WORKING EXPENSES REDUCED.

THE half-yearly general meeting of the shareholders of this company was held on Mar. 31, at the Board Room, City Chambers, Johannesburg.

Mr. J. L. Bilbrough

presided.

The CHAIRMAN, in moving the adoption of the report and balance-sheet (already distributed to shareholders), said that they had reduced the working expenses to 17s. 2d. per ton, which would compare favourably with any other mine upon the Rand. Having referred to the re-construction scheme, the chairman said that now they were in a thoroughly good financial position, they hoped soon to put the company on a dividend-paying basis, especially as the ore grew richer as deeper levels were reached. After this month, he hoped they would be able to show regular monthly profits.

KNYSNA CONCESSION GOLD MINING CO., LIMITED.

(IN LIQUIDATION.)

THE POSITION—A FINAL APPEAL TO THE SHAREHOLDERS—COMMITTEE APPOINTED.

AN extraordinary general meeting of the shareholders of the above-named company was held at Cannon Street Hotel, Cannon Street, on Thursday.

Mr. W. F. Garland

(the liquidator) presided.

The notice calling the meeting was accompanied by the following circular, viz.:—

To the shareholders in the Knysna Concession Gold Mining Co., Limited (in Liquidation).

Gentlemen,—The shareholders did not come forward in sufficient numbers to carry out the re-construction scheme which I was instructed by the general meeting to place before them. The position of the company, therefore, is that unless the shareholders come forward and supply additional capital the company's creditors will seize the property, and every shilling of the shareholders' money will be lost. Under these circumstances, a few of the larger shareholders have requested me to call a meeting, in order that the shareholders may be informed of

THE EXACT POSITION OF AFFAIRS,

viz., that unless further capital is put down, they will lose all their interest in the company. Those who wish the meeting to be called consider that if the general body will join them in raising the further capital required, that those who do so will ultimately be able to get the whole of their money back again. Every shareholder is invited to attend the meeting, or, if unable to do so, to write his views on the subject.

I remain, Gentlemen, yours faithfully,
W. F. GARLAND, Liquidator.

The notice calling the meeting having been read,

Mr. W. F. GARLAND stated that the circular that had been issued would have explained fully the object of the meeting, which was to decide what steps should be taken in regard to the future of the company. On Friday last a meeting of some of the largest shareholders was held at the offices of the company, and it was decided at that meeting that he (the speaker) should call a meeting of the shareholders to consider whether they should raise more money for carrying on the concern, or whether they should at once decide to liquidate. He invited suggestions from the meeting.

Mr. THOMAS asked if the large shareholders made any suggestion? and another SHAREHOLDER asked if any letters had been received offering suggestions?

The CHAIRMAN, in reply, said that the only suggestion made by the large shareholders at the previous meeting was that this meeting should be called. He had received about a dozen letters, but he was sorry to say that he had received no suggestions of advantage in the present condition of things.

Mr. KELLY referred to the position that he understood was occupied by Mr. Candler, and wished to know whether, as he understood the property was now in that gentleman's hands, there would be any chance of coming to an arrangement with him on satisfactory terms. He thought the fact that the company was in the offices of

MESSRS. JOHN TAYLOR AND SONS

was evidence that they considered the concern a good one.

Mr. CANDLER said that it was not true that he had any desire to take the property from the shareholders. He had advanced a certain amount of money to keep it going, and his solicitor had taken the needful steps to protect his interest.

Some discussion followed, in the course of which the action of the late board was strongly condemned, and it was complained that a policy had always been pursued of keeping the shareholders in the dark.

Mr. JOHN TAYLOR, at the request of a shareholder, addressed the meeting, and stated that the only position his firm occupied in regard to the company was that of technical advisers, and they had not been in any way responsible for its financing.

Eventually, after some further considerable discussion,

A COMMITTEE OF SHAREHOLDERS WAS APPOINTED,

to consider the present position, consisting of Messrs. Thomas, Kershaw, Candler, Kelly, Robinson and Basan.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been fairly active during the current week. Bank Rate remains 3½ per cent. Bar silver closes 44⅜d.

COPPER has been steady. G.M.B. Warrants have been fairly dealt in. Price improved from 50*l*. 17s. 6d. to 51*l*. 15s. cash, and from 51*l*. 5s. to 52*l*. 5s. three months. To-day's prices are 50*l*. 10s. cash, and 52*l*. three months. Liverpool and Swansea stocks decreased 500 tons for the fortnight. We quote English tough, 54*l*. to 56*l*.; best selected, 56*l*. to 58*l*.; strong sheets, 64*l*. to 65*l*.; India sheets, 60*l*. to 61*l*.; yellow metal, 5⅝d. to 5⅞d.; ore, 9s. 3d. to 10s. 9d. per unit.

TIN.—Was dull in the early part of the week but has since improved. Straits sold from 88*l*. 15s. to 90*l*. 15s., closing yesterday at 90*l*. 7s. 6d. cash, and 90*l*. 10s. three months. To-day's prices are 90*l*. 12s. 6d. cash, and 90*l*. 12s. 6d. three months. The arrivals during Apl. were 2,542 tons; delivery, 3,001 tons, including 1,150 tons to America. Stock, 3,119 tons, against 3,578 tons on Apl. 1. Straits shipments for Apl., 1,745 tons, viz., London, 795 tons; America, 730 tons; Continent, 220 tons. The Dutch market has been steady, closing prices, Banca fl54, and billiton fl53½. English Ingots, 93*l*. to 93*l*. 10s.

TIN PLATES are difficult to quote. Time of delivery forming a serious element. Nearest price for spot and May, 16s. 6d. to 17s., and July-Aug., 15s. for ordinary coked Liverpool.

SPELTER, after touching 22*l*. 15s., closes sellers 22*l*. 7s. 6d. for ordinary brands ex ship here.

LEAD firmer. Soft Spanish, 12*l*. 10s.; soft English, 12*l*. 12s. 6d. to 12*l*. 15s.; L.B. China pigs, 13*l*.; sheets, 13*l*.10s. to 13*l*. 15s.

QUICKSILVER.—Rothschild reduced his price to 7*l*. 15s. on Apl. 27, and this is the present quotation.

ANTIMONY irregular. Hallett's price for America, May delivery, is 62*l*. 10s.; forward, 58*l*. to 60*l*.; ordinary brands and delivery, 53*l*. 10s. to 55*l*.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING MAY 2.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

General Managers in South Africa.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

RECOMMENDATIONS FOR CURRENT ACCOUNT:—

INDIAN CONSOLIDATED,
MYSORE REEFS,
NINE REEFS,
MYSORE WEST,
MYSORE WYNAAD.
DEVALA MOYAR.

All recommendations this month have, up to the present, been correct, and large profits to our followers the result.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. Clients may rely on fair treatment at our hands. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

ARTHUR FORBES & CO.,

AUSTRALIAN INVESTMENT AND MINING AGENCY,

BRISBANE, QUEENSLAND,

And at 16, CORNHILL, LONDON, E.C.

Telegraphic Address:—"ORPHARION, LONDON."

Have special business in Australian Securities generally, and in the following Australian Mining Stocks:—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

J. S. B.—See answer to "Fix." Hold them.

W. S. (Glasgow.)—There is no douht the dire ctors did right in making the call. Keep them for higher prices.

Harris.—There is certainly an excuse for the directors of the company named. They have had exceptionally heavy work, and, no doubt, have done their best in the company's interest.

Colonist.—Nos. 1, 2, 3, and 7 are fair investments. Nos. 4 and 6 should be sold. 5 and 8 both unsaleable.

Towers (X. Y.)—The excha nge is advisable, and your chance of making a profit better.

Leopold.—Simply done to unload, if possihle, vendor shares on the market. They are not worth even half the price.

Bilston Reader.—Unlikely to improve yet awhile.

Expectant.—The shares in time, we are of opinion, will be worth a grea t deal more than the present quoted price. The company's position is strengthened every week.

Subscriber (Wexford).—Buy both named, including St. Augustine.

Fix (Plymouth).—We are informed hy the company that there will be no call made in Tesoro for some time to come. The directors and friends hold over two-thirds of the shares.

J. Jenkins (Newcastle).—Good for a market rise, and the amount named is worth risking.

Worried Reader.—Sell and cut your loss is our advice.

W. Eyedon.—We are afraid you have no legal remedy. You must pocket the loss.

Champion.—Your broker is correct in his statement. The buyer receives the dividend, and, of course, you must refund it.

The Mining World.

LONDON: SATURDAY, May 2, 1891.

The "Mining World" *is not the property of a Mining Speculator nor under the control of any clique.*

GOLDFIELDS OF MYSORE AND ITS SALES.

The sales from the Goldfields of Mysore Co.'s property have reached such a stage that it will be both interestiug and instructive to review the facts. The company has uow effected, practically, four sales, the Balaghat purchase being regarded as almost an accomplished fact, and we propose to look at them from both the buying and selling points of view. From the tabular statement we give below it will be seen that the Mysore Co. (the first custo mer of the Goldfields Co.) became possessor of 268 acres, for an equivalent of 153,000*l.*, or about 570*l.* per acre. These look formidable figures, and some people have not hesitated to say that the Mysore Co. has paid too much. We think, however, that such an opinion is not based on a knowledge of the facts. The Mysore Mine is making a profit of 150,000*l.* a year, and the lode from which the greater portion of this profit is being realised will, in the opinion of experts, within a measurable distance of time enter the Goldfields' property. Therefore the acquisition of this property was a matter of very considerable importance to Mysore shareholders. Before the acquisition of this grouud the Mysore Company's property consisted of 517 acres. Now, supposing the whole of the Mysore property to have been worth 570*l.* an acre, the value of the property would have been close upon 295,000*l.*, whereas the actual selling price of the mine at the date of the sale was over a million sterling, or nearly 2,000*l.* an acre. Thus it will be seen the Mysore Company has become possessor of a piece of ground of the greatest possible value to the company for cousiderably less than a third of the present selling price.

The next sale effected by Goldfields Co. was that to the Ooregum mine. Here we find the price paid was equal to about 438*l.* per acre. This company originally owned 256 acres, and the selling price of the mine at the time of purchase was about 700,000*l.*, or about 2,700*l.* per acre.

The Nundydroog purchase is at the rate of about 340*l.* per acre, and when viewed in the same light as the others shows an equally favourable result. The Balaghat purchase is not yet settled, but it will no doubt be concluded on favourable terms. The above figures will prove that the purchasing companies have certainly not paid too much.

We now now come to the case from the selling point of view. The Goldfields Co. originally possessed about 8,000 acres, for which it paid 160,000*l.*, or 20*l.* an acre. Its capital is 220,000*l.*, and it has alrcady received the equivalent of about 240,000*l.* for the sale of 492 acres or only about one-sixteenth of its entire property. The result of the negotiations, therefore, from both points of view cannot but bc entirely satisfactory to those concerned.

Sales Effected by Goldfields of Mysore Co.

Name of Purchasing Company.	Extent of Land Purchased.	Purchase Price.	Equivalent in sterling at Present Prices.
Mysore Gold ...	268 acres.	25,000 f.p. shares	£153,000
Ooregum	114 ,,	20,000 ,,	£50,000
Nundydroog ...	110 ,,	20,000 ,,	£37,500
Balaghat	150 ,, Suggested.	Negotiations authorised but no terms yet arranged	

THE REMARKABLE PROGRESS OF INDIAN MINES.

The importance of the Nundydroog and Balaghat meetings, held this week, must be our excuse for reverting once more to the subject of Indian gold mines. The evidence is accumulating in such a manner that he who runs may read the lesson of the intrinsic value of the Colar goldfield, as taught by these and other recent meetings. We venture to doubt whether, in the first blush of Mysore success, the firm with whose name Indian gold mining must ever be associated, that of Messrs. John Taylor and Sons, anticipated results so important and so wide-spread from operations in this field. The speeches delivered last week, and those by Mr. John Taylor and Mr. Rowse this week, not to speak of others which have come from Capt. McTaggart, Col. Malleson, and Lord Ribblesdale, have emphasised in a manuer, quite unmistakable, the potential wealth of these various properties, for, with all the extraction of gold that has taken place from some of them, they appear to be but on the threshhold of a veritable land of promise.

It is, however, to the position of the two companies whose meetings were held this week to which we now desire to draw special attention. First in order, though not in importance, came Balaghat. Here the problem to be solved has been one of a very delicate nature; the lodes near the surface have been very rich, but so narrow that Mr. Rowse plainly stated they could not be profitably worked. When in India he examined the mine in all its ramifications, and felt that if only the existing width were maintained in depth, the report he would have to give would be in the minor key, and that though the company might be allowed to proceed, in the natural order of things, to go to the end of its present tether, that tether would not be extended by a fresh re-construction or a new raising of capital. whether by debentures or preference shares. To put it as plainly as Mr. Rowse did himself, he was out of heart with what he saw in the upper part of the mine, but when he came to the bottom, the aspect of affairs became wholly changed. The lode became wider, and Balaghat had satisfactorily solved what it must be owned was a very ticklish problem. At the same time, here, as in other cases, the dip of the lode shows that if the life of the company is to be prolonged, a portion of property must be obtained from the Goldfields Co., and in principle this has been agreed to, whilst the details have been left to the board to work out.

Turning to Nundydroog, the position of the mine is in every respect satisfactory. Far more so than the bulk of the shareholders had expected to find it. Those of them who caught the true spirit of this most encouraging meeting left it with the idea of adding substantially to their holdings. Nundydroog shares we regard as extremely cheap at present quotations, or anything like them, and buyers as wiser than sellers. The policy of the board, as unfolded by Capt. McTaggart, has been threefold—first, to increase the development, the outturn and the dividends; next, to preserve the continuity of those dividends; and, lastly, to secure permanence for the results their efforts are now achieving. In regard to the first point, the speeches of Mr. John Taylor, Mr. Rowse, and the chairman himself, showed that nothing is being left undone that comes within the scope of human effort. In regard to the second, a basis has been laid for a reserve fund; and in regard to the third—well, for the most part it is included in the first. Toll will have to be paid by this company, also to the Goldfields of Mysore for a block of land, and the resolutions authorising a purchase for 20,000 of the company's shares, equivalent in price to 37,500*l.*, were carried unanimously and even without discussion, whilst provision has also been taken to add to the working capital of the company so that the new property may be developed without delay. The telegram with which the chairman concluded his speech is the most brilliant the company has ever seen. It speaks of the levels in the 520, where the lode, is 3 ft. wide as averaging 5 ozs. Mr. Taylor emphasised the importance of this discovery by saying;—"I do not think we have ever had more splendid news than that in the whole previous experience of the company;" but Mr. Taylor also pointed out that the company has what he called another string to its bow in Kennedy shaft, 2,500 ft. off—practically a distinct mine, which is opening up in a most remarkable and satisfactory way, and of which Capt. Plummer, when on the spot, had a high opinion. Mr. Rowse, who followed Mr. Taylor, speaking from the standpoint of his recent visit to the mine, was able to say that an immense addition had been made to its value, in the shape of reserves, since he left. The pessimists who cried in the market-place and elsewhere, "Your lode is destroyed"—lived to learn that by a cross-course, it was discovered somewhat to the east, and was "all the richer for the throw," and has been found in all the levels from the 230 downwards. We will not follow Mr. Rowse into all the details of a speech of great interest, but will refer our readers to the full text of it which appears in this issue. After showing the great improvements that have taken place in the mine during the last two months, he gave force to his statement by speaking of the large amount of additional machinery that has been sent out and that is being erected, including the tailings machinery, which has 17,000 tons to begin with, and this will be supplemented by the other quantities that accrue month by month. He also showed that the costs are being reduced, and are now down to 1*l.* 18s. 10d., which compares favourably with Mysore—all

other circumstances being taken into consideration. We have thus summarised the main points of two very important meetiugs ; and again we have to say in the cases of Nundydroog and Balaghat (as only recently we said in those of Mysore and Ooregum) that the public who are looking for sound mining investments may be asked with confidence to consider the facts that surround this quartette, and then to ask themselves whether the objects of their search have not been found.

HOW CORNWALL RECEIVES OUTSIDE HELP.

PERSONS acquainted with the facts will not deny that the chairman of Wheal Grenville has introduced about as much capital into Cornwall as has of late years gone there from the outside public ; but Mr. R W. Goold is the very gentleman who, above all others wit hin the past few weeks, has been attacked in the Cornish press. He is described as being "too positive," as "often wrong," as having "snubbed a local legal luminary," and as "being particularly offensive on the subject of sales by ticketing." We are afraid that all the Cornish press, at least on this point, affirms we shall have to deny, and all that it denies we shall have to affirm. Mr. Goold, from our knowledge of him, is only positive when conviction and experience lead him to be so, whereas his critics are cocksure when their lack of the former is only equalled by their need of the latter. Mr. Goold makes mistakes in some things no doubt, but in regard to Wheal Grenville, his management has been a brilliant success, and that is what some Cornish people with peculiarly constituted minds do not like. To put it plainly they talk, and act as if they would rather the "outsider" lost his money, than added to it by a mining success, although in the same breath they deplore the exodus of capital to foreign mines. He is also described as having "snubbed a local legal luminary," but Mr. Henry Rodgers, the gentleman iu question, would, we feel sure, be the first to say that he received from Mr. Goold at the Sept. meeting both the courtesy of a gentleman and the fair dealing of an impartial chairman. It was a meeting principally composed of Cornish shareholders who in reality "snubbed their local legal luminary" for instead of voting with him they voted against him. More than that, although they carried Mr. Goold's proposal by, if we remember rightly, an absolutely unanimous vote they afterwards forgot that a resolution, like a crying baby at a concert, must be carried out. They failed to subscribe, and this was how "the beautiful scheme fell through." Mr. Goold proposed it: the shareholders carried it, and if it failed for the want of the necessary subscriptions, is the fault to be laid at the door of the Wheal Grenville chairman, or is it due to those who are more ready to write bunkum to the local papers than to carry out the scheme for which they had voted in the logical way of cheque signing. Such letters as have recently appeared about Mr. Goold are beneath criticism and below contempt, and our only surprise is that they find ready entrance into the Cornish papers. But there again it is the "detested outsider," that explains it all. It was the same years ago in Wales, and now the good people of the Principality have their mines to themselves, and do not seem to like it if we may judge from a letter we published last week. As to the tin ticketing dispute the very paper in which the attack upon Mr. Goold appeares, quotes statistics, showing that Wheal Grenville has actually benefited by the system at present adopted as compared with Carn Brea, whose ore is selected as a standard of comparison. We know that views such as those which find expression in the Cornish press arc *not* shared by intelligent Cornishmen, who wish to see more of their mines worked and capital for the purpose introduced into what is called "the county," but the methods by which some of the reputed friends of Cornwall's chief industry seek to encourage the advent of this capital are, as Lord Dundreary would say, "what no fellah can understand."

THE IMPROVED PROSPECTS OF GOLDEN LEAF.

GOLDEN LEAF shares look uncommonly cheap in view of the facts brought to light at the meeting on Thursday. Mr. Cavendish, the esteemed chairman of the company, took up his parable about the company's affairs in a speech of four divisions :—First, dealing with the accounts ; next, with the Carlisle ; next, the Empire ; and lastly, the Golden Leaf. What he said about the accounts calls for but little comment. The directors, as good stewards, have used the company's funds wisely and well, and the somewhat larger costs which appear in the present financial statement are due to what he justly termed a "unique re-construction." Golden Leaf rises from the ashes, if we may say so, of two former companies—Carlisle and Empire—and having 1,200 or 1,300 shareholders, we can well understand the work cast upon Mr. Cameron Richardson (the secretary) and his willing staff to have been of no light character. The expenses would have been greater but for the fact that the board have asked for nothing. We admire the self-denial of the directors, but think their course wrong in principle. Let their remuneration be moderate, if you like, but let something be paid for services rendered, because, after all, a mining company is not a philanthropic institution. Directors, shareholders and managers alike hope to be rewarded out of the mines themselves, and let us look at what seem to be the prospects before them.

Carlisle we may dismiss in a word by saying that all the directors desire to do with respect to it is to sell its machinery to the best bidder. Empire is earning a profit of 700*l.* or 800*l.* a month, aud this has been entirely due to the excellent management of Mr. Longmaid, junior, and to the reduction of costs below $2 per ton. When Mr. Stewart Wallace (whose services in connection with the rejuvenated company will never be forgotten) said that this could be done, certain of the shareholders laughed him to scorn, and his statement was held in light esteem even by some experienced managers. Actual facts have proved to the hilt the accuracy of what he said. His further forecast that Empire would be earning 1,000*l.* profit per month, as we have shown, has not come far short of realisation. It is at Golden Leaf that the company's chief disappointment has occurred. Here the unfortunate breakdown of Mr. Hand's health led, in its turn, to the equally unfortunate breakdown of the well-laid plans which Mr. Stewart Wallace, in conjunction with that gentleman, devised when the former was on the spot. The directors have been much distressed at the absence of information from Mr. Hand, and at the delay which has occurred in working the property. They have now given to Mr. Longmaid the general management of the whole of the company's affairs, and we anticipate the best results from this appointment. The letters which this gentleman has written breathe a spirit which is highly to be commended, and which, to use his own words, show that his interests are those of the shareholders. Of the success of Golden Leaf Co. in the present year there are many assurances, and when achieved the shareholders will be ungrateful indeed if they forget either the loyal conduct of their manager or the unpaid services of their directors.

DAY DAWN P.C. PROSPECTS.

THE report of the directors of this company, upon which we commented last week, was followed on Tuesday by what we caunot help thinking the most eucouraging meeting the company has yet held. We shall endeavour in brief to state the points that struck us, as they will no doubt strike the shareholders, who do the directors the justice of carefully perusing the full report of the proceedings, and finally we shall mention another point which even more astonishes us. The chairman, Mr. Macleay, was able to report an increased output, and a reduced cost of working equal to 4s. 10d. per ton. This is partly due to more careful supervision, and partly to the improved machinery which the manager has now at his command. In this way the poorer quality of the ore, which is the solitary cloud upon the bright sky of the company's prosperity has been more than neutralised. Had the ore been of equal quality in 1890 to what it was in 1889, the extra profit would have been 28,353*l.*, or equivalent to a dividend of 5 per cent. extra. That a good deal has been done is proved by the statement of the chairman that, in addition to sinking two new shafts, 1,867 ft. of levels and 1,000 ft. of winzes are comprised in the work of the year, and in the end the manager is able to report "the mine is looking well," and that he has 26,000 tons of ore in reserve. The new properties have proved to be most judicious purchases, and Mr. Ievers, who knows the ground well, states that on a portion of the 35 acres of new ground acquired, a new shaft has been commenced, which will go down 1,000 ft., and there is every reason to believe that two reefs will be cut, one of which will double at least the value of the dividends now being paid, and which have already yielded 80,000*l*, in profit to the proprietors of the adjoining mines. The directors were truly congratulated on having issued an honest report, and they are also to be complimented upon their attention to the company's interests for they "are on view daily" at the office. Lastly, the point that astonishes us most is the absurd price of the shares, considering the dividends that are paid and the facts we have summarised. They ought to be at least double present quotations.

WATERWORKS AND GASWORKS SECURITIES CORPORATION, LIMITED,

THE business in which this corporation proposes to embark its capital is, when properly conducted and kept within legitimate bounds, both safe and profitable. The corporation is formed for the purpose of dealing in the securities of waterworks and gasworks and other lighting companies, and for obtaining and dealing with concessions relating thereto, particularly in the United States and Canada. To this class of enterprise the business of the company will be restricted and the prospectus does not err in stating that "it offers an extensive and profitable field for investment of capital of the soundest character," whilst it is equally true to add that it is a class of enterprise where competition becomes almost impossible. We have seen the latter illustrated only too plain in our dealings with the water and gas works—particularly the former—of the metropolis. The growth of cities, especially in the United States, has been marvellous, and similar manifestations await us in the future. Now, this Corporation proposes at the critical time to enter in and supply them with both water and light, in the absence of which requisites cities become a dream and population impossible as regards centralisation. Not only will the company do work in this direction *de novo*, but will, where practicable, obtain a controlling interest in the share capital of local companies. Upon the wide scope for such a corporation as this there is no need to dwell, because everyone of ordinary experience will admit the fact, as also the profitable character of the business when managed by experienced men. Have those men been secured in the directors

who figure upon the face of the prospectus? We are inclined to think that they have when we see the names of Sir Charles Tupper, High Commissioner for Canada, Lord Monkswell, of the London County Council, Mr. John Stone of the New River Co., and other gentlemen of large experience in their respective walks of life. The capital is two millions sterling, divided into 199,800 ordinary shares of 10*l*. each, and 2,000 founders' shares of 1*l*. each. The present is an issue of 99,800 ordinary shares, and the invitation to subscribe for them is given by the International Trustee, Assets, and Debenture Corporation, Limited.

THE ZWARTLAND MEETING.

THE shareholders of this company could not have expected a very glowing account of the company's operations for the past year, and, therefore, they should not have been disappointed. The year was a bad one for all land companies in South Africa, and this one has been no exception. There have been difficulties to contend against, both great and many, but they have been met with an energy and perseverance deserving of the highest praise. The boundary question has been no little source of anxiety to the management both at home and aoroad, and we can only hope and trust that the steps which are now being taken will end in a satisfactory result. We desire to express our sincere sympathy with Mr. Evans, and trust he may be speedily restored to health. The Transvaal is at present under a cloud, but there is not the slightest doubt there is a great future before it, and that land companies, which are well managed, like this one, will prove successful.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE tendency of Money remains firm, and the market in the course of this week has had an appearanoe of stringency. Accommodation has been had from the Bank of England, but according to the usual return, on a smaller scale than expected; the latter charged 4 per cent. per annum for bills and 4½ per cent. for loans on stock while in the open market. Three months' drafts varied between 3½ and 3¾, and advances for short dates were from 3 to 4½. The Stock Exchange settlement was, of course, greatly responsible for this dearness, but at the same time credits were being called in by large firms having to disburse heavy interest payments as to-day (May 1). At one time it was considered tolerably certain that the Bank rate would be raised on Thursday to 4 per cent., but the directors did nothing in this direction, and their action would show that they can see no danger in the present situation; 3½ per cent. has failed thus far in attracting gold, but it has undoubtedly stopped a drain, and left New York to accommodate Berlin. The discount houses have formally raised their allowances on deposits by ½ per cent., viz., to 2½ and 2¾ for money at "call" and "notice" respectively. The statement of the Bank of England shows a weak position, due no doubt to internal requirements, and the customary expansion of the note circulation at this period. The latter item alone is 308,350*l*. greater than last week, and as the bullion has diminished 477,000*l*., despite an influx of just 50,000*l*. from abroad, the reserve is down 785,100*l*., to 12,919,600*l*., and compares with 14,448,000*l*., this time last year. The public deposits have shrunk 359,000*l*., while bankers' balances have slightly augmented, and the other securities have swollen 472,000*l*. The proportion of assets to liabilities is nearly 2 per cent. down at 34¾ per cent.

On the Stock Exchange there has been a fair amount doing despite the settlement and approaching two or three days holiday. The account, of course, showed a preponderance of "bull" engagements, and rates of continuation were proportionately dearer, slight contangoes generally taking the place of "backs" on Home Railways, and charges of 4 to 5 per cent. per annum were freely paid upon American Railroads and some foreign bonds, but as regards the latter department, the account open is principally for a fall. The Funds are flatter on money sales of stock, and that quotation has touched 95 15/16. The monthly liquidation in this market has now commenced with a stiff contango to renew dealings into June, for owing to recent events there is an increased supply of stock. Foreign Stocks are lower upon Continental advices, and South Americans have also decliued, but there is a growing hope that matters are mending in the River Plate. Portuguese fluctuated considerably in connection with the Tobacco Loan in Paris, but final quotations show a recovery. In English Railways Great Western has fallen over 1 per cent., otherwise the variations are immaterial, and the traffics published were encouraging. Mexican and Argentine Railways relapsed, while Grand Trunk Railway Securities recovered, because, though the "poll" on Tuesday favoured the board, it is hoped that the latter will now bestir themselves. American Railroads exhibited some irregularity, but on balance are higher as a rule, and buying has generally obtained throughout. Miscellaneous were dull, Telegraphs appeared active and firmer, and Banks, Nitrates, &c., but steady. Breweries receded, especially San Francisco shares.

Annexed are the final quotations to-day:—Consols Account, 95⅜, 95½; Egyptian Scrip, 90⅝, 9⅞; Egyptian Unified, 97⅛, 98⅛; French Four-and-Half per Cents., 104, 105; Hungarian, 91¼, 91½; Italian, 92½, 92¾; Mexican, 31, 31½; Peruvian Corporation, 9¼, 9¾ per cent.; Peruvian Preference, 26¼, 26¾ per cent.; Russian, 1889, 98½, 99; Portuguese, 52⅝, 52⅞; Spanish, 74⅞, 75; Turkish, 1871, 95¾, 96¼; Turkish Defence, 93¼, 93¾; Caledonian Railway, 117⅛, 117⅜; Great Eastern, 95⅜, 95⅝; Great Western, 156½, 156¾; Brighton "A," 153½, 153¾; North Western, 172, 172½; Metropolitan, 85, 85½; Metropolitan District, 32¾, 33¼; Midland, 150⅜, 150⅝; North British, 44⅞, 45⅛; North Eastern, 161⅝, 161⅞; South Eastern "A," 94¾, 95; Mexican Railway Ordinary, 41, 41¼; Grand Trunk, 9 5/16, 9 5/16; Grand Trunk First Preference, 62⅛, 62⅜; Grand Trunk Second, 41⅞, 42⅛; Grand Trunk Third, 23¼, 23½; Canadian Pacific, 81⅜, 81⅝; Denver 19¾. 20; Erie, 22½, 22¾; Milwaukee 65⅝, 65⅞; Lake Shore, 114½, 114¾; Louisville, 82⅞, 83⅛; Atlantic First, 34½, 34¾; Ontario, 18½, 18¾; Ohio, 19⅛, 19⅜; Norfolk and Western, 57⅝, 57⅞; Reading, 17¼, 17½; Reading Bonds, 81½, 82½; Union Pacific, 52⅞, 53⅛; Wabash Preference, 23⅝, 23⅞; Ottoman Bank, 13¾, 13⅞; Anglo-Telegraph, 46¾, 47¼; National Telephone, 4¼, 4½; Hudson's Bay, 17¾, 18¼; Suez Canal, 100¼, 100¾; Guinness Ordinary, 308, 310; Allsopp's Ordinary, 30, 33; Bryant and May, 13⅝, 14¼; Eastmans, 8⅜, 8⅞; Bell's Asbestos, 10⅞, 11⅛.

SUBAQUEOUS EXPERIMENTS WITH ROBURITE IN CANADA.

FURTHER experiments were made yesterday afternoon by Capt. Sheridan with the use of the new explosive roburite, in breaking up the hull of the old steamer sunk in the dock at McFatridge's wharf. A man with a diver's dress went down, and after examining the bottom of the hull and also the inside of the hold returned and received the charge of roburite (about 6 or 7 lbs. enclosed in a clay jar) which he placed in the bottom of the hold at the stern end. This charge was connected by a copper wire extending to the end of the wharf to an electric battery, and when all was ready and clear a simple push on the battery by Capt. Sheridan instantaneously forced into the air a tremendous volume of water at the height of 40 or 50 ft. with broken planks and timber and the stump of a mast. A second charge similar to the first but of smaller size was then exploded with similar results; after which there was nothing to be seen in the dock but broken timber, and masts and planks, the machinery having sunk to the bottom, making work for the divers to recover it afterwards. Capt. Sheridan and other practical men on the wharf expressed themselves as thoroughly satisfied with the tremendous power of this new explosive, and think it must be used extensively for all wrecking purposes, as there is no risk of premature explosion in handling it, and it is impossible under any circumstances to fire it, except by insertion of a very powerful detonator attached to an electric fuse. Another property that it has is flamelessness, and in the different coal mines in the Pictou district it is now being largely used, and the safety of the miners' lives is assured, it being impossible for foul gas or coal dust to be exploded by it.—*Morning Chronicle*, Halifax, N.S., Apl. 11, 1891.

THE MOUNT ZEEHAN (TASMANIA) SILVER-LEAD MINES, LIMITED.

THE manager writes, under date Mar. 16, as follows:—Argent section, No. 1: Excavation has been completed for the erection of engine and pumping plant. Most of the heavy timbers have been hauled in from the bush, and are being placed in position as quickly as possible. As soon as the bed timbers are ready for engine its erection will be proceeded with immediately. Silver Queen Extended section, No. 5 —No. 1 main shaft: West level has been extended 3 ft. 6 ins., making total 192 ft. The ground has been exceedingly hard, of a grey sandstone, with strings of quartz passing through face; water is making freely, but not more than usual. North drive on course of No. 1 lode has been extended a further distance of 19 ft.; total, 97 ft. The south drive on course has been extended a further distance of 9 ft.; total, 65 ft. Air shaft on No. 1 lode: The air being very bad, we were not able to continue the sinking here until late in the week. The sinking for this week is 3 ft. 6 ins.; total depth, 73 ft. 6 ins.; lode about 16 ins. wide, showing hard grey slate, carbonate of iron, pyrites, and a little galena, only second-class. Montana section, No. 9—No. 3 lode: The rise is being continued to surface for air. During the week 13 ft. has been risen, and we hope to hole through during the coming week. Six men are driving north on course of this lode; 7 ft. driven, which looks well; about 6 ft. between walls, which are fast closing on the course of this level, but retains its width under foot; also its richness shows better in the bottom than top, which starts about 6 ins. (near the roof) of galena, and in the sole is nearly 3 ft. wide, a large portion being solid galena. This section has every indication of producing a large quantity of ore, but it cannot be got without a pumping plant. I should say that a 12-in. lift would be capable to cope with the water here—probably less; this depends upon the Silver Queen Extended pumps a little south of our Montana; they have 14 in. lift.

BILLITON TIN COMPANY.—The general meeting of the Billiton Tin Company has this week approved, by 309 against 104 votes, the terms proposed by the Government for the renewal of the company's concession until 1927, namely, that the State should receive 5½ per cent. of the gross revenue, besides one-half of the profits derived by the company from the concession, over and above an annual profit of 350,000*l*.

LAND MORTGAGE BANK OF TEXAS, LIMITED.—The ordinary general meeting of this company was held on Wednesday, at the Offices, Bishopsgate Street, under the presidency of Alderman B. S. Briggs, who, in moving the adoption of the report, alluded with regret to the absence, in consequence of ill-health, of the manager, Mr. A. T. Jay, and stated that he had the pleasure to congratulate the shareholders upon the results achieved during the past year, they having been able to maintain the growth of their business, and to continue the prosperity of the company. Their reserve fund was growing steadily year by year, and the soundness and safety of their business becoming better understood. Although the growth of the business of the bank had been very remarkable, he might tell them if it were to increase to 10 times as much it could not keep pace with the growth of Texas. He was confident that their new capital could be safely and profitably employed as their old. In the year 1887 their gross revenue was 2,826*l*., and for the year ending Mar. 31, 1891, it was 44,047*l*. The available balance that day was 18,214*l*., and from this it was proposed to pay the usual 10 per cent. This was only the fifth year of the existence of the company, but during that period the directors had returned in dividends to the shareholders no less than 41 per cent., which was equivalent to 25,309*l*., and they had also built up a reserve fund of 35,000*l*., and they hoped before the end of the current year to make that fund nearly 50,000*l*. The prospects of the bank were never brighter than at the present time. Mr. Woodall, M.P., seconded the motion, which was carried.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

FLAGSTAFF, LIMITED.

SIR,—Referring to the cable message received this week from Mr. Swope, from the Flagstaff Mine. as follows:—

"We have struck last night 4 ft. first-class ore. Sixth main level, 4 ft. wide, 3 ft. high—"

I am requested to say that the importance of this discovery cannot be appreciated without some explanation.

The ore-body announced in the cablegram is the first good mineral found at that depth in this particular section of the mine; the locality of the strike being situated about 160 ft. to the north-west of the nearest point of the workings from which the ore recently excavated has been obtained, so that this new discovery, whilst not large so far as yet opened up, is nevertheless regarded as of importance, because itwill prove to be an additional source of augmenting the ore producing capacity of the mine, particularly as this new find is immediately under a point in the level above from which large quantities of good ore were mined in former times.—I am, &c.,

R. S. ARCHBOLD, Sec.

Dashwood House, 9, New Broad Street, London, E.C.
May 1st, 1891.

SILATI AFFAIRS.

SIR,—The letter of Capt. Williams in your last issue puts a different complexiou altogether on the affairs of this company. To my mind Capt. Williams makes out a good case, and notwithstanding the statements made at the recent meeting, I should feel more confidence in his opinion than in that of either Mr. Conybeare or Mr. Henderson. How do the directors account for not publishing the reports of their manager? And what have they to say to Capt. Williams' statements as to climate, water, wood, &c.? Surely this gentleman is in a better position to speak on these questions than Mr. Henderson. If the directors of this company want to restore confidence in the concern they will have to do something more than make long harangues to the shareholders. However, it is no use trying to get blood out of a stone; and if there is no gold in the mine it is pretty certain none can be taken out.—I am, &c.,

"SCEPTICAL."

SILATI.

SIR,—Unfortunately I was prevented from being present at the recent meeting of this company but I have read with much interest the speech of the chairman (Mr. Conybeare), and I think, for plausibility, this gentleman ranks second to no one. It is not unlikely that some of the shareholders may have allowed themselves to be bamboozled by the exuberance of Mr. Conybeare's verbosity. and his wholesale denunciation of his critics in general, and of Capt. James Williams in particular, but Capt. Williams' letter, written in self-defence (and which appeared in your issue of April 25th), is to my mind a complete and crushing answer to the disparaging remarks of his accuser. The fact of the matter is, Capt. Williams, as manager of the Silati Mine, was the right man in the wrong place. He would be the last man in the world to say that there was an abundance of gold on a property if such were not the case; and it must be a great satisfaction to him to have his views about the Silati property corroborated by the expert—Mr. Alford. By dint of great perseverance and energy he has won for himself in Cornwall a reputation as an intelligent and reliable miner, and of this reputation he is naturally jealous. Having answered the charges brought against him, he can only say now with the immortal bard, "He who filches from me my good name, robs me of that which not enriches him, but leaves me poor indeed."—I am, &c.,

FAIRPLAY.

THE SILVER MINES OF LA LUZ.

SIR,—I have read "More Light's" letter in your issue of 25th current, aud think he would be more correct if he described the mining shareholder (in a large number of mines) not as the most patient individual on the face of the earth, but as the biggest fool.

So long as we confide our interests to a parcel of adventurers and guinea-pigs, who join a board simply for the sake of the fees, and not for any solid interest they have in the concern, so long will mismanagement result in ruin to the shareholders.

My advice to "More Light" and others is to absolutely avoid putting a penny into any concern managed by a board whose members figure on 6, 8 or 10 different companies, or whose secretary acts for other shady concerns. "Birds of a feather flock together;" and when it is seen that the pocketing of fees is the only interest the officials have in a mine, have nothing to do with it.

That the officials of the "La Luz" have so far proved themselves incapable, and utterly mismanaged affairs—buying machinery which arrives too late, and then is found not to be required, and gets chucked aside, and lays 100 miles from the mines, is the opinion of—Yours, &c.,

MEXICAN.

Apl. 28, 1891.

DICKENS CUSTERS AND EMMAS.

SIR,—Now we have entered the May month, and by private advices the snow is nicely clearing away from the above mines. The Custer and Emma Mines are expected to commence crushing almost immediately, and large returns are expected by the directors. There is every probability of their being a regular *furore* in those mines very shortly. The Custer property has a large quantity of ore stoped out on the floor sufficient to keep the 30-stamp mill on for about 12 months, and they are now stoping rich ore, so that there are certainties of a regular supply. The ore is rich in quality, varying from $100 to $1,250 per ton, and plenty of money in hand. Even if the Custer shares were double the present price they would be then the cheapest shares in the whole list. There is the likelihood of those shares being very scarce, being so well held.

The Emma property has now got into excellent prospects and good working ore, with a quantity of good ore ready for market, inexpensive to work, simply shovelling the ore into the trucks from the winze through the tunnels to just take and sell as soon as the roads are clear; the second-class ore they put through their mills on the mine. Of the whole pick of the market those two shares should be largely secured. No prospective uncertainty, but positive certainties of a good supply of rich ore at hand.—I am, &c.,

OBSERVER.

DICKENS CUSTERS.

SIR,—Anyone who has been in the habit of following the fluctuations in the mining market quotations would have to confess that there never was such an opportunity to pick up some really good shares at a ridiculously cheap rate as there is at present.

As an illustration I would draw attention to Dickens Custer shares.

These shares could, I suppose, be bought now at about 2s., whilst if the existing facts were well known and duly appreciated they would be standing at least at 10s.

This company has a very extensive property which, whilst it has been extensively worked in the past, is even yet only partially explored.

The returns from parts of the property in times gone by would read like fairy tales at the present day if the existing price of the shares can be taken as any criterion of the public estimation of their value; yet, from reports recently published from the mines' manager, a stope is being worked which gives in two different parts assays of (1) $915.75 silver; (2) $79.00 silver and $35.20 gold to the ton.

The main and most important point is that during the winter months the work underground has been quickly progressing, and now, when the mill is about to be started, there is some 2,000 tons of rich ore ready for crushing.

What does this mean? It means that the company, which has for so long been down at the mouth, is at last about to brighten up; that next month, when the mill is started, certain and continuous returns will be made, and the mines' manager will no longer need to draw from London for supplies, but will be able to pay his own expenses; and this, in a company which practically has not a farthing of liability, is next door to, even if it is not actually, a dividend.

When a comparison is made between this company and some of the shady South African ventures which are loaded up with debt, probably without any ore, certainly without machinery or money to work it, I think there can be little doubt as to the soundness of the advice now given to those who are out of these shares "to get some at present low prices," and to the shareholders not to turn out at any *little* rise, but wait for a thumping advance, which is sure to come.—I am, &c.,

A LARGE AND INCREASING HOLDER.

Brentwood, Essex,
Apl. 28, 1891.

THE DIVIDEND GOLD MINES OF VICTORIA.

DIVIDENDS amounting to 526,749*l.* 16s. 1d. were declared by mining companies during the year 1889, being an increase of 1,468*l.* 14s. 4d. over the amount distributed in 1888. Ballarat heads the list with 220,942*l.* 15s. 5d., then follow Sandhurst, 127,120*l.* 2s. 6d.; Maryborough, 54,163*l.* 14s.; Castlemaine, 46,166*l.*; Gippsland, 37,336*l.*; Beechworth, 32,734*l.* 6s. 8d.; and Ararat, 8,286*l.* 17s. 6d. The Madam Berry Company, at Creswick, which still keeps up its reputation as the principal dividend paying mine in the colony, paid to its shareholders during the year the large sum of 81,000*l.*, of which 24,300*l.* was divided during the last quarter. Several other companies also declared large dividends during the same period (1889), notably —The Star of the East Company, Ballarat, 40,800*l.*; Berry Consols Company, Creswick, 39,500*l.*; Great Extended Hustler's Company, Sandhurst, 37,400*l.*; Long Tunnel Extended Company, Stringer's Creek, 36,480*l.*; and North Johnson's Company, Eaglehawk, 24,375*l.* In mining for gold there were, on the 31st December last, 24,047 miners employed—viz., Europeans, 20,668; and Chinese, 3,379. Compared with the returns for 1888, this shows a decrease of 1,095—Europeans, 705; Chinese, 390. There were also, at the same date, 494 miners employed mining for metals and minerals other than gold, more than half of whom, namely, 251, were engaged in coal mining. The wages of miners in the different mining divisions vary from 2*l.* to 2*l.* 10s. per week of six days, working eight hours per day. General managers receive from 3*l.* 10s. to 10*l.*; legal managers, 10s. to 5*l.*; mining managers, 2*l.* to 10*l.* per week. From examination it will be seen that Queensland had the highest yield for the year, viz., 737,822 ozs. Victoria comes next, with 614,838 ozs.; then follow New Zealand, 203,211 ozs.; New South Wales, 119,758 ozs.; Tasmania, 33,050 ozs.; and Western Australia, 15,492 ozs. The amount produced in South Australia is not given, as there is no official record kept in that colony of the yield obtained.

M. B. FOSTER AND SONS, LIMITED, announce that their output of bottled beer for the quarter ended 31st March, shows an increase of 17 per cent. in the home trade, and of 6 per cent in the export department, as compared with the same period last year.

REPORTS OF MEETINGS.

BRITISH BROKEN HILL PROPRIETARY CO., LIMITED.

RESTORING THE MINE AFTER THE COLLAPSE OF THE STOPING GROUND—RESUMPTION OF REGULAR MINING EXPECTED AT AN EARLY DATE—IMPORTANT SPEECH BY A MELBOURNE DIRECTOR —NEW CONCENTRATING PLANT.

THE sixth ordinary general meeting of the shareholders of this company was held at Winchester House, on Wednesday.

James Macandrew, Esq.,

presided.

Mr. DOUGLAS PETRIE (secretary) read the notice convening the meeting.

PRESENT POSITION OF AFFAIRS AT THE MINE.

The CHAIRMAN: Gentlemen, in the remarks which I shall have to offer to you upon this occasion, it will be my duty to give you as accurate a summary as I can of the present position of affairs at the mine. It would be very unwise in me to attempt to represent matters in a more favourable light than they really are, and I shall not endeavour to do so; but in the course of what I have to say. I shall have to direct your attention to symptoms that are encouragiug quite as much as those that are discouraging. In the report that is in the hands of all of you, and which I presume you will take as read, the financial position of the company does not differ from that which you were led to expect—that is, in so far as it deals with the six months comprised in the directors' report. It was abundantly clear that with our ore-reducing and smelting works entirely stopped it was a matter of sheer impossibility to earn any profit or revenue at all for the company. The disappointment which we, in common with the shareholders, have experienced, relates not so much to the year 1890 as to 1891; and it certainly is an unexpected and an unfortunate occurrence that it was not until the current month of April that we have been able to earn any revenue at all. Now, the causes of this prolonged delay are explained pretty fully in the directors' report and in Mr. Howell's letter, which is appended to it, and which, I trust, you have all read. I do not, therefore, intend to take you over the same ground now; it would be wasting your time to do so.

UNFORTUNATE DELAYS.

We have chafed here under the delays that have occurred quite as much as any of the shareholders, and we have not failed to send out to the colony from time to time most urgent representations to expedite the work in hand, so that the company might be placed in a position to resume its regular operations. The task of restoration, however, following upon the collapse of the second level at shaft 1, has been of a most unexpected and formidable nature, and in carrying through the work of restoration I feel confident that Mr. Howell has done everything that it was possible to do in order to restore the mine to a workable condition. This work is now happily approaching completion, and it is to be hoped that the worst of the difficulties of the company are now over. We have in vain endeavoured to extract from our officials at Melbourne the date at which they expect to resume smelting at Port Pirie; but it cannot now be far off—I think most probably it will be in the month of June. The fact is, that on one or two previous occasions they have given us estimates of time which were not fully borne out by results, and, therefore, they have hesitated to commit themselves on this occasion—the more so as they have not been able to rely altogether upon the punctuality and promptitude of the workmen eugaged in the work of restoration. I may say, however, that when auything is known with certainty regarding this important subject, public notice of it will be given in the usual way. I would like, if you will allow me, to read a few words from a

RECENT LETTER FROM MR. HOWELL,

which will perhaps give you better than any words of mine a clear idea of the position of matters at the mine. He says:—

"The work required to reopen this crushed portion of the mine I cannot possibly over-estimate to you; it requires a view of the wreck to take in what the job means. At every step the greatest care has to be taken, and it is a constant source of thought and deep consideration as to the best and cheapest means of overcoming the several difficulties as they crop up. The relieving of the pressure from above at certain points before the face of the crush can be tapped, the extraction of the ore, and the separation from it of the broken-down timbers, the storage of this ore in the underground bins to assist the timbers to keep back the enemy, are all matters which claim attention, and I do trust that the London board will not overlook all this when they and the shareholders are getting impatient for returns from the mine. The work is a big one, but we have been facing it well, and are getting along in a safe and thorough manner, and although I have given the matter my most careful consideration, I cannot see that there is any way by which the work can be accomplished, and the mine reclaimed, except in this way. The ore turning out is really good stuff, but it is so terribly mixed, that nothing much can be done with it until the concentrating plant is got to work. Although I have put the state of affairs before you in such a straightforward manner, you must not think that I despair of setting things right; and you will be pleased to know that the new developments in the new workings are bringing to light ore of a much superior quality to what was sent to the Port Pirie furnaces during the final runs. I consider altogether that the mine has improved, and the prospects far from being so poor as when the last half-yearly report was published, are now much more favourable." (Applause.)

LATEST INTELLIGENCE BY CABLE.

The very latest intelligence that we have from the mine is contained in the following telegram, which we received two or three days ago. At the beginning he refers to the week's out-turn with the new furnace recently started at the mine. He says:—

"601 tons of ore treated, 11 ozs. silver and 26 per cent. lead. This includes a large amount of iron ore, assaying 2 ozs. silver and 20 per cent. lead. Profit on the run, 350*l*. Bullion on hand, 5,000*l*. Are treating at the present time low-grade carbonate ore, assaying 13 ozs. silver and 37 per cent. lead. The reducing capacity of two new furnaces would equal three at Port Pirie. Pushing forward, as fast as possible, alteration of concentration works. They will be the largest, and by far the most complete, plant in Australia. 5,000 tons of ore mined already for concentration. Have sold 2,600 tons to Australian Smelting and Refining Co., at a net profit of 2,000*l*. They now buy 300 tons weekly at a profit of 220*l*. Satisfactory developments by the Broken Hill Junction Co. to the east boundary on the 400-ft. level looks encouraging."

The only matters that I shall remark upon in this telegram are—first, the iron ore, which is rather

A NEW FEATURE

with us, and which is one of very considerable importance, inasmuch as it furnishes a flux for the silver-lead, and if it is found in sufficient abundance it will relieve us of a very considerable source of expense which we have hitherto had to incur at Port Pirie. Another very satisfactory matter is their remark that "the reducing capacity of two new furnaces would equal three at Port Pirie." That refers to the two new surfaces upon the same plan as the furnace which is just erected there, and which is a modification of our constructiou at Port Pirie, adapted to produce the best results from the ore that we are now treating at the mine. It is an improved design of Mr. Howell's own, and it is very satisfactory to find that it is working so well, and producing better results than those which you were getting from the large plant at Port Pirie.

CONCENTRATING PLANT.

There are also the concentration works. Some experiments have been made with the plant upon a somewhat similar plan by the North Broken Hill Co. Some of our ore has been sent there to be passed through their mill, and it is found that the construction of that mill, which is by no means so complete or so perfect as the oue we are now erecting in place of the old one, is much better adapted to deal with the peculiar ore that we have than the concentrating mill which was previously in operation at the mine; so that we trust that when the concentratiug plant is finished we shall get the best results from the improvements that have been effected in it. The accounts are in your hands, and they are given in such full detail, and seem to me so self-explanatory that I do not think it is necessary for me to take you through them on this occasion. I shall, however, be very glad to afford information upon any point which you may think requires elucidation.

PROSPECTS.

I am now brought, then, to the prospects which await us when the reducing and smelting work is fully resumed; and you will see from what you have already read and heard that they differ in some materal respects from the prospects which existed when work was compulsorily closed by the unfortunate "caving in" of the mine at shaft 1. It is perfectly true that we have not yet struck the main lode which runs through the parent company's property, and from which they have been enabled to pay their immeuse dividends; but we have by no means relinquished yet the hope of finding it on some portion of our ground. Whether that uay be in the neighbourhood of the Junction Co.'s mine, as is indicated in the telegram I have just read, or whether it may be elsewhere, I cannot say; but it is a matter to which our attention continues to be directed, and for which explorations will be made as circumstances permit. It certainly would be, as I have said before, most remarkable if the lode were not eventually to be discovered in some portion of our ground when we have had indications of its existence in so many directions all round.

FAVOURABLY CIRCUMSTANCED.

But apart from this, in dealing with the material which we already possess—with the ore which is in sight in the mine—we are circumstanced much more favourably than when we stopped working. The Australian Smelting Co. is ready to take from us a considerable quantity of ore, tolerably rich in lead, but very poor in silver, which suits their purpose and which leaves us a fair profit. Then the furnace which has been erected at the miue enables us to treat a class of ore too poor in silver to bear the cost of transportation to Port Pirie, and which hitherto we have beeu obliged to throw aside, notwithstanding that all the cost of mining had been incurred upon it. This ore we shall now be able to reduce to bullion, and of course in that shape it will amply repay the cost of sending it down to the port and shipping it from thence to England. The other consideration to which I would call your attention is the greatly improved results anticipated from the concentrating plant which Mr. Howell has been devising with so much care. We hope that this will enable us to make a profitable use of our immense reserves of galena, although that can only be spoken of with any degree of certainty when it has been brought to the test of experiment by the actual working of machinery. We feel confident, however, that the plant will produce much better results from the grade of carbonate ore which we have to work, and which is a peculiar one; that it will be able to reduce it to a form convenient and profitable for transportation, and to save a good deal of the silver, which hitherto has been absolutely lost during the concentrating process.

A FAIR CHANCE.

If, therefore, we have nothing whatever to depend upon but the ore which is actually in sight, we are in a far better position for earning profits for the company than we were in before the work stopped, and, at the same time, we have always the chance, which, in a rich district like that is a fair chance, of making discoveries by further underground explorations, which will produce more brilliant results than could be produced with the class of ore we are now working. There is one circumstance that all through has afforded me no little encouragement, and which I hope will not be without its weight in your minds also—and that is that, notwithstanding all the difficulties that we have had to encounter, the Australians themselves have never lost faith in the mine. I mean by that those who are interested in the concern, who have had their attention directed to it, who are watching closely the doings and the developments at the mine, and who are unquestionably in a better position than we can possibly be at this distance to form a judgment upon its prospects.

AUSTRALIAN OPINION.

From the other side, and from parties who are quite unconnected with

the management, we always hear the same story—that if time is only given it, the mine will come all right in the end. Well, gentlemen, I am disposed to share that view and to believe in the future of the mine also. We hear from everyone qualified to give an opinion upon the subject, that if anybody can rescue the mine from the period of depression that we have had, and bring it again into a condition of prosperity, our geueral manager is the man to accomplish that arduous task—(applause)—and I do trust, therefore, that the shareholders in England will, by a reasonable exercise of patience, be prepared to afford him that support and encouragement of which he stands so much in need in dealing with a question of this magnitude, and that they will enable him to face the task before him in that confident and resolute spirit which is best qualified to ensure success. (Applause.) The resolution I have to propose to you is, "That the directors' report and accounts for the half-year ending Dec. 31 be received and adopted," and the motion will be seconded by Mr. Harvey Patterson, who is one of the Melbourne directors.

VIEWS OF THE MELBOURNE DIRECTORS.

Mr. D. W. HARVEY PATTERSON: Gentlemen, I have much pleasure in seconding the adoption of the report and balance-sheet. The report as a whole is as satisfactory as we could expect, considering the great calamity which befel the mine in May of last year. At that time our manager, Mr. Howell, estimated that it would take eight months to put the mine in order. That this period has been considerably exceeded will not be a matter of surprise to you when you bear in mind the fact that during the first three or four months there was practically nothing done, owing to the strike; and even after the strike was settled great difficulty was experienced in getting miners to fill the places of the men who had left their work. Of course progress was naturally slow. I believe myself, however, that by June next, at all events, our smelters will be again ruuuing at Port Pirie. I speak from some personal kuowledge of the difficulties that occurred duriug the strike, for I was one of those appointed to interview and confer with the miners' delegates. I consider Mr. Howell has given in his report a very clear, concise and explanatory detail of the working of the mine. Having seen the wreck that took place I can speak with some little authority upon the subject. About a month after the disaster I went to the mine, and, accompanied by Mr. Howell, made a thorough inspection of the place. You will get some idea of the condition of thiugs at that time if you can imagine a box of wooden matches broken up into huudreds of pieces and then mixed up with ore. On looking up into the roof I could see at a distance of 100 ft. above an immense cavern, 60 ft. wide. Before I left, in Dec. last, I made another inspection of the mine, and the workiugs were proceeding very satisfactorily. Of course,

THE WORK IS A GIGANTIC ONE,

and you have only to see it to realise it. It is a wonder to me that we ever got miners to undertake the task of restoring it to order.

IMPORTANT STATEMENT.

Of the workings on the Junction boundary I have very great confidence. I believe in that direction we will get a large deposit of ore—a big bonanza will be found there yet. When I was there last Mr. Howell considered—and so did I myself—that we were then working just on the apex of the lode. In the Junction Mine at the 400-ft. level some of their best ore was found—ore very rich in native silver and chloride; and I think when we get down 50 ft. or 100 ft. lower we will come upou very good ore. It will be very hard luck if it does not come into our property. There are enormous bodies of ore now exposed to view in the mine, amounting to hundreds of thousands of tons. I can say that conscientiously, for I have seen it. There is no deception about it whatever; anybody can go and measure it. Nothing, however, can be done as regards mining in a systematic way until the effects of the disaster of last May are thoroughly repaired. When that is done, I believe there will be nothing to prevent the smelters running and a continuous supply of ore being maintained for them. (Hear, hear.) The affairs of the mine are beiug most carefully administered by the board of directors here and in the Colony.

IT IS A LONG LANE THAT HAS NO TURNING,

and I am of opinion that this mine will not be a mine only of the present, but a mine of years and years in the future. In Mr. Howell you have one of the best mine managers that ever came from America—a man whose whole heart and soul are wrapped up in trying to bring this mine to the front. Moreover, he is a thoroughly conscientious man, and I am certain that if he thought we had embarked in a hopeless undertaking he would not scruple to tell us so, and recommend the closing of the mine at once. From the report you have just heard you will see he has hope and is almost certain of being able to make

A BIG SUCCESS OF THIS MINE.

Of course, the affairs have given your directors out there a good deal of anxiety, because we thought long ere this we would be fulfilling our promise to the shareholders, and paying you 10 per cent. per annum. I am, however, almost certain that that will come if we wait a little longer. We shall not have long to wait—six months I am quite quite certain will prove one way or the other. There is one portion of the report where reference is made to a profit realised on the shares not taken up by the shareholders in Melbourne. A considerable number of shares were not applied for there, and your directors disposed of them here, and as the report states, got a very substantial return for them. I have very much pleasure in seconding the adoption of the report and accounts. (Applause.)

The resolution was carried unanimously, without auy discussion.

FORMAL BUSINESS.

The CHAIRMAN: The next resolution relates to the re-election of directors—one in this country and two in the colony.

Mr. THOMAS PIKE (director): I have much pleasure in moving that Messrs. Samuel Joshua, W. P. MacGregor, and W. R. Wilson be re-elected directors of the company. Will any gentleman amongst the shareholders be good enough to second that?

Mr. ASTON: I have much pleasure iu seconding it.

The motion was carried unanimously.

Mr. GLOVER proposed the re-election of the auditors, Messrs. Turquand, Youngs and Co., at a fee of 100 guineas.

Mr. SKEENE seconded the motion, which was carried unanimously.

The proceedings then closed.

RELIANCE MUTUAL LIFE ASSURANCE SOCIETY.

A GOOD RESULT DESPITE COMPETITION—A TRIBUTE TO A DEPARTED SERVANT, AND A FAREWELL TO A DIRECTOR—A MONETARY GRATITUDE.

THE annual meeting of the members of this society, for the election of directors and auditor, and for general purposes, was held on Tuesday, the 28th inst., at the Offices of the Society, No. 71, King William Street, E.C., in order that the annual report and statement of accounts might be presented. The notice added:—"The directors retiring by rotation are Messrs. James C. Trail, Edward Gellatly and Thomas Eykyn, and the two former offer themselves for re-election. One of the auditors (Mr. Spain) having resigned, the vacancy, thus created, remains to be filled."

Mr. W. W. Duffield

presided.

Mr. E. CLIFTON GRIFFITH (secretary) read the notice calling the meeting and also the report of the directors, which stated that during the year 879 proposals were received for the assurance of 289,335*l.*, resulting in the issue of policies for 158,335*l.*, producing in single and annual premiums the sum of 8,731*l.* 5s. 9d. A further sum of 3,757*l.* 15s. was received as the consideration for annuities amounting to 420*l.* 3s. 4d. granted by the society. The total premium income for the year was 92,540*l.* 11s. 11d., of which 6,063*l.* 16s. 7d. was paid to other offices for re-assurances. The net revenue for the year, including dividends and interest upon investments, was 118,470*l.* 5s. 6d. The death of 150 members, assured under 183 policies, brought claims upon the society's funds to the extent of 68,703*l.* 13s. 2d.; and 10 endowment policies matured, the payments in respect of which amounted to 1,273 2s. 2d. The total funds on the 31st Dec. were 740,705*l.* 15s. 6d., being an addition to the accumulated fund of 24,567*l.* 3s. 7d. The accounts and the minutes of the last meeting were taken as read.

The CHAIRMAN said: Gentlemen, and brother policy holders, it is now some years since I first took at your meetings the position of chairman, and I can only repeat on the present occasion the regret I have expressed on former occasions that some other member of the board does not occupy the position. There are two reasons why I could wish this. One is that it is extremely difficult for a chairman on an occasion of this nature to clothe his remarks in language not previously uttered. The other reason is that it might possibly be as well for some other gentlemau to take up the position, in order that it might be known that there are more than one member of the board capable and willing to occupy this important post. However it is, I may say, the universal desire of the board that I should occupy the position on this occasion, and I will, therefore, endeavour to lay before you in language as clear and as short as I can the present position of the affairs of this society. We are not one of those leviathian societies, which present very large figures, neither does it always follow that very large figures necessarily make a large amount of success. I quite conceive that

A GOOD, SAFE AND PROFITABLE BUSINESS MAY BE EVOLVED OUT OF SMALL FIGURES,

provided the expenses are commensurate with the income of the society. It may perhaps have occurred to some of our members that the figures with regard to new business are not so large as in previous years. There is one thing, at all events, which is exceedingly gratifying, and that is, that although for the present year the new business is not quite up to the last, our addition to the accumulated fund is considerably larger, and I think, therefore, you will be of opinion that although the figures have in a slight degree fallen off, we are not in a less favourable condition, but quite the contrary. You will observe that there has been an addition to the accumulative fund of 24,567*l.* 3s. 7d. I think, on the whole, considering the enormous competition there is amongst insurance offices at the present day, and especially when that competition has been embarked in by some of the old companies in the City of London, who never did it before, we may be satisfied with the amount of new business we have done, especially when we call attention to the fact that while the new business has not been larger, we have added to the accumulated fund, and have been able very materially again to reduce the annual expenditure in connection with our business. Taking

THE FIGURES IN THE ACCOUNTS

to be correct, I think you will be of opinion that our position this year is not an unsatisfactory one. With regard to the mortality, it is a little above what we anticipated, but I think from what I have seen of many kindred societies the mortality has also been greater with them, especially amongst the older policy-holders. This was, no doubt due in a great measure to the severe weather we experienced towards the end of last year. It may perhaps be as well to say that in my opinion it does not always follow that a large mortality amongst old members is a serious evil, and although none of us desire to see those that are assured die, but, on the contrary, hope that they may live to a good old age, we must remember that mortality must come some time to the aged, and that although the amount of mortality may be greater than we like among old members, the amount of expenditure in that way must decrease. Having said so much on this subject, I will call attention to one or two points which appear on the face of the report. The funds, as you now see, amount to 740,705*l.*, and the surplus of income to 24,567*l.*, and the decrease in the rate of expenditure, as shown in the balance-sheet, amounts to nearly 3 per cent. of the net premium income. We hope that our expenditure will be further reduced in the future, and I venture to say that our rate of expenditure in carrying on our business during the past year will bear favourable comparison with a large number of kindred offices in London. I do not think it necessary to address you at any great length on the favourable aspect of the balance-sheet in respect to the reduction of the expeuses, because someone might say "Oh, he did so because he had nothing better to speak about than that the expenditure was a little lower or a little higher in comparison with

the premium income of other companies." Be that as it may, the directors have performed what they promised to undertake last year, and have succeeded iu making a considerable reduction in the annual expenses of the office. Well, now, gentlemen, I will call attention to a subject which is of a very painful character, and it is

THE LOSS THAT WE HAVE SUSTAINED OF OUR OLD AND VALUED FRIEND AND COLLEAGUE, MR. EDWARD BUTLER.

There was no gentleman connected with this company who was more popular amongst the directors and every person connected with this company, down to the lowest servaut who served the society—and when I speak of them as servants, I do not use the word in any derogatory sense, but as meaning those who are in the employment of the society, and who had probably a better knowledge of the secretary as he was then than the directors could possibly have. I can only say this, that no such painful event has happened in this society during the long period that I have been connected with it. I had known Mr. Butler for a great many years before he was connected with this society, and he was a constant and firm friend. He was a gentleman on all occasions, and I do not know that I can say anything better of a man than that. The interest which he took in the society was unbounded, and the cordiality and geniality which he always showed at the meetings of the board met with the entire approval of the directors, and was also a source of very great pleasure to the directors. No man living could have done more than the late Mr. Butler for the purpose of serving the best interests of the society in every shape and form. The words of the report convey to you the feeling of the directors, and I am perfectly satisfied that they also convey the deep feeling of every individual connected with the society in any capacity. (Applause.) I would further remark with regard to him that he always exhibited on every occasion the most unselfish character. His great desire was to assist others, and on no occasion, and I am sure in this I will be confirmed by all the members of the board, did we ever see anything in our departed friend which was otherwise than of the most unselfish and generous character. His loss is deeply regretted by us, and I am sure of one thing, that if I were to dilate for half an hour upon his merits or upon the severe loss which we have had in his being taken from us, I could not explain to you better than I have done the strong feelings which we have upon the subject. Gentlemen, there is another rather painful thing, although not precisely of the same character, and that is

THE RETIREMENT FROM THIS DAY OF OUR FRIEND, MR. THOMAS EYKYN.

I am authorised by him to say to you that the sole reason why he has felt it his duty to resign his position as director in this society is that his doctor has prohibited him from undertaking these duties any longer. He has been in delicate health, as you all know, for years, and I know that he never did anything in his life more painful to his own feelings than when he was compelled to write and tell us that he must retire from his position as director of the society. I should like to say one or two words with regard to him. He is a man of immense knowledge of men and things, and he was ever ready to place at the disposal of his brother directors and the society every atom of knowledge which he possessed, and we on numerous occasions have found that the information he was able to give to us and to the society was of a most important and valuable character, and at the same time it was placed before us in such a way that we were perfectly certain that everything he said was of the most honest character, and his sole desire was to tell us what he believed to be for the best interests of the society. We all very much regret, indeed, to have lost him from amongst us. He was very genial and very amusing, and he was ready at all times to place his great knowledge and business habits at the disposal and advantage of the society. We all very deeply regret, indeed, that we should lose sight of him at this board, although we know, everyone of us, that he entertains towards us, and every individual of the society at large, the best and the kindest feelings. Gentlemen, there is another point which appears on the face of this report, and that is that there is a vacancy in the position of auditor. Mr. Spain has felt it his duty to resign, for reasons which, I believe, are tolerably well-known. He is connected with some other kindred society, and he cannot be the auditor of two societies at once, and that being the case he has felt it to be his duty to resign. It rests with you to say who shall be his successor, but of this I am very certaiu, that you will pick out some gentleman who will prove to be very useful to his brother auditors, and at the same time one who will not hesitate to point out anything which he discovers in the figures of this society which he thinks the attention of the directors, or even the policy-holders should be called to. A man is no use as an auditor unlesss he is prepared to take upon himself the responsibility of calling attention to everything which in his judgment is not quite right with regard to any of the accounts which may be placed before him. Gentleman, I do not know that it is necessary for me to detain you much longer. I notice that it is the habit of a large number of chairmen of insurance offices to dilate at great length upon figures, and upon a variety of other subjects, but I generally get up from the perusual of those speeches very little more informed than I was before. There are a great many things connected with insurance offices which are truisms, and which every person should make himself acquainted with. If I were to tell you that this is the grandest society of the kiud in London you would not believe me—(laughter)—and if I were to tell you that we were able to do great things you would say, "Well, so are other societies." The fact is this, that the best speech the chairman can make at meetings of this kind is to dilate solely upon the figures as they appear; to tell the houest truth with regard to theui, and to invite the opposition or otherwise of those who desire to make any observations upon the subject. I can only say this, that you have

A BOARD OF DIRECTORS WHO ARE EXCEEDINGLY DESIROUS TO DO THE BEST THEY CAN

for those whom they serve, and you have a remedy in your own hands if you think that is not the case, on any occasion that they come up for re-election you can turn them out if you do not approve of their conduct. With regard to the vacancies on the board, I am bound to tell you that we are not full as a board, and we have had under our anxious consideration on more than one occasion the question of appointing new directors, and the conclusion at which we have arrived is this, that if we are to carry out the system of economy which we have endeavoured to carry out during the last few years to its fullest extent, the directors believe—of course, we are subject to the superior judgment of the policy-holders on the point—that the board is sufficiently numerous and sufficiently expensive at the present time, and that it is not necessary, at all events on this occasion, to add to their number. I hope you will not consider that I am in the slightest degree dictating to you, or taking from you a privilege which you possess. If you choose to use that privilege, that you will have another one or two directors, all we shall have to do is to bow to your decision. I have simply told you as plainly as I can what the feeling of the directors is at the prescut time; that it will be economical and wise in their judgment at the present moment not to increase the number of the directors. Gentlemen, I have uo further remarks to make upon the subject of this report. I hope I have not said more than is necessary, or less than you have reason to expect from a chairman placed in the position I am, and if there is anything ou which you desire information I shall be only too pleased to give it to you, or to answer auy questions which you may put to me. I now beg to move, "That the report and statement of accounts be received and adopted."

Mr. W. R. Knobel, who seconded the adoption of the report, observed that there was every reason why the policy-holders should be satisfied with the present position of the society, and that the figures, as shown in the accounts, when compared with previous years ought to commend themselves to all. He thought the society was makiug satisfactory progress from every point of view. He sympathised with the remarks of the chairman respecting the loss the society had sustained in the death of Mr. Butler, aud in the retirement from the board of directors of Mr. Eykyn.

DISCUSSION.

Mr. G. Biddell, jun., desired some information as to the balance-sheet, and expressed the opinion that a higher premium should be charged to new policy-holders,

The Rev. Chas. Croslegh alluded to the profits of other societies, and desired to know when a further division of bouus would be made.

The Chairman, in reply, alluded to the rate of interest now prevailing, expressed the hope that the rate would soon be higher, and that the Reliance Mutual Society would participate iu that improvement. With respect to the bonus, the present quinquennium period ended Dec. 31, 1892, and the directors were not prepared at present to say what the next bonus would be.

The report and accounts were then adopted.

The retiriug directors, Messrs. James C. Traill and Edward Gellatley, were re-elected, and Mr. Knobel was elected auditor, in the place of Mr. Spain, who had resigned.

GRATITUDE.

Mr. W. M. Tuffnell (a director) proposed, "That, seeing that Mr. Edward Butler, who had died, leaving his widow in somewhat straitened circumstances, the society, in acknowledgment of the great service he had rendered, grant the widow an annuity of 150*l*. a year."

Mr. Purcell seconded tbe resolution, which was uuanimously adopted.

THANKS.

A vote of thanks to the chairman, to the secretary, and to the staff closed the meeting.

THE PARCOCHA IRON ORE AND RAILWAY CO., LIMITED.

MR. CHARLTON'S VISIT TO THE MINE AND HIS OPINION OF THE PROPERTY—SATISFACTORY POSITION AND GOOD PROSPECTS.

The ordinary general meeting of the company was held at Winchester House, Old Broad Street, in the City of London, on Thursday, Apl. 30, to transact the ordinary business of the company.

Sir Bernhard Samuelson, Bart., M.P.,

presided.

Mr. Edward Charles (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The Chairman said: Gentlemen, in asking you to adopt the report aud statement of accounts which have been circulated among the shareholders, I thiuk it might be desirable if at the outset I should call attention to a matter which, I understand, has becn the subject of some comment—whether amongst the debenture-holders or the shareholders, or among the public only, I am not aware. I allude to the question of the amount which the vendors had to provide in order that interest upon the debentures and the dividend upon the preference shares should be paid. Thc amount is somewhat under 41,000*l*., and was required to make up the profits, which were between 15,000*l*. and 16,000*l*., to the sum required for the purpose which I have already named. If anyone read the prospectus, which was issued at the outset of the company's inception, they would see that it has always been accepted that the directors would have had to make a provision of this kind, and the only question, therefore, that could arise in the minds of the debeuture-holders or shareholders was whether the amount was larger than they had anticipated. Well, it is in regard to this that I should like to say a few words in explanation. It is stated in the report—and I cau confirm it from the statements which have been made to me by Mr. Charlton, the engineer, whoui we sent out to satisfy ourselves as to the progress which is being made—that the mine has been worked by the founders chiefly with a view to putting it iuto such a condition that when it is taken over as a working concern by the company it shall be in the best condition for economical working. The amount of ore actually raised and sold has been considerably less than during the previous year.

THE VENDORS FULFIL THEIR CONTRACT TO THE LETTER.

I believe the quantity of ore sold has only been about 80,000 tons, as agaiust 130,000 in the previous year. There would have been no difficulty in working the larger quautity if it had bcen thought to have been for the permanent iutcrest of the mine, but the vendors having regard to that interest—and I am not surprised at it, because they have a very large stake in it, in fact, I am not sure whether they are not the largest sharcholders and debenture-holders—did not

think so. Their interest is that when the mine is handed over to the company as a working mine that everything shall be in the best condition for economical working during the entire life of the mine. But, setting aside this, I would just call attention to the fact that the profit, after all, has been in excess of 15,000*l.* during the year. If, instead of 80,000 tons having been worked, 450,000 tons had been worked, the profit—even after the adverse circumstances which prevailed—would have been something like five times as large. In addition to that, the working expenses, which are now very heavy, owing to the ore being conveyed by railway and barges, instead of being 4s. 6d. per ton, which I believe is the case at present, will be reduced to something between 2s. and 2s. 6d. per ton, which is about the charge incurred by mines similarly situated on the Bilbao River. Therefore, taking the thing at the worst, and without making any allowance for drawbacks in the working of the mine in the manner in which the mine has been worked, I think it will be apparent that this result is very far from being discouraging, and certainly not such as need make anyone afraid of the holding or the stake which he has in the undertaking. I can say for myself that

I AM PERFECTLY SATISFIED

in having invested a very considerable sum in this undertaking, and although it is not my duty to give advice to any debenture-holder or to any shareholder, I think I am justified—in fact, I think it is my duty to say that I have every confidence in the company, and that that confidence is not less than it was at the outset. Well, now, the directors thought that it would be agreeable to those interested in the mine that some inquiry should be made as to the progress towards the condition in which it will be proper that it should be taken over by the company. Mr. Charlton, who was sent out by the directors, returned on Tuesday evening. I have scarcely had time to go into his report in detail, but the following are the main points that I have gathered from him, and which it may be interesting to the shareholders to be informed of.

MR. CHARLTON VISITED THE MINE

by my instructions before I became definitely interested in it, so that he is able to compare the state of things at that time with what is the case now. His report to the directors is this:—Whereas at that time, owing to the way in which the mine had been worked, there was a quantity of refuse considerably in excess of the average of good mines in the district, now that is no longer the case. The average of refuse is now something like 25 per cent., which possibly corresponds with all the good mines of the district. The working faces have been bared almost from end to end, and the top bearing removed back, this being very extensive work undertaken by the vendors, and which will be of advantage to the good and economical working of the mine. The top bearing, which the founders have agreed to remove, has been set about in a workmanlike manner, with ample rolling stock and engine power. The shaft and tunnel have made considerable progress, rather more than three-fifths of the tunnel being completed. I then come to a rather big point, and it is this—that the inclines of the railway will require great exertion if they are to be completed by May 1 next year—the period named in the contract with the founders. With regard to this and other similar points, however, I may say that it is to the interest of the vendors to complete the works as quickly as possible for two reasons: In the first place, on account of the guarantee they have given, and which is to them a source of expense, and in the second place owing to what any gentleman cognisant of works of this kind must be aware of, namely, that the longer the works are in hand the more expensive they will be. The report proceeds: "Not much progress has been made with the actual dredging of the shipping place, owing to the time taken in preparations; these preparations being complete, the work is now going on rapidly. Nothing has been done as yet to the workshops and engine sheds." I believe the best locality for that has been agreed upon, and I have no doubt they will now be proceeded with rapidly. The engineers are pushing on the work energetically, and are well seconded by the contractors. The work appears to be done substantially and regardless of cost to the founders, but in consequence of the amount of work still to be done the time for completion may be somewhat exceeded. Much will depend on the weather as regards this. And here I can only repeat again what I said just now, that it is to the interest of the vendors to complete as soon as possible, and that they are sparing no expense for that purpose. The whole property has been transferred to the company, and the transfers have been registered, with the exception of a small portion of the Parcocha Mine, in the registration of which there is at this moment a technical objection, which our solicitors are informed by the solicitors in Spain is in the course of being removed, and probably will be removed next month or the month after. In the meantime the company has full possession of it. There is no substantial difficulty, as the ore is being got out of that very part and shipped. Well, gentlemen, that is the statement which we have to make to the shareholders. One of our body, Mr. Gjers, accompanied Mr. Charlton. He is present here to-day. I do not know whether you would wish to hear anything from him, but I believe he will be able to confirm all that I have stated. There is just one matter which I ought to mention, and that is with respect to

THE ROLLING STOCK.

In regard to this I have this assurance, and I venture to think I have no reason to doubt it. It reads "150 waggons have been ordered, 25 have been sent, 25 are now ready for shipment, and the remainder will be delivered at the rate of about 30 per month." Seven engines were ordered in May last year, and ought to have been ready now according to the contract, but we have not yet heard that they have been delivered. The ropes will be ready next month, and the necessary quantity of rails will be delivered at a month's notice as required. In conclusion, I think it is desirable that I should state that although the directors have taken upon themselves to send out an engineer, his report in no way detracts from the responsibility of the vendors. The time for ultimately proving all the works will be when the works are completed, and not before. Everything will be done by the directors, so far as their judgment enables them to do it, in the interests of the shareholders. At the same time, I should not be doing my duty if I did not again emphasise the fact I have already stated in giving you an abstract of the report, that I believe the vendors are not only willing, but are also more than willing. That is to say, they are engaged in the act of executing in

A BONA FIDE AND HONOURABLE MANNER

the whole of that which they have undertaken by their contract. I now beg to move the resolution, "That the report and accounts of the company be adopted."

Mr. GJERS secouded the motion, and said that he had just returned from an inspection of the mine, and he could confirm all that the chairman had said. The work at the mine was proceeding in a very satisfactory manner, and, as far as he could judge, the vendors had spared no pains or expense to make the work thoroughly efficient. Fair progress had been made, and everything that was stated in the original prospectus would, he had no doubt, be carried out, and he saw no reason to doubt the statements of the vendors.

SIR CHARLES LEWIS: If he understood rightly that the paying standard which they had to reach was 450,000, and also the guarantee of the vendors was limited by time or events.

The CHAIRMAN in reply said that the directors had every reason to believe that the mine would be able to turn out

450,000 TONS PER ANNUM.

The reason which he had given for the quantity be limited at present was in the opinion of the board a *bona-fide* reason. He would like to further add that the means of transport were at present very limited and incomplete. The transport was carried on by means of an aerial railway, which they could not work when the weather was at all unfavourable, and so the work was very much lowered thereby. There was no reason that he could see at present why when the railway was constructed, and everything going on in a satisfactory manner, they should not be able to turn out 450,000 tons per annum, and there was no doubt that that quantity could be raised when the mine was in proper working order. The guarantee as was stated in the contract, which was open for inspection at the company's offices at the time of the floating of the company, would contiuue until the completion of the mine and railway to the satisfaction of the company's engineers.

The CHAIRMAN then put the resolution, which was carried unanimously.

The following resolution was moved by the CHAIRMAN, seconded, and carried unanimously:—"That a dividend at the rate of 7 per cent. per annum be declared and paid, less the interim dividend of 3½ per cent., which was paid on Nov. 1.

Mr. J. DE GALINDEZ moved that Mr. W. D. Pete should be re-elected as auditor for the company.

Mr. HAMMOND seconded the motion, and said that he thought they could not have a better auditor than Mr. Pete, as that gentleman was professionally connected with so many steel and iron companies, and thoroughly understood the busiuess. The object of the formation of the company was to deal not only with the transport of 450,000 tons of ore from their own mine, but possibly with also

HALF A MILLION TONS FROM NEIGHBOURING MINES.

In the prospectus the price estimated for the ore had been 7s. per ton, and at the present time, notwithstanding the general depression which he had no need to remind them of, and which had affected the whole condition of trade and consequently depressed the iron market, he could sell as much ore as he could get at 8s. 3d. per ton free on board. He thought that that was a very satisfactory state of affairs, and he had every confidence in the future of the company.

The resolutiou was carried, and a vote of thanks to the chairman closed the proceedings.

THE POORMAN MINES, LIMITED.

THE MOST FAMOUS BULLION PROPERTY IN THE WEST—CASH PAYMENT TO THE VENDORS DEFERRED TILL 30 PER CENT. HAS BEEN PAID TO THE SHAREHOLDERS.

AN extraordinary general meeting of this company was held on Tuesday, at the Offices of the company, 1, Leadenhall Street, for the purpose of considering, and, if thought fit, passing resolutions for the increase of the capital and sub-division of the shares, and for the taking over of the Bear Creek Gold Co., Limited.

Mr. H. J. Fischel

presided.

Mr. D. OVENSTONE (the secretary) read the notice convening the meeting.

The CHAIRMAN, having regretted the absence of one of the directors, Mr. Livesey, said: Gentlemeu, we have met together to-day in accordance with the notice which was published in the newspapers, and for the purposes stated thereiu. As you are aware, this company acquired three valuable mining claims from the vendors, upon which persistent development work has been carried on for some two and a-half years at cousiderable expense to the then owners. As we came into possession of the property in Oct. last, rather late in the season to couveniently and economically lay in our winter supplies for milling purposes, the board determined to coutinue development work at a minimum of expense during the winter and early spring months, and increase the value of ore reserves for milling purposes during the summer and coming winter. To this end some 1,100 ft. of tunnelling has been completed, with a view to opening up the veins in the deeper workings of the property belonging to the company. You will be pleased to learn that at a point 475 ft. from the surface the lode has been cut during the first week of this month, the pay width of the vein averaging 18 ins. of ore, valued at $80, or 16*l.*, per ton. This vein has been exposed for a length of 900 ft. in the upper tunnel, which is 75 ft. from the surface, where it is estimated that the ore intact is valued at over 100,000*l.* The importance of this winter's work will be apparent to all uow that it has been demonstrated that the same veiu is of the width and value named at 475 ft. in depth. Another tunnel is being driven with a view to cutting the lode at 775 ft. in depth. The 475-ft. level tunnel is also being pushed forward to reach a point where there is a junction of three veins on the property. It was at this junction that some six millions of dollars was taken out down to the 400-ft. level. The ore shoot goes down and is intact at the bottom of the shaft 450 ft. from the surface, and it is iintended to cut it 300 ft. deeper.

NO MONEY HAS BEEN PAID TO THE VENDORS FOR THE PROPERTY.

They have taken fully paid shares for their interest, a cash payment of 5,000*l.* out of the earnings of the mine being deferred until after the shareholders have received a dividend of 30 per cent. per annum. No security has been asked or given for the payment of this sum, and an absolute transfer of the property has been made vesting the title in the company. Arrangements are about to be concluded with a reduction company to treat the ores produced by us on most favourable terms to this company, saving us the trouble and expense of keeping a staff to run the mill and providing supplies for same. The utmost harmony prevails at the mines, and the vendors are using all their local influence to the benefit and welfare of the company in every respect. We can safely say that probably better prospects and greater certainty of success could scarcely be wished for than those which belong to us as shareholders. This brings me to the next point, which is the first resolution proposing an increase of our capital to 75,000*l.* by the addition thereto of 100,000 shares of 5s. each. The object of this is, as stated in resolution No. 3—to be proposed presently—in order to purchase the property of the Bear Creek Gold Co. for 25,000*l.*, in fully paid-up shares in this company. According to reports in our possession, the property is 25 acres in extent, including 1,500 ft. by 600 ft. of mineral lode and a mill site of 25 acres, together with water rights. The vein has been opened at 16 points on the surface, showing

AN AVERAGE OF $50 PER TON,

the width of the vein being 2 ft. at the surface, and 3 ft. wide in the adit tunnels. From 4 to 6 ins. of the vein has assayed as high as $1,300, or 260*l.*, per ton. The company has paid dividends at the rate of 20 per cent. per aunum, and being a small capital and a valuable property, the board have favourably considered its purchase by this company, and submit to you the resolutions contained in the notice for that purpose. The ore can be carted from the mine to the reduction company's works, for treatment with the Poorman ores, at a minimum of cost. Although the board do not busy themselves with the market price of shares, still in this instance it is only natural that some reference should be made thereto. Before the collapse in everthing during last autumn the shares of the Bear Creek Co. stood at 2*l.*, and for a long time at 1*l.* 10s. to 1*l.* 15s., so that in acquiring the property at 1*l.* 5s. for the 1*l.* share, we are purchasing at much less than the market has valued the property at. We believe the benefit will be substantial and lasting to this company as affording another means of ore supply from

A VIRGIN PROPERTY,

and thus swell the revenue of this company in an economical manner also. We have not taken this step without consideration and consulting those largely interested, so that, although the resolutions will be formally put to you in the order in which they are set forth on the notice, the directors have received the unanimous endorsement beforehand of their policy. Resolution No. 2 deals with a sub-division of the existing shares of the company into shares of 5s. each. This is a matter which is purely one of individual opinion, and one which the directors are not deeply concerned in one way or another. It gives more shares—namely, 300,000 instead of 75,000*l.*—and is probably thus more popular to those whose business it is to buy and sell shares. It also affords an opportunity for persons to become interested in a good concern who could not afford to buy 1*l.* shares but could afford to buy 5s. shares. I shall be pleased to answer any questions within my power, or to hear any expressions of opinion on these various matters, before proceeding to put each resolution to the meeting.

Mr. BROTHERTON: Gentlemen, I think that we have heard with interest the facts which the chairman has placed before us, which to some extent, in a concise form, embrace the various reports which have been received since the company took over the property, and continued the development and working from the month of Oct. last to the present time. It must be a source of gratification to you to find that the surveys which have been made with respect to the development were correct, and although the distance run was considerable, the calculations have not been 5 ft. out of the original surveys. We ran an adit level 475 ft., and we should have struck the vein at about 1,100 ft. from the entrance of the tunnel. We have reached the vein only 5 ft. out of the calculation, which is very good, and is evidence that

THE OFFICIALS WHO HAVE THE WORKING OF THE PROPERTY ON THE OTHER SIDE KNOW VERY WELL WHAT THEY ARE ABOUT.

In the early part of this month we received cable information that the shoot of ore in the tunnel had gone down, as we expected, to the 475-ft. level, where we struck the back of the shoot, and on the floor of the tunnel the ore is intact, showing that the vein goes deeper than 475 ft. Another tunnel is being driven 300 ft. deeper to tap the vein at about 775 ft. The previous history of this property is well known throughout the United States as being the most famous bullion producing property in the West, and we have every reason to believe that what has been done will be done again in connection with this company. The famous shoot of ore which produced

$6,000,000,

down in the 400-ft. level, remains intact, at the bottom of the 450-ft. shaft, and when we get under this vein there is no reason that we should not reap as good a harvest. I am sorry there are not more shareholders here to-day; our constituency is not very large, but the shares are very well and very influentially held. I do not think that we are making a mistake in adding to this property a virgin property, which, according to the reports received, seems to be very rich. The idea of having our ore milled by a reduction company is, I think, a very good one, inasmuch as it saves the necessity of keeping an expensive staff for the mill, and supplies for the same, and also there is a save in respect to renewals and renovations, consequent upon the repairs to the machinery, which result in a considerable sum during the year. Personally, being a large holder of shares in the company, I am very much in favour of the increase in the capital of the company for the acquirement of the other property, and also the sub-division of the shares from 1*l.* each to 5s. The capital is very small, and is only 75,000*l.* even when increased, and looking at the subject from every point of view I think that the larger number of shares in the company is more beneficial even to the individual shareholder himself. (Applause.)

The CHAIRMAN: If there are no questions, I will move the first resolution, which is:—"That the capital of the company be increased to 75,000*l.* by the additional issue of 100,000 shares of 5s. each, with power, nevertheless, to increase the capital as in the memorandum of association mentioned."

The resolution was seconded by Mr. CAVANAGH, and carried.

The CHAIRMAN moved, and Mr. SMEDLEY seconded, "That the whole of the former shares of the company be subdivided into shares of 5s. each, so that the capital of the company be 75,000*l.* divided into 300,000 shares of 5s. each," which was carried, and

On the motion of the CHAIRMAN, seconded by Mr. MORLEY FLETCHER, the following resolution was also carried:—"That the directors of the company be authorised to purchase the entire property of the Bear Creek Gold, Limited, at or for the price of 25,000*l.* to be paid to the liquidator of such company by the issue to him, or as he shall direct, of 25,000 fully paid-up ordinary shares of 1*l.* each of and in the company, and upon such other terms as the directors may see fit."

Mr. BROTHERTON: I beg to propose a vote of thanks to the chairman for the arduous duties which he has performed.

The resolution was seconded by Mr. CAVANAGH, and carried.

The CHAIRMAN: I am much obliged for the vote of thanks. I think we have got

A MAGNIFICENT PROPERTY,

and I expect we shall have very handsome returns indeed.

The proceedings then terminated.

BEAR CREEK GOLD, LIMITED.

AMALGAMATION WITH ANOTHER COMPANY.

AN extraordinary general meeting of the shareholders of this company was held on Tuesday, at the Offices of the company, 1, Leadenhall Street.

Mr. C. G. Penney

presided.

The CHAIRMAN said that the shareholders had been called together on that occasion for the purpose of passing the resolutions set forth in the notice calling the meeting for the amalgamation of the Bear Creek Gold Co. with the Poorman Mines. For that purpose the directors proposed that their property should be sold to the Poorman Mines Co. for a sum of 25,000*l.*, in fully-paid 5s. shares. The shareholders in one company were largely interested in the other, and the directors had thought that it would be better if the two companies were worked under one management. The shares of the Bear Creek Co. had been valued at 2*l.* in the market, but like all other mining shares they had suffered from the recent depression. The directors proposed to sell the 1*l.* shares for 1*l.* 5s., and that arrangement had met with the approval of 75 per cent. of the holders of the capital of the company. The prospectus and copies of the reports of the Poorman Mines could be seen by the shareholders, so that they could judge that there were no disadvantages to be associated with the property. Their own mines had been

UNDER DEVELOPMENT WORK THE WHOLE WINTER,

and were ready now to make ore shipments for spring and summer, which shipments would be treated with the ore of the Poorman Mines, Limited. The chairman then proposed the following resolution:—"That the company be at liberty to enter into an agreement for the sale of the property of the company to the Poorman Mines, Limited, at or for the sum of 25,000*l.*, payable in ordinary shares of that company, such shares to be divided amongst the shareholders of the present company, so that they shall receive five shares of 5s. each in the Poorman Mines, Limited, for every share that they hold in the company, and upon such terms and conditions as the liquidator may think fit, and to carry a scheme in reference thereto, or to pass such resolutions in regard to the sale of the property of the company as may be deemed desirable," which was seconded by Mr. CAVANAGH, and carried.

The CHAIRMAN moved, "That the company be wound up voluntary and a liquidator appointed," which was seconded by Mr. CAVANAGH, and carried.

A vote of thanks to the chairman closed the proceedings.

THE EMERALD MINES OF COLOMBIA, LIMITED.

NO QUORUM—ADJOURNED FOR A WEEK.

THE ordinary general meeting of this company was called for Thursday last, at the Offices, 23, College Hill, Cannon Street, E.C.

Mr. W. B. M. Lysley

presided.

A considerable amount of time was wasted awaiting the requisite quorum, which failed to turn up at all, and, therefore, no formal business could legally be transacted.

The CHAIRMAN, however, in a conversational and informal way, said that they had been led to hold the belief, based upon the hopes of the owners of the property before it was sold to the company, that paying results would have been achieved at an early date. The directors were of the opinion, however, that the future of the company would prove ultimately to be satisfatory. The property was, in his opinion, a good one, and all that was needed to insure success was greater capital.

THERE WAS A LARGE AMOUNT OF MONEY OWING TO THE COMPANY,

and if the sum of 3,600*l.* was forthcoming from France there would be no need to curtail the expenditure at the mine. They had received advices by cable of the finding of emeralds.

Under the articles the meeting was then adjourned until Thursday, next (May 7), at same time and place, viz., 23, College Hill, at 2.30 p.m.

THE ORIENTAL (TRANSVAAL) LAND AND EXPLORATION CO., LIMITED.

FARMS SURVEYED—REEFS SCARCE, BUT COAL AND IRON FOUND—SOURCES OF REVENUE ESTABLISHED—RAILWAY APPROACHING.

THE second ordinary general meeting was held at the Cannon Street Hotel, yesterday, for the purpose of receiving and passing the report and accounts for the 15 months ending Dec. 31, and to appoint an auditor for the ensuing year.

Mr. C. Von Buch

(chairman of the company) presided.

Mr. J. A. SCRIVENER (secretary) read the notice of meeting.

FARMS SURVEYED AND WORK BEGUN.

The CHAIRMAN: Gentlemen, on the last occasion when my colleagues and I had the pleasure of meeting you, it was only a few months after the company's formation, at what was called the statutory meeting, which is required by law to be held within four months of the date of registration, and on that occasion we had nothing to tell you. To-day we beg to present to you the report and balance-sheet for the 15 months ending Dec. 31 last. We have made this report as full as possible, that all the shareholders may know exactly what has been done in the way of developing the properties, and I trust you will find the record satisfactory. Of course after formation time must elapse before the properties can be transferred to the purchasers, and the surveys and boundaries settled, and this causes much difficulty in South Africa. We have, however, received a cable from the manager there, stating that the title deeds of the property are now in our possession. We are also informed that out of the 18 farms we possess no fewer than 14 have been surveyed and the boundaries fixed. That shows what has been done in that direction. We have also sent out prospecting parties during the last year to our various farms. I regret to tell you that we have not found numerous reefs containing large quantities of gold, but there are undoubtedly auriferous reefs on the property, and what is perhaps even more valuable, having regard to the present state of the gold industry in the Transvaal, our managers tell us that on some of those farms he had found coal and iron. There is another feature which I think is very satisfactory. It is proposed by the Transvaal Government to

CONSTRUCT A RAILWAY AT AN EARLY DATE.

from Delagoa Bay to Pretoria. That railway is passing close by the company's property, and, in fact, the pegs of the proposed survey are on one of our farms, and we shall endeavour to get the station there, and a small township which may become very valuable. (Hear, hear.) We have also acquired townships at another spot where the proposed railway will go through, and these should also turn out valuable. We have turned our attention to the agricultural rather than the mineral development of the farms at present, some of which are extremely well watered, and which possess rich land. We have commenced the planting of timber, which in some years' time will be valuable, as there is an immense demand for it for all purposes in South Africa. We have also begun to plant and cultivate, and expect to get our first harvest during the coming year, and our manager believes we shall get a good return from the maize and other products we have sown. We are receiving rents in the shape of so many bags of mealies from the the Kaffir chiefs and others, and have also let some farms on grazing rights. It takes time to get returns from these sources, and hence we cannot show large profits during our first year, but the land remains, and considering the work being done, not only in the gold industry, but in the general development of the country by the Pioneer Co., the Chartered Co., and the South African Goldfields Co., there is every reason to believe that the value of the land will increase and not diminish. (Hear, hear.) With regard to the accounts you will see that there are some heavy charges which were necessary on the formation of the company, such as stamp duty in the Transvaal 1,000*l*., which, of course, will not occur again. We have given the matter of expenditure our most careful attention, feeling that

THE MOST RIGID ECONOMY SHOULD BE EXERCISED,

and in this direction, perhaps, one of the things that will suggest itself to you is that there might be a reduction of the directors' fees. We have decided, therefore, amongst ourselves that at this present meeting three of the directors will retire, and for the present they do not offer themselves for re-election, so as to keep the expenses down as much as possible. We have given the company our most unremitting atteution, and have held frequent meetings, and done all we can to make the concern a success, for we like the shareholders are very heavily interested. I trust next time we meet we may have some reward from our labours, and meanwhile I shall be able to give replies to any questions which shareholders may address to me. I move the adoption of the report and accounts. (Cheers.)

VIEWS OF SHAREHOLDERS.

Col. WILKINSON: Will you explain about the Pandora Mine?

Genl. FIELDING: What rents are paid? What is the number of acres planted and cultivated?

Mr. CAVENDISH: I see a large amount for calls in arrear, and you have alluded to the saving you expect to make in the matter of directors' fees. Having a view to the small amount of capital you have left, have the directors drawn their remuneration to the present time?

Mr. BREWIN asked that the articles might be read with reference to the directors' remuneration.

The SECRETARY read as follows: "The directors shall be paid at the ratc of 200*l*. per annum each, with an additional 50*l*. for the chairman, and by way of further remuneration, 5 per cent. on the net profits made in each year, but shall only be paid in each year out of the surplus amouut remaiuing after setting apart equal to 10 per cent. on the paid-up capital, whether such profits be in cash, shares, or other securities, and such further remuneration shall be divided amongst them in such manner as they shall from time to time determine."

A RASH PROPOSAL.

Mr. BREWIN: I suppose that three directors will only take now 650*l*.? I cannot help thinking that it would be best to sell off everything, stop the further call, and distribute what a sale would effect. A year hence the next call will have been made, and we shall be in a worse position than now, with probably debts contracted.

QUESTIONS REPLIED TO.

The CHAIRMAN: One of the directors who knows about the Pandora Mining claims will give an explanation, but I may say they are in the Barberton district, and that, owing to the depression, nothing has been done with them. Negotiations have been going on which may come to a head to amalgamate them with other properties, but have been delayed until the railway gets up to Barberton, which it is expected to do in the next eight or nine months.

Major COTTON:—The Pandora was taken over by this company, and I was interested in it as many shareholders know. The payment made for it was 200*l*. in cash, and 10,000*l*. in paper, and we are waiting for better times.

The CHAIRMAN: Regarding the rents the greater part is being received in "mealies," selling at about 15s. to 20s. per sack. We understand from the manager that he expects a considerable sum from that source this year. The number of acres under cultivation is between 600 and 700, and other portions are being got on with as rapidly as possible. The calls in arrear were, at the date of the accounts, 2,182*l*., but 1,000*l*. has been collected, and we do not think that in the result the amount unpaid will be at all large. (Hear, hear.) The directors have drawn their fees to the present time, and it is also a fact that the amount will be reduced in the manner indicated. It is not further proposed to reduce the directors' fees, because there is a saying that "the labourer is worthy of his hire." If gentlemen present knew the trouble and time it requires to manage a company like this they would not covet the office without payment, but if they choose to do it on those terms I will gladly make way for them. I must say that unpaid labour in my own business I find unsatisfactory. As regards the propositiou that we should sell the property, it is not reasonable, considering the railway is approaching us, that the prospects are so good, and that we have already spent so much.

Mr. CAVENDISH: I agree with you that there is a great deal of work to be done by directors who do their duty, and shareholders are apt to forget the worry and anxiety entailed.

The CHAIRMAN: We have about 90,300 acres.

A SHAREHOLDER: Does the actual acreage of the 14 farms surveyed approximately come to what the prospectus stated?

VENDOR MAKE A CONCESSION.

The CHAIRMAN: In some farms there has been an increase, and in others a shortage. We approached the vendor and got him to surrender 3,000 shares in consideration of the latter. I think the ultimate acreage will not be much below the figures in the prospectus.

The motion for the adoption of the report was carried, after being seconded by Major Cotton.

The CHAIRMAN proposed the re-election of the auditor, Mr. Jarvis, at a remuneration of 15 guineas.

Col. WILKINSON seconded the motion which was carried.

A SHAREHOLDER proposed a hearty vote of thanks to the chairman for the way in which he had performed a delicate task, and expressed the hope that at the next meeting the company would be in a better position than now.

The CHAIRMAN briefly replied, and the meeting ended.

OOREGUM GOLD MINING CO. OF INDIA, LIMITED.

RESOLUTIONS CONFIRMED.

AN extraordinary general meeting was held at the Offices of the company, No. 6, Queen Street Place, in the City of London, on Wednesday, Apl. 29, 1891, at 12 o'clock noon, for the purpose of confirming a resolution for the increase of the capital to 265,000*l*. by the creation and issue of 20,000 ordinary shares of 1*l*. each, which resolution was passed at an extraordinary general meeting held on the 14th inst.

Mr. Malcolm Low, M.P.

(chairman of the company), presided.

The CHAIRMAN: Gentlemen, I will ask the secretary to read the notice convening the meeting.

Mr. JOHN GARLAND (the secretary) read the notice convening the meeting.

The CHAIRMAN: Gentlemen, we are here to-day for the purpose of formally confirming the resolution which was unanimously passed at the last extraordiuary general meeting, for the purpose of increasing the capital of the company by 20,000 shares, to be issued as fully paid up to the Goldfields of Mysore Co., as the consideration for the new plot of land on the west of our property which we are about to acquire. The matter has been so thoroughly threshed out, and the unanimity of all the parties to the undertakiug has beeu so complete, that it would be really a waste of time, and, indeed, it would be an impertinence on my part to detain you with any lengthy remarks. You will probably like to hear that everything is going on very satisfactorily at the mines. We have had two mails since we last met you, but of course the telegram we read you on that occasion, dated 13th inst., is posterior to any mails we have since received, but the details of those two mails are entirely satisfactory. The cholera has entirely ended; our workmen (Moplahs) have returned, or are returning, and everything is going on in a highly satisfactory manner. It may bc right, perhaps, to state that in consequence of the severe cholera we have experienced at the mines, the returns for this particular month (April) probably may—I do uot say they will, but they may be slightly less than those of the month before; if they are it is very certain that the next month (May) will very easily enable us to catch up any lost ground, and indeed more than catch it up. With these remarks, I will now propose formally, "That the capital of this company be, and the same is hereby, increased to 265,000*l*. by the creation and issue of 20,000 ordinary shares of 1*l*. each."

Mr. C. H. WALLROTH: I shall be very happy to second that.

The CHAIRMAN then put the resolution to the meeting, and declared the same carried unanimously.

This closed the business of the meeting.

LONDON, EDINBURGH AND GLASGOW
ASSURANCE COMPANY, LIMITED.

SPRING ADVICE.

"Early to bed" and arise with the dawn ;
Sponge and rub well, either bed-time or morn.
Ope wide your windows to spring sun and air,
Cleanse out your dwellings with scrupulous care.
Keep your blood pure, 'twill save numberless ills ;
And for spring medicine—Take Holloway's Pills.

Make a good breakfast—good porridge brown bread,
Fish, milk or eggs, if you'd have your cheeks red.
Work with a will, but on no account worry ;
"Steady and Sure" gets on better than "Flurry."
Fretting and worry cause half of our ills ;
Keep a calm mind, and—Take Holloway's Pills.

Shun the rich dishes that gourmands delight ;
Eat but light suppers, and sleep well at night.
Clothe yourselves well and keep feet dry and warm.
Then you may safely defy wind and storm.
Climb when you can over moorlands and hills ;
If you need medicine—Take Holloway's Pills.

Bask in the sunshine and fear not the rain ;
Clothes that are wet can be soon dried again.
Take a walk daily in sunshine or shower ;
Welcome with gladness each fresh-opening flower.
List to the murmur of long 'prisoned rills ;
And for spring medicine—Take Holloway's Pills.

THE GLYNDWR MINING CO., LIMITED.
(IN LIQUIDATION.)

All persons claiming to be creditors of the above Company are required, on or before the 16th day of May, prox., to send in their names and addresses and particulars of their claims to Mr. Edward Ashmead, the liquidator, No. 2, Draper's Gardens, London, E.C., or in default thereof, they will be excluded from the benefit of any distribution made before such debts are paid.

REPORTS OF MEETINGS.

THE NUNDYDROOG GOLD MINING CO., LIMITED.

SHAREHOLDERS ARE INSPIRITED BY THE BEST TELEGRAM YET RECEIVED FROM THE MINES, AND BY THE STRIKING FACTS ELABORATED BY CAPT. McTAGGART, MR. JOHN TAYLOR, AND MR. ROWSE—GOLDFIELDS PURCHASE AGREED TO UNANIMOUSLY.

THE eleventh ordinary general meeting was held at the Cannon Street Hotel, on Wednesday, to receive the reports and accounts, to elect directors and auditor, and for other general business.

Capt. W. Bell McTaggart

(chairman of the company) presided.

Mr. W. H. ROWSE (secretary) read the notice of meeting.

THREE OBJECTS BEFORE THE BOARD.

The CHAIRMAN: Gentlemen, I rise with very great pleasure to move the adoption of the report and accounts. I say advisedly that "I rise with very great pleasure," because we are in a position to sincerely congratulate you upon the excellent results obtained in the past year—results which are equally good now, and which promise far better returns in the near future. Your manager, Mr. John Taylor, will, as usual, presently enter into a full account of the mining operations, and explain to you the splendid results which have been achieved, and your secretary, Mr. Rowse (who, as you are all aware, has just returned from a visit to the Mysore Field) will also have the privilege of addressing you, and will give you much interesting information concerning not only the mining portion of your property, but the surface works, together with questions of labour, and many other items which have direct bearing on your interests. I, therefore, myself propose to leave the mining matters to these gentlemen, and to pass on to others, which are contained in the body of the report. Gentlemen, the policy your board has been guided by and the objects they have sought to attain in their management of your property are in three directions—first, to secure as rapidly as possible increasing development and outturn, and consequently to secure as rapidly as possible increasing dividends; secondly, to preserve the continuity of those dividends, that there may be no jumping up and down accompanied by violent fluctuations in the market, with opportunities for rash speculation, attended by later moments of regret and heart-burning over a disappointed past; and the third of those objects is to secure permanence for the results which our efforts are now achieving, so that dividends on a large and substantially increasing scale may be earned for you during at least the longest lifetime of any shareholder now present in the room. (Cheers.) With regard to the first of these objects, rapidly increasing output and development, and consequently increasing dividends, I propose for the moment to pass it by. As regards the second, namely, continuity and insurance of those dividends, I wish to call attention to one item which appears in the accounts for the first time.

A RESERVE FUND ESTABLISHED.

If you will kindly turn to page 12 you will see that we have for the first time carried to reserve fund the sum of 500*l*. Now I think it may be accepted as an axiom that in all well and soundly established companies a reserve fund is very essential, and this more particularly so in the case of mining ventures, which, perhaps, are more exposed to sudden and violent risks than any other class of investment. Now, I have often talked with various gentlemen of experience from time to time on this matter, and have tried to find out what their opinions might be as to the amount of reserve fund we should endeavour to obtain. Some gentlemen have told me they consider that a mining company to be in a thoroughly sound position ought to have a reserve equal to two years' working capital, and although this may no doubt be quite true in the case of coal mines, where the risks of explosions is great, and where accidents frequently occur, still I am bound to confess that in the case of a gold mine, where there is little or no risk of explosion, where accidents are less frequent, and where, owing to the hard nature of the ground, the amount of timbering is limited, I think that one year's expenses is sufficient reserve for all practical purposes. (Hear, hear.) I do not mean to say that the 500*l*. we have put into reserve is anything like we should aim at by and by; but this we look upon as our nest egg, and year by year hope to add other nest eggs to it, so as gradually to fill up a very substantial basket until a sum approximating what I have indicated, or something of the sort, is obtained. The next and last point is to secure the permanence of these workings. As Mr. John Taylor will explain shortly, and as, indeed, is very well known to most of you by this time, while the Champion lode runs north and south in your property, it

DIPS RAPIDLY TO THE WESTWARD,

and it is absolutely an undoubted fact, which we cannot blink at or get over, that at some future time—in fact, at a future time neither dim or distant—the whole of this reef will pass suddenly and absolutely out of your property, and become the property of your neighbours. This being so, we have not hesitated to take time by the forelock and open up negotiations with the directors of the Goldfields to acquire for you this block of land while yet there is time. The more you develop the property, and the more magnificent are the returns, the bigger will be the price you will have to pay for this land if you delay the purchase. As to the advisability of acquiring this land, we have not the slightest hesitation in recommending you with all our power to acquire the rights over it. The only question that remains is with regard to the price. Before I go further I wish to say that lately I have been

INVITED TO TAKE A SEAT ON THE BOARD OF THE GOLDFIELDS CO.,

and that I have readily accepted this invitation, because I have felt that perhaps my knowledge of the property and of the goldfields generally, together with my connection with these mines for so many years might be of some service, not only to the shareholders in the Goldfields Co., but, perhaps, on this occasion be even more so to you, inasmuch as I might be the means of bringing to a successful conclusion these negotiations, which were at one time, to say the least of it, in a very halting condition.

WHAT THE DIRECTORS OF GOLDFIELDS THOUGHT ABOUT PRICE.

I found that the directors of the Goldfields Co. had, rightly or wrongly, fixed upon a price of about 50,000*l*. for the rights over this piece of land. They have obtained from the Mysore Co. an amount in shares equivalent practically in the market to 150,000*l*., which, acre for acre, is about the price that they were asking the Nundydroog Co. for. They have obtained from the Ooregum Co. an equivalent of 50,000*l*. Ooregum Co. is exactly on all fours with Nundydroog. There is the same size of property; the reefs run through it in almost exactly the same direction. But in the position that we were in then, I did not feel justified (and this feeling was shared by the whole of your board, including Mr. John Taylor) in recommending you to pay 50,000*l*. for this piece of land. We waited a little until we had cut the lode in the 520-ft. level. This has had the practical result of proving for ever the value of your mine. It is true in one sense that it strengthened the hands of the Goldfields directors, because they could point to us and say "your mine is established in depth—it is richer and stronger in the bottom, and there you have proof conclusive of the great value of the lode which is passing into our property." But there was a further argument in reply to this: I was able to tell the board of that company that we felt we could recommend you to find further capital to most actively develop the Nundydroog Mine and largely increase the outturn and dividends, and I ventured to think that if we asked you to subscribe for 30,000 shares at 5s. premium, having a cash value of some 37,000*l*.—with this capital in our hands we should have the means of making the balance of 20,000 shares worth far more than 2*l*., worth in fact, more than 2*l*. 10s. a share, and I believed that that value would most likely be obtained even, before they could distribute these shares amongst their proprietors, and that, therefore, while you were about doing two things, while you were finding money to increase your dividends you would be also making the shares given in payment of the 50,000*l*. value, and they (Goldfields directors) would be justified in the eyes of their own shareholders. The outcome has been the proposals we make to you to-day.

A BRILLIANT TELEGRAM.

I have little more to add, except as to the question of rapid development and increase of returns, and in this direction I may read to you our usual telegram, which has been received to-day, and which I am happy to say is of a most favourable nature:—

"520, levels driven 120 ft., lode average 3 ft., value 5 ozs." (Cheers.) "450, four workings, lode 4 ft. average, 2 ozs. 450, winze, 3 ft., 3½ ozs. 300, 1 ft., 4 ozs. Everything working well. Taylor's shaft, 545. Kennedy's, fair progress. Return, April, 1,600 ozs. Cholera over. Mine looking better than ever. 520, discovery largely increased reserves."

(Loud cheers.) You will observe from this that the deepest part of the mine is the strongest, and is very rich, and you will also observe that the district is now entirely free from disease. We have laid before you our programme—rapid development, followed up by continuity and permanence of dividends, and relying upon your support. I have great pleasure in moving the adoption of the report. (Loud cheers.)

Mr. J. SHAW KENNEDY (director): I second the motion.

A RETROSPECT.

Mr. JOHN TAYLOR, who was heartily cheered on rising, said: You will all doubtless remember that at the time of the last general meet-

ing, just about a year ago, I was able to tell you—in fact, you were told in the report that was circulated before you met—that we had overcome tho difficulties which we had to contend with in consequence of the vein being cut off or disturbed by the cross-course of which we had heard so much at the time. We had, I say, at the period of the last general moeting overcome that difficulty. We had found the lode on the north side of the cross-course, and found it rich. Capt. Plummer's report, which at that moment I was reading, referred to it at the time as "a grand discovery." Since that time the development of this rich shoot of quartz on the north side of the cross-course has gone on in a most satisfactory way. It has been opened upon in the 230-ft. level, the 300, the 450, and quite recently we had the good news of its intersection in what is now the bottom level of the mine—the 520. The lode has not only been rich but wide, and it is also very cheering to learn that the pay-shoot in the deepest point in which at present it has been driven any distance, the 450, is of greater length than in the level above. (Cheers.)

A MOST IMPORTANT POINT—THE 450 LEVEL.

The 450-ft. level for about 300 ft. has given a splendid lode from 2½ up to 5 ft. wide, and worth from 1 oz. to over 3 ozs. to the ton. (Cheers.) This rich piece of ground extends somethiug like 100 ft. further to the north than it did in the 230-ft. level. That, as I have said, is a most important point. It is most important, because it confirms what we see in other places on this Colar goldfield. I was able to speak of exactly a similar condition of things at the general meeting of the Balaghat Co. yesterday. It is not at all clear whether the Balaghat Co. is working upon the main part of the Champion reef, or even whether it is working upon that reef at all. My own impression is (take it for what it is worth) that the vein the Balaghat Co. is working upon is in all probability a branch or splice from the main reef, and very likely not the main reef at all, but that we have to prove. Still in Balaghat we have the same condition of things as here, and hence we expect to find the lode holding in richness in depth, and extending in length as developed. The cable speaks of four points of working where the lode averages 4 ft. wide and is worth 2 ozs. to the ton. That is a very rich piece of ground to deal with. Below the 450 the winze has been sunk upon the course of the vein about 70 ft. to reach the depth required for the 520-ft. level. There we have a splendid lode 2½ ft. to 3 ft. wide, and valued from 1¾ up to 3 ozs. to the ton.

A VALUABLE LODE IN THE WINZE.

The cable which the chairman has read tells you the lode is 3 ft wide and worth 3½ ozs. to the ton. From the bottom of that winze a level has been commenced south to meet the level comiug north from the main shaft. The distance driven has not as yet been great, but for that distance the lode has been from 1½ to 3 ft. wide, and worth from 17 dwts. up to 1¾ ozs., thus fully maintaining what we had above, and even more than doing so. (Cheers.) The shaft, you are aware, is not sunk on the course of the vein, but is a considerable distance from it, and to get to the vein we have had to drive a cross-cut, and the news which came to us in a cable on Mar. 26 was that in that cross-cut we had intersected the vein 4 ft. wide, and worth 3 ozs. to the ton. The report of Mar. 31 spoke of a fine lode 5 ft. wide, worth 3 ozs. 6 dwts. That was then driven north about 12 ft., and on Apl. 8 a report came (these reports have all been published, so that actually I am rather refreshing your memory than anything else) stating that the lode in each of the ends of the 520-ft. level was over 5 ft. in quartz, worth from 3 to 4 ozs. to the ton, and in that report came also the information from Mr. Grey that he has commenced sinking the shaft to get down to the 600-ft. level.

BEST NEWS YET FROM THE MINE.

Now, we have the cable message giving you the important news that the 520 level has been driven 120 ft.; that the lode averages 3 ft. wide, and is worth 5 ozs. to the ton. (Cheers.) I do not think you ever have heard any more splendid news than that in the whole previous history of the company. (Loud cheers.) It also tells you what is very satisfactory to know, that the shaft is already down 25 ft. below that level, or a total depth of 545 ft., so that you see Mr. Grey and the agents are doing all in their power to open up the ground to a still greater depth. (Hear, hear.) You cannot but realise that this portion of the property has opened up extraordinarily well within the past two months, and that we have very much to look forward to here; and there is also this, that just beyond our southern boundary there is in the Ooregum Co.'s mine an extraordinarily rich deposit being worked at what is called Probyn's shaft, and, as we know, the pay-shoots in this field have a dip to the north, and, therefore, we may look to getting this rich pay-shoot, which the Ooregum Co. has, as it gets deeper in our property, and we shall find it by pushing down the shaft as already alluded to. In addition to this valuable mine, we have

ANOTHER STRING TO OUR BOW 2,500 FT. AWAY,

and, in fact, the commencement of what looks likely to be also a very valuable mine. Of course, 2,500 ft. is something like ½ mile from the other workings, and that will be attacked by separate machinery, and entirely as an independent business. Mention is made in the report of last year of the discovery near the northern boundary, where there were extensive old workings. Capt. Plummer has a high opinion of this part of the property. The shaft was then over 90 ft. deep, but the work has gone on satisfactorily since, and only that we have had trouble about the water, I really think we have here something very good before us. I am not going to describe that, because Mr. Rowse has had the immense advantage of seeing it, and will tell you what his view is with regard to it. As to the the question of

PURCHASE OF LAND TO THE WEST,

it is no doubt a very serious one, but we have this before us, that the Champion reef of this Colar goldfield continues to open up extraordinarily well, and to become even richer as it gets deeper, and, in fact, in every case where it has been followed with persistence it has proved itself to be worth following. We also have this before us, that in every case where the workings have become deeper the vein has begun to get flatter. It is remarkably so in the deepest place in the field, viz., in the case of a shaft 800 ft. deep on the Mysore property. The inclination of the vein is more rapid than it was above. We have the same thing in other places on the field, and, therefore, I am bound to say that we ought to acquire this property. I cannot but feel (although it will be a considerable time before it will really he wanted by Nundydroog)—I say, I cannot but believe that we shall be acting more wisely to secure this extension of ground now than by waiting to see the turn of events, as I think it very probable we shall have to pay a much higher price for it if we do so. (Loud cheers.)

Mr. W. H. ROWSE, who was also cordially received, said: Gentlemen, the workings of the mine have been so fully described by Mr. Taylor that it will not be necessary I should make much allusion to them, whilst I should really be wearying you if I were to travel over the same ground that has already been so well occupied. I am glad, however, to have this opportunity of confirming the statements which Mr. Taylor has made with regard to the operations that have been carried on during the past year, with regard also to your present position, and also in relation to your anticipations as to the future. My inspection of the mines both underground and at surface was pretty complete, and, therefore, I am, as an eye-witness before you, able, as I have said, to confirm the position of affairs which has been indicated to you by the chairman and Mr. Taylor iu their respective addresses. (Cheers.) I am glad to know that since that inspection took place (though up to that time the lode iu the 520 level had not been cut) a very great improvement has taken place in the prospects of your mine, and

AN IMMENSE ADDITION HAS BEEN MADE TO ITS VALUE.

(Cheers.) There is the striking fact that in the 520 we have driven 120 ft. through a lode 3 ft. wide, worth 5 ozs. to the ton. Gentlemen, I think the experiences of this oompany may be looked upon as being both instructive and valuable—instructive to persons already working upon the field and valuable to those who may contemplate working upon it hereafter. In this mine we have proved, if proof were necessary, that the lode in this field is

A TRUE, CONTINUOUS, PERSISTENT FISSURE VEIN.

Reference has been made by Mr. Taylor to the cross-course which gave us some little trouble about two years ago, this cross-course interfered somewhat with the coutinuity, or the regular bearing of our lode, and pessimists told us "your lode is destroyed;" but, gentlemen, after a few months intelligent work it was discovered that that lode was thrown somewhat to the east, and working upon it has proved that it has been all the richer for the throw, for, as Mr. Taylor has pointed out, it has been found in the 230, in the 300, in the 370, in the 450, and now in the 520. My inspection of the mines which took place about the close of last year enabled me to send to the directors a favourable report upon its condition and prospects. I was then able to tell them that they might expect at some short period in the future a considerable increase in their returns, especially after the lode had been cut in the 520. Supposing the lode to be cut rich there I was in a position to recommend to them that they should increase their stamping power. You will have seen by the report (although it has not been alluded to by the chairman or Mr. Taylor) that an order has been given to send out to the mine

AN ADDITIONAL 20 HEADS OF STAMPS,

and accompanying this a number of pans and settlers, for the purpose of treating our present accumulations of tailings, as well as those that will be made from month to month. I think the directors are perfectly justified in the action they have taken, but, of course, it will be some months before these stamps can be erected, and at that time we shall have developed more extensively the lode in the 520, and I believe we shall have also cut an equally rich lode in the level below, namely, the 600. After that has been doue you have perfect ground, judging from the present condition of the mines, to look forward to a considerable increase in your monthly returns. (Cheers.) Our operations during the year have proved two things—first, that the shoot of ore from Taylor's shaft is extending rapidly northwards and lengthening as the mine is deepened. It has proved also that the same shoot of ore is following back southwards towards the Ooregum property in a line with the cross-course—the cross-course having a southerly inclination. Now, as the levels are being driven southwards towards the dip of the cross-course the lode is being found rich in that direction, and I have no doubt in the 520-ft. level it will continue rich close up to the cross-course, and our next level should, I believe, prove it rich to the southern boundary. I should like, that the shareholders present should have some idea of what a lode 3 ft. wide, yielding 5 ozs. to the ton, really meaus. Some of you do, perhaps, understand it, but for the beuefit of those who do not, I will say that a lode of that description is

WORTH 200*l.* FOR EVERY 6 FT. DRIVEN UPON,

carrying a level 7 ft. high and 5 ft. wide. I desire to emphasise the fact that you have standing between Taylor's shaft and Kennedy's a length of over 2,000 ft. at least of unexplored ground. I strongly recommend that immediate steps be taken for testing it, and I believe the managers and directors have contemplated this in the proposed issue of the new capital. I think this may be best tested by putting down a vertical shaft somewhere to the west of what we believe to be the line of the lode, with the object of cuttiug it 200 or 250 ft. iu depth, and I shall be disappointed, and so will you, if we do not find in that portion of unexplored ground a valuable shoot of ore. With regard to

KENNEDY'S PORTION OF THE MINE,

that is, comparatively, a new work. Kennedy's shaft and new north shaft, almost close by, are situated about 700 ft. south of our northern boundary. The first operation carried on there was to sink what we have called the new north shaft. This shaft was sunk to the perpendicular, taking the lode at

about 90 ft. in depth, when a short cross-cut of about 24 ft. was put out and the lode found. Whether this lode (as Mr. Taylor has indicated) is actually the Champion lode. and the same lode we are working upon in Taylor's shaft, is, I think, a question. Nevertheless, the lode found in this cross-cut proved to be of good size, and at that shallow depth it contained quartz up to 1 oz. to the ton. About 100 ft. were driven northwards upon it, and it maintained its size, and for the whole distance kept about the value of which I have spoken. Having reached this point of about 100 ft. a winze was sunk in the bottom of the level upon the lode about 70 ft., and in the whole of that sinking the lode continued its size, carrying two very well defined walls, having quartz never less than 1 oz. to the ton. Now, from the bottom of this winze a cross-cut was driven westwards for the purpose of communicating with Kennedy shaft, which was sunk perpendicular to take the lode at about 200 ft. This cross-cut is being pushed forward to come underneath Kennedy's shaft, the object being to facilitate the sinking of Kennedy's shaft, for as soon as it reaches under the perpendicular of that shaft a rise will be put up against it and so hasten the communication. I have no doubt that we have already proved in this part of your property the existence of another shoot of ore, and my expectation is (confirmed by Mr. Grey) that as soon as we cut the lode by continuing the sinking of Kennedy's shaft we shall during the next six or eight months lay open a considerable quantity of ground, yielding quartz for the new stamps which the directors are now sending out. Kennedy's shaft has been fully and completely equipped with new machinery, winding and pumping engine, &c., so that we have overcome the water difficulty of which Mr. Taylor spoke. We are now in full fork, and are sinking the shaft, by the aid of rock-drills, with great rapidity. Your present mills are fully employed. They do their work exceedingly well. We have taken the precaution there also (as I have already indicated in previous speeches at various meetings) that the mills are thoroughly protected, so that no theft of amalgam or gold can take place. The tailings machinery is in course of erection, and will, I hope, be completed within a very few weeks.

WE HAVE 17,000 TONS OF TAILINGS TO BEGIN UPON,

which is something, and we shall have the accruing tailings month by month, and when the additional stamps are erected, and our tailings machinery is complete you will be in a position to treat from 1,500 to 2,000 tons of quartz, and from 1,000 to 1,500 tons of tailing per month. With regard to your machinery and plaut—very considerable additions have been made to them as well as to the buildings. I will not trouble you with particulars, but may say, generally, that the whole has been well and substantially erected and built, and that they do great credit to Mr. Grey and the engineer. Perhaps it is not right I should detain you upon questions of native labour and general expenditure, especially with regard to fuel and explosives, though I carefully went into all these questions while on the spot. Mr. Grey is perfectly aware of their importance, and, as far as any man can, I am quite sure that his aim will be to keep the expenditure at the lowest possible limit, consistent with the proper development and working of your mine. (Cheers.)

LOW COSTS PER TON.

I would point out that the cost of obtaining the gold in Nundydroog is very satisfactory. It does not exceed 1*l*. 18s. 10d. per oz. I said at the Mysore meeting that the cost there was 1*l*. 2s. 6d. Taking into account the relative magnitude of the operations and returns, you may look upon 1*l*. 18s. 10d. per oz. as being eminently satisfactory. I feel it only just and right to you and to the officers of the mine to bear unqualified testimony to the intense interest exhibited by your superintendent, Mr. Grey, in the conduct of the affairs of your company.

JUSTICE TO THE OFFICERS AT THE MINE.

He is most indefatigible and most painstaking. I was almost going to say he is nervously anxious as to the success of your mine, and in his desire to do that which is the very best for your interests. With regard to Mr. Matthews, your engineer, I look upon him as being a clever man in his profession. He does his work exceedingly well, and the increasing duties devolving upon him in the erection of all this new machinery which has been sent out, has been performed entirely to my satisfaction, so that I am very glad indeed to have the opportunity of bearing testimony with regard to these two chief officers of your company. Before sitting down I would say that I

CONGRATULATE THE SHAREHOLDERS MOST HEARTILY

on the improved condition of the mine. I look upon the future with great hope and with high expectation, and believe that any expectations which you yourselves may have formed with regard to that future will be fully realised, and that in the Nundydroog property you will have one of the best on the field. I should like to say that I have come back in possession of a great deal of information which is entirely at the disposal of shareholders who may do me the honour to call at the office, or may write to me, and I shall be glad to place them in possession of any knowledge I may have acquired by my visit to the property. (Loud cheers.)

The report was carried unanimously, without discussion.

The CHAIRMAN, after thanking the meeting for their unanimous vote on the adoption of the report, moved the re-election of the retiring directors, Mr. J. Shaw Kennedy and Mr. P.S. Dowson.

Mr. FERGUSSON seconded the motion, which was carried unanimously.

Mr. DOWSON returned thanks for his colleague and himself, and added his congratulations to those of the other speakers at the improved position of the mine.

Mr. HENRY O. WHITE proposed the re-election of the auditor, Mr. W. Wainwright.

Capt. INGLIS seconded the motion, which was carried unanimously.

REMUNERATION OF DIRECTORS.

The CHAIRMAN: There is one matter to which I may perhaps call your attention, and that is the question of the remuneration of the directors. The articles provide in the first place that "out of profits," and only when they are earned, they shall receive 1,000*l*. a year, and it continues, "whenever the profits shall be sufficient to enable the company to pay a clear dividend of 15 per cent. upon the capital, such additional sum shall be set apart out of such profits for the directors' remuneration as the company in general meeting may determine." This is a matter we leave entirely in your hands, but I would remark that this is the 11th annual meeting over which I have had the pleasure of presiding, and for eight years the directors had no fees except on one occasion, when you were good enough to vote them 500*l*. Now that we have paid you a dividend of nearly 20 per cent., and are confident that such dividends can be maintained and increased, I think I can leave the matter in your hands without further remark.

Mr. HENRY O. WHITE: I propose "That the directors' remuneration be increased from 1,000*l*. to 1,500*l*. for the past year."

Mr. PROBYN: I will second that.

Carried unanimously.

The CHAIRMAN: I beg to thank you, on behalf of the directors, very sincerely for your kind recognition of our services. We have had a hard fight with this mine, and for many a long year have done our best to serve you faithfully, and your kind recognition of those services will be an additional incentive to us not to relax them in the future, but to do our utmost to promote your best interests. (Cheers.)

EXTRAORDINARY MEETING.

An extraordinary general meeting was then held, when the following resolutions were proposed:—

(1.) "That this meeting hereby approves the purchase by this company from the Goldfields of Mysore, Limited, of the exclusive mining and other rights possessed by the selling company in and over a certain block of land on the western boundary of this company's property, extending for the entire length of the sett and for 1,500 ft. wide, for 20,000 fully-paid shares of this company, and that the directors be, and they are hereby, authorised and empowered to carry out and complete the said purchase accordingly." 2. "That the capital of this company be, and the same is hereby increased to, 200,000*l*. by the creation and issue of 50,000 ordinary shares of 1*l*. each, and that 20,000 of the same shares be issued to the Goldfields of Mysore, Limited, as the purchase-consideration above mentioned, and that the remaining 30,000 of the said 50,000 shares be issued at a premium of 5s. each, and be in the first instance offered at the premium aforesaid to the shareholders of the company on the register of shareholders on May 27 next, in the proportion of one share for every five shares of the amount of capital then held by them respectively."

GOLDFIELDS PURCHASE.

The CHAIRMAN: I move the first resolution as above. It has been ully discussed and explained, so that I need say but little about it. There is one point on which a shareholder has written for information. He wishes to know the time wheu these 20,000 fully-paid shares which it is proposed to give to the Goldfields Co. will rank for dividend, and of course how soon the directors of Goldfields will be in a position to distribute them to their shareholders. I understand that these shares do not and cannot be issued until the transfer is duly registered in India, and the property taken over by this company, and that means a delay of six weeks or two months. As soon as the property is handed over, those shares will be issued to the Goldfields directors under a properly verified agreement at Somerset House.

Mr. FERGUSSON: I second the motion.

Carried unanimously.

The CHAIRMAN: I propose resolution No. 2, as above.

Mr. FERGUSSON: I second it.

A SHAREHOLDER ASKS FOR MORE LIBERAL TERMS.

Mr. PROBYN: I am sure everyone will agree with me that it is highly desirable that these 39,000 shares should be issued with a view to developing the property, but you have recommended a premium of 5s. to be attached to them, whereas I think it will be infinitely better to issue them at par. Nundydroogs stand at about 1¾ on the market, and should there be a fall, a great number of shareholders would not come forward and take them up, though I do not anticipate any fall. (Hear, hear.) At the same time, about five years ago, in a neighbouring mine, a lot of shares were issued at 1*l*. premium, and I do not know whether they were all taken up; but this I do know, that almost immediately after they were allotted, down they all went, and the shareholders could not get the price they paid for them. That is a warning to us, and I believe it will be much better to issue them at par, though I do not wish to be obstructive, especially as it is about luncheon time. (Laughter.) I also think that although you hold a large force of proxies, this is not a matter upon which you will care to use them, but will kindly and considerately weigh the views of the shareholders actually present. (Cheers.)

RESOLUTION CARRIED.

The CHAIRMAN: We are always pleased to hear Mr. Probyn, who has so large an interest in these companies, but I venture to say that we had taken all these matters into the fullest and most serious consideration before we submitted this scheme to your consideration. If we were to offer you the shares at 1*l*., we would be showing the little value we set upon them ourselves, and it would certainly have a bad effect upon the market; and in the next place, we want that 5s., and it is a part of the money we are looking to to increase our returns. We thought 30s. would be too much to ask, and therefore have decided to ask 25s. The shares have gone up and not down, and in regard to the instance Mr. Probyn gave—there the shares were issued at 1*l*. premium, and did not fall until many months afterwards, and then only because the company was not getting the anticipated results. If you support our hands by giving us an ample amount of capital, even before the shares can be distributed, they will, I believe, be worth 2*l*. 10s. instead of 30s.

The resolution was carried by a considerable majority, and before closing the meeting the CHAIRMAN thanked those present for their attendance as well as for their hearty appreciation and support of the efforts of the directors for the general welfare.

THE BALAGHAT MYSORE GOLD MINES, LIMITED.

THE IMPORTANT POINT BROUGHT OUT BY MR. ROWSE, AND CONFIRMED BY MR. TAYLOR, IS THAT THE LODE WIDENS AS IT GOES DOWN, AND MAINTAINS A GOOD AVERAGE VALUE—A PURCHASE (IN PRINCIPLE) FROM GOLDFIELDS AGREED TO.

THE first ordinary general meeting was held at the Cannon Street Hotel, on Tuesday, to receive the reports and accounts, to elect auditors, and for other general business.

The Right Hon. Lord Ribblesdale

(chairman of the company) presided.

Mr. W. H. ROWSE (secretary) read the notice of meeting, and the report of the directors was taken as read.

A GOOD CABLE.

The CHAIRMAN, after apologising for the absence, through illness, of his colleague, Col. Tennant, said: I think I may as well read you at once a copy of the telegram received from the superintendent, dated Apl. 27:—

"600 north, quartz 8 ins., 1 oz. 14 dwts. 500 winze, 15 ins., 2 ozs. 500 stopes, 15 ins., 3 ozs. Other stopes as usual. Haines' holed 500 north. Mine full work. No cholera. May returns will improve."

After the rather poor accounts we have had lately, owing to the great dislocation of the labour of the mine by cholera, that is a very satisfactory telegram. (Hear, hear.) I do not propose to trouble you to-day with many remarks of my own on the condition of the mine. I think the board has pretty well stated the summary of that condition in their report, whilst those of Mr. Oakley and Capt. Pryor will have told you a great deal more than I could now. But putting those two excellent reports of our superintendent and agent on one side—as you know, Mr. Rowse has been out at Colar as a special commissioner, as well as in his capacity of secretary of this company, and made himself very thoroughly acquainted with the underground workings, and what you have to hope for in regard to its future. Mr. Rowse has come back primed with very useful intelligence, upon which you can place absolute reliance, and, as he has done in the case of Mysore, Nine Reefs and other mines, so he will here give you a statement which will be of very much more value than one from me.

REVENUE AND EXPENDITURE NEARLY MEET.

In our report, I think one thing we have to be pleased with is, that taking into consideration that it has been a year of heavy capital expenditure, on account of machinery and development, the revenue for the year has so closely approached the expenditure, that there is only a difference (I am sorry to say on the debit side) of 101*l*. But I am bound to say that that difference is not so great as I anticipated, and, I think, we may look forward to the future with great confidence, and believe that next year the difference will be in our favour. Mr. Oakley explains very fully the energy and despatch with which the mine has been equipped with new machinery and plant, and he also goes into the sinking of Haines' shaft, which, in less than a year, will be communicated to the 500 level. That will make a great difference in working the mine, and the directors confidently look to an improvement in the returns when it is completed. Fifteen new stamps were started on Oct. 15, and the old battery is now being thoroughly overhauled, and will be at work by the time the hauling can be begun in Haines' shaft. There are two features in connection with recent developments which Mr. Rowse will explain fully to you. The first is that the shoot of quartz is lengthening, and secondly,

THE VEIN IS WIDENING.

Those are two very hopeful symptoms for the future. I spoke just now about Mr. Oakley's report, and you will probably have read the last returns of gold. It is satisfactory to see that the last month of last year (Dec.) we obtained the most gold that we had ever extracted in the history of the mine—certainly in its history since the reconstruction took place, and the change of management. In Dec. we had 486 ozs., which realised 1,896*l*. 15s. It is quite true that Jan., Feb. and Mar. have been disappointing months, but I should like to lay great stress upon this, that there is nothing in that disappointment which should make us feel apprehensive as to the future. It is entirely explained by what I might almost call "surface causes." It has nothing to do with the mine—it has all to do with the surface. As you know, our labour was entirely dislocated by cholera. When I was there we had a cholera scare, and you have no conception how difficult it is to go on working a mine, or even to depend on getting the ordinary supplies of everyday life, when cholera has broken out in the district. There are two important paragraphs in the directors' report, at the end, about the acquisition of

FURTHER PROPERTY ON THE WESTERN BOUNDARY,

and I wish to go into that question as a separate one, and to put the point before you definitely as to whether you will acquire that property now or later on, but I think it is desirable first you should hear what Mr. Rowse has to say, and meanwhile I move, "That the report now presented, and the balance-sheet and accounts to Dec. 31, 1890, be received and adopted." (Cheers.)

Sir FREDERICK P. HAINES, G.C.B., seconded the motion.

Mr. FAIRBAIRN: I think the accounts require explanatiou, as I see there is a loss of 100*l*. I fail to see that they are so enlivening as they might be, because on the whole transaction there appears this loss of 100*l*., and it seems that the whole of the miuing work is done for the advantage of the staff at home and abroad. (Oh!) The directors and officers have all been paid, but the shareholders have received nothing, and yet 15,000*l*. have been called up to work the mine during the year. Now, as only another 15,000*l*. remains to be called, I fail to see what advantage is to be got out of a mine that only just pays its expenses. With regard to 200*l*., the cost of Mr. Rowse's mission, of course we do not know what that means, but it seems a large amount, and my own opinion is that such a visit was unnecessary, that is if you are able to trust your agents on the spot. (Oh!)

The CHAIRMAN: It would be desirable for the shareholders to really hear what Mr. Rowse has done, and the information he is able to give them. (Cheers.)

A SHAREHOLDER: I think we should like very much to hear Mr. Rowse. He has been to the spot, and can give us the latest details from personal knowledge.

Mr. FAIRBAIRN: I also should like to hear Mr. Rowse.

THE MINE IS VIEWED BY AN EYE-WITNESS.

Mr. W. H. ROWSE, who was cordially received, said: I may, perhaps, be permitted to say, first, that my inspection of your mines, both underground and at surface, and my investigation of the affairs of your company, as I found them on the spot, has been of such an exhaustive character, that I have come back in possession of information, which I need hardly say is at the disposition of the shareholders of this company at any time they may choose to do me the honour of calling upon me at the office, or if they prefer to write for such information, it will be forwarded. I think, at the outset, you will be glad to have my assurance that the affairs of your mine are well looked after, first, by your superintendent, Mr. Oakley, who is a most careful, energetic and clever engineer, and next, that your mining operations are well attended to by your mining ageut, Capt. Pryor, who is very skilful, and has had large experience of the management of mines. The chairman has already referred to the vigorous operations which have been carried on during 1890, and in spite of the observations which have been made by Mr. Fairbairn, I am quite prepared to prove to you that those operations have been conducted with great vigour and great activity, and that considerable credit is due both to Mr. Oakley and Capt. Pryor for the amount of work they have been able to get through during the year. Their operations have been carried on under exceptional difficulties—difficulties under which the company has been labouring for years past.

DIFFICULTIES OF WORKING.

First, the only shaft through which your operations have been carried on is of a most defective character. It is small, and utterly inadequate for the purposes of developing a property like yours, and if, as I dare say, there are many here who have a knowledge of mining matters, they will understand when I tell them that the whole of the material broken in the mine has to be drawn therefrom by a bucket, or kibble, which can contain not more than 5 or 6 cwt. at a time. In addition to that, up to within the last few months the stamps which your agents have had to deal with the quartz broken has been a tumble down sort of erection of 10 heads, utterly unable to perform the work necessary for the treatment of the quartz broken, and constantly getting out of repair. It has been under these conditions your agents have carried on operations during the past, resulting, as the chairman has pointed out, in a loss of only 100*l*. I am quite free to take to myself, personally, the responsibility of turning what would have been a small profit into a small loss, because a charge of 200*l*. has been made for my mission to the mines. However, gentlemen, I am led to hope and believe that you will think my efforts may have been of so much value that it is just possible 200*l*., and perchance more, has been saved to you by that visit. (Loud cheers.) Now, the expenditure during the year has included the sinking of the engine shaft, the driving of levels, the sinking of winzes, the putting out of some cross-cuts, the stoping of the ore, its haulage to surface, and treatment in the mills, and also all the expenses of management on this side. When I compare that with the previous year (1889), I think I am prepared to justify the statement that your mines have been managed with economy and care, for during 1889, when about the same quantity of gold was raised, your mines were carried on at a loss of not less than 2,500*l*.; and, therefore, I have come here to-day prepared to say that during 1890, by the help of your agents on the spot, and by the wise direction of your managers and directors here, your mines have been carried on with economy and skill as compared with what had been done for them in the previous years. (Cheers.) Reference has been made to the sinking of Haines' shaft. You know, I believe, that there is no hope for the mine until Haines' shaft has been put through to the 500, but when it has been equipped with machinery and a skip-road, we shall be in a position to largely increase the output. Furthermore, when the mills are completed (of which I shall speak to you presently) there is no reason then why you should not demand from your officials on the spot a fulfilment of the promises they have made, namely, that the returns will be largely increased, and that you may look for considerable profits. The capital expenditure during the year has been 20,000*l*. That expenditure has been incurred by the sinking of Haines' shaft, (which I would point out has been deepened nearly to the 500 level in about 12 months)—(hear, hear)—

NEW WORKS.

and in the following new works:— 15-head Sandycroft revolving battery, with an engine of sufficient power to drive an additional 15 head of stamps, together with stonebreaker, counter shafting, copper plates for tables, and everything complete. One 9-ton Cornish boiler, one 7-ton Cornish boiler, to provide steam power for above. One pair of 12-in. winding engines for Haines' shaft. One 7-ton boiler for Haines' shaft. One pair of 6-in. winding engines for underground work, now fixed at the 410 ft. plat, and worked by compressed air. One 7-ton Cornish boiler to air compressor house at north engine shaft, in substitution of boiler removed to old mill. Besides these main pieces of machinery, sundry minor parts, donkey pumps, &c., have been added, whilst we have very largely increased our rock-drill plant, which will be found noticed in detail in the inventory. Very considerable additions have also been made to plant and materials in the way of rails, waggons, skips, buckets, wire ropes, steel, iron, &c. The work done under this heading has been very considerable, and more extensive than that executed during the year 1889. The principal new buildings erected are:—New granite stack, 68 ft. high, for the boilers, at

north engine shaft. This was built to give increased draught for the boilers—four in number—working at this part. New mill and boiler house, with necessary loadings and foundations for new engine and 15-head battery, and ore platform at the mill. Tramway carried on granite pillars from north engine shaft to new mill. New masonry water tank for supply of new mill, 100 ft. square. Tailings tanks. Ore screen floor for sorting quartz before sending it to mill. Loading for new winding engine at Haines' shaft, and house for same. Most careful arrangements have been made by Mr. Oakley and Capt. Pryor for preventing anything like stealing amalgam or quartz at the mills. They are carefully enclosed, with a watchman stationed at the entrance whose, duty it is to inspect and search every person who comes out of the mills. The arrangement at the top of the shaft is most complete, perhaps as complete, if not more so, than on any other mine on the field. The ore floors are entirely enclosed with palings; we have a weighbridge at the entrance, and every pound of quartz is weighed as it goes to the mill, here also we have a watchman to inspect the persons so as to prevent robbery. I mention this to show you that your officers on the spot have your interests at heart, and that all that can be done is being done to prevent robbery in that direction. (Cheers.) I have already said that we cannot look for any increase in the returns until Haines' shaft has been completed to the 500. A communication has been made to that level, but there remains yet the squaring down of the shaft, the completion of the skiproad to the bottom, and the repairing of the old battery, to which the chairman has referred. As soon as these works are completed, and they should be by about the end of June or commencement of July, there is no reason why you should not look for a considerable increase in the returns, and the small loss that has been made so much of by the hon. proprietor, will, I hope, when we meet again, be entirely wiped off, and that we shall have a balance on the other side. (Cheers.) I will now proceed as briefly as possible to

DESCRIBE THE OPERATIONS ON THE MINE ITSELF.

I propose to begin at its shallowest part, and work my way downwards. We will take first the 270-ft. level, which is being driven south. For the moment this level is suspended for a reason which you will have anticipated, that we have no power at present to draw any increased quantity of stuff through the north engine shaft. I strongly recommend that this level should be continued southwards towards our boundary, for about that neighbourhood there are some considerable old workings, and the opinion of Mr. Oakley and others is that we may look for another shoot of quartz between this and the boundary. You know the history of these old workings in the case of the other mines upon the field, and there is no reason why yours should be an exception. We may expect that as this level progresses southwards (and the driving will be resumed as soon as we can get Haines' shaft through) there is no reason why we may not look for a shoot of ore in this part of the property. If so, the vacant space represented on the map hitherto utterly untried may be proved to contain a shoot extending in that direction. In the back of the 230 we are working some stopes. The quartz contains 3 ozs. of gold, but, unfortunately, in the shallow parts of the mine the vein has been very narrow. You have seen the reports calling it from 6 to 10 ins., and you can understand these stopes are not so profitable as they would be if the quartz were much wider. The 270 north has not been extended. The 330 has not been driven south, though it has been some distance north, though not far. It is now 675 ft. from the north engine shaft, and the end is without quartz. The stopes I have already referred to. We have a rich stope in the bottom of the 330 and in the back of the 410, where the lode is 14 ins. in width, and worth 2¾ ozs. to the ton. In the back of the 410 is the spot where we had the first indication that the

QUARTZ IS WIDENING AS DEPTH IS ATTAINED.

I do not hesitate to confess to you that when I went through the mine—I began at the top and worked my way down—to the 330, I was very much depressed, and said to my friend, Capt. Pryor, "Really, if you have nothing better than this to show me, I do not know what I am to say to the directors and shareholders when I get back;"—because the narrowness of the lode so impressed me that I felt that unless there were some improvement in the bottom I should have nothing very encouraging to tell you. However, I am glad to be able to assure you that from the 410 down to the present deepest point (600 ft.) the lode has shown unmistakable evidence that it is widening as depth is attained. I will demonstrate that quickly so that you may see the difference at once. In the 410 the lode was about 12 and sometimes 15 ins. wide—in one or two places perhaps a little wider than that, but when we got down to the 500 the lode considerably widened out, and during the whole drivage, 471 ft. north of the shaft and 83 ft. south of the shaft, the lode was from 6 ins. to 3 ft. in width. I have mentioned 6 ins. because I thought it fair and right to do so. In a few places it did narrow down, but in the great length of the drivage the lode was nearer 3 ft. than 2 ft. The lode also south widened out very considerably, but the striking point with regard to the fact I have just mentioned, is in the winze which is being sunk in the bottom of the 500, 250 ft. north of the north engine shaft. This is now down about 50 ft., averaging for the first 46 ft. not less than 2 ft. in width, and carrying gold from 1 oz. to over 4 ozs. to the ton. (Cheers.)

IMPORTANT POINT.

I can testify to that, because I examined the winze carefully from the top to the bottom, and as I tell you for the greater part of the depth the lode was never less than 2 ft. wide. We have had nothing like that in the experience of the company in any other part of the mine. (Cheers.) The new north engine shaft is, as the telegram says, now at the 600-ft. level. We have commenced driving northwards at that depth. The shaft also from the 500 is a striking illustration of what I have said, that the lode does widen in depth. I went into the shaft. On the south side, for about 30 ft. deep, the lode averaged 1 ft. 6 ins. to 3 ft. in width, and just at the spot where it was 3 ft. in width it was richer than in any other part of the shaft. The average size of the lode in this shaft from the 500 to 95 ft. below has been 2 ft. It is true that at the last moment it has become a little smaller, and when last reported on was 1 ft. only. With regard to the assay of the lode in this shaft, it has been extraordinarily high. On several occasions whilst the shaft was being sunk we had

GOLD OVER 8 OZS. TO THE TON

—(cheers)—and the average yield in the sinking of that shaft is considerably over 2 ozs. (Renewed cheers.) Now, gentlemen, I have laid a good deal of stress upon the point of the lode widening in your property, because I feel that your future success depends very much upon it. Personally, I should have very little hope indeed if the lode had continued to hold down as narrow (although very rich) as it was above, for I feel that then it could not be profitably worked. Now, my firm conviction is that in depth, we shall find this lode widening, and if so, I do not think you need have any question with regard to the future. Haines' shaft, which is the one through which the largest quantity of quartz and material will have to be hauled for the future, has now been communicated to the 500-ft. level, and, as I explained just now, there is certain work which has to be done in the way of clearing down the winze, and bringing the skiproad from the 270 down to the 500, and when that has been completed you will be in possession of increased returns which your agents on the spot say they cannot give you until that work has been finished. I should like to point out the fact that the mine has been worked very judiciously by Capt. Pryor, inasmuch as he has not rushed the reserves—that is to say, he has not been taking away the ore as fast as it has been laid open. That is a very minerlike proceeding, and one which is always wise to adopt. We are now driving the 600. The whole of the ground is pretty well intact between the 600 and the 410. It is true some stoping has been done, but

THE RESERVES ARE CONSIDERABLE.

Therefore, you may look upon it as a fact that you have a considerable amount of ore ground in reserve to be operated upon as soon as Haines' shaft is through, and the stamps are completed.

Mr. ROWSE concluded a loudly-applauded speech by offering to give any further information the shareholders might desire.

A SHAREHOLDER THOROUGHLY GRASPS THE SITUATION.

Mr. WILLIAMS: The telegrams we have heard this morning I can only characterise as most encouraging. The statement we have had from Mr. Rowse is also one of very deep interest and great moment, and I only rise to ask if it can be confirmed by our professional adviser, Mr. John Taylor. I agree with the remark Mr. Rowse made, that if the lode had not widened he would hardly have been able to come back with a clear case to report to the directors. But he has told us that in his opinion, and as a matter of fact, the lode is widening, and that there is a prospect of its doing so still further. I think, as

WE HAVE BEEN ACCUSTOMED TO HEAR MR. TAYLOR,

and as he stands in the relationship of professional adviser to the company some confirmation from him would be both reassuring and desirable. (Cheers.) I regard this report as very satisfactory, and the balance-sheet as creditable to the company. The charges are very moderate, and although it is unfortunate that there is a debit of 100*l*. for the year, I think that nothing should be made of that. The amount of directors' fees contrasts in its moderation most favourably with the directors' fees charged in many other companies, and I do think we may congratulate ourselves upon this report, upon the balance-sheet, and upon the telegram. (Cheers.) The cholera having abated is most important, and we are also entitled to congratulate ourselves upon the report Mr. Rowse has given, which, I conclude as I began, by asking should be confirmed by Mr. Taylor, and he might say also whether in his judgment the Goldfields purchase should be entered upon now or upon a later date. (Hear, hear.)

CONFIRMATORY SPEECH BY MR. JOHN TAYLOR.

Mr. JOHN TAYLOR, who was received with applause, said: I did not anticipate that I should be called upon to say anything to-day, because I had practically gone through with Mr. Rowse before the meeting what he has just now told you. I was aware that his statement would be a very full one, and also that it would be most satisfactory to you as it was to me. You must all have listened to it with great attention, and I think he has practically dealt most completely with the whole subject. I think he has dealt most completely with regard to the question raised as to the small charge made for his visit to India. You cannot realise—you cannot expect to realise—as I do, and your directors also, the value to us in London of having Mr. Rowse at our side comparatively fresh from the scene of operations, with all the store of information he has acquired to place at our disposal, only a small portion of which he has, of course, in the time, been able to impart to you. (Hear, hear.) I can without hesitation say that

I REGARD WITH GREAT IMPORTANCE THE STATEMENT MADE BY MR. ROWSE

as to the improved position of your property during the last 12 months. It must be highly encouraging to you to know that this shoot of quartz in the bottom of the mine continues to lengthen and widen, as it undoubtedly has done, and that we have in the 500-ft. level, as Mr. Rowse has told you, a run of stoping ground laid open of about 450-ft. in length. It appears that, as was anticipated (this question was spoken of before) it has come about that the two shoots of ore worked upon near the surface have now practically come together in depth, and this is the result. (Cheers.) The lode in the 500-ft. level has been from 6 ins. to 3 ft., and yielding from 1½ ozs. to 5 ozs. to the ton, but the most important point of all in regard to the future is that with reference to the average width.

THE MOST IMPORTANT POINT OF ALL.

The average width in the 500-ft. level is 1 ft. 9 ins., against 1 ft. in the 410 level above. (Cheers.) That in a distance of sinking of 90-ft. is an immense increase of width—nearly double the width in the lower level that it was in the level above. (Hear, hear.) Mr. Pryor tells you that the bottom level is the most productive he has yet passed through, and he has every reason to believe this condition of things will continue. Mr. Oakley also tells you that "the ground in this section should turn out ore considerably larger and richer than we generally get on the property." Beyond this we have the fact of the good lode in sinking the north engine shaft below the 500, and in the winze 250 ft. north of that shaft.

The lode is not only rich in gold, but wider and stronger, and this makes us very hopeful for the future. What we have now clearly to do is to urge on the completion of Haines' shaft (which is down to the 500) in the way of equipping it with machinery needful for winding the quartz from the bottom of the mine with economy, and also to complete the milling arrangements. When these two things are done, we may most confidently look for considerably larger returns, and, of course, much better results as far as the financial statement is concerned. (Cheers.)

The report was unanimously adopted.

GOLDFIELDS PURCHASE.

The CHAIRMAN: Now, gentlemen, I am glad you have heard the very lucid and weighty exposition of the state of the mine that has been given by Mr. Rowse, and confirmed by Mr. Taylor, because I think it will make you all realise that we have a property which is well worth prosecuting, and which in the long run (and not a very long run either) will repay us for its full development and the energy we are bringing to bear upon it. I daresay you have not all the reports in your hands, and I do not know that in bringing this matter before you I can do better than read you the first sentence or two from that of the directors:—

"The workings in the bottom of the mine are approaching the western boundary of the property. In order to ensure the future of the company, it will be desirable to acquire a block of the adjoining land belonging to the Goldfields of Mysore Co. The directors propose to lay the matter before the shareholders at the forthcoming meeting, for without first consulting them the directors did not feel justified in entering into any negotiations. As a preliminary step, an assurance that the land referred to will not be disposed of without first offering it to this company has already been secured from the Goldfields of Mysore Co."

I do not propose at present to ask you to give any expression of opinion as to what the value of that land is. I do not propose either to tell you what we consider its value to be ourselves. All I want to put before you is that we have come to a point in the history of Balaghat Mine when we must settle whether we will commit ourselves to a policy of purchase or of non-purchase. If of purchase, I believe a bargain may be made on more advantageous terms than if you decide to postpone it. The actual figures must come before you later, but we know that we have only 12 months before us, at a low computation of labour, before our north engine shaft reaches the western boundary of the property and goes out of it. There is an old saying, "Prices rush up where the customer must buy," and, speaking for myself and colleagues, we think that we could make a better bargain by purchasing now than by waiting. The Goldfields of Mysore know well enough that the goose which lays the golden eggs, so far as they are concerned, is on the western boundary of their frontier, and they know that mines working into that boundary must come to them sooner or later. They will treat with us better now than if we put the whole matter off and have hereafter to come suing almost for a block of land at any price they choose to fix, and, in fact, it may not be theirs to sell, for other parties may have bought it meanwhile. Those seem the arguments in favour of the purchase policy. In favour of the non-purchase policy, 12 months hence we might be putting up the shutters, but I think that would be most suicidal.

EVIDENTLY WE HAVE A GOOD FUTURE BEFORE US,

and it is just possible that unless we secure what we can now, we may be forestalled. I wish you clearly to understand this, that the point on which I desire to get an expression of opinion is purchase or non-purchase. We should, of course (assuming the former to be your wish), make the best bargain we could. I, no doubt, am a vendor, but think I can sufficiently divorce myself from that position so as to sanction terms only which would be reasonable, just, and advantageous to this property. At all events, putting me on one side, you have here very able and very energetic directors, who, I believe, are not very largely connected with Goldfields of Mysore.

Sir F. HAINES: Not at all, as far as I am concerned.

The CHAIRMAN: Supposing you say we had better buy at once, the board would do that without prejudice to any course you may seem fit to take later on when it comes to a question of confirming the price we are able to fix. That has been done in the case of the other sales. A price has been fixed as between the buying and vending company, but, as you know, that price is entirely subject to the confirmation of the majority of the shareholders. The acquisition of this land means the raising of further capital, and it is obvious that to under-capitalise acquisitions in Colar or anywhere else is the very worst introduction to successful mining that you can have. Therefore, if we acquire this block of property we shall present a definite scheme for the raising of capital to amply equip that block for working.

A SHAREHOLDER DEPRECIATES HIS HOLDING.

Mr. FAIRBAIRN: The remarks of the noble lord show what will be the result of the second re-construction of this company if the purchase be agreed to. It has been shown that we are raising no more gold now than we did two years ago, although the shafts have been sunk deeper, but now we are asked to purchase more land. The fact is that the present company is in the position that you might as well tear your shares up and throw them to the winds. (Laughter).

The CHAIRMAN: I would point out that a year ago you had not Haines shaft developed to 500 ft., or excellent stoping ground laid open in what has hitherto proved the richest part of the mine. It is no use going back on the past, this question is entirely for the future. Do you think the new ground worth acquiring? and if so you must acquire it or you will soon be in possession of a worked-out mine.

A SHAREHOLDER thought they had better wait before purchasing until the price of the shares was higher in the market.

Mr. ROWSE, in reply to a shareholder, said: We are some hundreds of feet from the northern boundary.

The CHAIRMAN: We shall not buy a block at any price you may be sure, or one that is not worth having in regard to size. About 150 acres have been talked of.

Mr. PARRY: I listened to the eloquence of the chairman, but with much greater admiration to that of Mr. Rowse, and admired his displays with the pointer, but when I felt figuratively in my pocket, I could not find a cent. of dividend as paid by this company. It is no boast of mine to say that I could draw a map like the one on the wall and coach up an assistant teacher from one of the School Boards to tell you about winzes, stopes, and levels, and at the end of that time you would know as much as you to-day. I am an original shareholder, and at the outset was told that this was a most wonderful affair—in the centre of the mining district, and great things were promised. You see mines in various directions earning dividends, and although money was spent liberally Mr. Rowse comes home to tell you that the shaft was defective and the machinery shaky, but that we have large reserves in store. (Hear, hear.) What I say is, work these reserves. That is what

THE GREAT STRATEGIST WHO HAS JUST DIED

would have done—he would have worked up the reserves, and not made fresh purchases. We want to see practical results, but, so far, there has only been sufficient to pay working expenses. That is not much for you or for your children. In the name of all that is good, why should we buy new land before we have exhausted what we have? Centre your efforts on that.

CONSIDERATIONS FOR PURCHASE.

Mr. PROBYN: The purchase of the property must depend on the price we give for it, and can you give us some idea? Should it be 100,000*l*., you might say it is of no use; should it be 10,000*l*., we should jump at it; but should it be 20,000*l*., it would be simply a matter worth consideration.

Mr. TAYLOR: You really, as men of business, must take this matter as it presents itself actually to you. It is not for me, or for any other mining engineer, to prophecy definitely. You have the facts before you, and I emphasise one of them in particular, that you have a tunnel driven in this mine at the 410 to a great length; you have a tunnel driven at 500 ft. also to a great length; and, whereas the lode in the upper one was only 1 ft. wide, in the lower one it is 1 ft. 9 ins. wide, showing a great increase in 90 ft. I place that clearly before you. It is not for me to prophecy that that increase is certain to continue, but there is every reason to anticipate it. Suppose you get down the distance within the year, and you get this increase, and this rich ore, which contains many ounces to the ton, and you then want further property to follow it—what will be the answer of the Goldfields Co. to your application? I think you must

APPROACH THIS MATTER WITH THE FACTS DISTINCTLY BEFORE YOU,

as indicated by the two tunnels you have driven at considerable expense and great length through your property. One gentleman has said work down for a certain further distance and take out the reserves. What would be the result were my firm, as mining engineers, to recommend such a policy as that. We should never do such a thing. (Cheers.) If you did not carry on your exploratory work below, naturally you would soon exhaust the reserves in your mine, and where would you then be? All well regulated mines ought to be in a position to say "we have reserves equal to three years' supply if we do not make any discovery." You are getting towards that position, and you will soon be in it if the mine continues to develop as well as it has done; but the idea of stoping out these reserves and not caring for the position, you will be in in a couple of years—well, gentlemen, the statement is too absurd to require refutation by argument. (Cheers.)

Mr. FAIRBAIRN repeated the remarks he had formerly made, and added that the shares were only worth waste paper. (Oh.)

A BUYER AT THE PRICE.

Mr. WILLIAMS: The last speaker says the shares are only worth waste paper. I should like to have a few at that price. Is he a seller? (A VOICE: 6s.) At all events, 6s. represents better than waste paper. (Cheers.) Have we confidence in the judgment and integrity of the directors and the leading officers of the company. They tell us in 12 months we shall come to an end of the mine if nothing be done. We have an opportunity now of extending the company's boundaries, and it is no use saying, "Wait, and at the end of 12 months or two years we will approach Goldfields with a view to purchase," for they will say "your opportunity has passed," or it may be that in the interim others may have purchased what we may now consider desirable. Consider the position reasonably, and do not let past vexations militate against sound judgment.

IT IS SO.

These directors are not responsible for what occurred in the first years. (Cheers). They have brought us into a state which leads us to anticipate still further success. Mr. Taylor has, in forcible language as your professional adviser, uttered a word of caution, and if we do not give heed to it we may find ourselves in a year or two in a position that the mine will be worked out, and we shall have nothing further to do, but wind up. (Hear, hear.)

The CHAIRMAN: In asking you to empower us to negotiate—all final arrangements will be submitted to you for your approval, and you would hear all the arguments for the purchase from your responsible adviser, Mr. John Taylor, when we come to you and tell you the nature of the arrangements we had made. All I want now is your opinion as to the policy of acquisition or non-acquisition. I should really think the gentleman who spoke on that subject had himself been coached up by the School Board teacher with the pointer, to whom he has referred. (Laughter.) We are all proprietors, and, speaking as such, we believe it is our right policy to make this acquisition, but do not think I have any personal object in the matter. We only want to do the best we can for the property, because we believe it has a future, and because it is that future we wish to secure. The longer we delay the higher is likely to be the price. I now put the motion to the meeting.

The purchase was agreed to by 17 votes to 4, amidst cheers.

Mr. PROBYN proposed the re-election of the auditors, Messrs. James and Edwards, at a remuneration of 20 guineas, and this, on being seconded, was carried unanimously.

Mr. WILLIAMS: The generalship the chairman has manifested in carrying through the meeting to-day deserves from us a cordial vote of thanks. The manner he has dealt with the subject has been best shown by the fact that only four hands were held up against the proposition.

The motion was carried unanimously, and, with the brief reply of the CHAIRMAN, a protracted meeting was brought to a close.

THE DAY DAWN P.C. GOLD MINING CO., LIMITED.

IMPORTANT DEVELOPMENTS AND DISCOVERIES, PARTICULARLY IN THE NEWLY-PURCHASED GROUND—26,000 TONS IN RESERVE—THE OUTLOOK BETTER THAN EVER.

THE fourth ordinary general meeting was held at Winchester House, on Tuesday, for the transaction of the ordinary business of the company.

Mr. Seymour Macleay,

(chairman of the company) presided.

Mr. B. PEYTON WARD (secretary) read the notice of meeting.

FEATURES IN THE WORK OF THE YEAR.

The CHAIRMAN: Gentlemen, as you have all received a copy of the directors' report and statement of accounts for the year ending Dec. 31 last, I presume you will take them as read. The history of our undertaking during the year 1890, as shown in the reports and accounts which have been presented to you, reveals some features unfavourable and others favourable to the company's interests. The most unfavourable feature, as you doubtless all consider, is the comparatively low average quality of the ore, which was nearly 5¾ dwts. per ton less than in the previous year. This is explained by our general manager, Mr. Buckland, to be due to the intrusion of small veins of mullock, or barren ore, in many places in the reef. In extracting the quartz for the mill, it would cause much extra expense to separate the mullock from the gold bearing ore, and the result is necessarily a lower average of gold produced per ton extracted and milled. This circumstance is one which, of course, it is beyond the power of the directors or manager to control, but they have done their best to neutralise its effects by doing all in their power, first to increase the output of the ore, and secondly, to lower the working charges. In both these matters we have achieved considerable success. You will observe that a very large amount of work has been done in the year. The mine manager, Mr. Lester, shows that No. 1 shaft has been sunk 20 ft., No. 2 shaft 30 ft., and that altogether some 1,867 ft. of levels have been driven, and 1,000 ft. of winzes sunk. According to the statement at page 5 of the report, the output has been 28,879 tons of ore, being an excess of 2,328 tons over the previous year. The figures for the output given by Mr. Buckland are rather higher, and those of Mr. Lester higher still. The differencces are due to Mr. Buckland having iucluded the output of the fortnight ending Jan. 4, 1890, which had already been included in the account for the year 1889, while Mr. Lester seems also to have added the output for the fortnight ending Jan. 3, 1891, which we have omitted here, as belonging to the year 1891. In spite of the increased amount of work done in 1890, the working charges were lower by over 3,500*l*.

GREATLY REDUCED COSTS.

A great part of this decrease is due to the extra stamps set up, which have enabled us to treat more ore at our own Excelsior mill, and, therefore, less at the public, or Defiance, mill. Another cause of the decrease in the expenditure has been the connection of No. 2 shaft with the main workings, which has facilitated and cheapened the operations. The directors' report shows that the cost of extracting and milling the ore has diminished by 4s. 10d. a ton, amounting to nearly 7,000*l*. on the 28,879 tons treated, or, in other words, more than half the new capital expenditure which we have had to take from revenue has already been saved. I make here take the opportunity of pointing out that had the quality of the ore been as high in 1890 as in 1889, the company would have realised a further profit of 28,353*l*., equivalent to a further dividend of 5 per cent. The falling off in the quality during the year, owing to the mullock, is, no doubt, to be regretted, but there is nothing in it discouraging for the future, and the directors have the fullest confidence in the permanency of the mine—as the mining mauager mentions in his report "the mine is looking well, and is in good working order," and we may at any moment come on to a richer body of ore. I have lately heard the wildest rumours of the mine being exhausted and drowned out—there is no foundation for them. Quite recently the rains have been very heavy. and somewhat interfered temporarily with our lower workings, where the best ore is being found; there is plenty of ore in sight, and a very large area still remains to be worked in our original property. From a telegram just to hand, we are told that the quantity of stone in sight is 26,000 tons. This telegram also states that the reef in No. 1 shaft is 5 ft. thick of good quality, and I think you will agree with me that that is cheering and satisfactory news.

THE NEW PROPERTIES PROMISE WELL.

The board is satisfied that the new properties the company has purchased are likely to prove very valuable. As yet but little has been done in them, but our neighbours are sinking shafts in full confidence of reaching rich reefs, notably the Brilliant, and this company will profit by any discoveries they may make, and in the opinion of your board our prospects are as good to-day, if not better, than ever they were. You have, many of you, doubtless heard of the tax on dividends lately imposed by the Queensland Government, and from the beginning of this year your dividends will be subject to this tax. I am not here to question the action of the Government, but it seems a somewhat arbitrary measure, and I merely refer to it to tell you that our director in Queensland, Mr. Lissner, did his best in the local Parliament to prevent the imposition of the tax, and though unsuccessful, the thanks of the shareholders are due to him for his action in the matter. Before concluding, I will say one word on the adjustment of the accounts which is proposed in the report. That adjustment by which the capital charges incurred in the year are written off from the revenue appears to the board to be the correct method of dealing with the matter, seeing that, without borrowing money, there is no other source whence to meet these charges. It is approved by the most important shareholders and by our auditors. If it were not adopted, the next dividend would not be distributed any earlier, for it is evident that, except by borrowing, the money would not be available. Since last autumn the board have adopted the plan of having the remittances sent home in bullion instead of by bills. This has proved a more remunerative method, for the cost of freight and insurance is less than the discount on the bills. After the resolution I am about to propose has been seconded, I shall be happy to answer, to the best of my ability, any questions shareholders may like to put. I now propose "That the directors' report and statement of accounts for the year ending Dec. 31, 1890, be, and they are hereby received and adopted." (Cheers.)

Mr. BATTEN (director) seconded the motion.

VIEWS OF SHARRHOLDERS.

The SHAREHOLDER: May I suggest that it would be well to follow the example of the Indian railway companies by printing in the margin the corresponding items of the previous year, so that without troubling oneself to hunt up old reports, one could have an idea as to whether progress was being made or the reverse.

Mr. STEWART WALLACE: Will you be good enough to explain the incidence of the taxation? You simply refer to it as a tax, and we wish to know how it will affect us. On the question of reserves, I shall be glad to know what we have in sight and what we have opened up.

The CHAIRMAN: I may say that the suggestion as to the accounts shall receive attention. The portion of the map on the wall coloured green shows the property we have acquired, and there is a further portion lower down we have also acquired. The part coloured yellow is what we originally acquired. As regards the tax, it is 1s. in the £ on your dividends. In regard to the question of reserves, I pointed out that we know now by telegram that

WE HAVE 26,000 TONS IN SIGHT

—that is, supposing we do not develop any more ore for a year, there will be enough to keep the mill going for that period.

Mr. WILSON: Twelve months ago I made a suggestion, as a shareholder resident in the country, that quarterly reports should be issued, so that when any decline takes place in the value of the shares we should know to what cause to attribute it. Let that report be in popular language, and not like the reports of experts, which are hard to understand. Mr. Buckland was here a year ago, and told us to look to the Brilliant Mine, for he said if they found anything it would enhance the value of our property. That is 12 months ago, but I never see anything mentioned of the Brilliant Co. in the reports.

The CHAIRMAN: I thought I made it clear at the last meeting that the sending out of the quarterly reports would entail too much responsibility upon the manager, for it is not merely the writing of them, but there would have to be measurements, surveys, &c., which would be quite impossible to do as frequently as desired. If he were to give a rose-coloured report and anything went wrong he would be blamed. As regards the Brilliant Mine, there is a gentleman in the room who can give information if he will; but, personally, I am not very conversant with what it is doing, or the Brilliant St. George, or the Victory; but what we hear about our neighbours is all to our advantage.

The report was unanimously adopted.

DIRECTORS WHO ATTEND DAILY.

Mr. IEVERS (director) proposed the re-election of chairman, and said: Mr. Macleay attends at the office every day, and is most attentive to his duties. He is always present to do everything that is necessary.

Mr. CLIPPERTON (director): I have very much pleasure in seconding that resolution. Being myself a daily attendant at the office with other directors, we are always in a position to hold a special board meeting. if necessary to decide matters without waiting for the formal calling of one. (Hear, hear.)

Mr. ROBINS: I support that resolution, because I think we are very much indebted to Mr. Macleay for his re-assuring statement to-day. The directors' report is not either fervid or florid—it is, in fact, a cold water report, but

IT IS A THOROUGHLY HONEST REPORT,

which cannot always be said of reports emanating from other boards of direction. (Hear, hear.) It does them credit, and it is one which may be trusted. In respect to the complaint of the gentleman from the country, who says he is not able to gather why the shares go up and down, I will tell him he should buy blindly.

Mr. WILSON: Perhaps you will tell me where I am to get the money. (Laughter.)

Mr. ROBINS: You have heard from the directors that 26,000 tons are in sight, and what more do you want for the coming year? That is enough information for you, and it has certainly been for me, for I have increased my holding from 3,500 to 5,000 shares, and I snatched up 50 from a jobber the other day at 7s. 6d. who offered them

SIMPLY BECAUSE HE THOUGHT HE COULD NOT GET A BUYER.

I think there is a clique operating against the shares of this company, and we do not get the same attention from the Press that other companies do, but at all events we get honest statements of facts from the directors. I should like to know what Mr. Ievers, the largest shareholder, thinks of our prospects.

VIEWS OF ONE WHO KNOWS.

Mr. IEVERS: I think the prospects better than ever they were. We have 35 more acres of golden ground untested and untried, and from the experience of neighbouring mines we are bound to assume that there are very payable reefs in that ground. We are going to start a shaft next month 1,000 ft. deep most of which will be accomplished before we meet again, and we have every reason to believe that during that period we will cut two reefs one of which will double at least the value of our dividends. It has already paid 80,000*l*. of dividends in the adjoining mine. It is a large reef, in some places 10 ft. thick, and has averaged 2½ ozs. to the ton. It is called the Wyndham, and is one of the best in Charters Towers. I have had a survey made, which informs me that there is a shoot of stone 250 ft. wide, dipping into our ground up to the boundary—that is on the centre of the property, and the shaft is down 160 ft. (Cheers.)

The motion was carried unanimously.

The CHAIRMAN: I thank you cordially for the kind manner in which yon have elected me, and assure you that I shall do my best in the future as in the past for the welfare of the company.

Mr. CLIPPERTON: It falls to my lot to propose the re-election of our resident director, Mr. Isidor Lissner. During the time he was in England he regularly attended our meetings, and the chairman has told you he has done his best, as a member of the Legislative Council to obviate the dividend tax. I do not think we can do better than re-elect him. He is very useful to us out there, and from what I know personally of him he is a business man.

A SHAREHOLDER: How do you propose to find the money to sink the new shaft?

OUT OF REVENUE AS BEFORE.

The CHAIRMAN: We have always been sinking shafts, and shall do this one in the same manner as we have the others. If we keep up anything like the last returns we shall be able to do it comfortably, and pay you dividends. The better the yield the more the dividends we will be able to pay. It is only likely to cost 6,000*l*. during the current year, and the work will be well done.

A SHAREHOLDER: Are the 26,000 tons likely to yield a larger return than the average of last year.

The CHAIRMAN: It is impossible to answer that question, but the manager considers the return will be better, and that the average is likely to improve rather than the reverse.

On the motion of Mr. ROBINS, seconded by Mr. WILSON, Messrs. Monkhouse, Goddard and Co. were elected auditors at a remuneration of 30 guineas, and the meeting closed in the usual way.

LATEST TELEGRAM.

A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending Apl. 25, viz.:—"970 tons, 987 ozs." (Estimated value, 3,355*l*.)

ZWARTLAND (TRANSVAAL) LAND CO.

OPERATIONS DELAYED ON ACCOUNT OF THE BOUNDARY QUESTION—LIVELY DISCUSSION.

THE second ordinary general meeting of the shareholders was held at Winchester House, Old Broad Street, E.C., on Thursday.

Mr. N. F. Robarts

(chairman of the company) presided.

Mr. FOX (secretary) read the notice convening the meeting, and the report and accounts were taken as read.

A RETROSPECT.

The CHAIRMAN: Gentlemen, when we last met you it was at the statutory meeting, within a few months of the formation of the company. You will remember that the company was formed in Nov., 1889, at a time of considerable excitement in regard to Transvaal business and Transvaal properties, an excitement which at that time was just beginning to cool down, and which, I am sorry to say, has gone on cooling down almost ever since. I suppose all who invested in land companies 18 months ago, or since that time, invested in them as in properties which would require time for development, and did not expect any speedy returns unless after inspection of the properties it was found that they were auriferous or diamond-bearing, and subsidiary companies could be at once formed out of them. As you know, during the last 12 months it has been an exceedingly difficult thing to form subsidiary companies even for properties which were found to be of good mineral value.

APPOINTMENT OF THE MANAGER.

The first steps that the board took after their carliest meeting in Nov. 1889, was to appoint a manager and send him out to the Transvaal. No time was lost in sending him, for he left here in Jan., and we must say the energy which Mr. Evans has shown since he arrived there, and the great care he has taken of the company's interests have been almost beyond praise. As soon as he arrived there he started to, if possible, inspect some of our Lydenburg properties, but he found the season was not suitable, and he was obliged to return after having started. Then I have to mention how it was the company took possession of their properties. As you are aware, in the prospectus the properties were described as being purchased upon Government titles, and under the coutracts which were specified in the prospectus. The farms were bought upon those Government titles irrespective of area, but it was understood the farms would contain approximately the number of acres which were specified in the prospectus. The title deeds were duly passed at the end of April, and upon the advice of our solicitors in Pretoria, Messrs. Cooper and Scholtz, the purchase was completed here on May 1, the titlcs being found entirely in order.

THE RE-SURVEYING OF THE FARMS.

Subsequent to that we learned that the re-inspection upon a certain number of farms in the Waterberg district had shown the real areas to be far less than those shown in the Government register. I believe that has been a common experience with almost all companies that have had properties in the Waterberg district, but the difference was so serious in our case that the directors thought it was only right the shareholders should be at once advised of it, and a circular was according sent out, which you have all received. At the same time we sent out the very strongest possible instructions to our manager to look into this question of re-inspection and see what could be done in the interests of the company. You will bear in mind that before this, and upon the Government titles, the purchase had been completed in accordance with the contracts, and on receipt of this news we at once began to take advice as to whether any action would lie against the vendors for not having fully performed the contracts, but I regret to say we have been advised that we have no remedy against the vendors, the contracts having been so drawn that we were entirely bound by the Government inspection reports. However, we have made all possible enquiry with regard to these re-inspections, and we think there is no doubt but that very serious

ERRORS HAVE BEEN COMMITTED BY THE GOVERNMENT INSPECTORS,

and I am glad to be able to announce the Government have now ordered the inspector (Mr. Drummond), upon whose survey the figures in our circular was based, to proceed again on May 1 and re-inspect the properties and give us the final areas. At the present moment we cannot speak of the final areas in the Waterberg district. I will now explain to you how it is these areas are so much less than anticipated. About 15 or 20 years ago grants were made by the Transvaal Government to burghers of farms. These farms were 3,000 morgen, so that each farm would be about 6,000 acres. The boundaries were not laid out at the time. Settlers took possession of them and squatted on them, but so carelessly was the work done that the Government granted in certain areas more farms of 3,000 morgen than those areas could possibly contain. The way in which those farms were marked out, and the surveys were so roughly done, that we are not surprised that grave errors occurred. The habit was for a man to walk a horse for a certain length of time north, south, east and west, and the time occupied was supposed to define the area of the land. Consequently many of the farms differ very largely in size. That is how this great discrepancy has occurred. As regards the rest of our farms, I may say, so far as we know, we have received pretty well the right area. Only a part of them have been surveyed, but where the surveys have taken place they seem to be pretty well correct. As soon as the Government sends surveyors to survey the other farms, our manager will accompany them and see the full area is granted to us. In our prospectus we mentioned there were certain groups of farms, but owing to the alterations in the districts, several of which were originally described as Waterberg, are now in the district of Zoutpansberg.

DESCRIPTION OF THE FARMS.

We have 13 farms in Waterberg. We have three in Zoutpansberg about 360 miles N.N.E. of Pretoria, and an expedition is now being started to survey these. Then in Zoutpansberg we also have another group of four farms, three of which have been re-inspected, but the variation is exceedingly slight. The other one (Vergenoegd) has not been re-inspected. These farms lie about 250 miles N.E. of Pretoria. Then we have two more in Zoutpansberg (Zwartland and Cochin China) which have not been re-inspected. These are situate about 30 miles east of New Belgium and 200 miles north of Pretoria. Then at Potchefstroom we have one farm (Cecilias Home), but this has not been re-inspected, and the boundaries are therefore undefined. At Lydenburg we have the Cumberland, Northumberland, Lillydale Chalons, and Dover farms. These are 220 miles N.N.E. of Pretoria, and they will be re-inspected about July. From what I have said you will see we have been able to obtain exceedingly little information about our farms. We have had Cecilias Home inspected by our surveyor, and that is found to be a

VERY VALUABLE FARM.

Tree planting, we are recommended, should be adopted on that farm as wood is scarce, and this farm is exceedingly well watered and very suitable for tree growing. As soon as the boundaries of that farm are defined, we are disposed to plant there, and the manager says that will be an exceedingly profitable piece of business. We should have commenced that before if we had known the extent of the farm. Villi farm has been re-inspected, but I am sorry to say it has not been found at all a good farm. I should like to let you know exactly the description of the farms given in the Government register. We have in Waterberg three farms described as "well supplied with water and timber," and one "provided with water and timber."

A SHAREHOLDER: What is the area of them?

The CHAIRMAN: The three farms are Zoutpansberg, 3,500 morgen; Elsinore, which was supposed to be 3,000 morgen, but which turned out to be 1,040 morgen (this farm is to be re-inspected); and De Draai which is 1,590 morgen. The Goodedacht is 1,050 morgen, according to inspection report. We have in Waterberg, again, 15 farms reported on, as "well supplied with water and timber," and five farms, "timber plentiful, but water scarce." In Lydenburg we have four farms "well supplied with water and timber." It was on those reports and those title deeds the properties were actually acquired. How far they agree with the facts we cannot say until we have been able to inspect the farms ourselves. Of course our farms are all at a considerable distance from Pretoria, and the development of them must

DEPEND UPON RAILWAY COMMUNICATION.

They vary from 80 to 350 miles distance. If railways are opened up near the properties the value will be very much increased. With regard to the claim against the Government for diminished areas, that has also had our careful consideration, and the matter is in the hands of our manager to see what satisfaction he can obtain from the Government should it ultimately turn out that our areas are smaller than they were reported to be.

THE BALANCE-SHEET.

I would now merely make a comment upon our balance-sheet. As stated in the prospectus, we started with a working capital of about 30,000*l*., of which we have about 27,000*l*. unexpended. When we last met you, we intimated we should probably have to make a call of 2s. 6d. last July, in order to carry on the expeditions for inspection, but owing to the farms not having been re-inspected, we found it was useless to have these inspections, and therefore we found it unnecessary to make a call until this year, and then only of 1s. It is probable we shall not require any more to be called up this year. (Hear, hear.) The directors have had under consideration the delay there has been. We expected before this to have been able to do something seriously good upon the farms. We have lost a year, and, therefore, although they are entitled by the articles of association to certain fees, they have decided, in view of the postponement of all active operations, only in future to draw half the fees to which they are entitled, leaving the balance until such time as the company may be making ample and satisfactory profits. With regard to the calls, I may say they have been fairly well paid, and there only remains about 70*l*. outstanding from the last call. There is no doubt all the calls will be duly met in time.

ILLNESS OF THE MANAGER.

I have one very important thing to mention which we were only advised of by the mail this week, and which has caused us considerable anxiety. We have received a letter from our assistant manager, dated from Johannesburg, Apl. 4, stating that our manager, Mr. Evans, is seriously ill, and has been ordered by the doctor to leave the property at once. As Mr. Evans was too ill to travel alone, the assistant manager had gone with him, and at the date of the letter they had got to Johannesburg. This illness has been brought on by the death of his wife, after only being a few months married. I hope sincerely Mr. Evans will recover, but the board, while having every confidence in our assistant manager, think it would be very desirable to send out either a director, or someone who has the full confidence of the directors, to see after things during Mr. Evans' absence, and the directors will take steps to adopt that course. If one of them cannot go we shall endeavour to find someone in whom we have entire reliance should Mr. Evans be entirely incapacitated. I have nothing further I can say, but shall be pleased to answer any questions which may be put, if it is in my power. I beg to move the adoption of the report and balance-sheet.

Mr. CHARLES CLARK (director) seconded the motion.

DIRECTORS' FEES.

Mr. LIAS said he had seldom seen a balance-sheet containing such unsatisfactory figures. He wished to know whether the 1,687*l.* 10s., charged in the accounts, was the amount to which the directors were entitled? The chairman had said that the board would only take half the fees they were entitled to.

The CHAIRMAN: I think you must have misunderstood my remarks. I said, finding that the company was not getting on, we proposed in future only to take one half of the fees.

Mr. LIAS thought the directors should make their decision as to fees retrospective. He was quite aware that shareholders were not entitled to expect a large amount of time to be devoted to their interests without directors being paid for it, but he thought it must be within the knowledge of almost every gentleman present that in heaps of cases circumstances arose where the directors were not able to make the satisfactory report which they had expected, and they had therefore relinquished a very large portion of their fees. 1,500*l.* seemed to him a large sum. It would be satisfactory to the shareholders to know something about the amount of time devoted by the directors to this concern. The directors had also taken credit for not having made a larger call, but he could not see what a call was wanted for except to pay directors' fees. (Hear, hear.) He was not prepared to accept this report, and he thought they could not do better than send it back for amendment and re-consideration. He had looked forward to something like a reasonable return for his investment, but he saw not the slightest prospect of it. He could only express his extreme surprise that these farms were taken over without anything to warrant the figures put down. The directors had apparently gone blindfold into the affair, and now they were obliged to come here and tell the shareholders they were entirely wrong, and they were now in June next going to find out what they had got. The chairman had suggested one of the directors should go out, but he (the speaker) would very much prefer to see a gentleman from the body of shareholders to go out, for the directors had not done anything to entitle them to the confidence of the shareholders in this matter. He moved "That the report be sent back for re-consideration and amendment."

A SHAREHOLDER: I beg to second it.

The CHAIRMAN: In answer to Mr. Lias' question, I may say the expenditure upon the expedition that is to be undertaken our manager thinks will be 1,500*l.* Mr. Lias said that only on June 1 were the directors going to take any steps to ascertain the area of our property. We were doing all we possibly could last year. Mr. Lias has intimated that directors have not been fully mindful of doing all they could to ascertain the value of the properties. It was entirely out of the power of the directors to know what the area of these properties was, until the re-inspection commissions reported. We bought upon Government titles. Our solicitors advised us to purchase on those Government titles. All the contracts were open to the shareholders before they subscribed to the shares.

THE SOLICITOR'S VIEWS.

Mr. MORSE (solicitor to the company) said that land in the Transvaal was originally all Government land entirely, and the only mode of granting it to a particular person was through the Government registry. This document contained a statement of what land was granted, where it was situate, what were its features, and very often it gave a plan showing exactly the situation of the land. When the company made the contract for purchase a question was raised as to how the areas were shown to be of the extent named, and Messrs. Cooper and Scholtz advised the company very strongly that the proper way was to take the area contained in the Government certificate, filed at the Government office. When the discrepancy was found out they went very fully into the matter and consulted counsel, with the result that they were advised they had no legal claim against any of the vendors or against the assets company, and that he did not see any way out of the difficulty.

A SHAREHOLDER asked what the suspense account represented?

The CHAIRMAN said it was a dispute in the solicitor's account in the Transvaal, but which, until it was decided, was placed to suspense account.

A SHAREHOLDER asked what was the manager's salary?

The CHAIRMAN: Mr. Evans's salary is 500*l.* per annum, and the assistant manager 360*l.*

Mr. BLACKWELL: Considering there has only been sufficient transfers to produce 8*l.* 5s. during the year, I put it to you whether you will not make action in regard to directors' fees retrospective? I have been out to South Africa, and I think

THERE IS A FUTURE FOR THE TRANSVAAL,

but unless the land companies do something to promote immigration, and establishing a labour bureau, so as to get people located on their farms, they will not do much good.

A SHAREHOLDER: How many shares are held by the directors?

The CHAIRMAN: The qualification of the directors is 250 shares. Every director holds his qualification, and one director holds a very considerable quantity more than his qualification.

A SHAREHOLDER: I hope every shareholder will protest against these fees. If the directors had come forward and stated in the report, Inasmuch as the year had been a disappointment they had resolved to take only 50*l.* a year each, we should have passed the accounts without this discussion.

Mr. POPE: I should be very sorry if this amendment is carried, and we separate leaving the report not adopted. There is no doubt there has been

A GOOD DEAL OF WORK

in the incipient stages of this company, but in future we hope and expect that their labours will not be so onerous. It is a very usual practice. I understand that the vendor is prepared to leave the matter of area open, but I think the directors would have been very unwise to have left this matter open. If the directors would meet the shareholders a little in this matter of fees, it would be wise, so that we might pass the balance-sheet amicably.

The CHAIRMAN said the directors were not prepared to do anything further than he had already intimated. A contract had been entered into when they took the office, and for the first year they had had a great deal of anxiety, and it was no fault of theirs that the company had not been able to sell any of their farms or make profits. One of the original directors is dead, and therefore the question in his case could not be re-opened.

The amendment was then put to the meeting and carried.

The CHAIRMAN: I demand a poll.

The poll was then taken, the result being shortly afterwards declared as follows:—1,290 votes for the amendment, and 11,952 against it.

The amendment was declared lost, and the original motion was put to the meeting, and carried.

Mr. POPE moved the re-election of the auditors, which was duly carried.

Mr. POPE suggested that a letter of condolence be sent to Mr. Evans, which met with the approval of the meeting.

A vote of thanks having been accorded to the chairman, the proceedings closed.

PRINCE OF WALES MINE.

SEVERAL PROMISING POINTS IN THE MINE—PROSPECTS BRIGHTER—CALL OF 3s.

A GENERAL MEETING of the shareholders in this company was held on Thursday, at the Offices, Gracechurch Buildings, London, E.C., "to examine the accounts, to make a call, and to transact the ordinary business of the company."

Mr. Alfred Thomas

presided.

Mr. C. B. PARRY (secretary) read the notice convening the meeting, and also the minutes of the previous meeting, which were duly confirmed.

The agents' report was read as follows:—

AGENTS' REPORT.

Apl. 30.—Since the last general meeting operations have been confined principally to the bottom of the mine, and at that time it will be remembered the shaftmen were engaged in driving a cross-cut north from the bottom of shaft, as every indication seen led us to believe that the main part of the lode would be found in that direction. This cross-cut is driven about 6 fms. through killas traversed by veins and branches, and mixed with spar and capel of a highly mineralised character, but finding no other change taking place we resumed sinking, and have now sunk to a depth of 15 fms. 4 ft. below the 166-fm. level. In the later sinking the lode has very much improved, being now 2 ft. wide, well defined in tinny capel and peach, and producing at times rich stones of tin. It is generally considered that the shaft is sunk in a small part or squeeze in the lode, and by driving either east or west, or both, a rich discovery may be made at a very early date. The cross-cut south at the 166 towards the Goodluck lode has been driven 10 fms., making it now 24 fms. from shaft. The lode, as you will see by the transverse section, "had it maintained the same underlay," should have been met with in this distance. It is quite evident, therefore, that it has taken a more downright dip. The 166-fm. level west has been driven 5 fms. 1 ft. 6 ins., making it altogether 29 fms. 1 ft. 6 ins from shaft. This drivage has been on a lode from 4 ft. to 5 ft. wide, and worth 12*l.* per fm. In the present end the lode is large and of a most promising character indeed, and should be further developed, especially as there is a large cross-course in advance, which favourably affects the lode. The 166 east is driven 6 fms. (about), which makes it 31 fm. from shaft. Here latterly the ode became disordered, but there are a pare of tributers stoping the bottom, and have a large and well-defined productive lode. All stoping throughout the mine is being done on tribute.—S. ROBERTS, J. PROWSE.

ACCOUNTS.

The CHAIRMAN: Gentleman, with regard to the accounts, we have sold tin this time to the extent of 18 tons 17 cwt., as against 17 tons 6 cwt. in the previous quarter, showing an increase of 1 ton 11 cwt. Copper we sold last time to the value of 62*l.* 5s. 2d.; this time, 136 19s. 2d. Mundic, last time, 82*l.* 6s.; this time, 103*l.* 5s. 11d. Therefore, you will see that our sales of all classes of mineral have increased. The total sales for the previous four months were 1,002*l.* 1s. 7d., whereas this time they are 1,155*l.* 15s. 8d.; and I may add, that our tin has not fetched so good a price, otherwise this sum would have been increased. The labour costs last time amounted to 2,315*l.* 15s. 7d., and the merchants' bills to 741*l.* 3s. 9d.; this time the amounts are 1,968*l.* 12s. 2d. for labour costs, and 728*l.* 15s. 5d. for merchants' bills, showing a less cost, notwithstanding the increased sales, of 415*l.* This, on the face of it, of course looks favourable; at the same time it is my duty to bring to your knowledge, if you have not already noticed it, the fact that our operations in the bottom of the mine have not been so productive of returns to any appreciable extent, and that has been fully explained in the reports that have

appeared in the public papers from week to week. You will remember that when we last met we had lost the main Prince of Wales lode, and we were driving a cross-cut north from the then bottom of the shaft with the endeavour of finding it in that direction. However, after driving the cross-cut 6 fms., which took the best part of two months, we found no lode, and we therefore resumed sinking the shaft; and the lode for the last 3 or 4 fms. of sinking has gradually improved and has assumed its former character, although not so large as it was before. It is composed of all the matrix that goes to make a good tin lode. I cannot say that it is rich in tin; at the same time it contains tin capel, and it is good enough to put through the stamps. We have now arrived at a depth of 4 ft. below the 180-fm. level, and we are of opinion—the agents have expressed the opinion in their report, and I went thoroughly through all the workings underground myself only last week—therefore, I say, that we are of opinion that by extending the levels east and west upon this lode we shall get out of what we think to be the "nips" part of the lode, and it will assume its former size and value. One

VERY IMPORTANT POINT

I must direct your attention to, and that is that by driving the 166-fm. level westward we shall intersect a cross-course that we have seen in the level above; and in the level above that cross-course made a lode rich in tin. Therefore we are 15 fms. deeper, and the conclusion is that we shall have a still better lode in the 180-fm. level than we have had in the 166-fm. level. The lode from the 135-fm. level eastwards has gradually improved; that is proved by the increased quantity of tin produced from the stuff raised by tributers in that section of the mine. With regard to the western end the 166-fm. level is not at present being worked. In fact the ground was so disordered there that your committee thought it advisable to stop all the drivings on this level until the general meeting was held. But I was very much surprised to see so good a lode in the end of the 166-fm. level west, and I think it certainly ought to be driven; also both levels at the present bottom of the mine. Those operations, I think, should be the only operations for the future—that is, so far as tut-work is concerned. Of course, if we can raise tin at a profit so much the better of the company. Although the price of tin is not so good as it was, there are hopes that we shall have it better, and if so, there will be greater inducements for us to spend more money. At the same time we learn from correspondence with shareholders that it is desirable that the costs should be kept as low as possible. With that view, our

COSTS ARE NOW CONSIDERABLY REDUCED.

Some two or three months ago our costs were 750*l.*, whereas the cost-sheet up to to-day is about 227*l.*, which shows a considerable reduction. We propose, however, to further reduce the costs; at the same time we cannot reduce them below a certain point, if we are to study the proper working of the mine. At any rate we have two or three good points, either of which may any day come off. A great disappoint-ment we have had is the driving of the cross-cut to intersect the Goodluck lode at the 166-fm. level. You will see by the transverse section on the wall that it is extended a considerable distance beyond the point at which we were led to believe we should have intersected the lode; but it only proves this, that the lode has taken a more vertical dip than it had in the upper levels, because the lode has never been seen below the 45 fm. level., and we are down to the 166 fm. level. Therefore the only way to get at the underlie of the lode was to take the bearing of the lode from the surface down to the depth at which it was last seen. It is proved beyond doubt now that the lode is still standing further south, and I have no doubt we shall some day intersect it—probably when we least expect it. We have six men working night and day. I look upon that as one of the most important points of the mine and that certainly should be prosecuted. I do not know that I have anything else to say. I will simply move "That the accounts and report be received and adopted."

Mr. ANDREWS seconded the motion.

QUESTIONS.

Mr. SIMMONDS: Do you not think that the disordered ground has thrown this good lode away?

The CHAIRMAN: Very likely it has. There is no doubt there is a rather large channel of disordered ground. I examined very care-fully the bottom of the mine, and the Prince of Wales lode proper has assumed its normal state as regards size. It is widening as it is going down, and no doubt will do so either east or west, and perhaps both.

Mr. SIMMONDS: Do you think it is much better to drive than to sink lower?

The CHAIRMAN: I think so, certainly. We have a good lode at the 180-fm. level. In the 166-fm. level east end the lode is disordered, and immediately under it there are a pair of tributers working, and it is a very good lode. The tributers are on the east and west.

The motion was carried unanimously.

Mr. SIMMONDS: How about the arrears of calls? They were heavy last time.

The CHAIRMAN: We propose to call a meeting a month hence to forfeit all shares that are more than one call unpaid.

CALL OF 3s.

The next business is the question of the call. The loss last time was 2,170*l.*; this time it was 1,601*l.*, showing a very considerable reduction in the loss, so that a 3s. call will be sufficient to liquidate it.

Mr. TAYLOR: Do you propose stopping the sinking for the present?

The CHAIRMAN: We have stopped it, and we are driving east and west. If the lode does not improve, we shall resume sinking again.

Mr. TAYLOR proposed "That a 3s. call be made, payable within one month."

Mr. SIMMONDS seconded the motion, which was carried unanimously.

A vote of thanks to the chairman terminated the proceedings.

GOLDEN LEAF, LIMITED.

EXHAUSTIVE STATEMENT OF THE POSITION OF CARLISLE, EMPIRE, AND GOLDEN LEAF PROPERTIES — EMPIRE MAKING STEADY PROFITS, AND EXCELLENT RETURNS FROM GOLDEN LEAF—THE POSITION MORE HOPEFUL THAN EVER—IMPORTANT SPEECHES BY MESSRS. CAVENDISH AND WALLACE.

THE second ordinary general meeting was held at the City Terminus Hotel, on Thursday, for the transaction of the ordinary business of the company.

Mr. W. George Cavendish

(chairman of the company) presided.

Mr. H. CAMERON RICHARDSON (secretary) read the notice of meeting.

MR. LONGMAID'S GOLDEN LEAF REPORT.

The CHAIRMAN: Gentlemen, it was our intention to have called you together during last month, but as we did not receive the accounts for the end of the year until Mar. we could hardly get them ready to call you together during the same month, and then, when we found it was necessary to make a change in the management at Golden Leaf, we thought it would be preferable to wait, if possible, long enough to receive a report from Mr. Longmaid after taking possession of that property. I am glad to say it has been received, and has been for some considerable time in your possession. Of course, you cannot regard that report as altogether glowing, but I tell you frankly and candidly that from my point of view I am very pleased with it. (Hear, hear.) We do not want the reports to be too glowing, but rather to lead up to better things than to tell us things that may not happen. The course I propose to adopt to-day is to refer to one or two items in the accounts which, I think, will require some explanation; then to pass in review the different aspects of your properties, and finally to conclude by moving the formal adoption of the report and accounts.

FINANCE.

With regard to the accounts, the first item to which I will refer will be office expenses. Now, you know as well as I do that this re-construction of the two companies, Carlisle and Empire, was not an ordinary one—(hear, hear)—as we have no fewer, I think, than between 1,200 and 1,300 shareholders, so that it entailed a very considerable amount of work on the office staff. Since Dec., however, we have reduced those expenses as far as we think we ought to, and I believe that in future everybody connected with the office will have as much to do as they can. We shall do all we possibly can to keep down expenses, and I trust you will be satisfied with that assurance. Then the next item is sundry disbursements, which have amounted to 725*l.*, and they include the expense of Mr. Wallace's journey to America last autumn, and when he went there, not only did he go to Golden Leaf and Empire but to Rochester, Denver, and other places on the company's business. It also includes the large item of 200*l.* for cables and postages, which, of course, seems a very heavy item, and is very heavy, but you must again not forget that we have practically three properties to deal with—Carlisle, Empire, and Golden Leaf. Then, again, there are the preliminary expenses, upon which it is not necessary for me to dwell.

A UNIQUE RE-CONSTRUCTION.

Such a re-construction as we have passed through is almost unique, and it entailed very heavy expenditure, which, of course, will not again appear in the accounts. Another item is the amount we have written off to revenue account instead of placing it to capital account. That is 3,437*l.* 5s. 7d., which we have thought it more prudent to at once write off against revenue account, instead, as is often done, carrying it to capital account. It makes our accounts appear worse, but I think you will agree with me that it is a wise policy. The next item is the amount of unissued shares. We have now some 39,848 shares which the directors could only allot at par. I hope that should the day ever come when we require further capital for machinery, and so on, that the circumstances of the case will then warrant at least par being paid for those shares; but I wish to tell you, gentle-men, that should it ever happen that we require the money, and that we are enabled to place them at such a price, they will, in the first instance, be offered to you. (Cheers.) They will be offered to the shareholders generally in the first instance. I hope that is a matter that will meet with your approval. (Hear, hear.) There is one other item only to which I have to refer, namely, directors' fees, and I wish to tell you this, that since Dec., 1890, the

DIRECTORS HAVE DEFERRED DRAWING THEIR FEES,

and also that it is their intention to continue deferring to draw their fees until the prospects of the property are more encouraging for the shareholders. (Cheers.) I am very pleased that that meets with your approval. I know there are certain people who say that directors, especially of mining companies, if they take their fees are no better than they ought to be, and if they do not take them they are fools. (Laughter.) Well, we are perfectly above criticism such as that. The only object which has actuated us is to express to you the sympathy we feel under the somewhat disappointing circum-stances of the past, but I think that if things are carried out as we hope, we shall all be richer in pocket and happier in every way later on.

CARLISLE PROPERTY.

I propose now to refer to the Carlisle property. This still remains the *bête noir* of the company. Owing to the most ill-judged action on the part of the late manager, Mr. Eustice, the facts of which, when we last met you, we had not fully realised, it was impossible for us to conclude any arrangements for the sale of the plant and machinery at Carlisle until Feb. last. I need not tell you that we did not cease endea-vouring to negotiate so as to achieve that much-to-be-desired object but all the offers made to us were to a certain extent rather of the

"wild-cat" order; everybody who offered for our machinery wanted to work ore in some near neighbourhood, and if they were successful they would pay, and if they were not our machinery would be used, and we should have got nothing for it. Therefore, we have decided that when we do sell the plant at Carlisle we will entertain only a proposition which is based upon the cash principle. We would rather take less for cash, but do not want the matter to hang over for any considerable time. I am pleased also to tell you that as soon as Mr. Hand left the company's service he intimated that it was his intention to go to New Mexico for the purposes of rest, and the restoration of his health, and knowing that many matters at Carlisle had been left unsettled, he kindly offered his services if he could be of any assistance to us. As the board have every confidence in the honesty and probity of Mr. Hand they gladly accepted that offer, and told their representative at Carlisle to communicate with him when he arrives. They have also put their representative at Carlisle in direct communication with Mr. Longmaid, who, from his previous experience is fully acquainted with all matters there. Therefore, gentlemen, I am exceedingly hopeful that the time is not far distant, considering especially that we are informed that several mining properties have been opened in the neighbourhood and will be requiring plant, such as ours—I say I am exceedingly hopeful that ere long we shall realise a fair sum for the machinery there. Should we not be able to do so we will continue what we have commenced, and that is to remove to the Golden Leaf and Empire such machinery as will pay us to remove, and then to sell on the best terms we possibly can what remains at Carlisle. I will now pass to

THE EMPIRE MINE,

as regards which I think we may all congratulate ourselves upon the policy we adopted, viz., (which, at the last meeting, you approved of), re-opening operations there, and appointing Mr. Longmaid, jun., superintendent, because the figures which he gave and which (if I recollect rightly) were laughed at in the room, and certainly were scoffed at in America, have been verified to the letter. (Cheers.) I think it was in Dec. that Mr. Longmaid submitted to us a plan for the further development of the Empire property; but as that meant an outlay of something like 5,000*l*., we replied to him that, although no doubt what he advised was correct, we thought it preferable to keep our money for development work at Golden Leaf; but, at the same time, we authorised him to use the profits he was making in development work at Empire, and I am pleased to say that so far he seems to think the outlook is very encouraging. I will read you presently, in connection with Empire, a cable we received from Mr. Longmaid yesterday afternoon. I will now pass to

GOLDEN LEAF;

and there, although to the shareholders the result is to a certain extent disappointing, I trust you will no more feel discouraged than I do when I explain to you somewhat in detail the results of last year's working and our future prospects. It is true that this company has been established 12 months, but you must bear in mind that we only had our statutory meeting in May. In June only did we commence work on the placer ground, and it was simply in Sept. that we commenced the shipment of ores to the smelters. Therefore, taking it at the fullest extent, we really calculate that

DURING SIX MONTHS WE HAVE GOT OUT OF THAT PROPERTY ABOUT 16,000*l*.

(Cheers.) That, if you come to regard it in its true light, is by no means a discouraging result. What has harrassed the board more than anything else has been explained to us now by the ill-health of Mr. Hand who has been unable to send us regular information, and hence we could not communicate with you. That has been from no want of constantly writing to Mr. Hand to keep us fully posted, because the shareholders desire to know everything in connection with their property, and we were only too glad to furnish them with the information as received, Mr. Hand has evidently been a sick man, and has not been fully alive to the requirements of the board and shareholders on this side. He has not been, owing to ill health no doubt, in continuous residence at the property, and I am quite sure that in consequence our affairs there have considerably suffered, and that the development work has not been pushed on as vigorously as we could have wished, but we were fully alive to this, and were laying our plans accordingly. We could foresee that unless matters altered a change would come about, and we had it in our minds that we should

APPOINT MR. LONGMAID AS GENERAL SUPERINTENDENT

after the Empire was going all right. We had to bear in mind that, had we precipitated matters, you would have been in this difficulty, that our properties at Golden Leaf would have been left without a responsible head, and then I should like to know what you would have said to us. As matters turned out, Mr. Longmaid was at liberty almost about the time when Mr. Hand sent in his resignation. I need scarcely dwell upon the trouble and annoyance it has given us to think we have not been able to furnish you with the requisite information. But now that Mr. Longmaid is there, I am quite certain that in the future you will have no cause to complain on that score. He is fully alive to the requirements of English shareholders. We have told him not to over-colour anything, and to under-estimate rather than over-estimate, and I am satisfied that from the knowledge Mr. Longmaid manifested at the Empire Mine, his administrative abilities and power of working economically will in the long run bring about that reward to us which we most earnestly wish for. (Cheers.) As soon as possible after Mr. Longmaid arrived at Golden Leaf we furnished you with the report to which I have referred. He then made immediate arrangements, not for reinstating the old 10-stamp mill, but for practically having a new one, and a point in connection with that mill, which is encouraging, is this, that he is not only putting up a 10-stamp mill, but is preparing for the eventuality of requiring 20 stamps, and with that object we have given instructions to ship from Carlisle 20 stamps that are there. In Mr. Longmaid's report he says:—"After closer examination of the 10-stamp mill have come to the conclusion that it would be economical to discard it as a whole;" and he proposes to erect a 10-stamp mill, with vanners for concentration, and pans for the extraction of silver of a capacity of 25 to 30 tons. He says "by using part of the machinery at Carlisle and Empire as well as Bannack a mill could be erected for very little more cost than would repair the old mill with not over half the capacity. 10 stamps are ample for the mine as it is, but far greater capacity will be required, and 10 stamps can be easily added and the extra power used for pumping water for the hill-side placers." I believe he has power provided for 30 stamps, but when I tell you the boilers he has, you gentlemen of engineering capabilities will be able to follow me. The ore, as far as practicable, will be handled automatically, thus reducing the cost to a minimum. It must be perfectly evident that Mr. Longmaid is alive to all the requirements of the mine, and is preparing carefully for them. In part he has commenced his developments, and I will now read an extract from a letter received last week.

LETTER AND CABLE.

"Golden Leaf Mine: We are driving the south drift with four men, and making about 2 ft. per day, at a cost of $6.00 to $7.00 per ft., but intend to-morrow letting this by contract to six men, at, say, $5.00 per ft., and then hope to drive over 100 ft. per month. No. 3 and No. 7 raises are being pushed, the former showing a little high-grade ore; the latter being very promising, and assays high grade. The drift to the north 50 ft. down. No. 3 winze is in ore varying from $3 to $10. We have prepared a station, and will soon be ready to continue sinking in No. 1 winze, and also raising in No. 1 raise. The station will be large enough to accommodate a hoist for at least 400 ft. in depth, and ore and waste shoots required. We struck $70 ore in the north main drift, but soon after knocked through into Shenon's old north drift. Good ore, however, continues in roof, and is to all appearances lower part of body of high-grade ore found in No. 2 raise. Only two men are stoping in the mine, and we intend to stop them soon, and put them on development work. When snow clears off surface ground of Golden Leaf I intend examining surface and prospecting vein by means of open cuts."

The following is a telegram from Longmaid, Apl. 28:—"In raise southerly shoot of ore, 12 selected assays averaged per ton—gold, $109; silver, $34; but character of the ore is bunchy. Other developments in the mine are making good progress. In the main drift south have found ore in small quantities; value per ton $5. Empire: The stopes continue to look well. Smithville stopes and new winze look encouraging. The ore contains a large percentage of lead. Probably producing in gold bullion in Apl., value of $11,500; sundries, $300."

I want to draw your attention to a remark in the cable which is liable to be misunderstood, and which, therefore, should be explained at once. He uses the expression "12 selected assays averaging per ton; gold $109, and silver $34." In my own mind, I feel perfectly sure that the word "selected" is not to be taken in the sense that he has selected 12 of the best samples, and given you the result of that assay, but rather that he has taken 12 samples from this particular drift which averaged that quantity of gold and silver. I think considering the request we had made to Mr. Longmaid, he underestimates rather than over-estimates everything, and I think you will find that this is the correct reading of the cable. With regard to Empire, the returns will be an improvement upon the previous month. I have still a few words to say with regard to the mill at Golden Leaf. As I have already told you,

MR. LONGMAID IS, ABOVE ALL THINGS, ABLE TO WORK ECONOMICALLY,

and he has heard that machinery in the neighbourhood was for sale. He says:—

"I am offered, 4 miles from Marysville, two good tubular boilers about 100 h.-p.; an 80 h.-p. slide valve engine (Fraser and Chalmers' make); two combination iron pans, as good as new; and one settler ditto; with line shafting, belting, and sundry other machinery, for $3,500, and may be able to buy it for $2,500. I am going to-morrow to examine it thoroughly, and may conclude to take it, as it will save the company at least $3,000."

Another economy he has made is this—timber which has cost $22 per 1,000 ft., he has now made arrangements to purchase at $20, and the price of cordwood from $4.50 has been reduced to $4.25. Then, in the matter of salaries, he has made reductions already which mean a saving of 700*l*. a year to the company. Whilst on that subject, I may tell you that when we cabled to Mr. Longmaid to undertake the general management of the whole of our property there came in the question of his salary. We made a proposal to him, which entailed upon the company for the time being only an expenditure a little in excess of what he was to receive at Empire. We have, therefore, abandoned the agreement we entered into with him at Empire, because he has practically carried out all he said, and the arrangement (which will cost a little extra beyond what he received as manager of Empire alone) is a new one. Mr. Longmaid has accepted our terms, in order to show you that your interests are his; and I must not disguise from you the fact that should the results turn out as we hope they will, it will be our duty and your duty to acquiesce in augmenting that gentleman's salary. (Cheers.) I will say a few words expressive of my feelings with regard to the future of the property, and then sit down. As I have already said, the results are not quite what we anticipated; but, personally, I feel exceedingly encouraged, and I do not mind adding that

I NEVER FELT MORE HOPEFUL

of the future of this company than I do now. (Cheers.) It may be that I attach, from the trouble I have gone through, and all of us have gone through, too much importance to the fact that the board feel confident that, in the future, our business relations on the other side will be carried on in a perfect way, that you will have no cause to complain of the information supplied and that the directors will not be harassed by the want of such information. But what leads me to regard the future so hopefully is this, that if, in the short space of time from June of last year, we extracted from that property so large an amount as we did, with more vigorous development, more energy displayed in carrying out the works, and greater economy exercised in all departments, I feel we ought to have done a great deal better, and that in the future we shall actually do better. Another point we must not forget is this—that shortly the placer will be working from which Mr. Hand predicted that this year, at all events, there would be a handsome profit. I am not going to embark upon the doubtful ocean of prophecy, for as President Lincoln said, "You should never prophesy unless you know," but I cannot sit down without saying, personally, that I feel we have

now entered upon a new era in our fortunes, and I, for one, shall be extremely disappointed if the results are not in the future all that can reasonably be expected. I now move the adoption of the report. (Loud cheers.)

A DIRECTOR WHO HAS MORE THAN ONCE VISITED THE PROPERTIES.

Mr. J. STEWART WALLACE, who was received with cheers, said: I have to rise formally to second this motion. I did intend to make a few observations which perhaps I had better defer till later, or would you prefer to hear them now? (Hear, hear.) I wish to refer then to one or two points, and in the first place to Mr. Hand's ill-health. That has been to the directors a source of very great distress. It has delayed the development of the property, as arranged with him when I was out there, in a most marked degree, and there was no reason why the arrangements made with Mr. Hand should not have been carried out regarding the shipment of ore had not his ill-health intervened. We hope we have survived the loss and trouble his ill-health has caused. I told you how anxious we felt regarding the re-engagement of Mr. Longmaid, jun., to take the management of the Empire again. It was a source of great anxiety to the board whether they acted wisely or not in taking that responsibility. On going through the Empire mill with Mr. Longmaid, it was there I became satisfied that it was quite possible to

REDUCE THE WORKING COSTS UNDER $2 PER TON.

Some of the shareholders rather laughed at me for making that statement, but I said that I was something of an engineer, and that whilst not professing to speak about underground developments, yet matters overground were those upon which I could form a competent opinion, and that the opinion I then expressed I was prepared to endorse, and also the calculations that the working costs would be under $2 per ton. It is a matter of gratification to me now to be able to poiut to the actual working as haviug

VERIFIED THOSE CALCULATIONS.

The cost has actually been under $2, and the quantity put through the mill has not been 2,500 tons per month, but the 4,500 tons we expected. (Loud cheers.) My calculations have been verified in both respects. (Cheers.) So astonishing did that appear, not only to shareholders, who were not, in a sense, practical men, but to mine managers in America, who might have been expected to know better, and I have here the copy of a letter from one of them addressed to Mr. Longmaid after reading the report of my speech made at the meeting, and kindly sent to me by Mr. Longmaid:—

"Marysville, Lewis and Clarke Co., Mont.,
"Dec. 19, 1890.

"J. Henry Longmaid, Esq.,
"Empire, Mont.

"Dear Sir,—In the published report of the half-yearly meeting of the Golden Leaf, Limited, I find the following remarks attributed to Mr. J. Stewart Wallace:—

"'We went, I say, over this mill, and on consultation we found we could arrange the mill in such a manner that it would be quite possible to reduce the working cost from $6 or $7 a ton to under $2 by a rearrangement of the machinery alone. Under the old plan, the mill could only pass through about 2,500 tons per month; under the new plan, we have, and can, put through at the rate of 4,500 tons per month.'

"I believe your 60-stamp mill is of practically the same pattern as our 60-stamp mill, and if the remarks of Mr. Stewart Wallace are in accord with the facts, I should be under a great obligation if you would let me know by what arrangement of the machinery such an extraordinary economy has been effected. If this saving is not a creation of Mr. Stewart's *(sic)* mind, you would, perhaps, not object to Mr. So-and-so and myself going over to Empire and seeing what you have done, for we are particularly interested in making such an economy in the operation of the 60-stamp mill here, if it is possible to do so."

The reply is that we have done it. It was

NO CREATION OF MY MIND.

I never come here to give creations of my imagination. (Cheers.) It gives me pleasure, therefore, to point to facts having followed predictions, and in another important point also my figures have been verified. I said we anticipated making 1,000*l*. per month. Well, we have got up to 700*l*. or 800*l*. profit per month, irrespective of what we are realising from using the large amount of what otherwise would have been useless stores. Perhaps you will bear with me while I say a word regarding Golden Leaf. I am quite satisfied (you will take it that I speak to the best of my judgment) from the intercourse I have had with Mr. Longmaid, that whatever value we have in Golden Leaf property will be obtained at the earliest possible moment in the most vigorous manner, and in the most economical style. We would have been in a very different position to-day had it not been for the unfortunate state of Mr. Hand's health. If you recollect, I said at the last meeting that possibly we were then within sight of a dividend. I know of nothing other than Mr. Hand's ill-health that has interfered with the realisation of my hope. I still believe that had my programme been carried out we would have had a considerable surplus available for distribution or otherwise. I am satisfied that under Mr. Longmaid's management, when we get the mill started (and we have a cousiderable quantity of ore on the dump waiting treatment, in addition to the 16,000*l*. extracted during the limited time we were at work last year), we have a prospect of still further supplies from Golden Leaf, so that I have no reason to alter my views as previously placed before you, when I told you, in my judgmeut, how desirable it was to acquire that property. I only hope next time we will have realised more definitely than we have now done what our hopes then were and what they are still. I formally second the motiou. This mining manager is paid 5,000*l*. a year, and yet had the audacity to say that I was here to give you "the creation of my mind." I hope he will see the report of my reply. (Loud cries of "Name.")

A SHAREHOLDER: Will you give us the name of the author of this letter?

Mr. J. STEWART WALLACE: I am in the hands of the meeting; I have nothing to conceal. If you *insist* upon having the name I have no personal objection to give it to you. (Loud cries of "Name, name.") The writer of the letter is Mr. R. T. Bayliss, and Mr. Robinson whom he wished to go with him to inspect your property.

THE EXCELLENT SPIRIT OF MR. LONGMAID.

The CHAIRMAN: There is a letter from Mr. Longmaid here, just arrived, and it is on the point of his salary. He says I am perfectly willing to accede to the proposition made me, and will defray all expenses of house at Empire Mine, and expenses of Bannack will be charged to the company. I am entirely satisfied, but trust to the generosity of the company in case of success, and dividends being paid, and am also unwilling to profit by the company's operations if conducted at a loss, but wish it understood that in no way does my salary affect my work and interest on the company's behalf." I read that to show you the spirit which animates Mr. Longmaid. (Cheers.)

The report was unanimously adopted.

Mr. PYKE: I would urge upon the board the publication of a detailed report when the monthly returns are sent out. The shareholders would receive such information with a great amount of satisfaction.

The CHAIRMAN: It has been our trouble that we have not had this information to give you. We shall have it from Mr. Longmaid, and when it comes it will be sent to you. The maps promised are not yet to hand. Mr. Longmaid has not had time to send them. As soon as they arrive they will be sent out, and you will be able with the monthly reports to follow intelligently the operations as they proceed. (Cheers.) The retiring directors are Mr. John B. Ball and Mr. J. Stewart Wallace. You have seen and heard Mr. Wallace on many occasions, and I am sure you agree with me that he is a most valuable acquisition to the board. (Cheers.) With regard to Mr. Ball, we have not called upon him to speak, but I will see if I cannot get him on his legs next time. He is of the greatest assistance to us, particularly in matters of finance. The accounts are submitted to him, and he goes through them most carefully. It is not a small matter that we have a gentleman on the board who is an accountant, and who is able to do that for us.

Mr. CROSS seconded the motion, which was carried unanimously.

Mr. BALL: The chairman has kindly promised from me on the next occasion a speech, but that does not mean one on this occasion, and, therefore, I need not stop to address you, but will call upon Mr. Wallace, who is much more competent to do so, to convey the thanks of us both for our re-election.

A DIRECTOR WHO CANNOT FORGET HIS RESPONSIBILITY.

Mr. WALLACE: It is in no perfunctory spirit that I thank you for the evident warmth with which you have carried this motion. I can never divest myself of the recollection that I have had your money to work with whilst I was arranging with your affairs in America, or that it was you I represented, and you will believe me when I say that the anxiety weighing upon me (knowing I had to give an account to you) was very great, and the responsibility was never for a moment forgotten. In fact, my anxiety was positively greater than if I had been dealing with money entirely my own, and I trust you will believe me when I say so, and that you will have no reason to say that the acquisition of Golden Leaf was an ill-judged measure. I can endorse the great value of Mr. Ball's services, and thank you for his re-election and my own. (Cheers.)

On the motion of Mr. PYKE, seconded by Mr. FARRELL, Mr. Charles Clayton was re-elected auditor, and his remuneration fixed at 25 guineas per annum.

On the motion of Mr. HIBBERT, Mr. Cavendish was heartily thanked for presiding.

DEAR SIR,—The following remarks embody our usual fortnightly report of the movements and changes in the more active section of the list of stocks and shares. The last one—copies of which are obtained free on application—was dated 8th inst.

IT WILL BE NOTED BY READERS that our circulars are prepared on each Contango day of the bi-monthly Stock Exchange settlement, and are distributed liberally on succeeding days, both through the medium of the Post Office and in advertisement form in the leading financial and society journals.

WE WERE THE FIRST TO INAUGURATE a systematic regularity of issue on Contango day with a view to thoroughly enlighten clients by a comparison of values at standard stated periods. By this method they are enabled also to estimate the consequence of political or other events as bearing upon our subject.

THERE ARE SEVERAL IMITATORS OF OUR SYSTEM, who also have not been slow to wholly or partially copy our circulars verbatim.

We have been similarly accused by other dealers. The public and our clients can read for themselves from the public Press at the moment of issue, and we therefore leave the verdict on such accusations with confidence in their hands.

DAILY AND FREQUENT REMARKS have been passed upon the opening by us of additional branch establishments at the West End, Brighton and Hastings, and we have been asked point blank the question whether the movement is encouraged by increasing business, and what is the extent of such business. We dislike ostentation, but consider it unfair to confide such information to isolated applicants only, and, therefore, at once avow for the benefit of all inquirers that in the 17-day account now closing

THE AMOUNT OF OUR DEALING TRANSACTIONS, if passed through the Stock Exchange, would have exceeded, at ⅛ per cent., a charge for brokerage of over £2,500. This is equal to a turnover, in that short period, of 2,000,000 sterling, and the statement is verified by our books. We are somewhat curious to know whether any inside dealers charging the commission which we omit from contracts, and thus give as a bonus to our clients, can sum up a similar total.

THE MONEY MARKET.

Although on 8th inst. we recorded a quiet market and low scale of contangoes upon current speculative bargains, events in the ensuing week created some disturbance of general calculations. Bullion withdrawals continued upon a free scale, although apprehended early receipts induced a belief that the Bank directors would not find it necessary to alter the rate. On 16th inst., however, it was advanced to 3½, from 3 per cent., at which it had remained since the end of January. The measure was largely precautionary, but has met with unmixed approval. Its first effect was to divert the foreign demand from London to New York and other markets, and the benefit was promptly apparent in Thursday's Bank return showing an augmentation on the week of half a million in the bullion and of about 1⅝ per cent. in the general revenue. The current rate is expected to have some continuance, and is deemed sufficient to induce a considerable import from abroad.

The Budget statement is viewed satisfactorily, particularly as the Chancellor of the Exchequer has apparently such faith in the elasticity of home commerce and consequent ability on the part of the community to pay existing taxes that he has not, out of his handsome surplus, disturbed them.

Money is now rather harder, whether for Stock Exchange accommodation or discount of trade bills, but this may be accepted as an index to an extended and satisfactory course of transactions in both.

THE STOCK MARKETS.

Relieved from the uncertainty as to monetary conditions, coupled with the advent of summer-like weather, have exhibited recovery and animation in every department.

Although the advance in prices has been general, it still falls very far short of the present merits of the stocks chiefly affected. Even the "fright" administered to Bulls of South Americans has given place to a renewal of confidence in that department, and as little reasonable doubt can exist of the recent Bear selling having been overdone there is apparent a nervous desire to cover such operations upon every quiet market.

In the Home, American and other generally active sections symptoms are undoubtedly encouraging, and prices are expected to reach a much higher level.

HOME RAILWAYS.

There is a degree of stability attaching to the present course of these stocks which, of itself, forms assurance to the buyer, whether for investment or on speculation. Neither Continental nor South American Stocks, so long depressed, are yet sufficiently re-established in public estimation to interfere with the course of home securities. Besides, the weekly increases of traffic are of a character to assure improved dividends at the end of the half-year, of which the results of 16 weeks' traffic are already declared.

We may quote as the more striking examples that—

MIDLAND has been earning a gross increase over the corresponding half of 1890 at the rate of 1½ per cent. per annum.
GREAT WESTERN, do., 1¼ " "
NORTH WESTERN, do., ⅝ " "
GREAT EASTERN, do., ⅝ " "

We consider all the above worthy of confident recommendation, also—

SHEFFIELD "A," which we recommended a month ago, when at 34½, now 39, and expected to reach 50, on prospective merits and the continued operations of a strong bull clique.

METROPOLITAN, DOVER "A," EAST LONDON, } Forming remainder of the group, which will be favourably and permanently affected by Sir Edward Watkin's extension to and beyond London of the Sheffield system.

BRIGHTON "A," DOVER "A," CHATHAM ORD., CALEDONIAN, NORTH BRITISH, } Should all promptly advance upon the improvement in weather conditions, and consequently cheering prospect for summer passenger traffic.

AMERICAN RAILROADS.

We have long and persistently advised all friends to keep a vigilant eye upon the American market, and when its stocks were at recently depressed prices comparisons of which we afforded, purchases were recommended by us, and in many instances, we are happy to say, such advice was acted upon. True, the confidence which seemed dawning in the American mind, in regard to these securities, has been more than once rudely shocked by suspected dissensions amongst the leading railroad presidents, and the heavy export of gold from New York to Europe.

The presidents being now fully of accord on the question of rates, and the great promise of the American grain harvest, in the face of ascertained scarcity in Europe, have dwarfed all other considerations, and the "boom" will no longer brook delay.

As a leading recommendation we cite Atchison Income Bonds, now at 52½, and assured of an immediate greatly increased advance.

We give selections in the order of preference, with making-up prices of the present and two previous accounts, for guidance in operating:—

	Mar. 23.	Apl. 8.	Apl. 25.
ATCHISON INCOME BONDS... ...	43	46¾	51¾
NORTHERN PACIFIC PREFS. ...	71¾	71¼	72
ONTARIOS	18	17⅝	18¼
UNION PACIFIC	45	47¾	52¼
MILWAUKEES	55⅞	59⅝	65¼
ERIES	18¾	19¼	22
LAKE SHORE	112	113	115½
ILLINOIS CENTRAL	95¾	98	104

CANADIAN PACIFIC SHARES

Make up at 8 ½, or higher than on 8th inst. Influential connections are being formed and arranged for, in all directions, by the enterprising chairman, and traffic earnings continue upon a scale of increase to warrant expectation of an early gradual advance to 100.

GRAND TRUNK STOCKS

Make up a full point lower on the first and second preferences. An unusually bad weekly traffic return is largely accountable for such result. Our favourable anticipations in regard to Americans and Canadian Pacifics likewise apply to Trunks, although in a modified degree, upon the recent fall in price, at which we consider them cheap.

MEXICAN RAILWAY (VERA CRUZ)

Have afforded a surprise to the market by the dividend declaration of Thursday, giving the ordinary 3 per cent., although, in the most sanguine quarters, only 2½ was looked for. The preference received in full, as a matter of course. A year ago, when no dividend was paid on the ordinary, the price was identical with to-day's—say, 60¾. In August last, under said no-dividend conditions, the price touched 67¾. This stock should undoubtedly advance many points, and it is hinted that such result is only momentarily retarded by the oversold state of the account in the "House."

FOREIGN STOCKS

We do not at the moment recommend as a safe medium for operations in view of the ample choice preferably afforded.

MINING AND MISCELLANEOUS SECURITIES.

We recommend

CALLAO BIS, BROKEN HILL,
LISBON BERLYN, OCEANA,
WENTWORTH GOLD, SILATI RIVER.

Upon every Stock which we recommend we have carefully compiled "Reasons Why," and our aim is to afford such information in its entirety to all inquirers.

We continue to direct constant attention to every class of investment or speculative business, including Options, which are becoming a favourite medium.

Cover in protection of clients' operations may be deposited either in the form of cash or any marketable security.

The fullest information cheerfully and promptly given in response to all inquiries.

GEORGE GREGORY AND CO.

P.S.—Write for our work, entitled "Hints to Speculators" (136 pages), giving a mass of information, and teeming with reliable, honest, and straightforward advice. It also contains the highest and lowest prices of all stocks, together with dividends paid for the past 10 years. Issued gratis and post free.

£5 COMMANDS £500 STOCK AT 1 PER CENT. COVER.

£10 " £1,000 " 1 " "
£20 " £2,000 " 1 " "
£50 " £5,000 " 1 " "
£100 " £10,000 " 1 " "

With no further liability whatever.

SECRETARY AND OFFICES—E. J. CONLON, Esq., 30, Great St. Helen's, London, E.C.

ABRIDGED PROSPECTUS.

THIS Company is formed for the purpose of acquiring the valuable Concession or Lease granted by the Russian Government to Mr. James Coke, to work the Government slaughter houses and curing factory, situate in the town of Griaza, Tamboff Government. The said concession or lease dates from the 19th August, 1889, and is for a period of 21 years, free from rent for the first three years, after which a fixed annual rental of £150 is to be paid. (The original and a certified translation of the concession or lease can be seen on application to the solicitors of the Company.)

The Russian Consul-General in London has certified, at the request of the Russian Imperial Ministry, that the contract is good and valid, and has been legally registered at St. Petersburg. His certificate is dated 10th February, 1890.

Mr. James O'Mara (of the well-known firm of Messrs. James O'Mara and Sons of Limerick, and of Lalor and O'Mara of London) has been to Griaza to inspect the factory and the surrounding district, and as a result of his visit has consented to join the board, and to go out to Russia to superintend the working of the factory for a time.

The present factory was erected by the Russian Government, and Mr. O'Mara states that it is capable of handling 3,000 pigs weekly, and he has made the following calculation, based upon an output of 2,000 pigs per week, showing a dividend of 27½ per cent. on the capital of the Company.

WEEKLY ESTIMATE.

Cost of 2,000 cwt. of dressed pork at 23s.	£2,300
Cost of curing, labour, wages, &c.	300
Cost of freight	275
Commission on sales, and all other expenses in London	325
Sinking fund for redemption of capital and provision for reserve fund	200
	£3,400
Sale of 2,000 cwt. of bacon, at 12s.	4,200
Balance profit for one week	£800

Equal to an annual net profit of £41,600, or 27½ per cent. on the capital of the Company.

The memorandum and articles of association of the Company have been submitted to and approved by the Russian Government, and the authority to trade was published in the "Imperial Senate Law List," No. 9, St. 83, on January 25th, 1891, and the "Official Government Messenger," on January 30th, 1891, a translation of which can be seen at the offices of the Company.

Messrs. Herman Lescher and Co., chartered accountants, of 6, Clement's Lane, Lombard Street, E.C., have, upon instructions received from Mr. James O'Mara, examined the accounts referring to the consignments of bacon taken by Messrs. Lalor and O'Mara, and sold on the London and Liverpool markets, and have given the following certificate:—

"February 28, 1891.

"We have examined the accounts relating to the consignments of bacon from Russia in February last, and find that the profit on the sale thereof amounts to 42 per cent. upon the cost price, after deducting cost of freight, commission, and incidental charges.

"HERMAN LESCHER AND CO."

The price to be paid to the vendor is £100,000—£25,000 in fully-paid shares, and the balance, £75,000, is to be paid in cash or shares, as provided in the purchase contract. All expenses up to allotment, including brokerage, will be borne by the vendor.

Applications for shares should be made on the application form and sent with the deposit of 10s. per share to the Company's bankers. Should no allotment be made to any applicant the deposit will be returned in full, and if the number of shares allotted be less than the number applied for, the balance of the deposit will be credited in reduction of the further amount payable on the shares allotted.

Prospectuses and forms of application can be obtained from the bankers, brokers, solicitors, and at the Company's Offices.

April 30, 1891.

QUINLAND—LONDON.

MINING MARKET.

City, Friday Evening.

STATE OF THE MARKETS — CIRCULAR ADVICE — A DISCLAIMER—COURSE OF BUSINESS.

The Mining Market has this week suffered from sins not its own. It has been affected by the unsteady state of affairs in Paris, as well as by the weakness of the general markets, and notably of the American section. It is not expected that there will be much revival of business next week, for the simple reason that the first three days will be occupied by the settlement, and the last three by a general packing up of the portmanteaux, and a scurrying off for the Whitsuntide. Thus between the upper millstone of the settlement and the nether millstone of the holidays the Mining market will be in a pretty tight place during the next week.

It is amusing to read the advice which certain persons tender to their "clients," and the facile way in which they pass over the miserable results of their previous recommendations. In some of these communications truth gets slapped in the face by mendacity, and modesty is put to the blush by brazenfacedness. In one of these effusions, issued a few days since, the British investor is delicately referred to as a born gambler. We should describe him as a born fool if he reads without his risible faculties being tickled to the straining point some of the delicious sentences prepared for his delectation. Here is a sentence referring to Flagstaff, a mine that the writer in question has constantly attacked for reasons best known to himself, and which, in an earlier part of his effusion, he condemns : "With so much talent as the company possesses, and with operations carried on in such a small scale, it puzzles me much to know why Capt. Palmer and Capt. Stephens were called in to report upon the property at a cost to the company of about 450*l*."

Letting pass the writer's peculiar style of composition, it only requires that any person who has been a year or two in a Board school should look at our report of the Flagstaff meeting to see that every explanation was given, and that in the result the shareholders unanimously adopted the report and accounts. Does anyone suppose that they would have done so had that document been unsatisfactory.

We have a word more to say about Harnhalli postcards, which were recently sent hither and thither, and which caused many of the public, to their regret, and against our strong advice, to buy the shares at 15s. and 16s. The board have this evening taken a step, for which they are highly to be commended, in issuing the following notice :—"The directors of the Mysore Harnhalli Gold Mining Co., Limited, disclaim any responsibility for statements made concerning the mine other than those published by the authority of the board, conveyed through the secretary." We are extremely pleased to see this, and only regret that its issue has been so long delayed.

The market this week has been chiefly eventful from its Indian side. The shares in most of the companies have been rampant during the week, though by no means closing at their best. Nundydroogs, to the favourable features of which we called special attention last week, have been much higher than we quote them now, and prices may still be regarded as exceptionally low. It is surprising also that during the week there has been practically no change in Goldfields of Mysore. The table we published in our last showed to a demonstration that this company has already received back in shares more than the whole of the capital with which it started, whilst it has still the greater part of its property intact. There have been large dealings in Balaghats, which are slightly firmer on the week, and which at any time may have an important rise. Mysore Reefs, West, and Wynaad should by no means be overlooked, for the prospects in all three are fairly encouraging, and under improved auspices Nine Reefs also merit attention. Harnhallis are a shade firmer, though, unfortunately, about 10s. below the price at which many persons recently bought them.

The returns from the four mines making regular crushings for the first four months of the present year are, by comparison, extremely favourable. Mysore leads off with 21,795 ozs., as compared with 12,505 ozs. in 1889, and Ooregum, in the same period, 10,862 ozs., as compared with 4,153 ; Nundydroog, 5,478 ozs., as compared with 1,974 ; and Balaghat, 1,081 ozs., as compared with 939. The full position is brought out in an article with tabular statement specially devoted to the subject, and the facts and figures are very striking.

Australian Broken Hills have been the sport of the hour. At one time they were as low as $1\frac{3}{4}$ and close $2\frac{1}{16}$, $\frac{3}{16}$, or a fall of 7s. 6d. on the week. The dealings have been very large. At one time there arose the cry "The market has collapsed," but buyers promptly appeared, and prices were fairly re-established. It cannot, however, be said that there is the same consistency of quotations which we emphasised a few weeks ago. Its offspring East Broken Hills has fared badly, and the shares are now quoted at a substantial discount. It is said that the public by no means responded well to the prospectus, and that the underwriters were saddled to the extent of over 60 per cent. of the stock. Wentworth Proprietary shares have been fairly well supported, but exhibited symptoms of unsteadiness, and Day Dawn Blocks have not maintained their recent rise. On the other hand Gympie Great-Easterns are better, and appear to indicate a further rise.

Coming to Diamond mines—De Beers continue to justify our prognostications, and this week the fall has been notable. New Jagersfonteins are also down, but the market for North East Bultfontein has been better supported, and there has been an enquiry for St. Augustines.

In the Miscellaneous market there has been no striking feature. Callao Bis were firmer on a good return, but afterwards fell away. Dickens Custers have been propped up by communications to the Press, which, however, are fairly warranted by the improved aspect of affairs. Elmore Golds have been in good demand, and as for American Belle, New Guston, and Yankee Girl—it only needed that the snow should melt so as to enable operations to be resumed to bring them once more prominently to the front. There has also been a fair amount of business in Don Pedro and Pinos Altos shares, and we are somewhat surprised that the former have not risen substantially on the satisfactory news published from the mine. The news from Golden Gate and Golden Feather as sent almost daily by Col. McLaughlin is good, and the shares are in much better demand.

An important discovery has been made in Elkhorn, which, however, did not materially affect the shares. There has been some enquiry for De Lamars during the week.

There was a good demand for Golden Leaf when the facts brought ont at the meeting had sufficiently perculated through the country, and Lomas recovered somewhat from the facer they received on the announcement of the recent call. Venezuelan-Austins are also firmer, but on the other hand the life has gone out of Amador for the moment, and the end of the week has not left Frontino, Montana, Lisbon-Berlyn, and some other descriptions where the begiuning found them.

Copper descriptions are all down, the market not having seemingly recovered from the effect of the Mason and Barry dividend. Moreover copper statistics for the first time for a long period are against the mines instead of in their favour. Then it is to be remembered that events in Chili are approaching a termination, and that certain new sources of supply are being opened out.

African shares in both the land and gold departments are down without exception, the returns from the mines being viewed unfavourably. The following comparison will enable the reader at a glance to form his own opinion.

The letter we publish from Mr. Conybeare this week will not do much to help either Silati or Oceana. It will be observed that he deals with none of the points which Capt. Williams brought against the property.

In Home mincs there has been a revival which is most refreshing to see, but a revival only after a series of, perhaps, the most dreadful falls we ever remember to have taken place in Cornish shares. However, for such mercies as have been vouchsafed this week, we are thankful, and in the general rise Carn Brea, Dolcoath, East Pool, West Frances, Wheal Basset, and Wheal Grenville have shared. On the other hand, there have been certain drops, though not of a very substantial kind.

The Wheal Uny meeting to-day, in spite of the call of 5s., may be described as fairly satisfactory, the later developments in the mine having given great promise for the future.

The outlook is indicated in our opening scntences.

Diamonds.

De Beers have continued their downward course, having fallcn $\frac{9}{16}$ on the week, with every appearance of going still lower. A slight rise in North-Eastern Bultfontein has been the only cncouraging feature in a decidedly weak market.

Business: A rise is to be noted in North-Eastern Bultfontein of $\frac{1}{8}$, whilst a fall is shown in De Beers of $\frac{9}{16}$; New Jagersfontein, $\frac{1}{4}$; and Burma Ruby, $\frac{1}{16}$.

$\frac{7}{8}$	Burma Ruby Mines	par $\frac{1}{8}$ pm.

Kaffirs.

The market has again been flat, stale, and unprofitable, and quotations generally show a fall on the week. The April crushings are not considered entirely satisfactory. The principal falls have been in City and Suburban, Crown Reef, Jubilee, Jumpers, Kimberley Roodepoort, Simmer and Jack, and Stanhope, all of which have fallen from 5s. to 10s. cach. The market closes decidedly weak.

Business: There is no rise to record.

The following close lower:—Pigg's Peak, 1s. 6d.; Sheba, 2s.; Bankets, 3d.; Central Langlaagte, 9d.; City and Suburban, $\frac{1}{2}$; Crœsns, 1s. 6d.; Crown Reef, $\frac{3}{8}$; Durban Roodepoort, $\frac{1}{8}$; Geldenhuis, $\frac{1}{8}$; Glencairn, 1s. 6d.; Great Gold Zone, 2s. 6d.; Henry Nourse, $\frac{1}{8}$; Johannesburg Waterworks, $\frac{1}{16}$; Jnbilee, $\frac{3}{8}$; Jumpers, $\frac{1}{4}$; Kimberley Roodepoort, $\frac{1}{4}$; Langlaagte, $\frac{3}{16}$; Langlaate Block, $\frac{3}{16}$; Main Reef, 1s.; May Consolidated, 1s.; Robinsons, $\frac{1}{16}$; Salisbury (New), 2s.; Simmer aud Jack, $\frac{1}{4}$; Stanhope, $\frac{1}{4}$; Vogelstruis, 6d.; Wemmer, $\frac{3}{8}$; and Witwatersrandt, (Knights), 6d.

Australians.

Business in this market has again been confined principally to dealings in Australian Broken Hill and Wentworth shares, the former closing at $2\frac{1}{16}$, $\frac{3}{16}$, after having been $2\frac{3}{4}$. The prices of both these shares have fluctuated constantly during the week. There are very few other changes to note.

Business.—A rise is noted in Gympie Great Eastern of 3d., but the following show a fall: Australian Broken Hill, $\frac{3}{8}$; Bonnie Dundee, 6d.; British Broken Hill, $\frac{1}{4}$; Day Dawn Block, 1s.; Etheridge, 3d.; Mosman, 3d.; and Wentworth Proprietary, $\frac{1}{4}$.

African Land Shares.

There has not been very much doing in this class, and when shares have changed hands they have, in nearly every instance, shown a fall on previous dealings. London and South African Explorations show a fall of 10s. per share, while London and Orange Free States, Oceana, Bechuanaland, and British South Africa Chartered have also declined.

Business.—There is no rise to record.

The following have fallen:—Bechnanaland, $\frac{1}{8}$; British South Africa Chartered, $\frac{3}{16}$; Goldfields of South Africa, $\frac{3}{16}$; Klerksdorp, 3d.; London and South African, $\frac{1}{2}$; London and Orange Free State, $\frac{1}{4}$; Moodies, $\frac{1}{16}$; Oceana, $\frac{1}{4}$; Read's Drift, $\frac{1}{8}$; South African Gold Trust, $\frac{1}{16}$; and Transvaal Gold, 1s.

INDIANS.

As we foreshadowed last week Nundydroogs have gone better, and but for the general downward tendency of stocks in other market, these shares would, undoubtedly, have improved still fnrther. Although they show a rise of 2s. 6d., they do not close at their best, having changed hands at one time during the week at 2 1/16. They close 1⅞, 2 market firm. Mysore Harnhallis show a gain of 6d. on the week, though at one time they were almost unsaleable at 6s.

Business :—A rise has taken place in Balaghat of 3d., and Nundydroog ⅛ ; whilst a fall is shown in Mysore Harnhalli of 6d. and Nine Reefs of 3d. Others remain unchanged on thc week.

COPPER.

We have again to record a dull market in this class, nearly all shares having fallen on the week.

The chief dealings have been as usual in Rio Tinto on Paris account, and although Mason and Tharsis show a fall, these shares do not close at their lowest. There is no rise to record.

Business.—There is no rise to record, but falls have taken place in the following :—Copiapo, ⅛ ; Mason and Barry, ⅛ ; Quebrada, ⅛ ; Rio Tinto, 9/16 ; and Tharsis, ⅛.

GENERAL FOREIGN SHARES.

There has not been very much business in these shares, and prices generally are lower. There have, however, been some free dealings in Elmore Gold, which have improved slightly on the week. Fortuna have risen 5s., but Don Pedro have fallen on the receipt of the last report. Golden Gates are lower on some selling orders coming into the market, and American Belle, Frontino, Montana, Orita, and Palmarejo are all slightly lower.

Business.—A rise has taken place in Elmore of 6d. ; Fortuna, ¼ ; Golden Leaf, 3d. ; Loma, 3d. ; and Venezuelan Austin, 3d. ; whilst a fall is noted in Amador of 6d. ; American Belle, 1s. ; Barretts, 3d. ; Don Pedro, 5/16 ; Flagstaff, 3d. ; Frontino, 1s. ; Golden Gate, 1/16 ; Graskop, 3d. ; Idaho, 6d. ; Lisbon, 3d. ; Montana, 1s. ; New California, 6d. ; New Viola, 3d. ; Orita, 1s. ; Palmarejo, 1s. ; Pinos Altos, 6d. ; St. Augustine, 3d. ; and West Argentine, 9d.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

INDIANS.

BALAGHAT MYSORE.—A telegram, dated May 5, gives last month's return of gold as follows :—"132 tons of quartz produced 193 ozs. of gold." The company has sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Mar., which realised 438*l*. 13s. 6d.

INDIAN GOLD.—The following information has been received from the mines :—Apl.—Total amount crnshed is 770 tons, yielding 91 ozs.

MYSORE.—A telegram, dated May 5, gives last month's return of gold as follows :—"3,239 tons of quartz produced 5,043 ozs. ; also 463 ozs. obtained from tailings ; making a total of 5,506 ozs. of gold." The company has sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Mar., which realised 21,595. 2s. 2d.

NUNDYDROOG.—A telegram, dated May 4, gives last month's return of gold as follows :—"855 tons of quartz prodnced 1,638 ozs. of gold." The company has sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Mar., which realised 5,735*l*. 10s. 6d.

OOREGUM.—A telegram, dated May 4, gives last month's return of gold as follows :—"950 tons of quartz produced 2,055 ozs. of gold. 19 days' crushing." Official note :—The superintendent's telegram of Apl. 13 (read at the recent general meeting) reported that the cholera epidemic, which had interfered with the work, had disappeared, and that the Moplah miners were expected to retnrn to the mines that day. The company has sold the gold produced in Mar. for 11,403*l*. 4s. 6d.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Tclegram from the managing director resident at Broken Hill, dated May 1 :—"5½ tons of ore, containing 44,074 ozs. of silver, raised during the fortnight. Tenth shipment, consisting of 5½ tons of ore, containing 44,074 ozs. of silver, will be shipped for London per steamer leaving Adelaide May 13."

BRITISH BROKEN HILL PROPRIETARY.—The return for the week ending Thursday, 30th ult., of the furnace at the mine was 600 tons (including iron ore) treated, yielding 162 tons lead, containing 7,800 ozs. silver.

BRITISH BROKEN HILL.—The return for the week ended 7th inst. of the furnace at the mine was 596 tons of ore treated (including 193 tons of iron ore) yielding 155 tons lead, containing 6,556 ozs. silver.

BROKEN HILL PROPRIETARY.—The yield for the week ending 30th ult. was 5,102 tons of ore treated, yielding 867 tons of lead, containing 178,570 ozs. silver. The surplus on hand is 185,058 ozs. silver.

BROKEN HILL PROPRIETARY.—A cable, dated 8th inst., states that during the week ending 7th inst. 5,122 tons ore was treated, yielding 871 tons of lead, containing 179,270 ozs. silver.

EAST BROKEN HILL CONSOLS.—A telegram from the managing director, resident at Broken Hill, dated May 5, states as follows :—"Work is being pushed ahead. Have commenced erecting machinery, block 98. Driving cross-cut to the vein, block 99."

HARRIETVILLE.—A telegram from the superintendent, dated May 5, is as follows :—"Cleaned up May 4. Mons Meg Mine, 570 tons ; 308 ozs. New Lease, 300 tons ; 32 ozs. Amalgamating pans, 51 tons, 125 ozs."

MIDAS.—A cable from the minc states :—"Yield, 29 ozs. ; not in deep ground."

Foreign Mines.

Callao Bis.—Telegram from the superintendent at the mines as under:—"415 tons; 510 ozs. gold. Mine is improving; works well."

Colombian Hydraulic.—Cablegram of the result of run No. 172:—"We have cleaned up after a run of 28 days, during which time we have washed 640 hours. The gross returns are 1,700*l*.; the net profit is 480*l*."

Elkhorn.—Important information from the manager of the mine:—"Have struck the ore body in the 1,150-ft. level south, carrying 50 ozs. per ton, and is improving as we advance. Bullion produced for week ending May 2, $8,700."

Golden Gate Alluvial.—Cablegram from Col. F. McLaughlin, the manager at Oroville:—"Lowering of river shows head-dam perfect condition. Flume progressing well. Everything going all right."

Gravel.—Cablegram:—"Commenced washing with 1,000 ins. of water. We have been much hindered by breakages on the ditch."

Mammoth.—The manager telegraphs that the bullion produced and sent to Bank for month of Apl. was $23,600. The mill was standing two days. Mine looking first-rate.

New Pierrefitte.—The company sold 150 tons silver-lead orc to La Société des Mines de Pontgibaud at 11*l*. 14s. 10d., f.o.b. Bordeaux.

New Viso.—This company sold, on May 5, two small parcels of black tin at 47*l*. 15s. and 50*l*. per ton respectively.

St. John Del Rey.—The directors have received the following telegram from the mines, dated Rio de Janeiro, May 7:—"35 fms. sunk during Apl."

Yankee Girl, Guston, and American Belle Mines.—A cable states that the railway is opened for traffic, and that shipments had commenced. It adds that one car-load shipped of Yankee Girl ore ran 1,070 ozs. of silver to the ton.

Zaruma.—Telegram respecting the Mar. produce:—"Mill working 13 days, crushed 250 tons of quartz, producing 180 ozs. of bullion. Mill working day and night. Weather very unfavourable."

Home Mines.

New Morgan.—The general manager reports the result of crushing for month ending May 2 as 1,520 tons of quartz crushed, which yielded 420 ozs. of gold, an average of 5 dwts. 13 grs. per ton.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

Jumpers.—Obtained 2,685 ozs. gold during Apl.

Salisbury.—The crushing for last month was 1,100 ozs.

Stanhope.—The result of last month's crushing yielded 867 ozs.

Ferreira.—Crushing for last month, 4,572 tons, yielding 4,038 ozs 17 dwts.

Sheba.—Cablegram from the general manager:—"Started crushing May 2."

City and Suburban.—The result of last month's crushing yielded 690 ozs.

Kleinfontein.—Result of Apl. crushing:—3,436 tons crushed, 828 ozs., 27 days, 50 stamps.

New Primrose.—April crushing, 1,742 ozs., from 3,621 tons; result of 25 days running with 50 stamps.

Geldenhuis Main Reef.—The result of Apl. crushing produced 365 ozs. of retorted gold from 800 tons.

Simmer and Jack.—Quartz crushed during month of Apl. 7,367 tons; obtained 3,275 ozs. of gold.

Pigg's Peak Estate.—Cablegram from Barberton:—"Mar.-Apl. mill returns show 950 tons, 321 ozs."

George Goch Amalgamated.—The company advises the receipt ex Mexican s.s., from Cape, of 274 ozs. of gold.

Blue Spur and Gabriel's Gully.—The manager telegraphs the yield of gold for the month of Apl. at 413 ozs.

May Consolidated.—During the past month the mill was running 28 days; 4,800 tons crushed, yielding 2,250 ozs. of gold.

Worcester Exploration.—Result of last month's crushing is 1,069 ozs. of gold. The directors have declared a dividend of 5 per cent.

Durban-Roodepoort.—Cable crushings since Apl. 8 last, are as follows:—"3,230 tons crushed; 26 working days; 1,868 ozs. of retorted gold."

African Gold Recovery.—According to a cable just received from their manager, 2,025 tons Robinson tailings treated for Apl. yielded 1,645 ozs. troy.

Jubilee.—Result of last month's crushing is 831 ozs. of gold. The directors have declared a dividend of 5 per cent., payable to all shareholders registered on May 5.

May Deep Level.—Cablegram:—Tons crushed, 275; result, 433 ozs. gold. Concentrates value 450*l*. Fourteen days' milling. Everything working well."

Wemmer.—The London agency has just received a cablegram giving the result of the working for the month of Apl. last, viz.:—"950 tons crushed; 900 ozs. of gold won; 15 stamps working 22 days."

Paarl Central.—The certificates of the Central Langlaagte Gold Mining Co., Limited, are now exchangeable for certificates of the above company, but they must first be listed and left here three clear days for examination, between the hours of 10 and 2, Saturdays 10 and 1 p.m.

Wyldsdale Gold Exploration and Developing.—Cablegram from the agent at Barberton:—"14 tons, 3 ozs. per ton." This refers to another test crushing of the Lomati reef by means of the small hand battery of three stamps.

North-Eastern Bultfontein.—This company has telegraphic advice announcing for last week 5,000 loads washed, producing 1,050 carats of diamonds, making for the four weeks ending 2nd inst. a total of 3,520 carats of diamonds for 16,250 loads washed.

Witwatersrandt (Knight's).—The London agency advises the receipt of 386 ozs. of gold ex Mexican s.s. from Cape. A cablegram gives the result of the working for the month of Apl. last, viz.:—"3,200 tons crushed; 790 ozs. of gold won; 24 working days."

Stanley (Sheba United) (Apl. 23).—Report from the manager—Our shaft continues very hard, and the crevice is somewhat narrower, being 12 ins., but of very good-looking ore. The shaft is pitching a little more than formerly, and we think that this will bring a change in the rock and crevice. Our last mill-run showed an improvement in the ore from the shaft. You will be glad to hear that an adjoining mine has struck very good ore at a depth of 2,150 ft. The ore is about $20 per ton, and pays a large profit. This strike has had the general effect in the community of creating confidence in deep mining.

Ottos Kopje Diamond.—The board state that the re-construction has been highly successful, and that they have news by cable from Mr. F. Stobbs (the chairman), who is now on the mines, that the transfer of the property to the new company will be completed very shortly, and that he will return to England after having thoroughly inspected the property. Mr. Stobbs also reports that the company's prospects are in every way most satisfactory. As the shareholders will doubtless wish to have his personal report on their property the board intend to convene a further meeting for the purpose at the earliest possible date. The meeting now convened is purely formal, being called to comply with the requirements of the Joint Stock Companies' Acts, and no business can be transacted thereat.

Akankoo.—The manager writes on Apl. 13:—Crushing has gone on steadily during every day of the past week. The copper plates are getting into very good condition again, and I am disposed to consider that the stone contains 1 oz. free gold per ton. During the last few feet the reef has very much improved, specks of gold being visible. We have crushed up to date 54 tons, at the rate of 6 tons per day of 11 hours. The result will show less ounces of gold to tons of stone than have been actually deposited, as I shall have to leave on the plates 30 or 40 ozs. as dressing, the plates having been scraped quite bare. I am very short-handed, owing to disturbances on the Kroo coast, preventing labour coming, and this delays work a good deal. Progress report: 100-ft. level driven 4 ft.; total distance from shaft, 107½ ft. Winze A done, and cross-cut to meet 60-ft. level driven 4 ft. This will be completed in three weeks. Winze B sunk 28 ft. We shall have to drive the level the distance between the two winzes before stoping can be commenced. Telegram from the manager:—"Have discovered another reef in middle level 3 ft. 6 ins. wide, reef very promising."

Transvaal Gold Exploration.—General manager's advices to the company of Apl. 6:—Bullion: A shipment of eight bars melted gold, weighing 1,179 ozs. 15 dwts., value, 4,425*l*. (part of Mar. produce), was forwarded through the Standard Bank on Apl. 6. Mines.—Ophir Hill: Theta vein: Stripping work had made good progress, but no ore was extracted. Brown's Hill: Nu vein: Ore extracted at Nos. 1,211 and 1,216 40 tons; assay value, 1 oz. 15 dwts. per ton; and at No. 1,209 70 tons; assay value, 3 ozs. 15 dwts. per ton. A large paddock was being stripped at No. 1,215, where the ore deposit was showing rich. Mill: After a short stoppage of battery and pans for repairs to water-race and for the monthly clean-up, work was resumed. Summary for Mar.: Mined during month 629 tons; average assay, 6 ozs. 10 dwts. per ton. Battery working 555½ hours crushed 735 tons (113 tons Theta and 622 tons Nu ore), yielding 1,044 ozs. 10 dwts. retorted gold, equal to 1 oz. 8 dwts. 10 grs. per ton. Pans treated 174 tons mixed tailings, yielding 130 ozs. 12 dwts., equal to 15 dwts. per ton, and 25¼ tons rich Nu ore, yielding 380 ozs. 12 dwts., equal to 15 ozs. 2 dwts. 3 grs. per ton. From damaged battery plate and sundries 64 ozs. 6 dwts. 16 grs.; total for month, 1,620 ozs. 0 dwts. 16 grs." A telegram from the manager states:—"Mined during Apl., 525 tons; mixed ore (¼ Theta, ¾ Nu) 22 days; double shifts, crushed 650 tons; battery working, yielding 560 ozs.; pans, 550 ozs.; total for month, 1,110 ozs."

COMMERCIAL NOTES.

Dividends Declared and Announced for Week Ending May 9.

Argentine Land and Investment	2½ per cent.
Baker Bros.	8 per cent.
Barrett's Bottling	5 per cent.
Bengal and North-Western Railway	1*l*. 16s. 8d. per cent.
Bolands (Dublin)	9 per cent.
British and American Trustee Corporation, Ordinary	6½ per cent.
British and American Trustee Corporation, Founders	10 per cent.
Bank of Constantinople	4s. per share.
Chester Northcote Brewery	3 per cent.
Darjeeling...	6 per cent.
Empire of India Corporation	7 per cent.
English Bank of Rio de Janeiro	6 per cent.
Frank Jones Brewing	12s. per share.
Great Northern Telegraph of Copenhagen ...	7s. 2d. per share.
General Life	10 per cent.
Guardian Fire	3*l*. per share.
Henry Ford and Co.	12½ per cent.
Ionian Bank	5 per cent.
International Trnstee	7 per cent.
Jhanzie Tea	6 per cent.

Liebig's Extract	12½ per cent.
Linoleum Manufacturing	8s. per share.
Loan and Finance Corporation...	7 per cent.
Minas and Rio Railway...	7 per cent.
Metropolitan Railway of Constantinople ...	1 per cent.
National Fire and Marine	10 per cent.
National Bank of Australasia	15 per cent.
Royal Bank of Australia	6 per cent.
Scottish Ceylon Tea	11 per cent.
St. John and Maine Railway	1 per cent.
Scottish Union Insurance	16 per cent.
Scottish Australian Investment	10 per cent.
West London Dairy	8 per cent.
Western Counties and South Wales Telephone	6 per cent.
William Yates and Co., Preference	6 per cent.
William Yates and Co., Ordinary	10 per cent.
Wright and Greig, Preference...	6 per cent.
Wright and Greig, Ordinary	12 per cent.

BRITISH MINING INTELLIGENCE.

LEADHILLS (May 4.)—Brown's vein : The 145-fm. level north of Jeffrey's shaft is in solid quartz, 1½ ft. wide, with ore worth 45 cwt. per fm. The stope above the 145 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The two stopes above the 145 south of Wilson's shaft are worth 30 and 60 cwt. of ore per fm. respectively. The stope above the 145 north of Wilson's shaft is worth 30 cwt. of ore per fm. The 130-fm. level north of Jeffrey's shaft continues in a vein above 4 ft. wide, nicely mixed with promising quartz, and is very wet, but without ore. The three stopes above the 130 north of Jeffrey's shaft are worth 25, 30, and 20 cwt. of ore per fm. respectively. The rise above the 130 north of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 130 south of Jeffrey's shaft is worth 25 cwt. of ore per fm. The stope above the 130 north of Wilson's shaft is worth 10 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, mixed with very kindly quartz and spots of ore, not, however, to value. The stope above the 115 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 25 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft keeps in a vein about 4 ft. wide, showing quartz, but no ore. The 85-fm. level north of Jeffrey's shaft is in a vein 4 ft. wide, charged with quartz, and damp, but continues without ore. The 70-fm. level south of Wilson's shaft is in a vein 4½ ft. wide, charged with very much better stone and quartz, but yet without ore. The 35-fm. level south of Flat Rod shaft is in a vein above 4 ft. wide, charged mainly with kindly stone and ore worth 15 cwt. per fm. The stope above the 35 south of Flat Rod shaft is worth 30 cwt. of ore per fm.—T. NEWBIGGING.

MID-DEVON. — Report for week ending May 2 :—Surface : Machinery has worked continuously, and is in good order throughout. A shaft : Water kept drained to bottom of the 80 by three and a half revolutions of wheel per minute. C shaft : The 60 east has been driven obliquely 1 fm. 1 ft. 6 ins. towards south wall of lode ; total distance from shaft, 96 fms. The strata driven through to east of cross-course, referred to in my last, is composed chiefly of capel and compact garnet, interspersed with small streaks of yellow ore and arsenical mundic, not sufficient to save ; it is hard, but has a good cleavage, which accelerates progress. The point on which the two men are working east of winze at the 60 following branches of ore does not yet show any improvement, although the branches are still carrying a little ore. I intend next week to make a trial at another point, which shows a little ore nearer the winze.—J. NEILL.

PRINCE OF WALES (May 6).—We have no material change to report. The shaftsmen are driving the 180-fm. level east and west by the side of the lode, which, as far as can be seen, looks promising to be productive of tin. We have reset the 166-fm. level west to four men, but nothing yet done. In the cross-cut towards the Goodluck lode we have intersected a branch from 4 to 5 ins. wide in capel with a little mundic, but of no value for tin.—J. PROWSE.

ROMAN GRAVELS (May 7).—The shaftmen have now finished cutting ground for lodge room at the shaft in the 155 cross-cut, and have commenced to case and divide the shaft. This work is being pushed as fast as possible, since, as stated in last week's report, all driving at the 155 level has to be suspended until the said work is completed. The lode at the 140 south is about 3 ft. wide, and producing 1 ton lead ore to the fm., and saving stuff for blende. This forebreast is now driven about 94 fms. 1 ft., or within say 5 fms. of the perpendicular of the new winze being sunk from the level above. This winze is now 9 fms. 5 ft. deep, and the part of the vein being carried produces some good saving stuff for blende and lead ore. The vein going south-east at the 140 north is worth 2 tons of lead ore per fm. We have taken the men back from the forebreast proper in this level, and they are at present working with rock-drills in a north-easterly direction at a point some 7 or 8 fms. behind where this rich bunch was first cut into, the object being to effect a communication with the above-mentioned drivage south-east, and so lay open ground for stopes. The three stopes at work in this level are producing 1 ton lead ore each to the fm. I may mention here that no stoping can yet be done on the above-named bunch of ore. There is no material change to notice at the 140 on Caunter lode since last reported. The lode at the 125 south is looking better, and is producing some very good blende stuff. The four stopes in back of this level at Lewis winze average 1½ tons each per fm. The four stopes in back of the 110 south are together producing 5 tons per fm. The three stopes in back of the 80 south are producing 3 tons lead ore each to the fm., and the forebreast is worth about 1 ton per fm. We have now made a communication from the stopes south of Glover's winze in back of the 80 on East lode to the winze, which was sunk some 7½ fms. below the 65, and abandoned some 10 or 12 years ago, in consequence of there being no level underneath. We estimate that a piece of ground is now laid open here for stopes, say 7 fms. long by 7½ fms. high, which will yield, on the average, quite 1½ tons lead ore to the fm. We have to-day sampled 20 tons of blende for sale on Thursday next.—A. WATERS.

WEARDALE.—Report on Weardale Co.'s mines for week ending May 2 :—Ore raised for week, 83 tons ; ore dressed for week, 113 tons ; ore and slag smelted for week, 153 tons, producing 79 tons of pig lead.

WHEAL CREBOR (May 5).—Good progress has been made in driving the 156-fm. level east during the past week. The lode has a good appearance, letting out more water than hitherto and yielding 4 tons of arsenical mundic with a little copper ore per fm. The other points in the mine are the same as reported last week.—P. D. HOLMAN.

WHEAL GRENVILLE (May 5).—Monthly report : We are pleased to be able to report good progress in driving our bottom levels by boring machines, and also glad to say they have both improved in value since last reported. The 220-fm. level east of Goold's engine shaft : The lode in this level is strong and of a very promising character, and worth for the part driven on 12*l.* per fm. There is more lode standing north and south of the level. The 205-fm. level east of Goold's engine shaft : This level has very much improved, the lode at present being worth 18*l.* per fm. We must soon commence to rise in this level to communicate with the winze sinking from the 178-fm. level. The other levels are without change to note since last reported. Our stopes and pitches are producing their usual amount of tin. There is no particular change in them to note. At the Eastern shaft we have about 3 fms. more to cut down to complete it to the 150-fms. level. We are making good speed with the building of the stamps house. The loadings are finished. We hope to finish the house stack in about four weeks more. The weather made very much against us, or we should have completed it earlier ; but, all things considered, we have made good speed. As soon as the engine house and stack are finished we shall commence the buildings for the 90-inch pumping engine forthwith. We are also making good progress in driving the water level from the main leat to the new stamps for repumping the water, and as the weather is fine we shall push on all surface work with all possible speed. We are taking down West Condurrow stamping engine, and getting ready to re-erect it as soon as the new house is finished.—C. F. BISHOP, J. HOSKING, S. WILLIAMS.

WHEAL METAL AND FLOW (May 6).—There is no alteration to notice worthy of remark in the 27 end during the past week. The Flow produced more tin in the past month than for some time since, and we are hoping to do better in the future.—S. P. CURTIS.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Report from the superintendent at the mine for the month of Mar. :—The complete obstruction of the Tirito part of the tunnel, caused by the fire that broke out in this part of the mine on the 14th, evening, impeded us to continue operations in Mina Grande in the second fortnight of the month, and compelled us to start driving a new road on solid rock from a point about 100 ft. south of Tirito shaft, to pass west of said shaft, and to connect with the Primera Veta drift, and then from the breast of this latter to run in a north-easterly direction to connect with the tunnel below the Providencia shaft. This work was begun as soon as we became convinced that the collapses at the tunnel were of such an extent that we could not have any certainty of being able to repair them in a short time, and also that for some time the excessive heat would not permit us of re-opening and securing the tunnel in the section burned. The fire cannot have advanced northward beyond the Providencia shaft, there being a section of about 400 ft. without any timber between Providencia and Mina Grande Mines. The drivage for the new road will have to be about 325 ft., utilising about 156 ft. of the Primera Veta drift, and at the present rate of drivage with the drill it will probably be completed by the middle of May, if there is no source of hindrance or unfavourable change of the ground. In the meantime we will see if it is possible to redeem the old road in a short time and at a moderate cost. As there is no other way to get at the Mina Grande Mine than the tunnel (the Balvanera shaft is blind from the tunnel upward since 1884, and now we have found that the San José shaft and the series of winzes connected with the tunnel are in a very dangerous condition), it is of the utmost importance to re-open the tunnel road as soon as possible before the Mina Grande workings are filled with water to the tunnel level, and no efforts will be spared to attain this end. During the week ending Mar. 21 we were only engaged in extinguishing the fire, the first three days keeping all ventilations stopped and injecting a 3-in. current of steam to the section in fire, and the balance of the week was spent in extinguishing the fire as far as it was accessible with a stream of water forced with a steam pump, but there being evident signs that the fire continued beyond the obstruction of the tunnel, where neither steam nor water could be applied, we decided to stop all ventilation and let the fire be suffocated slowly by the carbonic acid from the combustion. During the week ending Mar. 28, we drove 38.4 ft. of the new road. During the first fortnight of the month we carried out the following work :—Exploration: Driving south on 100 lode at tunnel level, from the long San José west cross-cut, on a good-looking ground, 16 ft.; cross-cutting west at 12-fm. level, 45 ft. north of No. 5 winze, 6 ft., on hard limestone ; driving north end, 24 level, 100 lode, 16.1 ft., on unproductive ground ; driving south on west wall of 100 lode, 24-fm. level (west of 1st winze to 36), 11.2 ft. This drift is in ore, but of low grade. Rising back of 140-ft. level, Providencia, east of shaft, 6.8 ft., on partly mineralised ground ; total exploration, 56.1 ft. Stoping : At main stope, from back and sides above 24 level, estimated ground stoped out, 17 cubic fm. ; at 31 fms., from back and sides, 9½ cubic fms. ; at 36 fms., 100 lode, back and sides, 7½ cubic fms. ; total estimated, 34 cubic fms. Financial result : The amount of silver sold at the Alamos mint was 12 bars, value, $11,787.88 ; silver remitted to the London office, five bars, mint value, $5,221.44. Collected for 1,200 lbs. litharge sold, $63.68 ; total realised, $17,073. The expenses for the month amounted to $10,881.80, there being an excess of receipts over expenses amounting to $6,191.20, but the value of argentiferous stocks in hand was decreased by $4,769, leaving a net profit for the month amounting to $1,422.20. But for the sad accident of the fire the profit for the month would have been much more satisfactory. Prospects : I cannot anticipate any favourable results for Apl. and May, it being more than probable that the operations in the Mina Grande stopes will remain interrupted till the beginning of June. In the meantime, all we shall be doing is to realise the argentiferous stocks in hand, and getting a little more ore from the dumps and from the Cruz Verde Mine, but on a very small scale.

ARGENTELLA (Apl. 30).—Weekly report :—No. 2 Marine : Cross-cut No. 2, south drive, 5.80 metres, through kindly killas, iron

pyrites, carbonite of lime, quartz, and small spots of silver lead. On the footwall, as before reported, we have about 12 ins. of kindly quartz. Eastern drive: Advanced 9.70 metres; the only change to note is the ground is letting out a quantity of water. Quartz reef, cross-cut south: Advanced for the month 19.30 metres. The ground being very favourable, we are able to make good progress. The last week in the month soft joints were more numerous. At the present rate we shall cut the reef sooner than we anticipated. Ogliastrone Valley, eastern drive: Driven 6.60 metres. The seam of pyrites we cut has gone up into the roof of the level; have had some good stones showing copper pyrites. I think it advisable to continue driving east another month, and not cross-cut into the pyrites as promised. No. 3, Rome's workings: Driven in south cross-cut 4.80 metres. The ground is very hard. The ground driven through produced fair stones of silver-lead, the joints are more frequent. How far we are from the Africana is hard to say, the nature of the ground leads us to expect cutting it any day. Ground driven through the mine for the month 46.20 metres, at an average cost of 61.10 francs per metre.—J. B. ROBERTS.

ASIA MINOR (Apl. 24).—Chief Mine: In driving beside the lode in main adit occasional cubes of lead ore are being met with. The cross-cut from intermediate Hamburg has cut south branch, containing big nodules of lead rich in silver. This looks well for the main lode which we should cut very shortly. We have started a drive east on ore lately discovered from No. 4 stope, and as soon as there is room another core of men will drive west. This point is looking very well, and is worth fully 30 cwt. The stopes east of Savalan Pass have much improved, three of them being worth fully 3 to 3½ tons of rich silver-lead. The whole of them may be valued at an aggregate of 2 tons. Kaya Bashi Mine: The end east is looking very promising, and may improve any day. Dressing floors: Production to Apl. 24:—2,769 tons crushed, yielding 124¼ tons rich silver-lead ore.

AUSTRALIAN BROKEN HILL.—The *Broken Hill Budget* of Mar. 28 last contains the following reference to the above mine, viz.:—The mine is looking particularly well just now, and the vein of ore on the 280-ft. level continues to yield large quantities of native silver, sulphide of silver, and other rich ores. For the fortnight ending Mar. 19, 4¾ tons have beeu raised from it, containing 38,675 ozs. silver. The blocks of ore in the office are well worth seeing, four of them aggregating 12½ cwt., containing 9,000 ozs. silver, equal to 14,500 ozs. to the ton, or 45 per cent. of silver. This ore has never before been found in such masses in Australia, and there are but few foreign silver mines that have unearthed specimens of equal value. The 4¾ tons are now being cased ready for shipment to London. Considering the condition of the mine, and that there is every reason to believe that this rich vein will continue down to great depths, it is no wonder that the value of the shares is steadily rising. The incline drive, following the vein down below the level, has been driven 33 ft., and rails are now being laid for a truck road, and the hauling will be done by means of an air winch. The ore here is priucipally fahlerz, associated with native silver. The sinking of the Engine shaft is being pushed ahead, and is now down 540 ft.; the lode is about 10 ft. wide, but is going down at a sharper angle than formerly. From the lay of the country further to the south, it is quite possible that the lode will ultimately become vertical. A handy air-compressing plant has been erected on the surface, and is now at work driving machine drills below ground. The plant works well, and driving is greatly expedited. The shafts going down on blocks 95 and 97 are showing good indications of ore being at hand. The manager's office and the assay-room have been moved to a spot close to the workings, and an ore-house has been put up just to the west of the engine-house. This is a change for the better, as it concentrates the various branches of work in one spot, and the officers are always at hand.

BALAGHAT-MYSORE (Apl. 15).—I am very pleased to say we have not had any cases of cholera lately, and that most of our old contractors have again returned to the company; we are, therefore, able to resume the greater part of underground operations—in fact, I may say we are now almost in such a full working order as we were previous to the outbreak. North engine shaft: This shaft has been sunk about 7 ft. 6 ins., or 102 ft. 6 ius. below the 500-ft. level. This being about deep enough for the present, we have put the rock-drills to cut the necessary ground for the plat at the 600-ft. level, and to extend this level north and south of the shaft; the former is now about 1 ft., and the latter 2 ft. from the shaft; the lode in both ends yields a little quartz, which assays 15 dwts. 19 grs. of gold per ton. The 500-ft. level north has been driven 29 ft., or 500 ft. 6 ins. from the shaft; the lode produces a little quartz, and assays 7 dwts. 15 grs. of gold per ton. We have about 13 ft. more to drive to hole to the No. 2 winze (or Haines' shaft) in the bottom of the 410-ft. level north; this we hope to accomplish next week, when we shall at once proceed with the cutting of the necessary ground for a plat, then resume the driving of the level north, and also to sink Haines' shaft below the 500-ft. level. The sinking of No. 1 wiuze in the bottom of this level has been resumed, and 1 ft. 6 ins. sunk, or 51 ft. 6 ins. below the level; the quartz has again improved, being now from 1 ft. to 14 ins. wide, and assays 3 ozs. 7 dwts. 15 grs. of gold per ton. The stopes in the back of this level yield quartz of about 1 ft. wide, and assay, on an average, 4 ozs. 13 dwts. 13 grs. of gold per ton. The 500-ft. level south has been driven 2 ft., or 92 ft. from the shaft; the lode presents a kindly appearance, and yields a little quartz. The stopes in the back of this level produce quartz of about 9 ins. wide, and assay 1 oz. 13 dwts. 19 grs. of gold per ton. Not having yet been able to effect the much desired communication of the north shaft below the 410-ft. level with the shaft above the 270-ft. level, and finding we are unable to satisfactorily deal with the increasing dirt at the 500-ft. level with the little windiug engine fixed at the 410 west plat, we have, therefore, decided to erect another engine at the No. 2 winze or Haines' shaft at the 410 level north, so that when the communication of this shaft with the 500-ft. level is effected, and this will be done next week, we shall be in a positiou to considerably relieve the northern engine, as we can then hoist all the dirt from the north part of the level, also the sinking of Haines' shaft through this shaft. The engineer is busily engaged about this work, and hopes to get it completed by the time it is required. The stopes in the back of the 410-ft. level north yield quartz of about 1 ft. wide, and assay, on an average, 1 oz. 9 dwts. 5 grs. of gold per ton. The stopes in the back of the 330-ft. level north produce quartz of about 14 ins. wide, and assay, on an average, 1 oz. 8 dwts. 14 grs. of gold per ton. The plat stopes in the back of the 330-ft. level north produce quartz of about 8 ins. wide, and assay 10 dwts. 7 grs. of gold per ton. The 270-ft. level south has been advanced 1 ft., or 649 ft. 6 ins. from the shaft; the lode is at present unproductive. The stopes in the back of this level produce quartz of about 9 ins. wide, and assay 1 oz. 2 dwts. 20 grs. of gold per ton. The stopes in the back of the 270-ft. level north yield quartz of about 1 ft. wide, and assay 2 ozs. 19 dwts. 22 grs. of gold per ton. Haines' shaft: The ground about the 270-ft. level continues to give us considerable trouble, but it is being satisfactorily secured, and we hope soon to clear the dirt and effect the communication with the 330-ft. level. Surface: All the general work at surface is progressing fairly satisfactorily.—J. PRYOR.

BRATSBERG.—Report for week ending Apl. 25.—Hoffnung Mine: No. 2 adit level contiuues much the same as when last reported, the ore at present being mostly found in patches. No. 1 rise in the back of No. 2 adit level maintains its value, viz., 1 ton per fm., but No. 2 rise has fallen off to ½ ton per fm. At No. 3 adit level the lode is yielding about ¾ ton per fm., and the rise in the back about a similar quantity. At No. 4 level the lode is undergoing a change both in size and character, which we hope will be followed by an improvement in value. The trial level at Murchison's section is looking very well, and still yielding 1 ton per fm. Johannes Mine: The level both east and west on Howard's lode is producing about ½ ton per fm., and the rise in the back 1 ton per fm. Surface work and remarks: The dressing machinery has been running regularly and doing satisfactory duty since the 22nd inst., but I have to mention that the 24th inst. was a national holiday, heuce one day lost. The work about the completion of the inner set of the jiggers is drawing to a close.—J. D. HOLMAN.

CALLAO BIS (Apl. 13).—The directors have received advices from the mines as under:—Independiente: The cutting of station at the No. 3 level is completed; ground for plunger cut; also the lift of pit-work completed, and in a few days more will be set at work, when we shall rcsume the sinking of shaft. No. 3 level west has been driven on the course of the lode 24 ft. Lode showing 5 ft. wide of good value. Water proceeding from the face of the drift very freely, so much that it is with great difficulty the steam pumps are able to keep the shaft dry. No. 1 winze in No. 2 level west has been advanced 6 ft. Lode showing 4 ft. wide, of good value, with visible gold, underlying about 50 degs. to the south. New mill: Batteries for 10 stamps are almost completed, and I hope to have the mill engine connected to same by the next mail.

CAPE COPPER.—Mar. report.—Ookiep: The 117-fm. level east of 72 winze is yielding about 1 ton of copper ore per fm. There is no change to notice in the ground in the 117-fm. level north of 72 winze since last report. The 117-fm. level south towards the new shaft at the present is unproductive. The 105-fm. level (No. 6) north of main east level is yielding stones of copper ore. The rock in the 92-fm. level (No. 8) north-east of 45 wiuze is a little easier for progress, and it also contains spots of copper ore. The ground in the 80-fm. level (No. 16) south-east of new shaft has during the month produced stones of copper ore, but the forebreast at the present time is without copper. The rock in the 68-fm. level (No. 6) south of 24 winze presents spots of copper ore. The stopes throughout the mine, on the whole, continue to yield well. Trial Mines: Springbok: The rock in the 59-fm. cross-cut north of north-west level is a little easier for driving, and is showing spots of copper ore. The 59-fm. level north-west of south-west cross-cut (No. 2) is producing stones of copper ore, but not to value. Kotzees Mine: The ground in bottom of shaft sinking below the 25-fm. level is producing stones of yellow and purple copper ore. Nababeep north: The winze sinking below the 31-fm. level having intersected ground not very favourable for copper ore, it has been suspended. The 31-fm. cross-cut north of east level is producing stones of copper ore. Nabaheep south: The 59-fm. cross-cut north-west of north-east level is yielding saving stuff, and the 59-fm. cross-cut south-east of north-east level is worth about 1 ton of copper ore per fm. Ookiep east: The stopes in the 58 and 66-fm. levels are still yielding 1½ tons of copper ore per fm. Spectakel: The ground in bottom of winze sinking below the 86-fm. level having become unproductive it has been suspended, and the men are put to prove the productive ground passed through by stoping. The stope in back of 86-fm. level south-east of No. 1 winze is yielding 1½ tons of copper ore per fm., and the stope in the 36-fm. level south-east of Kelly's shaft is also worth 1½ tons per fm.—Capt. HENWOOD.

— Returns for Mar.:—Ookiep, 1,850 tons of 23 per cent. Arrivals at Swansea: The Sindbad, Gateside, and Hinda. Arrivals at Port Nolloth: The Golconda and Taunton. Bills of lading received: 750 tons of ore per Serena, and 900 tons per Douglas Castle.

CASTILLON (May 4).—The tramway leading from St. Barbe level to No. 2 station of cable has been cleared of snow, and stoping has to-day been resumed in this level by four men, in a lode worth 12 cwt. of silver-lead ore, mixed with a little blende. We hope shortly to start work at the St. Jean level, but as the mineral coming from this point has to be carted it will probably be another fortnight or three weeks before we shall be able to do so, there being still a vast quantity of snow lying on the cart-road. We have also put two men to continue the Cigalere level west on the lode. On the 1st inst. the men in the Bentallon level were put to drive west on the course of the lode, from which we anticipate satisfactory results. The stopes, &c., throughout the mine are without any noteworthy change since their values were given on the 20th ult. The dressing-floors are now in full work, and are being kept fully supplied with average quantity crude ore.—Capt. EDWARDS.

CHAMPION REEF.—Superintendent's report for the fortnight ending Apl. 13.—Mysore section: Carmichael's shaft has been sunk 2 ft. 6 ins.; total depth, 232 ft. During the early part of the first week the men were employed putting in a guttering around the shaft for conveying the water to the cistern of the new drawing lift. The rock in bottom of shaft is very hard, but it has a better underlie than we have hitherto had. The cross-cut at the 225-ft. has been driven 11 ft. 6 ins.; total length, 43 ft. 6 ins. Since having passed through the small vein of mineralised matter reported last fortnight nothing of importance has been cut. We shall, however, continue the cross-cut a few feet further before suspending the work at this point. Ribblesdale shaft: We are unable to report any sinking at this shaft, having had to stop the work to put in another pumping lift. Garland's shaft: Sinking 3 ft. 6 ins.; total depth, 225 ft. 6 ins. The sinking has been retarded considerably owing to the stoppage of engine for repairs, consequently the men were hindered nearly a whole week. There is very little change in the lode since last report, but the surrounding rock is a little harder. Dalyell's shaft: This shaft has

been sunk 6 ft.; total depth, 231 ft.; the lode continues very regular, and carries from 9 ins. to 1 ft. of quartz on the footwall. Coromandel section: At Prospect shaft the 320-ft. drive north has been advanced 7 ft.; the lode maintains an average width of 3 ft., 1½ ft. of which is quartz; the samples obtained from each week assayed respectively, 7 dwts. 18 grs. and 9 dwts. per ton. The 290 end south has been driven 4 ft. 3 ins.; total length, 144 ft. The end looks more promising; the lode is now 1½ ft. wide, of quartz, and carrying a good foot and hanging-wall. Assays from this point show a good trace of gold. The cross-cut west from bottom of winze below the 290 level has been driven 5 ft. 6 ins. There are small stringers of quartz in the end which show a little gold in washing, but nothing of any particular value. We have effected a communication from the shaft north of Prospect shaft through the old workings. A great deal of work still remains to be done in securing loose ground, but when finished we shall have an air passage north of shaft from the 320-ft. level to surface. The general surface work is progressing satisfactorily. At Garland's shaft the pumping and winding-engines are erected, and the carpenters are employed preparing the pit-head gear, poppet heads, &c. We have a gang of coolies excavating for a new water tank and chimney stack, the building of which will be commenced probably next week.

COLAR CENTRAL (Apl. 15).—Eastern section, north division, new shaft: 200 ft. west cross-cut has been driven 13 ft., making a total of 30 ft; no change as yet in the ground. The 200 ft. east cross-cut has been driven 13 ft.; total, 20 ft. from the drive. The ground is of the same character here as in the west cross-cut, being very bad for blasting.—A. S. B. OAKLEY.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending Mar. 14:—No. 9 level west: No work has been carried on during the past fortnight. No. 5 level west: In the stopes above this level the reef both on the foot and hanging-wall is payable; the average thickness is 2 ft. No. 3 level west: There is nothing fresh to report from these stopes. The reef is about 18 ins. thick and payable. No. 2 shaft—The 630-ft. level west: Have driven a further distance of 23 ft., making total from the shaft 179 ft. There are about 4 ft. of good mineral stone in the present end. The reef is intermixed with diorite, the formatiou being 7 ft. wide. Have sunk the winze a further depth of 16 ft.; total depth, 24 ft. The reef is 4 ft. thick of fair quality stone. No. 2 underlie: Have sunk 4 ft., making total depth below 1,108 ft. plat 312½ ft. No. 3 underlie shaft: Have sunk a further depth of 6 ft.; total depth of underlie, 344 ft. There is a change in the ground, with a leader of quartz on the hanging-wall.

ELMORE (Apl. 19).—We cabled yesterday as follows:—"Ore is improving in the drift as we advance on the vein." Since writing you last week we finished the station at the 540 level, and have drifted east on the Alturas or big vein, some 25 ft. So far the ore in the vein improves. There is a streak about 12 ins. wide that assays very well. There is no improvement in the Confederate Star since my last report.—GEO. A. MCCORNICK.

ESMERALDA (Apl. 21).—The manager reports that the ground at time of writing was somewhat broken, and the melting of the surface snow had increased the water, but it was only necessary to work the pump at four strokes to the minute. The certificates showing all essays made during the week gave from 6 dwts. to 12 ozs. of gold per ton, or an average of 2½ ozs. of gold per ton. A cablegram received states that the milling of the ore has been delayed on account of the bad road. The crosscut to the Live Yankee vein has been driven 60 feet during the week.

FLAGSTAFF (Apl. 18).—Main 6th level: This is now in 76 ft. The rock has become very hard, and we cannot make the headway as heretofore. I hope soon to get through this hard slip. South drift: We have broken through into the old stopes, about 25 ft. above 6th level. There is but little first class ore in sight. At present there is only one pipe of ore, which is going downward; it may lead to a large body below; have sunk 5 ft. on it; the pipe is 2 ft. in diameter, and all first-class ore. The 7th level: The seam of iron that we were sinking on made a turn to the south-east, and ran almost flat for 15 ft., and then turned downward again. I am now turning the windlass round so as to be able to pull the rock away. Number of tons mined 26, viz., 19 first-class and 7 second-class.—A. L. SWOPE.

GOLDEN FEATHER CHANNEL (Apl. 14).—I am pleased to report that I have concluded a contract with the Challenge Lumber Mill Co., of Moore's Station, Butte County, by which we procure all lumber required by this company in the construction of sub-flume, sluices, restraining dams, &c., at $14 per thousand, which is the lowest price such quality of lumber has ever been sold for in this county, and $3 per thousand less than we paid for the same grade last year. Ditch is in thorough order throughout its entire length. The whole amount of repairs necessitated by the past rainy season was so small as to be unprecedented in the entire experience of the ditch tenders, who have been more or less connected with the care of the ditch since I built it in 1880. Pipe line: Nearly ½ mile of the 30-in. pipe from the reservoir on the South Table Mountain has been laid towards the claim, and the trench and bridges prepared for the remainder and that part of the 24-in. pipe which is now being made. The rapid progress made upon the canal and walls since my last monthly report is so clearly set forth by the progress map this month that it is needless to call further attention to it. With the continuation of the present favourable weather the excavation of the canal will be practically completed to the present southern limit by the date of my next monthly report. In conclusion I am pleased to be able to report that all company affairs here continue in first-class condition.—F. MCLAUGHLIN.

GOLDEN GATE ALLUVIAL (Apl. 13).—As I cabled on the 8th, we commenced receiving lumber on that date, and will have the full amount contracted for delivered upon the claim by May 10. The work commenced to-day, and now under way, is the receiving and distributing of lumber along the flume grade, and the getting down and preparing of the old lumber, fixing up of camps, overhauling of machinery, tools, &c. By May 10 work will be under full head, and I have the utmost faith that it will result in the opening of the claim at a date hitherto regarded as impossible by river miners. I have planned to drain the claim this season with centrifugal pumps, geared to a speed of 700 revolutions, and operated by undershot wheels, built in the main flume. I will handle the seepage water by four Chinese pumps operated in the same manner.—F. MCLAUGHLIN.

GOLDFIELDS OF MYSORE.—Superintendent's report for the fortnight ending Apl. 13:—Sinking south shaft, 8 ft.; total depth, 249 ft. 6 ins.; the shaft is in hard country rock, but on the east side there are several stringers and small patches of quartz, which no doubt indicate that we are getting near the back of the lode. The shaft has drained the water from the winze below the 206 level. We have commenced the sinking again at this point, and 9 ins. have been sunk; total depth of winze 37 ft. 6 ins. From samples taken across the winze from the lode several pieces of quartz were found containing free gold; the lode is making more vertical, and if this continues we shall have a greater depth to sink in the shaft than we expected before cutting the lode. The water has abated considerably, and we have no difficulty in keeping the shaft dry by hoisting the water in barrels.

GREAT EUKABY (Mar. 30).—Weekly report:—Bird-in-Hand Mine: The Victoria shaft has been sunk about 2 ft. since last report. Owing to the Easter holidays we were only working four days. The south drive at No. 5 level has been extended 6 ft.; the lode here has considerably improved since last week, carrying a great deal more quartz and pyrites. The back of this level at this point has not been stoped below No. 4. Engines and pumps working well.—J. M. CRAZE.

GYMPIE GREAT EASTERN (Mar. 19).—Fortnightly report: During the past fortnight the rise on the Orient reef has been put up 15 ft.; total, 100 ft. from where we cut the reef. There was no reef in the rise for the last 10 ft.; it is now making and shows a little gold; the country is good slate. The cross-cut at this level has been extended 6 ft.; total, 407 ft. from the shaft. The country keeps about the same. The north drive has been extended 10 ft.; total, 53 ft. The reef in this drive is improving a little; there is more quartz in the formation, which shows a little gold. There is good slate country in the hanging-wall now. In the south drive no work has been done during the fortnight. The stopes over the north drive all show a little gold, but the crushing stuff is all small. The 690-ft. level: The back stopes north and south above these levels all show a little gold. The present crushing going through the mill is looking poor. There are only 10 head of stampers crushing for the mine, and five for the Nicholls' lease. We clean up on Monday 23rd. The last five of the copper plates have been treated. The return of gold from them was 157 ozs. 5 dwts. 18 grs. smelted, of poor quality. Everything about the mine, winding engine, and battery, is in good working order. There are 52 men employed, 45 on the mine and 7 at the battery.—J. JAMES.

INDIAN CONSOLIDATED (Apl. 14).—Phœnix section.—Tramway drive has been extended 7 ft. only, progress not being so good as usual owing to the contractor being away. The seam alluded to in my last still continues, but has pinched small and very soft. No. 1 level: Here we have driven 9 ft.; there is little change to report, the lode, if anything, being smaller. Stoping: We have a good force on stoping, and supplies are being delivered in the usual quantities. Stope A is now 2 ft. thick, and is of good quality. Stope B is about 2½ ft. in thickness, and is equally as good as A. Stope C: The lode here, as well as at D, is about 5 ft. wide, and is moderately good, being a good deal mixed with country rock. Stope E: This is also about 5 ft. wide, and rather poor; it is getting worse as we go down, but, stoping south, it remains fairly good. Stope F is about 4 ft., moderate, and stricted with country rock. We are also working at a point in back of No. 2, not named in last plan sent. We are getting about 2 ft. of moderate stone from this point. The mill has been working well, but water is fast failing. The dam has been of great use to us. Some repairs were required at winding engine, which stopped hoisting from lower stopes for a time, but did not interfere with crushing. We will have to stop work about May 15 to get repairs to driving wheel, hoppers, tables, and incline effected before the monsoon bursts.

— Office note: A telegram has been received stating that during the month of Apl. 600 tons of quartz were crushed, yielding 97 ozs. of gold.

— (Apl. 15).—Colar section.—No. 1 new shaft has been sunk 4 ft. 6 ins.; total depth, 221 ft. 6 ins. The rock is now much harder and the water has increased. No. 2 new shaft: The 210 ft. south has been driven 20 ft. 3 ins., or a total of 135 ft. 9 ins. from shaft. We have nothing to value in the present end, and from the run of the quartz met with in the No. 1 east cross-cut we should have been into the quartz by this time. The 210 north-east cross-cut has been driven 25 ft. 6 ins.; total, 67 ft. 6 ins. We have not as yet cut any quartz at this point. The 210 ft. south-east cross-cut: In the drive going northwards on the quartz met with in this cross-cut we have advanced 5 ft. 6 ins., or a total of 11 ft. north. The quartz is again much broken up, but shows a little gold now and then. Going south we have also driven 5 ft. 6 ins., or a total of 15 ft. 6 ins. in that direction. The quartz here is rather more solid, about 3 ft. wide, but showing only a trace of gold. Main shaft: The 240 ft. north drive has been advanced 15 ft. 6 ins.; total, 150 ft. from the cross-cut. No change to report. We still carry about 3 ins. of quartz. Roaches shaft: We are driving a short cross-cut from the bottom of this old shaft in an easterly direction towards the old workings. The ground is very hard; 4 ft. have been driven. No. 5 shaft: We are breaking a little more quartz in the drive from the bottom of the 425 winze; the quartz at times shows a little gold. New air-compressor machinery: I hope we shall be ready to start this in about a fortnight's time.—A. S. B. OAKLEY.

LA PLATA.—Report for Mar.—The output from the La Plata Mines for Mar. month amounts to 436.69 tons of carbonate ore which sold for $5,232.20. The Montgomery Mine produced 17.24 tons; value, $78.74 The output of matte from the slag dump amounted to 19½ tons; value, $735.65; the total receipts amounting to $6,046.59, and the profit on the month's operation, $1,217.30. The mine continues to open out well; the lessees on blocks 1, 2, and 3 have large bodies of ore blocked out ready for stoping. This ore is, however, low grade, consequently the present low price of lead and advance in the treatment of these ores by the smelters has left very little profit in mining them. The high-grade ore in blocks 4 and 6 continues in small seams and pockets without showing any indications of opening into larger bodies. Work on these blocks is being actively and profitably prosecuted. Respecting the White Cloud claim (adjoining the Guston mine), the manager refers to the *Red Mountain Journal*, 18th April, which states that the shaft had been surveyed and staked out, and a contract closed for the first 50 ft., and that the sinking would be continued with all speed into the big ore bodies below.

LEEDS COPPER (Apl. 23).—Underground: The following is my report for the week ending as above:—Kent's shaft: The 20-fm. level driving west of this shaft continues in a vein 3 ft. 6 ins. wide, and producing 3½ tons copper ore per fm. The 20-fm. level driving east

of shaft also continues in a vein 3 ft. wide, and producing 3 tons copper ore per fm. About midway between the two levels I am communicating the 15-fm. and 20-fm. levels for convenience of stoping and ventilation which has been rather bad; the vein in rise is 2 ft. wide, and producing 2 tons of ore per fm. The stope in the back of the 15-fm. level is in a good vein of ore, producing 4 tons ore per fm. The drive opposite steam drill stope has been idle, owing to the men putting in tramway for the convenience of getting away the stuff. Steam drill stope is not producing as much ore as when I last reported, but we look for an early improvement. Adit: We have not yet got the pump to work in the bottom of this level; getting the work ready to start it as early as possible. Surface: The snow is still on the ground, which interferes with outdoor work. We have now got the large engine ready for running, and the boilers under repairs; this work will be got on with as rapidly as possible. Shall commence the excavations for crusher stamp, &c., as early as the snow is away. Roads for wheeling heavy machinery will not be open for a week or 10 days yet.—T. R. DAVEY.

MONTE DEL ORO (Apl. 28).—Fortnightly report:—Taylor's engine shaft: In this shaft we have succeeded in forking the water, also completing a few slight repairs that were necessary, and have again commenced sinking on the underlie. The lode is small, and it is composed of a flookan, the sample from it assaying traces of gold. Shaft No. 6: During the past fortnight 16½ ft. were driven in the 244-ft. level north of the shaft, making its total length 481½ ft.; the lode is from 12 ins. to 15 ins. wide, carrying about 8 ins. of quartz, both samples from which yielded 1 dwt. 23 grs. of gold per ton. The total length of the west cross-cut is now 253 ft., showing a good advance of 29½ ft. for the fortnight. Near the present end a vein was met with composed of soft white clay, and a little water is issuing from it. The 186-ft. level north was extended 17 ft. in the two weeks, and its total length is now 645 ft. Two samples were obtained from the lode which is 1 ft. wide, and composed of flookan and slate, with a stringer of quartz in the footwall, one assaying a trace and the other containing no gold.—J. ROBERTS.

MOSMAN.—Manager's report for fortnight ending Mar. 21.—North Australian Mine: No further development has taken place in this mine since last report. Stone of fair quality is being obtained from some of the stopes, but the quantity is very limited, and not much can he raised; the rock in which the reef is found is very hard in most places, and renders progress somewhat slow and expensive. During the fortnight 35 tons of quartz has been brought to the surface, making a total of about 170 tons in the paddock. This, I think, will yield between 2 ozs. and 3 ozs. per ton. Some heavy rain during past week has given us considerable water to pump, in addition to the usual amount making in the mine. Eastward Ho! Mine: The 1,100-ft. level winze has been further sunk during fortnight 6 ft.; total, 11 ft.; the reef is 3 ft. thick, of very poor quality, most of which is thrown away. An improvement may at any time take place. The reef being stoped above, this level is 9 ins. thick, of fairly good-looking stone, which may yield over an ounce per ton. 10 tons of stone has been raised during fortnight, making total at grass, 22 tons. Wyndham shaft: Have sunk this shaft during fortnight 20 ft., making total depth, 715 ft. from surface. There is no reef yet made, but appearances are more favourable than they were a fortnight ago. The 400-ft. level south has been extended 8 ft., making total distance 52 ft. The reef is about 8 ins., and the quality a little better than it was. The 550-ft. level south has been extended 12 ft.; total from shaft, 65 ft.; reef, 9 ins.; about 1-oz. quality. The 550-ft. level north has been further extended 13 ft.; total, 67 ft.; reef 10 ins., of somewhat better quality than it was. The stopes are turning out stone of fairly good-looking quality from a reef averaging about 9 ins. in thickness. The quantity of stone raised during last fortnight is 35 tons, making total at grass about 170 tons. The crushing mill is engaged crushing public stone.

MOUNT MORGAN EXTENDED.—The directors have received the following from their local committee (per Mr. Ballard, M.I.C.E.), dated Rockhampton, Mar. 17:—Eastern cross-cut at 86-ft. level from shaft No. 3, Immanuel vein: We have made splendid progress to date. For the three weeks since Feb. 24 we have driven 34 ft., being over 11 ft. a week; total distance attained to day is 76 ft. We have 17 men on mine and six at outside work, all told, including myself. On Mar. 6 we got into a change of country, viz., at 6 ft. the strata began to underlie to the east, instead of west, as hitherto; here we met a bunch of calcspar veins. On Mar. 9 at 61 ft. the stone became softer, and the pyrites in it of a cubical nature; here we found the stone to contain 2 dwts. 22 grs. per ton of bullion, but from here to 76 ft. it contained only traces of gold. From 60 to 76 ft. the ground is softer and easier worked, and we have been fortunate to find a flat roof, a bed running just right for the roof of our drive.

MYSORE (Apl. 15).—Mining operations for the fortnight ending Apl. 14:—The progress made by the rock-drills during this time has been very satisfactory. The 780 north of shaft has been driven 30 ft. 6 ins.; total distance, 184 ft. 6 ins. We have just met with some quartz mixed with the country rock in this level, and expect to reach the main part of the lode under No. 1 winze in the course of a day or two. The 700 north of shaft has been driven 6 ft. 5 ins.; total distance, 342 ft. 8 ins. At this point the end came in contact with the unproductive rock. This level has opened out a very valuable run of stoping ground. The 550 south of the incline shaft on the west lode has been driven 15 ft. 5 ins.; total distance, 34 ft. 5 ins.; the lode is 9 ins. wide, and assaying 3 dwts. 6 grs. Glen's shaft: The 250 cross-cut has been driven east of shaft 11 ft. 1 in.; total distance, 30 ft. 9 ins., without meeting with anything to notice. We have also cross-cutted west 21 ft. 6 ins. In this drivage we have intersected a branch of quartz 6 ins. wide, and assaying 6 dwts., on which we are opening to see if it will improve. Schaw's shaft: The 450 north of shaft has been driven 28 ft.; total distance, 269 ft.; the lode is small and unproductive. The 450 south of shaft has been driven 4 ft. 6 ins.; total distance, 73 ft.; the lode is 1 ft. wide, and assaying 9 dwts. 3 grs. The 320 north of shaft has been driven 3 ft.; total distance, 154 ft. 6 ins.; the lode is yielding stones of quartz occasionally, but not sufficient to value. The 320 south of shaft has been driven 6 ft.; total distance, 203 ft.; the lode is 1 ft. wide, and assaying 11 dwts. 2 grs. Tennant's shaft: The 360 north of shaft has been driven 30 ft.; total distance 370 ft. 5 ins.; the lode is 1 ft. wide, and yielding some saving work for quartz. The 290 north of shaft has been driven 34 ft. 6 ins.; total distauce, 692 ft.; the lode is small and unproductive, but we are expecting to meet with the run of quartz very soon that we are driving through in the level above. The 290 south of shaft has been driven 27 ft. 6 ins.; total distance, 334 ft. 6 ins.; this level is in a band of trap-rock, which for a time has pinched up the lode. The 180 north of shaft has been driven 30 ft. 6 ins.; total distance, 848 ft.; the lode is 4 ft. wide, and assaying 17 dwts. 21 grs., and looking very promising to further improve in value. Stopes: The lode in stope in back of the 700 south of the incline shaft on wide lode is 4 ft. wide, and assaying 15 dwts. 15 grs. The lode in stope in back of the 700 south of Rowse's shaft is 2 ft. wide, and assaying 1 oz. 17 dwts. 21 grs. The lode in No. 1 stope in back of the 700 north of Rowse's shaft is 1 ft. wide, and assaying 3 ozs. 9 dwts. 21 grs. The lode in No. 2 stope in back of this level is 2 ft. 6 ins. wide, and assaying 4 ozs. 8 dwts. 16 grs. The lode in No. 1 stope in back of the 620 north of Rowse's shaft is 1 ft. 6 ins. wide, and assaying 1 oz. 6 dwts. 18 grs. The lode in No. 2 stope in back of this level is 1 ft. 3 ins. wide, and assaying 11 dwts. 1 gr. The lode in No. 3 stope in back of this level is 2 ft. 6 ins. wide, and assaying 1 oz. 6 dwts. 18 grs. The lode in stope in back of the 620 south of incline shaft is 3 ft. wide, and assaying 1 oz. 6 dwts. 3 grs. The lode in stope in back of the 600 north of Rowse's shaft is 2 ft. wide, and assaying 2 ozs. 3 dwts. 8 grs. The other stopes in the different levels throughout the mine are looking quite as well as when last reported. Rising: The rise in the back of the 290 north of Tennant's shaft has been communicated to the 180 level; this has laid open a large piece of good stoping ground, and also greatly improved the ventilation of this part of the mine. The lode in rise in back of the 180 north of shaft is 4 ft. wide, and assaying 2 ozs. Sinking: Rowse's shaft has been sunk 12 ft.; total distance, 62 ft. below the 780-ft. level. The rock is getting of a mixed character, composed of runners of trap and schist and very spare for progress. No. 1 winze in bottom of the 700 north of Rowse's has been sunk 27 ft. 2 ins.; total distance, 72 ft.; the lode is 4 ft. wide, and assaying 1 oz. 10 dwts. No. 2 winze in bottom of this level north of shaft has been sunk 8 ft. in a lode 4 ft. wide, and assaying 5 ozs. We have had to suspend this winze for the time, on account of cutting an increase of water, but it will soon be drained by the level below. The winze in bottom of the 290 north of Tennant's shaft has been sunk 6 ft. in a lode 4 ft. wide, and assaying 1 oz. 6 dwts. 18 grs. Gilbert's shaft has been sunk 9 ft.; total distance, 72 ft., and going down through a very beautiful channel of ground. The crushing mills are in full work, and the other surface operations are going on in their usual satisfactory manner. Mill samples: New mill quartz from Rowse's and Tennant's shafts, 3 ozs. 5 dwts. 8 grs. Old mill quartz from Taylor's, Plummer's and Tennant's shafts, 2 ozs. 3 dwts. 2 grs.; new mill tailings, 7 dwts. 7 grs.; old mill tailings. 6 dwts. 12 grs.—J. GILBERT.

NEW DEVALA-MOYAR (Apl. 14).—The 116-ft. level drive west: This end has been driven 6 ft.; total distance, 138 ft. Reef hard, and of no value. No. 1 winze has been sunk 5 ft.; total depth, 44 ft. Reef maintains its size. In the 78 underhand stope we have commenced filling up with waste rock. All our stopes continue in good order, and nothing calls for special mention.—R. B. JOHNSTON.

NEW EBERHARDT (Apl. 19).—The mine manager reports:—Our mine prospects remain unchanged. We are still getting good ore, having extracted and assorted for the week ending Apl. 18, 40 tons, the average value of which is $37.71 per ton. Mill: The total weight of ore crushed for the week was 97 tons. Assay value of same, as per battery samples, $42 per ton. Ore delivered at mill: Our quartz team is still hauling, and has delivered at the mill for the week 55 tons of ore, being less than it usually brings with good roads. I believe there has not been one day this month but what there has been some snow, little or much, which keeps the roads very bad indeed. Bullion shipment: Please find herewith shipping receipt for two bars bullion: Total ozs., 3,021.05; standard value, $3,676.16.

— Cable: "Mine prospects remain unchanged. Weekly output quantity, 42 tons. The average is $37 per ton; mill worked 22 days during the month of April. I estimate net yield, $9,000. Expenses during the month of April, $4,500; net profit, $4,500."

NEW HOOVER HILL (Apl. 21).—I cannot see that I have anything new to report. We have still a great deal of water to contend with below the 50 ft. level south of Provost shaft. The ore continues about the same. Driving south of the Briol's shaft at the 130, we are making fair progress; have not cut any water as yet. There is a good deal of quartz in the end, panning just a colour of gold.

NEW VIOLA.—The following information has been received from the manager of the mine, under date Apl. 24:—After innumerable delays I commenced work with the drills yesterday, and hope it will not be very long before we will be making good progress. If the drill accomplishes half what its builders claim, we will thoroughly prospect a large part of the Viola ground in a few months, and at a cost of one-half to one-fifth what shafts, &c., would cost. I will commence operations on the Daisy and New Year claims as soon as the snow has disappeared sufficiently for me to work advantageously.

NEW VISO (Apl. 30).—Manager's monthly report:—It being the close of the month, I have to-day examined all our operations, carefully considering each point, and making such alterations as seemed necessary for the proper and economical development of the mine. As regards results, there is no improvement as yet at either of the deep adits, the lodes at both these points being unproductive and not very favourable for progress. Our other work has, on the whole, made very satisfactory progress, and has yielded more tin during the past month than before, and if the present produce be maintained, I think there is a probability of getting another parcel of tin by the end of the coming month. I find the two lots sent to England for sale this month assayed 69½ per cent. and 72 per cent. respectively, which shows the tin is of good quality and carefully dressed.—R. R. NANCARROW.

NUNDYDROOG (Apl. 15).—Report of work done for fortnight ending Apl. 15:—The 520 north: Distance driven, 22 ft. 6 ins., by two Italians with a rock-drill; total length of level, 35 ft.; the lode is a very fine one, 4½ ft. wide, and assays 2½ ozs. per ton. The 520 south: Distance driven, 24 ft. 6 ins., by one Englishman with a rock-drill; the lode is also a very strong one here, being 3½ ft. wide, while the value of the quartz is higher, as it is worth by assay 4 ozs. 3 dwts. 12 grs. of gold per ton. The 450 south winze in bottom: We commenced to sink a winze in this level last week to meet the 520 south, and have sunk 3 ft., with 12 coolies; the lode is rather small, but is making bigger in the bottom, and I expect it will soon open out; it assays 2¾ ozs. per ton. The 450 north stope in back No. 2: Ground stoped, 10 fms., by two Italians with a rock-drill; the lode is a strong one, 4 ft. in width, the quartz being rather white, and assaying 1¼ ozs. per ton. The 450 north stopes, north and

south of rise: Ground stoped, 18½ fms., by two Englishmen with two rock-drills; the lode looks well, being 4 ft. wide in each end, and the average assay value is close upon 2 ozs. per ton. There are two stopes working by hand. In the back of the 370 north the lode is 3 ft. wide, and assays 3 ozs. 6 dwts. per ton. In the back of the 300 north the lode is 2 ft. wide, and assays 2 ozs. 11 dwts. 18 grs. per ton. Taylor's shaft: This has been sunk 5 ft. since we recommenced sinking, and the shaft is now down 12 ft. below the level; there is no change in the ground. North shaft, cross-cut west: This has been driven 14 ft., by two Italians with a rock-drill; total length of cross-cut, 76 ft.; the ground is very hard. Kennedy's shaft: This has been sunk 6 ft., by two Italians with a rock-drill, making a total depth of 110 ft. 6 ins.; the ground is very hard, and we have a great deal of water to contend with. Mill: The mill is running well, and the amalgam is turning out better than last month. Health: The camp is not yet free from cholera, but the number of cases is decreasing. I hope we shall be clear shortly. All the Europeans are well, and at work. Mill samples: Rough quartz, through stonebreaker, 3 ozs. 2 dwts. 18 grs.; smalls, 2 ozs. 8 dwts. 18 grs.—F. W. GREY.

OOREGUM. — Fortnightly report of the superintendent, dated Apl. 15.—I beg to hand you the mine report for the fortnight ending yesterday.—Wallroth's shaft has been sunk 4 ft.; total below 280 ft. level, 95 ft.; the lode is 4 ft. wide, and assays 2 ozs. 18 dwts. per ton. We propose to continue sinking until the end of this month, then cut plat and commence the 360-ft. level north and south. The 280-ft. level south advanced 8 ft. 6 ins.; total from shaft, 570 ft.; lode 1 ft. 6 ins. wide, value 1 oz. 3 dwts. 22 grs. per ton. No. 2 winze, bottom 280-ft. level south sunk 3 ft. 4 ins.; total 71 ft. 2 ins.; lode 2 ft. wide, value 2 ozs. 14 dwts. 10 grs. per ton. No. 1 winze, bottom 280-ft. level north, sunk 2 ft. 4 ins.; total. 74 ft. 2 ins.; lode 1 ft. 6 ins. wide, value 15 dwts. 6 grs. per ton. No. 3 winze, bottom same level, sunk 10 ins.; total. 22 ft. 8 ins.; lode 9 ins. wide, value 1 oz. 1 dwt. 19 grs. per ton. No. 3 winze sunk 1 ft.; total, 36 ft. 6 ins.; lode pinched. The 215-ft. level north, driving resumed; the lode is 2 ft. wide and assays 5 ozs. 8 dwts. 21 grs. per ton. Low's shaft: The 350-ft. level south advanced 19 ft. 2 ins.; total, 101 ft. 6 ins. There is a branch of quartz in the present end, which, judging from the level above, should soon open out in size as we are approaching the rich shoot passed through in the 270-ft. level. Probyn's shaft sunk 8 ft. 6 ins.; total below 450-ft. level, 73 ft.; lode 4 ft. 6 ins. wide, value 2 ozs. 3 dwts. 13 grs. per ton. The 450-ft. level south advanced 10 ft. 6 ins.; total, 147 ft.; lode 3 ft. 6 ins. wide, assaying 6 ozs. 6 dwts. 21 grs. per ton. A rise has been commenced in the back of this level, 7 ft. 6 ins. risen.; lode 1 ft. 6 ins. wide, value 2 ozs. 1 dwt. 9 grs. per ton. No. 2 winze bottom, 366 ft. level south, sunk 2 ft. 9 ins.; total, 12 ft.; lode 1 ft. 6 ins. wide, value, 1 oz. 1 dwt. 19 grs. per ton. We have resumed the driving of the 300-ft. level south, and measured 1 ft. 7 ins.; total, 259 ft. 5 ins.; lode 1 ft. 3 ins. wide, value, 1 oz. 10 dwts. 2 grs. per ton. No. 2 winze in bottom same level commenced, and sunk 2 ft.; lode, 1 ft. 3 ins. wide, assaying 15 dwts. 6 grs. per ton. Since the last report the health of the camp has greatly improved. We have had no cases of cholera for more than a fortnight. We have sent for the Moplah maistries to return with their men, and we are daily expecting them, and by next report we hope to show that a far greater amount of development work is being carried on. We have been very short handed this month up to date, and consequently the amalgam collected on account of the current month is much below the average, and we fear a decrease in this month's return of gold. But should this happen we expect to make good any deficiency in the following month when we hope to be full handed. Our return for Mar. was 3,004 ozs. of gold from 1,302 tons of quartz.

OSCAR (Apl. 25). — Report from the mine.—Hodgkinson lode: The lode in bottom of shaft presents still a disturbed appearance. We are sinking as fast as possible, and hope next week to be in a position to report having passed through clear of disturbance. The quartz in the 200 north still holds a width of 3 ft.; the lode is carrying a quantity of copper and iron pyrites and a little galena. Some stones showing gold have during the week been brought from this working. Assay value of end 13 dwts. 9 grs. In the 200 south the quartz has an improved appearance, and is over 4 ft. in width. At intervals in driving bunches of iron pyrites are being met with, which, by assay. have shown value for gold from 2 ozs. 13 dwts. to 9 ozs. 17 dwts. A stope working in back of 200 north is producing good stuff. The quartz is 3 ft. wide, well mineralised and assaying 17 dwts. 3 grs. Hewlett lode: There is no alteration here since last report. The quartz in the level driving south maintains a width of about 2 ft., and assays 4 dwts. 7 grs. gold per ton. In the north level there is a quartz leader about 4 ins. in width. I hope next week to be able to report improvement here.

PESTARENA UNITED (May 4).—No. 1 lode: The 160 end north is unproductive. The rise over the 150 north has been holed to the winze from the 130, and driving the 150 north has been resumed in a lode worth 4 tons per fm., at 10 dwts. per ton. The 90 south is yielding 5 tons per fm., at 12 dwts. Caunter lode: The intermediate level over the 90 west is yielding 5 tons per fm., at 13 dwts.; stoping will shortly be commenced here. The lode in the 90 west is 1 metre wide, producing 4 tons of ore per fm., worth 15 dwts. per ton. The 70 east and west is suspended. The 55 east is yielding 5 tons per fm., at 1 oz., and west, 2 tons at 10 dwts. The 46 east has very much improved, and now gives 4 tons of 15-dwts. ore per fm. The 70 cross-cut is expected to cut No. 1 lode this month. The water has increased in the Anza, and there is now sufficient for all requirements. All the machinery is working satisfactorily.—W. ROBERTS, W. H. TRELEASE.

— Val Toppa: The rise stope over Zero level on eastern lode is now yielding 10 tons per fm., at 10 dwts. At the stope under No. 1 level and branches a bed of low-grade quartz has been found under the level, upon which we shall sink to ascertain its value. At the intermediate drive over No. 3 level the ore-bearing rock is all the width of the end—1.30 metres—and is yielding 8 tons per fm., at 5 dwts.—W. ROBERTS.

RED MOUNTAIN (Apl. 17).—The manager reports:—The first 300 ft. of Pickwick tunnel is completed, and a contract let for a further 100 ft. The last 100 ft. driven in the Pickwick has opened up a nice channel of mineral ground.

WEST INDIAN (NEW GOLD).—The mail from San Domingo has arrived, and the company has received a report of the visit of Mr. Cambiaso (the new superintendent of the concessions), together with a report of Mr. Johnson, the manager of the mines, to Mr. Cambiaso. This being the first report from Mr. Cambiaso, the directors have every reason to believe that the workings of the mines will go on satisfactorily, and that monthly reports will be received, showing the amount of work done on the property, in which the directors have every confidence of success. The company is also in receipt of bill of lading for a small shipment of gold, viz., 21 ozs., making a total of 35 ozs. Mr. Cambiaso only being at the mine for a short time when this shipment was made, the directors fully anticipate that these shipments will be largely increased every month. Some photographs have been received of the property and workings, taken at the mines in Jan., which can be inspected by the shareholders at the company's offices. Mr. Cambiaso has, since his visit to the mines, expressed a desire to receive his remuneration in fully paid up shares of the company in lieu of cash, thereby clearly demonstrating his opinion as to the future of the company.

YURUARI (Apl. 17).—Up to the 11th inst. I have now sunk a further 23 ft. in the Water shaft. According to a survey which I have held I am now sufficiently deep to make preparations for driving both east and west, so as to connect with level No. 9 west, Cenicero shaft. I have immediately commenced therefore forming a platform for this purpose, but will not delay till its completion the re-sinking of the shaft. The lode all the way down has carried quartz of varying quantity, as per my reports, and I am pleased to state that the walls of the lode continue to be of solid quartz. I have also driven 16 ft. since last report, in No. 5 drift west of Water shaft, and am happy to be able to report an improvement in the lode there. You will observe from wages sheet enclosed that I have increased my staff which now consists of about 120 men, which I think you will agree is a small staff considering the large amount of development operations we are now carrying out. You will observe that the pay-sheet includes the salaries of the administrative, medical and permanent staff, and nevertheless is only 1,020*l.* for the month of Mar. I am pleased to state that the staff are supporting me by, I might almost say extraordinary efforts so as to carry forward the works with all possible speed during the next few months. I may add that I feel the deepest interest in these works, because, as you are aware, we are in virgin ground, and have proved that both the Peru and Chile lodes (running east and west at about an angle of 40 degs.) intersect the ground we are now developing, and, therefore, we do not know what valuable discovery may come to light any day. I shall not fail to telegraph you any important discovery, and meantime am making daily examinations of the bottom of shaft and faces of lodes, as the indications already satisfy me that we must be nearing the points at which previous managers have agreed a continuation of these lodes must be found.—PRYOR.

— The secretary adds that the policy mapped out by the chairman of concentrating operations on what Mr. Pryor describes as virgin ground has had the effect of reducing expenses to about one-third of what they were when the two shafts were in operation, one of the heaviest items being firewood, which was then costing more than 1,000*l.* per month. The total estimated expenses at the present moment do not exceed 1,500*l.* per month, and the chairman estimates that a return of 500 ozs. will nearly suffice to cover all expenses, while the mill is capable of treating 2,000 tons per month, so that ½ oz. rock, which formerly only covered expenses, will show a profit of nearly 20 per cent. upon the capital of the company.

REPORTS OF MEETINGS.

CUMBERLAND GOLD MINING CO., LIMITED.

SHAREHOLDERS UNANIMOUSLY DECIDE TO RE-CONSTRUCT THE COMPANY—PROSPECTS OF PAYABLE STONE VERY ENCOURAGING—ECONOMICAL MANAGEMENT AT HOME AND ABROAD.

THE fifth ordinary general meeting was held at Winchester House, yesterday.

Mr. Edmund A. Pontifex

(chairman of the company) presided.

Mr. ARTHUR GIFFARD (secretary) read the notice of meeting.

PROGRESS OF THE WORKINGS.

The CHAIRMAN: Gentlemen, we do not meet to-day under quite such auspicious circumstances as we met under at our last general meeting in Oct. At that time you will remember the mine, which had been very rich in the first four or five upper levels, had become poor, and that we had passed through something like 242 ft. in depth of sterile ground, and had then come upon a fresh make of stone, which promised exceedingly well—so much so that we anticipated that, although you had not responded to our invitation to subscribe for preference shares quite to the extent that we had thought it desirable in order to assure arriving at the depth where we expected to find the stone payable again, yet, still, the mineral which was already in sight was thought by our superintendent and mining experts to be sufficiently rich and large in quantity to enable us to carry our shaft down to the No. 7 level, and to drive that level until we got underneath the rich stone we found above. The mineral, however, appears to exist in a somewhat patchy and unreliable condition, although it promised so exceedingly well then, the promise was not entirely fulfilled. The ore became poorer as we went deeper, and for some time we were working at a loss. Since that time we have sunk to the No. 7 level, and the ore is continually improving in appearance. It would look, therefore, as if this fresh make of ore had at first not assumed a settled condition, but that it was now assuming a more regular form, and that we might fairly hope, and indeed expect, that as we get deeper we shall find the rich mineral that we had in the upper levels.

AN IMPROVEMENT.

On Feb. 7 the manager reported that, "at the bottom of the shaft there were 2 ft. of stone showing fairly good mineral, and giving every indication of better stone beneath." He then advised us strongly to continue the sinking of the shaft, but owing to the scarcity of funds we were not able to authorise him to do that, as we thought it more important to drive the level, which would soon get under the ore ground, and might be expected to become remunerative, whereas, sinking a shaft for the moment would be unremunerative. In a letter dated Jan. 17 he says:—"I am pleased to say the stone has improved considerably in the last few

feet, and it is a pity we did not meet this body 650 ft. higher, and, under the circumstances, the shaft should go down. The stone may improve as we are going north." That north drive is going under the ground where we expected to find the rich ore. He wrote with regard to that: "No. 7 north drive was commenced on Jan. 7. The ore was met with in the drive, but we are not yet far enough in for it to have become as rich as we hope to find it." On Mar. 10 he writes—"There are now signs of great improvement; there are 12 ins. of payable stone with a fair stream of water issuing therefrom."

IMPROVEMENT CONTINUES.

This favourable appearance seems to have continued. We received the usual monthly cablegram on the 4th, when the level was driven in 150 ft., and the mine was looking better. All the indications show that we are gradually getting into a better condition of things. A little more money will enable us to become a remunerative mine again. No work has been done in the No. 1 winze where operations have been temporarily suspended, and the ore body appears, from Capt. Straughan's report, to have greatly improved at that point. A cablegram on the 6th also states that driving forward from No. 2 had been commenced, and the driving would start on 2 ft. of favourable stone that was met with in the bottom of the shaft, so that I do not think that I have at all overdrawn the picture that appearances have been gradually improving as we get deeper, and that we may quite hope to find the mineral much more settled and remunerative. I think you will be of opinion that it would be the height of folly to abandon the enterprise at the present moment. We are in every respect in a most favourable condition. We have, at great expense, made a dam which will supply us with an abundant quantity of water, and which I believe is one of the finest hydraulic arrangements in that part of Queensland. The machinery is in first-rate order. We had great difficulty in getting permission to lay a tramway to the mill in respect to the land necessary, but we overcame it, and the tramway is now either completed, or on the point of being so, and will reduce very much our working expenses. We have also acquired at a merely nominal outlay a large quantity of ground into which we can sink when the mine gets deeper, so that if, as we expect, the mineral again becomes payable in depth we can go to any reasonable depth, and cannot have the threat held out to us of being blocked out. We are only 700 ft. deep at present, which is nothing for a gold mine. In many parts of Australia they sink 100 ft. or more before they even expect to strike the lode and find payable mineral. We are almost still working at the surface, and might naturally expect that as we go deeper the lode will become more permanent.

EXPENSES LOW BUT EFFICIENCY MAINTAINED.

All our expenses, both here and abroad, are on the most economical scale. (Hear, hear.) Our home expenses are so low there is no lack of efficiency, for I believe our mine is as well managed, both here and there, as any other that can be named. (Cheers.) The miners' salaries over there amounted altogether to 1,298*l.* during the year, and those are now largely reduced by reason of Capt. Straughan being no longer with us, and we are working merely with the assistance of our chief miner, who has been at the mine for many years, and who understands the work, and can carry on operations as well as Capt. Straughan.

FEELESS DIRECTORS.

Here the expenses are very low, and although the directors' fees figure at 1,200*l.* a year, they have not drawn a penny for two years. (Cheers.) Our rent is only 33*l.*, and the office charges 181*l.* (Hear, hear.) Therefore, you will see in every respect we are favourably situated for making profits as soon as we can find the mineral which will enable us to work to advantage. Under these circumstances, you can have no doubt that it is well worth while putting a little more money into the property, in order that we may have the benefit of all the expenses of the past. (Cheers.) I propose to leave the details of the re-construction to be discussed at the extraordinary general meeting, and will now simply move, "That the report and accounts be received and adopted."

Mr. MACFARLAN (director): I second the motion.

QUESTIONS.

Mr. TOTTENHAM asked a string of questions as follows:—Why did Capt. Straughan leave the mine? Who is the present manager and what are his qualifications? Why has the tramroad only just now been completed? What is the cost of sinking the shaft per ft.—also driving and timbering? What is the cost of transport per ton from Georgetown to the railway station, and what rate are you paying for labour and fuel? What proportion does the wood bear to coal? What is the cost of milling and concentrating, and what concentrating machinery have you?

The CHAIRMAN: Capt. Straughan left because he secured a better appointment, and we did not need to stand in his way. He left us on the best terms, and, as he is not far distant, he is willing to give us advice and assistance when we require his aid. (Hear, hear.) We have out there, Mr. Piper, who was in our office here, and who has gone over there to take charge of the office work. He is not a professional miner, but has had a good deal of experience, and with the assistance of our chief miner, is competent to carry on the general work, but should we require more skilled aid we shall not hesitate to employ him, but do not wish to incur the expense until we do. The tramway could not be finished, because until recently we could not get the ground. The details of sinking and driving can be obtained at the office, where the books of reference are at hand, but the cost of sinking the shaft are probably about 4*l.* a foot. Expenses there are enormous, and

ONLY RICH MINES CAN PAY.

We have to pay as much as a pound a day for anything like skilled labour. We are working extremely well, very efficiently and very cheaply, considering the circumstances. We cannot get coal and the price of wood varies. You may say that it takes 1 oz. to the ton to pay expenses and anything beyond is profit. We have excellent concentrating machinery, with Berdan pans, &c., and have under consideration another process in which Mr. McIlwraith, one of our largest shareholders, is interested.

The report was unanimously adopted, and with equal unanimity the directors and auditors, who retired, were re-elected.

Notice was further given that an extraordinary general meeting would be held at the same place, for the purpose of considering and, if thought fit, of adopting the following resolution:—(1.) "That the arrangement below set forth for the sale and transfer of the business, undertaking and property of the company to a new company be, and the same is hereby, approved and adopted. And that such sale be made in accordance with sections 161 and 162 of the Companies Acts, 1862." (2.) "That the company be wound-up voluntarily under the provisions of the Companies Acts, 1862 to 1867, and that Mr. Arthur Giffard, of Blomfield House, London Wall, E.C., be, and is hereby, appointed liquidator for the purpose of such winding-up, at a remuneration of 100 guineas." (3.) "That the said liquidator be, and he is hereby, authorised to enter into any agreement necessary or convenient for selling and transferring the whole of the business, property and undertaking of the company to the new company in accordance with the foregoing scheme, and for satisfying any of the debts or liabilities of the company, which would otherwise be chargeable by the new company under clause 1 (*c*) in consideration of the issue to him or his nominees of any shares in the new company in addition to those to be issued to him in accordance with clause 1 (*b*)." The scheme of re-construction follows.

EXTRAORDINARY MEETING.

THE CHAIRMAN: In reference to these resolutions, our whole endeavour has been to discover the best means of providing the funds necessary to carry on the undertaking. In my remarks at the ordinary general meeting I endeavoured to show the desirability of doing so, and will confine myself now to dealing with the mode suggested to you of providing fresh capital. We endeavoured formerly to provide it by an issue of 25,000*l.* preference shares, of which about 12,000*l.* was subscribed. Had the whole amount been subscribed the present scheme would not have been necessary, but as it was the 12,000*l.* has only been sufficient with the greatest economy to carry us on to the present point. We felt that a further preference issue would be useless, and a reconstruction scheme seemed to be the only possible way out of the difficulty. The result is the proposals now before you, and from the large number of assents I can assure you that

THE RE-CONSTRUCTION WILL BE CARRIED THROUGH

and that the shares will be taken up provided you pass the resolutions. The only point that causes any difficulty, is in regard to the position of the preference shareholders, who may claim that their rights are not sufficiently protected in the new scheme. In regard to that, I may say, I hold more than my proper proportion of preference shares, which, of course, would not influence my recommendations to you, but it seems to me that the scheme is equitable. When they put in their preference capital, they knew that no large ordinary capital was at its back, but it is so now, and their position is so much the better. It would be unfair to the ordinary shareholders if the preference shareholders did not subscribe their quota, because these ordinary shares with capital behind them make their position more assured than it was originally, but I believe the legal position is somewhat doubtful. One or two have said they would object. Now the Board do not wish to court litigation, especially when the issue is doubtful and the amount involved small, and I do not think it would be worth your while to insist upon the scheme as originally proposed.

DESIRABLE TO MODIFY SCHEME.

The three shillings per share upon 12,000 shares will only amount to £1,800, which would be deducted from the large amount that the ordinary shareholders will have to subscribe or make themselves liable for. I should be willing to accept an amendment that the

PREFERENCE SHARES BE ISSUED FULLY PAID INSTEAD OF 17s. PAID,

and then we shall do away with any risk of litigation. With these observations I move the first resolution, and shall then be glad if somebody will move a modification in the sense I have indicated.

Mr. MCFARLAN: I second the motion.

Mr. TOTTENHAM put a number of questions, most of which had been anticipated by the explanations of the chairman in his two speeches, and then that gentlemen suggested the appointment of a committee to consult with the board in settling the constitution of the new company. He was careful to say that he was not for a moment reflecting upon the board.

The CHAIRMAN said he would be only too delighted to have the assistance of shareholders in the sense proposed, and would take care that some of the largest of them were invited. The articles as agreed to with them would be read at the confirmatory meeting if desired.

JUSTICE TO DIRECTORS.

Mr. WILDEY WRIGHT: It seems to me that the directors have acted very thoroughly and honourably in their work in this company and have brought the scheme to a very promising point. The only fault they have committed (if fault it be) is that they perhaps trusted slightly too much to the future, and divided profits instead of keeping the money for contingencies. The working capital at the onset was too small, and that is the sole and whole cause of any cloud that has passed over us. The directors have shown themselves desirous to do everything possible for the company, and have worked hard, and without remuneration. They merit our confidence, and I hope that we shall carry their scheme unanimously. I will formally move an amendment as desired by the chairman, that the preference shares be issued fully paid, and not 17s. paid as proposed. The amendment was carried unanimously.

JUSTICE TO MR. GIFFARD.

The CHAIRMAN proposed the next resolution as above, and said that no person could be more suitable than their secretary, Mr. Giffard, for the post of liquidator, and certainly no one knew so much about the company or could do the work more economically. (Hear, hear.) The motion was carried unanimously as was also the third resolution which will be found above.

The CHAIRMAN said that the resolutions would be submitted to an extraordinary general meeting as soon as possible, as the directors were anxious to carry through the matter speedily.

On the motion of Mr. WILDEY WRIGHT the proceedings ended, with a cordial vote of thanks to Mr. Pontifex for presiding.

LISBON-BERLYN CO., LIMITED.

THE INCREASE OF CAPITAL AND PURCHASE OF THE FRANKFORT FARM CONFIRMED.

AN extraordinary general meeting of the shareholders in this company was held at Cannon Street Hotel, on Thursday, when the following resolution, passed at the meeting on Apl. 22, was submitted for confirmation :—

"That the capital of the company be increased by the sum of 62,500*l*., divided into 500,000 shares of 2s. 6d. each, to be considered as part of the original capital ; the proceeds thereof to be used for the purchase of the farm Frankfort in the Lydenburg district of the South African Republic, of machinery and plant, for the erection of such machinery and plant, for developing the resources of such farm, and for the general purposes of the company, or for any of such purposes, and that unless and until the company shall by special resolution otherwise determine, such shares, or any of them, may be issued by the directors from time to time, in one issue or more than one, and either at par or at a premium, and generally in such manner and upon such terms and to such persons as the directors shall think fit."

Mr. Albert Macklin

presided.

Mr. C. P. SIMPSON (secretary) read the notice convening the meeting.

FAITH IN THE LISBON AND BERLYN FARMS.

The CHAIRMAN, in moving that the resolution be confirmed, referred to the remarks made by the expert, Mr. Rickard, at the previous meeting relative to the Lisbon and Berlyn farms, which might possibly, he said, have led shareholders to think that the board had lost faith in those two farms. He thought Mr. Rickard had gone rather out of his way to make his report "cold-blooded." "The history of this property," Mr. Rickard said at the last meeting, "was too well known to the shareholders to justify anything but the most cautious treatment, and he would, therefore, willingly leave it to the judgment of his fellow-experts, or to any gentlemen present, whether he had not at least given a very good show of intending to be very careful." It appeared to him (the chairman) that Mr. Rickard need not have taken any notice of the past history of this company ; he had simply to go to the fields and say what he saw and what was likely to turn out after careful prospecting. With all this precaution, however, Mr. Rickard stated that there was every reason to suppose that auriferous quartz would be met with by boring ; and he added that the great water system would materially assist in the development of the property. As regarded the Westley Reef—it was intended to sink with the object of coming upon the reef under the bed of the waterfall ; but Mr. Rickard advised the cessation of sinking operations, thinking they would, by draining the pool, have a better chance of getting at the rich ore body at the bottom of the pool. It was

NOT FAIR

to assume that the Westley reef had vanished. They hoped in the course of a few months to have the pool drained ; and Mr. Rickard stated that the gully had been formed by the action of the water upon the softer quartz, and it was the soft quartz that contained the rich gold. The Frankfort property they proposed to acquire simply because it was adjacent to their own farms. The value of it they had known for many years, but the terms offered hitherto had been too onerous. It was offered now for a mere song—14,000*l*. Previously it was proposed to form a separate company with a capital of 120,000*l*. or 130,000*l*., which company would have purchased the property for 70,000*l*. or 80,000*l*. Great as they believed the value of the Frankfort property to be, however, the directors would rather sacrifice a hundred Frankfort properties than give up their faith in the Lisbon and Berlyn farms.

Mr. HAMILTON seconded, and after a brief discussion the resolution was confirmed.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SILATI.—MR. CONYBEARE'S REPLY.

SIR,—In your issue of the 25th ult. you published a long letter over the signature of Capt. James Williams. As in that letter I was charged with untruthfulness, and challenged by the writer to make good my statement, I have to ask you, in fairness to those whom I represent as chairman of the Silati Co., to be good enough to give equal publicity to this communication.

Upon my attention being drawn to Capt. Williams' letter, I wrote at once to Messrs. Bewick and Moreing the following letter :—

[Copy.]

"Apl. 29, 1891.

"Messrs. Bewick and Moreing,

"Dear Sirs,—A letter, published in the MINING WORLD of the 25th inst., and purporting to be written by Mr. James Williams, of Redruth, represents that gentleman as referring to statements made by me at the recent meeting of the Silati Co. in the following terms :—

"'Mr. Conybeare says that Mr. Alford himself has described the manager sent out by his own firm as absolutely incompetent and unfit for the post. I do not believe a word of it ! This is a little bit of his own making, as the public will see from Mr. Alford's letter written above. Further, if Mr. Conybeare can get Mr. Alford to write a letter to the papers to this effect, I will publicly apologise, and give £ s. d. to the Redruth Miners' Hospital. The fact is, they did not send out the right man.'

"As I am not in the habit of making statements which I am not prepared to substantiate, and as I am anxious for the Redruth Miners' Hospital to profit by Capt. Williams' promised donation, I beg you to be kind enough to inform me whether it is the fact that you have in your possession a letter dated from Johannesburg, Oct. 24, 1890, addressed to your firm, and signed by your partner, Mr. Charles J. Alford, containing the following words :—

"'As to Capt. Williams, he is not a fraud or a humbug, but an illiterate, honest old mining man, altogether out of his place as manager of a mine so far removed from supervision, and almost driven crazy with the responsibility of the present situation. He cannot write letters, and by nature he is far too proud to allow his subordinates to write them for him. Send for him home out of a place he is not fit to be in, but do not allow his good name to be attacked.'

"Awaiting the favour of your early reply,

"I am,

"Yours faithfully,

"C. A. V. CONYBEARE."

To that letter Messrs. Bewick and Moreing replied *inter alia* :—

"We have in our possession a private letter containing the words quoted."

They then proceeded to make further comments, which elicited from me a second letter, which, with their letter, I should send to you herewith were it not for the following extraordinary threat, which reached me this afternoon :—

"5 and 6, Bucklersbury, London, E.C.,

"May 4, 1891.

"Sir,—My clients, Messrs. Bewick and Moreing, have handed me your letter to them of the 1st inst. Without entering into the merits of the correspondence between you and them, or into the value of your arguments, I have on their behalf to give you distinct notice that if pending the present litigation you publish any correspondence or take any step which is intended to have the effect of prejudicing their case, or in any way interfering with the course of justice, they will instruct me to at once apply to the Court for your committal, as I cannot conceive any grosser contempt of Court than that which you are now instituting, and which you threaten to continue by means of a publication of matters which affect the issue to be determined between my clients and your company.

"I am, Sir,

"Yours obediently,

"(Signed) H. MONTAGU."

"C. A. V. Conybeare, Esq., M.P.,

"67, Cornhill, E.C."

I have not the slightest intention of committing any contempt of Court, nor, having taken the advice of counsel, can I discover that by publishing the whole correspondence should I run any risk of doing so, but as such publication is not necessary to my present purpose, I will respect the not unnatural dislike of publicity which this eminent firm of consulting engineers have suddenly developed, although fully persuaded that their solicitor's idle threat is but a bit of Bewick and Moreing bunkum.

I must, however, in further reply to Capt. Williams' challenge, ask him whether he is prepared to deny that he has in his possession, or received while at the Silati from the firm whose *protégé* he is, a letter dated Sept. 25, 1890, and signed Bewick and Moreing, containing the following :—

"We regret very much that you did not, immediately you arrived on the property, report fully as to its value, as you were instructed to do. The directors are extremely annoyed that you have not kept them better informed and that their first news that the property was not what it was represented to be should come from Mr. Alford. We must say that we entirely concur with the directors, and think you are much to blame."

It will thus be seen that, while Mr. Alford on the spot condemned Capt. Williams as "not fit to be in" the post he was sent out to fill, his partners, Messrs. Bewick and Moreing, severely rebuke this gentleman, who has such an excellent opinion of himself, as being "much to blame" for not carrying out his instructions, which, I may add, were handed to him before he left England in Dec., 1889.

As I believe there is no other partner in the firm to whom I can refer for a certificate as to either his competency or his conduct, I think I may now fairly claim for the benefit of the Redruth Miners' Hospital the fruits of Capt. Williams' generous challenge.—I am, &c.,

C. A. V. CONYBEARE.

4, Sun Court,
May 4, 1891.

REVIEWS.

"LIBERTY LEAVES"—PUBLIC BILLS.

Some more of the precious productions of the so-called Liberty and Property Defence League have reached us, which are hardly worth serious criticism. The council of this body (who mainly represent themselves) called their effusions "Liberty Leaves"—another crime committed in liberty's sacred name. The League appears to exist for the purpose of opposing the reforms which the progress of public opinion and the common sense of the nation demands. For example, we find it in opposition to such measures as the Access to Mountains (Scotland), Agricultural Tenant's Improvements, all efforts to chain up still further the curse of drink, London Water (Meter), Leaseholder's Enfranchisement, and the like. Happily the League is no more able to stop the course of measures like these, and a general progress, than Mrs. Partington was to brush back the Atlantic with her broom.

HOLLOWAY'S OINTMENT.—Sores, Wounds, Ulcerations, and other diseases affecting the skin, are capable of speedy amendment by this cooling and healing ointment, which has called forth the loudest praise from persons who had suffered for years from bad legs, bad breasts, piles, abscesses, and chronic ulcers. None but those who have experienced the soothing effect of it can form an idea of the comfort it bestows by restraining inflammation and allaying pain. Whenever Holloway's Ointment has been once used it has established its own worth, and again been eagerly sought for as the easiest and safest remedy for all such complaints. In neuralgia, rheumatism and gout, the same application, properly used, gives wonderful relief.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

[And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Stocks.—Both concerns are good for investment.

J. B. Main (Liverpool).—If you sell during this account the buyer pays th call.

Sykes.—Hold on. The report reads well, and a better price is likely to be obtained shortly.

German (N.W.).—Yes. They are likely to go lower still.

Dividend Seeker.—Cannot keep up. There is very little to warrant the sudden rise.
B. L. O'D.—A very good speculation. The shares are fully paid.
Correspondent (Bristol).—Yes. It is viewed by the knowing ones as a good return, although the general public think otherwise.
Money.—A very important meeting, which should have a good effect on the price of the shares. Certainly hold.
Speculator.—The call was rather unexpected, no doubt, but it must eventually improve their situation. Hold for better prices.
London Sub.—Sell.
J. J. J. (Dover.)—Your broker is right in his claim. The market deal in the shares "cum call" until the next account.
Roadster.—Rather a small number. Write the parties again.
Tent Peg.—Do not rely on their statements. They are to suit themselves *only*.
Securities.—A pure speculation. If you care for the risk, well and good.
Grateful Reader.—Dispose of 4 and 7, but others should be held for better prices.
Chertsey.—You should buy now, as a rise is expected when the cable comes to hand.
South-West (A. M.).—You cannot blame the parties named. They have evidently done their best to protect your interest, although the matter really rested with you.
Continental Reader.—Only a rig. Why not secure the small profit ?
B. R. S. A.—Very hard to judge. Our advice is to accept the offer.
Old Subscriber.—The price is still for shares, 17s. Brokers will deal 18s. paid; next week should go better.
T. F. (Sheffield).—Do not apply until we write to you. Hold your Indians.

The Mining World.

LONDON: SATURDAY, MAY 9, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

INDIAN SHARES AS AN INVESTMENT.

THE Apl. crushings of the Indian gold mines, so far as announced, show a decided improvement on those of Mar. The progress of these mines has been so steady, that it would almost seem as if the public had failed to grasp the significance of it. We have repeatedly called the attention of our readers to these companies as being an exceptional field for investment, and we now hasten to give a reason for the faith that is in us. The table below shows the results up to and including Apl. of the present year for the four principal companies in the Colar field, and a careful perusal of the figures should be sufficient to convince the most sceptical. The Mysore Mine has produced during the four months no less than 21,795 ozs. of gold, being nearly 500 ozs. better than for the same period of 1890, and 9,300 ozs. better than 1889. Yet, strange to say, the shares are selling at within a fraction of the price obtainable two years ago.

The Nundydroog returns are, comparatively speaking, even more favourable than those of Mysore, the result for the four months being 5,478 ozs., showing an increase of 1,015 ozs. over 1890, and 3,504 ozs. over 1889. That is to say, the mine is producing at the present time nearly three times the quantity of gold it was producing in 1889, while the shares have remained practically the same.

The Balaghat does not show quite so good a result as it would have done, the returns for Mar. and Apl. being decidedly below the average of the previous three or four months. This falling off, however, is not due to any defects in the mine, but is to be accounted for by the scarcity of labour, consequent upon the cholera epidemic, the result being that the mill could not be kept running. Notwithstanding this drawback, however, the returns for the four months are considerably more than for the same period of 1889, and only 96 ozs. less than for 1890. The last balance-sheet of this company showed that the receipts came to within 101*l.* of the expenditure, and unless anything untoward happens, the company will, no doubt, pay a dividend on the current year's working. It has been proved, beyond doubt, that the lode improves as it goes down.

The position of the Ooregum Co. is in every way as satisfactory as that of any of the others, and, in fact, as regards returns, comes second to Mysore. This company has also suffered from the cholera epidemic, the returns for Apl. being nearly 500 ozs. below the average, but notwithstanding this fact, the yield for the four months amounted to 10,862 ozs., being nearly 3,000 ozs. better than for 1890, and 6,700 ozs. better than 1889. At the recent meeting the directors, after paying off all the debts, 22,500*l.*, declared a dividend of 3s. on the preference shares and 1s. on the ordinary shares. We look upon the shares of this company as one of the most promising investments in the mining list.

COMPARATIVE TABLE.

Name of Company.	Jan.	Feb.	Mar.	Apl.	Total for first four months of 1891.	Total for same period of 1890.	Total for same period of 1889.
	ozs.	ozs.	ozs.	ozs.	ozs.	ozs.	ozs.
Mysore ...	5,360	5,452	5,477	5,506	21,795	21,326	12,505

Ooregum ...	2,890	2,913	3,004	2,055	10,862	7,940	4,153

MR. CONYBEARE AND SILATI.

THE letter we publish from Mr. Conybeare is an example of the extreme cleverness of that gentlemen, who decidedly scores against Mr. Alford when he inferentially charges him with inconsistency in his statements respecting the management of Capt. James Williams, not to speak of his opinion of that gentleman himself. On Oct. 24, 1890, Mr. Alford seems to have described the much criticised Capt. Williams as "out of place and almost driven crazy with the responsibility of the present situation," and recommends that he should be sent home at once. But poor Capt. Williams, quite unconscious of this thunberbolt in the Conybeare pigeon holes, placed his reliance on the Alford epistle of July 22, in which that gentleman wrote, "I fully approve of your present scheme of explorations, and shall be glad if you will push on the work with all possible dispatch, so that on my return in about two weeks I may be able to re-examine the place, when we shall be in a position to gain further information." Capt. Williams seems to have been ignorant down till the present time of the opinion Mr. Alford expressed of him three months later.

There is, however, no mistake about a point which Mr. Conybeare, with his usual adroitness, has wholly evaded—the opinion of Mr. Alford and Capt. Williams of the valuelesness of the property as viewed from a gold-bearing standard, and especially so to a company saddled with a capital of 600,000*l.* Silati shareholders are not particular to know the opinion Mr. Alford may have of Capt. Williams, or the opinion Mr. Conybeare may have of them both. They have the miserable choice to make as between one set of experts who extol the property to the skies, and another class who declare it only to be worthy of their maledictions. Mr. Conybeare does not deal with the statement of Captain Williams that the Swiss reef so far from being worth 600,000*l.*, was not worth as many pence; nor does he tell us why, if the rich stone is there, some of it was not taken out and crushed. There is no reply to Captain Williams' statement as to absence of wood and water, upon which, surely, it did not need even an expert to give an opinion. The crucible of time will show whether the earlier or the later experts of Silati were right, but so far as the unfortunate shareholders are concerned, the mining outlook seems quite as gloomy as the market price of the shares indicates.

THE PRESENT POSITION OF THE RANDT MINES.

THE present position of the Randt Mines, looked at entirely from the development point of view, exclusive of reference to the market prices of the stocks, which is deplorable, merits greater attention than it has hitherto received. An investigation of many of the properties by an expert, on whose judgment we can rely, and whose testimony we regard as worthy of all acceptation, has led us, by a logical process, to the conclusion that they are now being worked in a far more systematic and able manner than at any previous period of their history. Indeed, one turns with relief from the state of the share market to the steady improvement in the general working of the mines, and the success that is following. There is more reason than ever now to believe in the permanent character of the reefs, which we need scarcely remind our readers was as hotly disputed by the enemies of South African mines as it was stoutly maintained by their friends. The output during 1890 was, at least, 100,000 ozs. in excess of that of 1889, and as this represents close upon 375,000*l.* in money, the fact is significant and worth recording, because, though the shares were not worth the inflated prices to which the Hatton Garden and Holborn Viaduct clique put them in the early part of the former year, they are decidedly worth more than quoted prices in the present state of the development of the mines. Judging from the first four months of the present year, the increase on the full year, if kept up till the close, will be roundly 250,000 ozs. more. Side by side with this increased production there has been decreased working cost, in many cases going down to 1*l.*, and in one case—Kleinfontein—to even as low as 15s. A French engineer, who has recently been inspecting the Randt Mines for a group of speculators in Paris, has recommended them to take up claims, upon which they will have to sink 1,500 and 2,000 ft. to strike the reef. All the facts go to show that, whilst the Johannesburg Stock Exchange has been uttering cries of distress, which have been echoed by weepers and wailers in this country, who bought at the extravagant prices that ruled two or three years ago, the directors and managers of the mines on the spot have been setting their houses in order, and looking at mining through common-sense spectacles, that is, as an industry which will only yield its rewards as the result of honest and intelligent work. There is obviously more science and experience exercised now, together with a vast deal more economy, than has previously been known since the Randt Mines first came into notice.

We will mention a few cases to illustrate what we say. There is, for example, City and Suburban, which is one of the best properties on the Randt, but was at one time found by Mr. Percy Tarbutt, when he went to examine it, in a state of chaos. The development works were in a bad state; the machinery was in a dilapidated condition, and the milling plant was such that profits became a delusion and losses a certainty. Of late, however, thanks largely to this gentleman's initiative, the new leaf has been turned

over. The management has been improved, and so have the works underground, together with those for dealing with the ore at surface. The position of affairs is now very satisfactory, so that it was stated a month ago that the African Gold Share Investment Co. had re-invested considerably in the shares. Then there is the Kleinfontein property, which is said to have 68,000 tons of ore in sight in the two reefs that are being worked. It has 50 stamps at work, and though the yield of ore is only 6 dwts., the working costs are so low that a profit remains. The manager estimates that he can crush 4,000 tons a month, which, with only 6 dwts. per ton, would give a profit of 1,200*l*. a month, and each additional pennyweight would mean 750*l*. profit extra. The Stanhope, Geldenhuis, and May Deep Level are also properties that are looking uncommonly well. The former has a showing of 33,000 tons of ore calculated to yield from 1 to 3 ozs. to the ton, and a 40-stamp battery is in course of erection. Then at the May Deep Level something has been attempted—something done. The south reef is poor, and the developments not far advanced, but in one drive 120 ft. long, the north reef varies from 3½ ft. to 10 ft. wide, and assays from first to last 2½ ozs., whilst another drive of similar length has averaged the somewhat astonishing result of 3 ozs. to 7½ ozs. to the ton. Another promising company is Crown Reef, which Mr. Tarbutt recently described as one of the best managed mines on the field, and "worked fairly and squarely to earn dividends." It is a significant sign that in all these properties the African Gold Share Investment Co. has become largely interested, mainly, if not entirely, owing to the able reports which have been sent by Mr. Tarbutt to his colleagues, and in most cases in consequence of his visits to them.

There are other companies on the Randt that might be mentioned, whose encouraging returns we publish this week, but to those already named we might add Vogelstruis, which seems to have overcome its chief difficulties. Out of the mouths of more than one witness recently, on whose testimony reliance can be placed, the management of the Randt Mines has been much improved. In fact the properties are really being intelligently developed, and the prospects are extremely good. To the Randt list we might add in the De Kaap district Sheba, one of the most promising and best conducted of the South African mines, and Pigg's Peak, which is also under good and responsible management. We come then to the conclusion from the premises adduced, that the general position of the South African mines, and particularly of those on the Randt, has never been anything like so good in the previous history of the industry.

KABOONGA AFFAIRS.

WITH unhappy countenances, and voices anything but sweet, the shareholders of this company met at Cannon Street Hotel yesterday. It is not often, however, that shareholders in this frame of mind come to so sensible and busineslike a conclusion. That they were disheartened and somewhat pessimistic is not surprising, considering the disappointments they have had, but in mining, and especially gold mining, indomitable patience and perseverance are essential qualities. Similar trials and disappointments to those experienced by the shareholders in the Kaboonga Co. have fallen to the lot of shareholders in other companies, whose properties are now yielding very satisfactory dividends. Notably is this the case with the Indian mines. It was only as depth was attained that the Mysore and kindred mines began to yield profits; and large sums of money were in the early days of these properties expended upon work which was apparently worthless.

The Kaboonga mine has only reached a depth of 250 ft., and anyone who knows anything at all of mining will agree with Col. Malleson that this is not sufficient to prove the value of a mine. It is satisfactory to learn that the mine is improving as depth is attained. In the upper levels some small pockets of rich ore have been discovered, but nothing of a permanent payable character has as yet been exposed. The present manager, who is a thoroughly qualified miner, has left a lucurative appointment in order to undertake the duties, and, as was pointed out by a gentleman at the meeting, he being a 'cute Yankee, it is not to be supposed that he would have done so had he not seen favourable indications for the future. Under these circumstances the shareholders have decided—and we congratulate them upon the wisdom of their decision—to sink to a further depth of 100 ft., but before authorising this procedure a telegram in the following terms has been sent to the manager:—"Shareholders require to know your full and candid opinion whether prospects are sufficiently good to justify continuation of sinking. If not, what course do you advise? Reply immediately." The meeting has been adjourned for a fortnight pending receipt of a reply; and if the answer is favourable we have little doubt that the shareholders will willingly put their hands in their pockets to the extent of 3d. or 6d. per share to provide the sinews of war. Some exception was taken at the meeting to the expenditure, but we would remind the shareholders that there is such a thing as using the pruning knife too freely. However, the directors have undertaken to keep the expenses down to the lowest possible limit, and our advice to them is to emulate the Scotchman, and "count their bawbees guid siller."

ROBURITE AFFAIRS.

THE discussion at the meeting of this company yesterday, though not wholly relevant, will nevertheless do good if it only has the dual effect of showing the desire of the board to meet the reasonable wishes of shareholders and the steady progress of the explosive in the public estimation. In regard to the first poiut, the discussion chiefly turned on the priority in the division of assets given to the preference shareholders, who have consented to take paper for their arrears of interest, and 5 per cent. in future instead of 7 per cent. to which they were entitled. It was, we think, clearly shown by the chairman, by Col. Gerard Smith, and notably by Mr. Bohn, that this priority was of little or no value, but a section of the meeting held otherwise, and the *quasi* pledge was given that at the next gathering this obnoxious provision will be withdrawn. In regard to the second point, the progress of Roburite is so substantial that the chairman distinctly foreshadowed a dividend for the ordinary shareholders in 1892. The advantage of the present reconstruction scheme was well shown by some figures adduced by Admiral Colomb. The position of the company is evidently improving month by month. We think Sir John Stokes and his colleagues may claim to have surmounted their initial difficulties, and our firm conviction is that the future of Roburite will be a great improvement upon its past.

LEEDS COPPER CO.

THIS company has risen upon the ashes of a former one, whose name it is bootless to mention. We haste to say, however, that the company is in Canada, and not in the northern town, from whence it would appear to derive its name. There are 10,000 tons of ore on the dump, which is a very good supply for the machinery now on the spot to start upon, and from what was said in the meeting we should judge that no small measure of success awaits this concern in the future. It has plenty of capital, and a perusal of a report of the meeting will show that the directors are not deficient on the side of either business acumen or prompt action. The confidence of shareholders will no doubt be strengthened by the knowledge that their directors are interested in the company to the extent of 50,000 shares.

AFFAIRS IN SOUTH AFRICA.

Kimberley, Apl. 6, 1891.

THE NEW WESSELTON MINE.

So far as the practical working of this new discovery is concerned everything is going on peacefully and quietly. The prospectors are busily engaged in working their claims, and they are well rewarded for their exertions. Since the actual discovery, to which I alluded in one of my Jan. letters, and which is now about 10 weeks ago, they have produced 6,000 carats of diamonds of good quality, and the price has averaged 30s., so that it is now placed beyond all doubt that they have hit on a diamond mine as payable as either Kimberley or De Beers. But in another sense matters connected with this new mine are neither peaceful nor quiet. It is almost impossible for an important matter of this character to be dealt with in this colony without it being in some way mixed up with politics, and this is no exception to the rule. The consequence is an agitation has sprung into existence, which will materially affect the future of this mine. It is useless to deny the fact that business on these diamond fields has during the past 18 months been severely restricted owing to the shutting down of the Dutoitspan and Bultfontein Mines by the De Beers Co. Gradually hundreds of white men and natives have been thrown out of employment, and a very great deal of actual destitution has been the result. Up to the end of last year the business men of the fields only gave vent to their feelings in muttered grumblings and growlings against the directors of the great monopolist company. They not only saw the trade of Kimberley gradually dwindling away, but they also saw that in Beaconsfield (the sister township) a busy and thriving population was gradually giving way to a beggarly array of empty houses and stores. What would have occurred during the present year had things gone on in the same fashion does not now much matter. What we have to deal with is the present, and the new year was scarcely a fortnight old when, as I have said, a discovery was made which has created a notable era in the history of these diamond fields. It has brought about the existence of two factions. Under other circumstances these factions would have fought the matter out on purely commercial grounds, but, as you will see as I proceed, political considerations are involved, and it is quite on the cards that the arena will be removed from Kimberley to the floor of the House of Assembly in Cape Town. So far as the diamond fields are concerned the bone of contention between the two factions was that the supporters of the De Beers Co. oppose the working of the new mine on the ground that an additional output will so bring down the price of diamonds as to ruin the industry, whilst the other faction, which I will call the popular party, are clamorous for the mine to be thrown open in order that employment may be found for the large number of unemployed. On these lines the battle has raged most furiously for several weeks past. The newspapers have teemed with letters, *pro* and *con*; public meetings have been held by the popular party,

who have raised subscriptions to pay the expenses of delegates, who have visited several of the commercial centres, where resolutions have been passed requesting the Governor to proclaim the new mine a public digging, which he is enabled to do by virtue of an Act of Parliament passed some seven or eight years ago. Popular clamours of this kind succeed, if they only make noise enough, and at one time it really looked as if this faction was going to take the mine by storm. All at once they were pulled up sharp, and in a very unexpected manner. If your readers have followed me from time to time they will remember that I have frequently alluded to the existence in this colony of a powerful political body known as the "Africander Band." Looked upon as an insignificant and uninfluential body when it came into existence some ten years ago, it has gradually obtained such a power in the land that it is now become the maker and unmaker of Ministries. It is well known that Sir Gordon Sprigg coquetted with the Band during his term of office, and that he had to resign because the Band objected to his gigantic railway scheme. When Mr. Rhodes was asked to take office last year, before doing so he went straight to the leading members of the Band and plainly told them that he would only accept on condition of receiving their support; this was promised, and the Rhodes' Ministry was formed.

By a Singular Coincidence,

at the last meeting of the Band Congress it was decided to hold the next meeting this year in Kimberley, in Mar. Accordingly when the new diamond mine agitation sprang up in Jan., the local members of the Africander Band, who were with the popular party, heart and soul, took it for granted that they would secure the support of the members of the Congress in favour of throwing the new mine open to the public. The result proved not only that they counted their chickens before they were hatched, but that they could not see an inch before their noses. The Congress members arrived here a fortnight ago, and were at once presented with addresses of welcome from several public bodies, in all of which their attention was directed to the terrible stagnation of trade on the diamond fields, and the Claimholders' Protection Association (the special mouthpiece of the popular party) plainly asked for their support in their endeavours to get the mine thrown open. To their intense disappointment and astonishment, the chairman of the Congress promised only that they would give the matter their earnest consideration. But what annoyed the popular party so much was, that the directors of the De Beers Co. took the members of the Congress under their wing, almost ostentatiously, from the day of their arrival, and on Good Friday took them all over their works, and subsequently gave them a grand spread at their pretty little village of Kenilworth. This was sufficiently galling, but the death-blow to their hopes had yet to be dealt.

Mr. Rhodes Landed from England that very Day.

Now, it appears that it was well-known that if the steamer came in soon enough to enable him to do so, he intended to be present at the grand public banquet to be given to the members of the congress in the Town Hall here on the evening of Easter Monday, but when the steamer only came in on Friday all hopes of his doing so vanished. People reasoned in this way; There were only three clear days; the distance between Cape Town and Kimberley 750 miles; and, as Premier of the colony, it was quite understood that there would be a vast accumulation of business awaiting him. That Mr. Rhodes is a man of great activity every one knew, but no one thought for a moment that he would consider the Band Congress Banquet of sufficient importance for him to be present under such circumstances; but to the astonishment of the whole colony he turned up here on Monday morning, was present at the banquet in the evening, and made two long and important speeches. For the purposes of this letter I may state that it is now quite apparent why Mr. Rhodes considered that it was so imperatively necessary that he should be present on Monday evening. It is to be observed that in neither of his long speeches, the one in reply to "the Ministry" and the other in proposing the "Africander Band," did he make the smallest allusion either to the new mine or to the popular clamour, but he clearly wished it to be distinctly understood all over the colony that the Ministry and the Africander Band were one, and indivisible, and thoroughly understood each other, and as everybody knew before the banquet that the Rhodes' Ministry would never consent to the throwing open of the new mine, so they were made to know after the banquet that the Rhodes' Ministry had secured the support of the Africander Band, and as the Africander Band rules the roast in the Houses of Legislature, there is not the slightest chance of Parliament acceding to the popular cry. This being so the diamond monopolists have everything their own way still, and the shareholders in the De Beers Co. may go on their way rejoicing. Sober people are now coming round to the conviction that this is the only reasonable outcome of the agitation. Whilst everybody sympathises with the unemployed on these fields, common sense dictates that if the output of diamonds is unrestricted, there would very soon be such a glut in the market that a panic would be the result, and the industry ruined probably for some years. In the meantime nothing is known as to what Mr. Ward and his fellow concessionaires are going to do. At the present moment they are working as if the lease was not in existence, and with the amount of luck I have already mentioned; but June 30 will soon be here, and then Mr. Ward will have to decide whether he will become proprietor of the farm, or whether he will leave Mr. Wessels, the present owner, master of the situation, and owner of one of the most valuable diamond mines in the world.

BETTER TRADE.

The Customs returns of trade for the month of Apl., issued yesterday afternoon, show more favourable results than were to be expected. Our exports were valued at 20,919,000*l.*, or an increase of 2¾ per cent. upon the corresponding month; and the imports at 30,982,000*l.*, or nearly 10 per cent. better; while in both cases the loss on the four months has been made up. Of the reshipments, the total was 5,535,000*l.*, or 14 per cent. better, with 1¾ per cent. increase on the four months. Our exports show generally an increase, but yarns and textile goods, and metals and metal manufactures a decrease. In the imports there is only a decline in raw materials, for textile manufacture, and in horses, cattle, &c.

The following table in our usual form shows the results for the month in regard to the imports and exports of metals, &c.:—

Article.	Quantity Tons.	Value £	Increase or decrease per cent. Quantity.	Value.
Imports.				
Copper ore	5,579 ...	44,780 ...	— 43.5 ...	— 37.8
„ reg. and precip. ...	16,625 ...	405,983 ...	+125.7 ...	+105.3
„ un. and pt. wrought	3,323 ...	183,268 ...	+ 19.1 ...	+ 33.5

CUMBERLAND GOLD RE-CONSTRUCTION.

The decision of the Cumberland Gold shareholders to re-construct their company is wise. All the circumstances point to its desirability. There is every chance that as the shaft strikes the lode at a deeper point than the 700-ft. level reached at present, paying mineral will be found again as it has been in other mines under similar conditions in the immediate neighbourhood. In this case the shareholders will be more than repaid for their late disappointments. It was gratifying to hear Mr. Pontifex say that the success of the re-construction scheme is assured, and we congratulate him and also the meeting on the business-like view taken of the position of the preference shareholders, whose claims have been met in a just, not to say liberal spirit. The feeling of unanimity in regard to the re-construction scheme and confidence in the management augurs well for the future of this well managed company.

THE CENTRAL ASPEN SILVER MINING CO., LIMITED.

Before noticing in particular the prospectus of the Central Aspen Silver Mining Co., Limited, it may not be uninteresting if in general we give a few particulars of the Aspen district itself. Aspen is in Colorado, and 7,775 ft. above the sea level, and has been described by a local enthusiast as "the grandest mining camp in the United States." Aspen is one of the most remarkable of the many cities in the United States which illustrate the rapidity of growth which inevitably follows in the wake of successful mining. The Park Regent Mine of Aspen is said to have paid $240,000 in dividends, whilst the J. C. Johnson has also paid big dividends, and is said to have four millions worth of ore in sight. The Smuggler has made immense outputs of silver and lead, and the Mollie Gibson, hard by, is described as a metal factory rather than a mine. The "Enterprise" has also paid heavy dividends, whilst the Aspen Mining and Smelting Co. is paying $40,000 per month, and the Compromise Co., adjacent, claims to have "the largest ore showing in the world." These are only a few of the mines which have made the name of Aspen famous in mining, and in regard to which a local contemporary is not perhaps wholly exaggerating when it says that "it most certainly has the lead of the world in general at this period of our writing."

So far then as its surroundings are concerned, the Central Aspen Silver Mining Co., Limited, comes before the English public with good credentials; but before dealing with the prospectus we wish to call attention to the exhaustive report of Mr. Nasmyth Sidebotham, M.E., C.E., to which the public will attach considerable importance, as he is an engineer, well known throughout the country, and particularly in the Manchester district. He found that the six silver mining grants which this company is established to acquire are situate upon the great Aspen lode—that is, upon the Smuggler Mountain, and form almost a complete square of about 50 English acres in extent. The lode has been traced almost an incredible distance, but the inspection of Mr. Sidebotham was limited to about 5 miles. He found it to vary in size and thickness, and its products to be chiefly chlorides and sulphurets of silver.

The Badger, along with four other claims, lies parallel upon the lode, forming a large and, what in the future should be, "a most

profitable property." He found that a considerable amount of exploratory work had been done, including the sinking of a shaft 300 ft. vertical, in the course of which (and this is most important) "the Contact has been proved," by which is meant that this is a sure sign that ore bodies are in the immediate vicinity. The plant and machinery are in good order and capable of dealing with a large output. He found a good road to the depôt, and estimates that the cost of transporting the ore thence from the mine should not exceed $1 per ton, and the arrangements which he suggests for future working, he thinks, will have the effect of reducing the costs still further. Of the value of the ore-bodies, when met with, he has no doubt, as they range from 30 to over 1,000 ozs. to the ton.

It is to work the six mining grants, upon which Mr. Sidebotham thus favourably reports, that the present company has been formed. The prospectus properly lays stress upon the circumstance mentioned by this gentleman that "the celebrated Contact lode of the district has been proved to exist in the property, containing branches of silver ore, assaying 112 ozs. of silver to the ton, and revealing the same general characteristics of the lode as are presented in the richest of the camp." As the vendor takes the whole of the purchase-money in shares, the capital of the new company will be devoted to sinking the shaft with a view to driving the levels and the general development of the lode, and also to the acquisition of other claims. The estimated production is 50 tons a day, and the net profit upon this output only is estimated at 75,000*l*. per annum. After proper provision for contingencies and reserve fund, and 20 per cent. per annum (non-cumulative) has been paid on the ordinary shares in accordance with the articles of association, the surplus profits will be divided equally between the two classes of shareholders, one moiety to the ordinary shareholders, and the other moiety to the deferred shareholders. The purchase price to be paid by the company is 50,042*l*., the vendor agreeing to take at least 45,032*l*. in ordinary and 10*l*. in deferred shares, and the remaining 5,000*l*. in ordinary shares or cash at the option of the company. The balance of 49,858*l*. will provide for the working capital of the company. The authorised capital, 100,000*l*., is divided into 99,890 ordinary, and 110 deferred shares of 1*l*. each, of which the vendor agrees to take 50,032 ordinary and 10 deferred shares. The remaining 100 deferred shares have been allotted, and the holders thereof have taken 10,000 ordinary shares. The balance of 39,858 ordinary shares is now offered for public subscription. A list of the deferred shareholders is given, which includes some of the best known names in commercial circles in Manchester and elsewhere. The directors are responsible business men, and are so confident of success that they have agreed to take no remuneration until a dividend of 10 per cent. is paid to the ordinary shareholders.

RUSSIAN BACON CO., LIMITED.

The company has been formed with a capital of 150,000*l*., for the purpose of acquiring a concession granted by the Russian Government to Mr. James Coke to work the Government slaughter houses and curing factory situate in the town of Griaza. The business to be carried on will be that of curing pig-meat, and importing it into the United Kingdom, a trade which has hitherto been almost entirely in the hands of the Americans. It is stated that Russia by her large production of grain will be in a position to successfully compete for the bacon meat supply of the United Kingdom. Labour is cheap, salt is low in price, and ice can be had from an adjoining river. Under these circumstances the company ought to be able to do a good business, as the quality of the bacon is said to be exceedingly good. The price to be paid to the vendor is 100,000*l*., 25,000*l*. being in cash and the balance in cash or shares as provided in the purchase contract. The capital is divided into 15,000 10 per cent. cumulative preference shares of 5*l*. each, 14,800 ordinary shares of 5*l*. each, and 200 founders' shares of 5*l*. each. The lists will open on Monday.

COPPER MINING IN MEXICO.

The Santa Rosalia del Carmen (Mexico) Copper Co., Limited, has been formed under peculiarly favourable auspices to acquire two-thirds of a property, of which one-third has already been sold to the French Boleo Co., by which it has been proved to be of great value. In reference to the Boleo Co., we may say that the shares are chiefly held by the Rothschilds of Paris. In fact, 18 proprietors hold 15,375 in the Boleo property (immediately adjoining Santa Rosalia), each share being of 20*l*. value, and representing a holding of 307,500*l*. out of a nominal capital of 500,000*l*. The Santa Rosalia property was not offered by the vendor to the public until the experience of the Boleo Co. had proved first that the beds of copper existed in vast quantities, and next that it could be easily mined and treated. Now as to the property generally. It is in the district of San Agueda, in the territory of lower California, and has all the advantages of proximity to the sea, has fluxing ores on the spot (*vide* the report of Mr. Derré), cheap labour, abundant water, and almost all the facilities for working that nature can give to a mining property. The report of Mr. Derré shows that "the ores, which are oxides and carbonates of copper, occur in beds averaging from 2 to 5 ft. in thickness, and can be raised readily and inexpensively. Moreover, the ores in the upper strata, prepared as they have been by nature, require no roasting treatment, and are found in the most desirable form for the smelter." remarkable success has attended the operations of the Boleo Co. The present rate of output is 3,300 tons per annum of copper, or at the rate of 200,000*l*. per annum, and its successful operations have mainly led to the rise of a town of 4,000 inhabitants, and whilst out of its own resources there has been built a railway and a pier, not to speak of smelting works on a considerable scale. The map which accompanies the prospectus, is admirably calculated to show intending investors the geological conditions of this ground, which are of a very favourable character, seeing that the costly operations of drilling, blasting, and pumping can all be dispensed with for the present at least. The experts who have reported favourably upon the district in general and Santa Rosalia in particular are legion, but the pith of what they say may be summed up in this—that the copper-producing capacities of Santa Rosalia are remarkable alike in their extent and in their richness. The directors have laid down a clear programme. They will erect conper-smelting works close to the sea, where ores containing less than 18 per cent. will be smelted, whilst the richer ores, containing 18 per cent. and unwards, can be at present shipped to smelters in Europe. It is proposed to treat the lower class of ores by the process of lixiviation. The cost of the company's copper delivered in Europe is about 23*l*. per ton, and with that metal selling at 50*l*., there would be an estimated profit on an output of only 113 tons a day of 27*l*. per ton, or 94,500*l*. per annum; or, with copper selling at only 40*l*. per ton, 59,500*l*. Of course, it is not the intention of the directors to stop short of 113 tons per day. But the works will be extended as prudence dictates. The purchase money is 150,000*l*., of which 75,000*l*. is payable in cash, and the balance in shares, and the working capital of the company will be 200,000*l*. The capital is 250,000*l*., and the directors are gentlemen of great commercial experience, who have long been associated with the copper industry. The commercial agents of the company are Messrs. Richardson and Co., of Swansea. On a careful review of the facts, Santa Rosalia shares have every appearance of being a sound investment. The lists closed for town and country yesterday.

MINING IN VICTORIA.

The quantity of gold obtained during the quarter ended Dec. 31, 1890, amounted to 152,816 ozs. 16 dwts. 11 grs., being an increase of 3,565 ozs. 6 dwts. 23 grs. as compared with that obtained during the previous quarter. From quartz mining 102,820 ozs. 12 dwts. 22 grs. were raised, and 49,996 ozs. 3 dwts. 13 grs. from alluvial, the Ballarat district having the largest yields in both classes. The amount of gold recorded in each district during the quarter was as follows:—Ballarat, 54,762 ozs. 17 dwts. 18 grs.; Sandhurst, 30,929 ozs. 15 dwts. 18 grs.; Castlemaine, 17,256 ozs. 11 dwts.; Maryborough, 16,880 ozs. 12 dwts. 11 grs.; Beechworth, 16,877 ozs. 8 dwts. 6 grs.; Gippsland, 10,068 ozs. 12 dwts. 20 grs.; Ararat, 6,040 ozs. 18 dwts. 10 grs. The gross weight of Victorian gold received at the Melbourne branch of the Royal Mint during the quarter was 147,124 ozs. 8 dwts., comprising 28,046 ozs. 9 dwts. of rough gold and 119,077 ozs. 19 dwts. gold bullion. During the quarter 45,509 ozs. 10 dwts. of gold were exported from the colony to the following ports:—London, 2,449 ozs. 8 dwts.; Bombay, 35,043 ozs. 6 dwts.; Ceylon, 8,016 ozs. 16 dwts. Gold specie from all sources, and valued at 1,220,423*l*., was also exported during the same period. Particulars have been received of 199,638 tons of quartz having been crushed during the quarter for a yield of 92,644 ozs. 8 dwts. 16 grs, being at the rate of 9 dwts. 6 grs. per ton. The greatest quantity was crushed in the Ballarat district, namely, 80,738 tons; whilst the highest average was obtained in the Gippsland district, 6,633 tons yielding 5,553 ozs. 15 dwts. 18 grs., giving an average per ton of 16 dwts. 17 grs. There were also 10,862 tons of quartz tailings and mullock treated, for a yield of 790 ozs.; and 1,441 tons of pyrites operated on, which yielded 3,562 ozs. Washdirt amounting to 174,495 tons was reported as having been sluiced during the quarter, the amount of gold obtained therefrom being 14,172 ozs. 4 dwts. 17 grs., or an average of 1 dwt. 14 grs. per ton. In working for gold, 23,712 miners were employed throughout Victoria during the past quarter, being 484 less than the number given in the previous quarter's returns. The decrease was in connection with alluvial mining, an increase being shown as regards the number employed in quartz mining. Of the total number at work during the quarter, 11,063 were engaged in alluvial and 12,649 in quartz mining. The number of Europeans in both classes was 20,548, and of Chinese 3,164.

For the three months ended Dec. 31 last an amount equal to 139,416*l*. 19s. 2d. was paid in dividends by gold mining companies throughout Victoria. The several districts contributed in the following order:—Ballarat, 61,012*l*.; Sandhurst, 32,053*l*. 2s. 6d.; Castlemaine, 16,254*l*. 3s. 4d.; Beechworth, 14,687*l*. 13s. 4d.; Maryborough, 7,550*l*.; Gippsland, 5,760*l*.; and Ararat, 2,100*l*. The total number of companies which disbursed dividends during the quarter was 46. In Ballarat district there were 15; Sandhurst, 13; Beechworth, 8; Maryborough, 4; Castlemaine, 4; Ararat, 1; and Gippsland 1. The following are 10 of the largest dividends which were paid by individual companies during the quarter:—Star of the East, Ballarat, 19,200*l*.; Madame Berry, Creswick, 17,100*l*.; Berry Consols, Creswick, 10,500*l*.; Great Northern Extended, Chiltern, 9,000*l*.; North Cornish, Daylesford, 7,200*l*.; Russell's Reef, Malmsbury, 7,200*l*.; New Chum Railway, Sandhurst, 5,994*l*. 12s. 6d.; Long Tunnel Extended, Walhalla, 5,760*l*.; Shenandoah, Sandhurst, 4,800*l*.; and Lazarus, Sandhurst, 4,500*l*.

THE MONEY MARKET.

City, Friday Evening.

ADVANCE OF THE BANK RATE.

A fresh wave of distrust has passed over our markets during the past week without any apparent reason, for, as a matter of fact, it is satisfactory to find that the Baring liquidation is progressing satisfactorily, all but half a million of the acceptances of the firm having been already met. The fears were raised in connection with the proposed conversion of the Russian 4 per Cent. Debt into 3 per Cent. Bonds, which Messrs. Rothschild advised the Government was inopportune at present in view of the financial position at Paris, aggravated by the failure of the new Portuguese Loan. It was rumoured, however, that the withdrawal was partly the result

of the bad treatment of the Jews in Russia, and intended as a protest. In retaliation, it was reported the Russian Government would withdraw its deposits held in the shape of gold, and it is certain that realisations of Consols and Russian, if not other securities, were made to meet the demand should it be pressed. This caused somewhat of a scare, but it is now said that the Jews will not be expelled, and that the conversion will be proceeded with; if so, it is evident that the threat has had its effect. It is in prospect, however, that gold will be required by Russia against 1½ millions of Treasury Bills falling due, and this, combined with the fact that the position of the Bank, according to the return, has been materially weakened, so that the proportion of reserve to liability stands at 33½ per cent., which is the recognised limit consonant with safe banking, the directors have deemed it advisable to raise the rate to 4 per cent. Discount has consequently risen to 3¾, ⅞ per cent., but is weak, owing to the result of the allotment of Treasury bills, which went at 3½ per cent. for three months, and 3⅝ per cent. for six months bills. Money has been supported at 3 to 3½ per cent., and the discount houses have raised their terms for deposits to 2¾ and 3 per cent. for money at call and notice. The increased circulation has reduced the reserve by 700,000*l.* to 12,210,000*l.* against 13,595,000*l.* last year. The private securities have run off 280,000*l.*, and the private deposits, 550,000*l.*

The past week may not inappropriately be termed a Russian week. Apart from the alarming increase of the influenza epidemic, which has entered uninvited all classes of society, the particular bugbear of the markets has been the breakdown of the Russian Three per Cent. Loan. The French house of Rothschild withdrew from the syndicate controlling the arrangements, and their action is believed to be an act of retaliation against the Czar for his harshness towards Jews. The precise meaning of these events have little significance for us were it not that Russia has large gold reserves here, and on this count solely prices have fallen, for these balances are likely to be withdrawn, and the friction may even cause regrettable political complications. The Continental bourses suffered heavily, and this reaction is plainly visible in Foreign Bonds, where Russian, Portuguese and even Egyptian have fallen heavily. South American are flatter, but nothing special has transpired in their case, although the gold premium is 264 per cent. Colonial Inscribed Securities exhibited exceptional buoyancy, owing to a prospective Trust Bill, while Consols were the opposite, 2¾ per cent. for cash, even going below 95 partly on the anxiety of the public to realise. Home Railways again are distinctly lower, led by the ever active Brighton "A," but the late accident had no immediate influence. Metropolitan, Metropolitan District, South Eastern, Great Eastern and North Eastern, have been a good deal sold, while East London and Chatham Preference were actually bought. Grand Trunk relapsed, because trade in that quarter is less favourable, but Mexican and Nitrate Railways on the whole appeared to be supported. Argentine lines gave way, and American descriptions have lost some of their recent brilliancy, but as rates on that side are likely to be restored to something like a permanent basis—according to Yankee ethics of stability—a sensible recovery from the lowest can, however, be recorded. American Breweries continue to fall since the tendency is to sell them at almost any sacrifice, but this headlong conduct is, as usual, being taken advantage of by more astute individuals. Banks, Trust, and all prominent speculative Miscellaneous enterprises are down, but nevertheless, Suez Canal and Anglo Cable Stocks have sometimes been extraordinarily good.

The action of the Bank of England is already bearing friut, *i.e.*, gold, for to-day the directors were enabled to purchase 103,000*l.* in American eagles, that must otherwise have passed on to Berlin. 90,000 sovereigns furthermore arrived from Rio de Janeiro, but 30,000*l.* was absorbed for Vienna, so that the net influx was 163,000*l.* Money ruled in demand at 3½ per cent., and three and six months' bills were in fair supply. The general discount rate was firm at 3⅞. Bar silver remained at 44¾d., but dull at that figure.

The Stock Markets were very heavy this morning, owing to the state of the Paris market and the reported failure of a well-known speculator, but there was a partial recovery before the close. The Funds have rallied from their worst, but are ⅛ lower at 95⅛, ¼ for money, and 95⅜, ½ for account. The Two-and-a-Half per Cents. improved ¼, but Indias were flatter and Colonial steady, if not quite so firm. Foreign Stocks suffered from Paris advices, but rumours were unconfirmed, and the closing exhibited a much better feeling. Spanish and Portuguese fell to 72⅝ and 47¼, and Russian Four per Cents. to 95¼. The latter closes ½ better than yesterday, and Spanish and Portuguese only ¼ and ½ lower respectively. Other International Stocks were ¼ to ½ lower, and Buenos Ayres, Chilian, and Uruguay Bonds, 1 per cent. Home Rails receded, Brighton "A" touching 149 but closed 150–¼ or ¾ under yesterday's prices, and others were ¼ to ½ lower. American Stocks opened exceptionally good but slightly under New York parity, and gave way, but support was received from the other side, and prices closed above their worst, with, however, a fall of ½ to $1, Louiseville, Wabash, Union Pacific, Northern Pacific and Atchison being the heaviest. Grand Trunk and Mexican Mines, both receded ¼ to ⅜, and Nitrate Railway Shares were flatter. Central Argentine rallied 3 per cent. on the meeting. Peruvian Corporation Issues declined in sympathy with Foreign Securities, and Miscellaneous Shares were dull.

Annexed are the final quotations to-day:—Consols Account, 95⅜, 95½; Egyptian Three-and-a-Half per Cent., 89⅛, 89⅜; Egyptian Unified, 94¾, 95; French Four-and-a-Half per Cents., 103, 104; Hungarian, 89⅞, 90⅛; Italian, 91¾, 92; Mexican, 30¾, 31¼; Peru Corporation, 9¼, 9¾ per cent.; Peru Preferred, 26¼, 26¾ per cent.; Russian, 1889, 96, 96½; Portuguese, 48, 48½; Spanish, 73 7/16, 73 9/16; Turkish, 1871, 94½, 95; Turkish Defence, 92½, 93; Caledonian Railway, 116⅝, 116⅞; Great Eastern, 93⅞, 94⅛; Great Western, 155½, 155¾; Brighton "A," 150, 150¼; North Western, 170⅜, 170⅝; Metropolitan, 82½, 83; Metropolitan District, 31½, 32; Midland, 149⅜, 149¾; North British, 44, 44¼; North Eastern, 160⅝, 160⅞; South Eastern, 124, 126; South Eastern "A," 92⅝, 93⅛; Mexican Railway Ordinary, 40⅝, 40⅞; Nitrate Rails, 14⅝, 14⅞; Grand Trunk, 9 1/16, 9 1/16; Grand Trunk First Preference, 60⅝, 61½; Grand Trunk Second, 40⅝, 40⅞; Grand Trunk Third, 22⅝, 23¼ Canadian Pacific, 80¼, 80½; Denver 18⅜, 18⅝; Erie, 21⅛, 21⅜; Milwaukee 65¼, 65½; Lake Shore, 113¼, 113¾; Louisville, 80⅜, 80⅞; Atlantic First, 32⅞, 33⅛; Ontario, 17⅝, 17⅞; Ohio, 18⅜, 18⅝; Norfolk and Western, 55½, 55¾; Reading, 16¾, 17; Reading Bonds, 81, 82; Union Pacific, 50, 50¼; Wabash Preference, 21⅜, 21⅝; Ottoman Bank, 13¼, 13⅜; Anglo-Telegraph, 47¾, 48¼; National Telephone, 4¼, 4½; Hudson's Bay, 18¼, 18¾; Suez Canal, 100¾, 101¼; Guinness, 310, 312; Allsopp's Ordinary, 30. 32; Bryant and May, 13⅞, 14⅛; Eastmans, 8⅛, 8⅜; Bell's Asbestos, 9⅞, 10⅛.

VISHNU GOLD CO., LIMITED.

THE MANAGER SENDS A VERY ENCOURAGING REPORT.

May 6.—Below is a copy of report received this morning from Dr. Woodrow, one of the directors, who is now at the mine, which I trust you will cousider most satisfactory. A cable has just been received as follows:—"Estimate bullion for the month will realise $4,000. Mine looking well."—C. HARRISON SMITH, Secretary.

REPORT.

Apl. 18.—I have the honour to report my arrival here on the 16th inst., after a trip of the usual severity at this season of the year, and I herewith send you my first report on the mines. To say that I find things even better than expected is to state a pleasant fact, and to add that a permanent improvement may be looked for is not being too sanguine. The miue to-day is supplying ore to run 20 stamps "day turn," and has done so uninterruptedly since the 4th inst. The leasers also furnished some $1,800 worth of ore, which has been milled by 20 extra stamps since the 4th. Mr. McCormick made a clean-up yesterday of the last few days' run, being the second since starting (one for the leasers) and out of it got about $2,000. The 20 stamps will now continue running without stopping until the 5th prox., at which time he will again clear up and have a very respectable brick. All the debts of all kinds will then be paid, and a credit balance remain for the company. It is possible that next week Mr. McCormick will put on for Vishnu Mine proper another 10 stamps, making 30 running regularly. And now about the mine. The face of the new drift run east on the new strike about 50 ft. shows at least *four* feet of quartz, of which 12 ins. is rich, and the whole of it will mill $25 per ton as taken out. The stopers are at work taking out this ore, and as fast as room is made for them the amount extracted will be increased. It speaks volumes for the mine, and for the management, that within ten days of the time of finding the ore, Mr. McCormick should have been able to start the mill, and run it so continuously. Ordinarily a mine like this would have wanted about three months' start of the mill. The old Vishnu workings show a very large amount of low grade ore in sight, which, when the mine is opened up, will pay to extract, but which at the present time it would not be good judgment to disturb. There are also no less than 5 to 6 points in the old workings which show small seams of high grade ore, and upon some of these work will be pushed at an early day. At the date of this writing it is impossible to estimate how much ore can be extracted, because as you might say, we have just only entered the threshold, and are absolutely in the dark as to what may be in the mine. It is about safe to calculate an output of 600 tons per month, when all the connections, shoots, stopes, &c., are in good working order. The chimney of ore now so promising, and which Mr. McCormick expects to encounter again 100 ft. deeper, was entirely unknown to the old owners, who had absolutely laid their footwall timbers, when working the Vishnu, within 6 ins. of the hanging wall of our find. And one of the late lessees who had a contract on the old Vishnu, and who had worked to this point and not found the ore, and who as a miner for us encountered it the other day, was so overcome with all kinds of feelings, chagrin, mortification, envy, &c., that he has quit work, and been consoling himself with the tanglefoot of the camp ever since. The leasers whom Mr. McCormick have allowed to work the Andy Kramer Lode near the surface have encountered this morning 12 ins. of $30 ore, and they will soon have out 100 tons, when it will be put through the mill and our one-fourth deducted, which comes to us without cost. This lease only gives them a right to work up near the surface, and while paying us a nice little sum per month is tending to lay open this part of our property. Mr. McCormick, when he can get around to it, will start in on this vein from a point in the Old Montana Tunnel about 100 ft. lower than where the leasers are working, and expects better results than they are finding. Before this reaches you I (individually) predict the leasers will have a face of ore 3 ft. wide. Their contract can be terminated at will, and when the company can work the ground to better advantage than by leasing it will be done so. Mr. McCormick is not yet satisfied that the stringer of ore which he encountered on the 430 ft. is exhausted; in fact, he does not feel that he has prospected it at all. And when there is plenty of money in the treasury, he proposes to return to this point, and thoroughly exhaust it, but he expects to find a good body of ore. Now to sum up. There is ore in the new find both east and west, top, bottom, and both faces, from 3 ft. to 5 ft. in width; 12 ins. good ore in the face of the Leaser's drift—a new find. At least 250 ft. low grade ore in the old Vishnu works, and at least five to six points besides showing good ore, as yet totally untouched. Under these circumstances, I have taken the literty of cabling the secretary that I find the mine "better than expected, not to sell any shares less than par." I trust you will agree with me that it is better to have a little patience, and not try to sell any shares until Mr. McC. has had at least time to turn around. If the mine opens up as it has started out, then par for the shares is very cheap for them, especially as the Elmore begius to look as if their day of tribulation was also drawing to a close. Before closing, I must express my entire satisfaction with the way the work here is being carried on. There is not a better working staff at any mine in this country, and it is the best I have ever seen. I shall continue here watching developments for some weeks, and will write by every mail.—H. C. WOODROW, Director.

P.S.—Mr. McCormick has just come in, and informs me he will start up 10 stamps more on Vishnu ore regularly next Monday, the 21st.—H. C. W.

REPORTS OF MEETINGS.

WHEAL UNY.

THE MINE LOOKING WELL—A CALL OF 5s. A SHARE.

A GENERAL MEETING of the shareholders in Wheal Uny was held yesterday, at the Offices, Gracechurch Buildings, Gracechurch Street, E.C.

Mr. A. Strauss

presided.

Mr. C. B. PARRY (secretary) read the notice calling the meeting and the minutes of the previous meeting which were confirmed.

The accounts were then read. The labour cost for the four months amounted to 3,431*l.* 4s. 1d., and the merchants' bills to 2,585*l.* 18s. 10d. The sales of tin realised 2,836*l.* 4s. 6d., and the balance at debit on the four months working was 3,319*l.* 17s. 9d. The total liabilities over assets amounted to 3,534*l.* 2s. 6d.

AGENT'S REPORT.

Capt. JAMES WHITE then read the agent's report as follows :—May 7.—Since the last meeting held Jan. 16, we have sunk Hind's engine shaft 3½ fms., which completed the lift to the 244-fm. level; we have also put in skip road, cut trip and cistern plats, fixed standing lift and plat sollars, and are now sinking below the 244-fm. level in a lode 10 ft. wide, worth for length of shaft 40*l.* per fm. The shaft is not clear of the elvan as yet, we have granite for about half the length—this is in the western end of the shaft, where the improvement is takiug place in the lode. We hope in about 3 fms. sinking to be clear of the elvan, when we expect a more productive lode. The 244 end driving west at 6*l.* per fm. by six men; here we have a very nice-looking lode, worth for tin 15*l.* per fm. The 230 end and stope west, by 15 men, worth 20*l.* per fm. The 230 east : This end is still poor. We are putting a cross-cut south at this point to prove if there is any part of the lode standing, as the whole drivage of this level has been in disordered ground. The 203 end west, by four men, lode worth for tin, 13*l.* for fm. ; a stope behind this end, by 12 men, worth 18*l.* per fm. We have also 18 tribute pitches at work by 54 men at tributes varying from 6s. to 13s. 4d. in the £. Our returns fell off in the early part of this quarter, but looking at the points now opening up, and the various tribute pitches (if they hold good), we hope to increase our returns in the coming quarter.

Speaking of the 244, Capt. WHITE said they had since cut into the lode north and south, and found it of increased value.

Mr. W. H. RULE : How many stamps have you got working?

Capt. WHITE : 64 heads.

Mr. RULE : What can you put through?

Capt. WHITE : From 1,000 to 1,100 tons a month.

Mr. RULE : How much coal are you burning?

Capt. WHITE : Between 500 and 600 tons.

Mr. RULE : What are you paying?

Capt. WHITE : 18s. 8d. per ton.

Mr. RULE thought the committee should try and arrange for the Carn Brea, Tincroft, and their own company to enter into an arrangement with some colliery, so as to get coal on cheaper terms by taking a large quantity.

The CHAIRMAN did not think it practicable.

THE ACCOUNTS.

The CHAIRMAN : The first item to which we have to call your attention is the arrears of calls. As you know, last time this item was in a very unsatisfactory state, and it is not satisfactory yet. Still, fortified by the resolution you then passed we issued legal process against every man who was in arrear of more than one call. Proceedings have been taken with very satisfactory results. However, the amount is still a large one, being at the date the accounts were made up 2,626*l.* 11s. 8d., but I understand 500*l.* has been paid to-day, so that it really amounts to about 2,100*l.* Your committee will not in any way neglect their duty in trying to bring these calls in, but I am sorry to inform you that after making careful enquiry, partly through our solicitors and partly direct, we find there is a certain portion of this sum which is almost hopeless, and I shall presently submit a resolution to you in regard to it.

A SHAREHOLDER : What is the amount of the doubtful debts?

The CHAIRMAN ? It is estimated at 1,170*l.*

TRIBUTERS.

There is one remark I should like to make to Capt. White. It is a gratification to me that we are able to employ some more tributers at a time when other mines are obliged to shut down. Of course, the more tributers we have the better chance we stand of increased returns. There is, however, one system to which I would like to call Capt. White's attention. As we desire to have tributers, it is only right we should offer them some inducement. I believe it is a system in Cornwall to give short contracts to the tributers but I would recommend instead of giving short contracts to give long ones, say from four to six months. Then there is the other question. I know there is a certain reluctance on the part of captains to guarantee a certain amount to tributers. Supposing we set a pitch at a certain price, if the ground goes against them they will not work, but if the ground goes in their favour, well and good. I would suggest to you, and, of course, I will be guided a good deal by what you say, that you assure the tributers if the ground goes in their favour they will reap the same tribute as they were originally engaged upon, while if the ground goes against them, you will guarantee them a certain minimum per month.

Capt. WHITE : We have always been very liberal to the tributers, but if there is anything the shareholders think we can do, we shall be pleased to try it. We have paid meu 3*l* per month, whether they got it or not. and we have never deducted it again.

Mr. RULE : I quite endorse what the chairmau has said. I have had some experience in tributing, and I believe if a tributer comes and says put me down for six months we should put him down for six months, or even twelve months.

Mr. PIKE thought this was a question which might very well be left with the committee.

The CHAIRMAN then proposed the adoption of the accounts.

Mr. RULE seconded the motion, which was carried.

The CHAIRMAN : The next resolution is the call. The question is how much that call should be. The majority think that in view of the

BETTER PROSPECTS OF THE MINE

a call of 5s. will be sufficient. I myself am always in favour of making a sufficient call to pay all the debts, but I will give way to my colleagues. I therefore propose a call of 5s., payable at the bankers of the company.

Mr. W. PIKE seconded the motion, and said the prospects of the company were very much better than ever since the mine was restarted. The lode seemed to be assuming a settled form, and he looked forward to diminished calls, if not dividends.

The motion was carried.

FORFEITURE OF SHARES.

The CHAIRMAN : The next resolution is about the forfeiture of shares. There are 880 shares upon which there are arrears, some as far back as 1889. We do not propose to forfeit any shares upon which the last call is the only one not paid, but the others we propose to forfeit unless the calls are paid before the meeting to confirm this resolution in about a month. I propose that these 880 shares be forfeited.

Mr. W. TREGELLAS seconded the motion, which was carried.

The CHAIRMAN : The only other matter is with regard to these bad and doubtful debts. There are about 1,175*l.* in arrear which we are advised there is no chance of recovering. Of course, we wish to leave them in our books as debit balances, because some day we may be able to collect a part, but in the meantime it would be useless to deceive ourselves, and put down as an asset that which any business man would know to be a

FICTITIOUS ASSET.

My suggestion is we should open a suspense account, and that this 1,175*l.* should be debited. The accounts as presented at present, do not show a true state of the affairs.

After a short discussion, it was agreed that a resolution should be submitted to the next meeting authorising the transfer of the above amount to a suspense account.

A vote of thauks to the chairman closed the proceedings.

THE LEEDS COPPER CO., LIMITED.

COMPANY STARTS UNDER GOOD AUSPICES WITH 10,000 TONS OF ORE ON THE DUMP—DIRECTORS IN A FEW WEEKS SEND OUT THE MANAGER, THE STAFF AND THE MACHINERY.

A GENERAL MEETING of the shareholders was held at the Guildhall Tavern, Gresham Street, yesterday.

Mr. R. P. Gould,

one of the proposed directors, presided.

Mr. C. HARRISON SMITH (secretary) read the notice of meeting.

LATEST NEWS.

The CHAIRMAN said he could not do better than ask the secretary to read the latest report that had been received from the mine.

Apl. 23.—Underground : The following is my report for the week ending as above. Kent's shaft : The 20-fm. level driving west of this shaft continues in a vein 3 ft. 6 ins. wide, and producing 3½ tons copper ore per fm. The 20-fm. level driving east of shaft, also continues in a vein 3 ft. wide, and producing 3 tons copper ore per fm. About midway between the two levels, I am communicating the 15-fm. and 20-fm. levels for convenience of stoping and ventilation, which has been rather bad ; the vein in rise is 2 ft. wide, and producing 2 tons of ore per fm. The stope in the back of the 15-fm. level is in a good vein of ore producing 4 tons ore per fm. The drive opposite steam drill stope has been idle owing to the men putting in tramway for the convenience of getting away the stuff. Steam drill stope is not producing as much ore as when I last reported, but we look for an early improvement. Adit : We have not yet got the pump to work in the bottom of this level, getting the work ready to start it as early as possible. Surface : The snow is still on the ground, which interferes with out-door work. We have now got the large engine ready for running, and the boilers under repairs ; this work will be got on with as rapidly as possible. Shall commence the excavations for crusher, stamp, &c., as early as the snow is away. Roads for wheeling heavy machinery will not be open for a week or 10 days yet.—T. B. DAVEY.

In reply to enquiries by a shareholder,

The CHAIRMAN said the directors had every reason to believe that 10,000 tons of ore were still in the dump, and it was to treat this as well as the other quantities to be hereafter raised from the mine that the machinery had been sent out.

WHAT'S IN A NAME.

A SHAREHOLDER : What is the virtue in the name of Leeds, when the mine is in Canada?

Mr. BATTINSON : It is at the township of Leeds, and it was called the "Leeds Copper Mine" before the last company took it in hand. It has nothing to do with the Leeds in England, though curiously enough some of our best shareholders are located there, and for that reason, too, we thought the name might come in appropriately. I have much pleasure in proposing the election of the following gentlemen to serve as directors :— Mr. J. R. Armitage, Mr. R. P. Gould, Mr. William Brown, Mr. H. A. Whittaker. I might also at the same time just mention how the fees are apportioned. They are fixed at 500*l.* a year according to the articles of association, that amount being paid and divided amongst the whole of the board. Now, they are all business men, and there is nobody who will work for nothing —in fact, the remuneration hardly pays them for their out-of-pocket expenses. I might just say that the gentlemen connected with this company have taken very great pains to see that this property is of some value. They have a very large stake in it, and they sent their engineer over in the winter to scarcely do anything else than to report. They sent him again in the summer, and his reports on both occasions were so good that they decided definitely to go on with the re-construction. They took a

long time about it. I think it must have been six or nine months before they entertained the idea at all, but when the reports came over they came to the conclusion to re-construct, and I think you will find very few companies after re-construction that have gone on so satisfactorily as the present, or that have been conducted with so much energy. Since the re-construction the manager has gone to the mine and has taken with him an engineer, carpenter and ore dresser. He has concentrating machinery at the station, within 7 miles of the mine, and is only waiting for the snow to melt to get it up to the spot, when he reports that he will be able to send large large quantities of ore down.

The CHAIRMAN: 3*l.* per ton will be the cost if only small quantiare sent, and you have to pay extra freight as well in addition from Liverpool to Swansea: but the directors purpose sending it across by chartered schooners direct from the port right to Swansea, and to sell the ore prior to arrival to some smelter there, so that the vessel shall actually run alongside the smelter's wharf, and so save all the wharfage and other charges. In this way the chances are that the whole business will be done for 12s. or 15s. a ton, and instead of sending small quantities we shall ship 300 or 400 tons at a time.

Mr. BATTINSON: This

ORE IS VERY GOOD,

and all we want is the quantity, and that is what the directors are going to try to get. We will work the property on a large basis. All the directors have a large stake in this company, and so have I, and it is to their benefit to bring this mine into good working order. I believe you will see the shares very valuable within six months from this date.

Mr. LEAK seconded the motion, which was carried.

BIG HOLDING OF DIRECTORS.

A SHAREHOLDER asked what was really the holding of the directors, and suggested that they should work for nothing. The articles should be altered in this sense.

The CHAIRMAN: Surely, as a business man, you do not propose that we should work for shareholders for nothing?

Mr. VERDEN, solicitor (Messrs. Kerly, Son, and Verden): These articles were before the members of the old company and were approved by them, and it is not possible to deal with them in the way of alteration now. You would have to call a special meeting to do that.

The SHAREHOLDER: How many shares do the directors hold?

The SECRETARY: Speaking roughly, something like 50,000 between them.

A SHAREHOLDER: Have you sufficient capital subscribed to go on with?

The CHAIRMAN: The Canadian applications are expected tomorrow, and we shall have quite enough to carry on the mine, to which we have already sent out all the necessary dressing machinery. They are fixing it now and making every preparation.

A SHAREHOLDER: Was there any machinery on the mine before?

WHERE TO FIND THE REPORTS.

Mr. BATTINSON: Yes, and it has all been put in first-classs order.

In reply to a question,

The SECRETARY stated that the reports from the mine appeared regularly in the MINING WORLD.

The CHAIRMAN, in reply to further questions, stated: The concentrating plant is equal to treating 100 tons per day. We are only taking 3 or 4 per cent. ore into our calculation. The Rio Tinto returns are 2¾ per cent., and most of the gentlemen present know what the Tinto has done. (Hear, hear.) All the Tinto ore is calcined, but our ore does not require any calcination at all, and consequently is treated by concentration, by which we bring the ore up to 20 per cent., at which standard it will sell readily. The smelters will give the highest price for this class of copper.

Mr. BATTINSON: I should only like to say that the new shareholders will get the whole of the property for 33,700*l.*, which is what 1s. 6d. a share will fetch. The old company owed about 8,000*l.*, and the new one simply has to take over that debt, and will then be left with 25,000*l.* working capital. Hence there will be three times more capital in the new company than there was in the old, and I verily believe that the new company in the short time it has been in existence has actually done more than the old. At least they have secured proper machinery, which the mine never had before, within three months of re-construction, and practically everything is complete. I think you will find this company will be a grand success, and that the shares will go up legitimately on the value of the mines.

Mr. BROWN: I am one of the proposed directors, and I thought it would be a satisfaction for you at all events to see me in the flesh —(laughter)—and to hear me say that I have put a considerable amount of cash into this mine. I am liable for a cousidcrable amount, and naturally do not want that money to go without result. I want to make it worth something for myself and for you. (Hear, hear.) I feel I may add some little weight in being able to bring about that result, and in making a profit for you I shall be making a profit for myself. That is the main reason I have in taking a seat on the board.

On the motion of Mr. BATTINSON, seconded by Mr. BROWN, the chairman was thanked for presiding.

KABOONGA MINING CO., LIMITED.

THE MEETING ADJOURNED FOR A FORTNIGHT PENDING RECEIPT OF THE MANAGER'S REPLY TO A TELEGRAM.

AN ordinary general meeting of this company was held at the Terminus Hotel, Cannon Street, London, yesterday.

Col. George B. Malleson, C.S.I.,

presided.

Mr. WILLIAM P. FOOT (secretary) read the notice convening the meeting, and the report was taken as read.

ADVANTAGE OF MR. POWER'S EXPERIENCE.

The CHAIRMAN: Gentlemen, when I had the pleasure of addressing you on Aug. 6 last year, I related to you in the fullest detail all that had taken place since the company had been re-organised. I told you how we had telegraphed out to Mr. Power, who was then our financial agent on the spot, and the representative of the company, to appoint the best manager of the mine he could find, and to work it with all possible industry and energy. I told you that Mr. Power had carried out those instructions to the letter; that he had gone into Gympie to ascertain who were the best mining captains, and that on the recommendation of a very competent authority he had appointed Mr. Burrowman. Gentlemen, Mr. Power then came home and he became by the vote of this board the managing director. We submitted that appoiutment to you for confirmation at the last meetiug, and I am happy to say it met with the approval of all the shareholders present with the exception of one. For our part I can only tell you we have derived the greatest advantage from the presence of Mr. Power on our board, because he spent three or four years on the mine. He knew the mine, the country, and the men of the country thoroughly, and he has been able to advise us in a very competent manner.

THE MINE MANAGER.

Amongst other things he advised us that we should take steps to procure the very best mining captain to take charge of the property —a gentleman who was not available when he appointed Mr. Burrowman last year—and we, following his advice, made an offer to Mr. Fishborne, a gentlemen of the highest character in Queensland. Mr. Fishborne accepted our offer and became manager of the mine. He took charge on the 1st of Jan. this year. We sent out to him the fullest and most detailed instructions requesting him to report upon the mine in every particular. His opinion of the mine is embodied in the report which we have sent out to you withiu the last few days. Possibly you may say that it is not a very hopeful report. There is this to be said about it, that it shows very clearly that at the present level there is no chance of obtaining payable ore, but at the same time in sinking to that level we have come across

POCKETS OF GOLD,

some of them very rich indeed (but unfortunately small); and those who are working the mine on the spot entertain a hope that if we go down say 100 ft. deeper, we may possibly reach richer ore. It is for you to say, gentlemen, whether you will sanction the carrying on of that idea. We are of opinion that a depth of 250 ft. is not sufficient to prove the value of a mine. If you look at the Indian Mines you will see that none of them have paid at a depth of 250 ft.; but you have to go down 300 ft., 400 ft., and even 500 ft. before you reach the payable ore. I think that that is very likely to be the case in the instance of our mine—at all events, it will be worth the experiment of sinking at least 100 ft. further. This is the opinion of myself and my colleagues, and it is also the opiniou, I know, of a great many shareholders; but the future of the mine rests with you, and I think that if you take into consideration the ore that we have met with at the higher levels, you will not shrink from pushing down a little further, in the hope of obtaining something payable. I think it is uunecessary for me to say any more at present. I shall be very happy to answer any questions which any shareholder may put to me. I will only say that practically there is no difference between the gentlemen who sit on this side of the table and those who sit ou the other side of it. We are all shareholders, and our only interest is in the success of the mine. I beg now formally to move, "That the report and the accounts be adopted."

Mr. D. H. ALTEN (director): I have pleasure in seconding that.

THE ACCOUNTS CRITICISED.

Mr. A. W. LATHAM: Before passing the accounts I should like some information respecting them. In the first place the Australian expenses seem to be repeated several times over. How is it that we have mining and general expeuses 569*l.*, and then separate items for wages aud salaries aud mill expenses which seem to me Australian expenses also? Ought that not to be included in the 4,838*l.* for wages and salaries? And how is that 4,838*l.* made up? What is the salary of the mine superinteucant?

The CHAIRMAN: 600*l.* a year.

Mr. LATHAM: How do you make out you have spent 4,838*l.*? Then there is another item—office, secretary, &c., 625*l.* What is the salary of the secretary?

The CHAIRMAN: You must remember that these accounts embrace a period of about 15 months. We pay 450*l.* for the offices, the secretary, and clerks.

Mr. LATHAM: It is a great deal too much. Then there are postages, 183*l.* You can buy a good many stamps for 183*l.*

The CHAIRMAN: That includes cablegrams. It costs 9s. a word up to the 1st of this month to send a cablegram to Australia.

Mr. LATHAM: We appear to spend 10,000*l.* to get 444*l.* worth of gold out of the mine. I should like to know, with such an expenditure as that, how we are to prospect at all? The best thing to do is to wind up the thing altogether.

Mr. ROBERT SNARE: There is an extraordinary item which appears year after year, viz., preliminary and registration expenses. What does it mean:

THE AUDITOR EXPLAINS.

Mr. DUNN (auditor): The preliminary and registration expenses include law-costs and fees payable at Somerset House for the registration of the company. This being a new company, the fees have to be paid just the same as in the old company. And as in the old company no profit was ever derived from it, it appeared in the balance sheet year by year, and the present item will do the same until it is paid off out of profits. With regard to the expenses in Queensland, I think it right to say that the headings of these accounts are copied from the Queensland accounts; I thought it better that they should appear exactly as they came over from Queensland. The whole of the accounts have been vouched; aud with regard to the wages and salaries—the time-sheets can be seen by any gentleman who calls at the office.

Mr. SHERIDAN: That was not the object of the question. The question was what constitutes this item of 4,838*l.*? We know perfectly well that all auditors have to do is to prove the correctness of the vouchers put before them.

The CHAIRMAN: The 4,838*l.* includes purely wages and salaries at the mine.

Mr. LATHAM: How many men are there and what is their wage per diem?

Mr. POWER: For an ordinary miner the rate of pay is 8s. 4d. and

for a foreman 10s. per day. I had as many as 50 and 60 men working for me while I was there.

Mr. LATHAM: Say 60, that comes to —. (Laughter).

Mr. ALTEN: 11,000*l.* a year.

Mr. NORTON: I am an original shareholder in this company, and I remember well that the prospectus stated we had nothing more to do than to

GATHER UP THE GOLD AND TAKE IT AWAY.

From what has happened since, I have come to the conclusion that this company was brought out entirely under false pretences. The very day after it was brought out that eventful telegram came from the Premier of Queensland. Although the lists were not to have been closed until the following Monday, I was informed, when I applied to have my money returned, that they had been closed. Now we are being applied to for extra money to put into a mine that produces nothing. It seems to be merely kept up for the purpose of paying directors.

The CHAIRMAN: I should like to say one word with respect to the last remark, and I would tell the gentleman that the directors of this company do not sit on the board simply to take fees. In the old company, to which he has referred, we took no directors' fees; and here the fees were put at the smallest possible amount, and we came on the board most unwillingly I, for one, positively refused to join the board, and it was not until great pressure was put upon me by some of the largest shareholders that I acceded to their request, and I hope the shareholders will not make me regret it. If the shareholders do not wish to see me on the board I am ready at any moment to retire; I do not care one straw.

THE BOARD EXONERATED FROM BLAME.

Mr. SHERIDAN: We were unquestionably swindled by Mr. Horton. I quite exonerate you, Mr. Chairman, and every other member of the board. I had the pleasure of addressing you once before on this subject, and I then challenged Mr. Horton to meet us on that occasion, but he had not the courage to do so, or to defend the directors in the statements they had made on his reports.

The CHAIRMAN: We gave his report in full, and did not make any statement ourselves.

Mr. SHERIDAN: That, however, is a matter of past history. Let us come to our present position. Mr. Power was sent out by you and the directors to look after this mine, and he is here to-day face to face with us, and can tell us what his opinion of the mine is—whether or not it is worth our while to spend more upon it, and if so, how much he estimates it will be necessary to spend before we can arrive at anything like the possibility or probability of payable ore. As to directors' fees—if we were successful I would be the first to propose to you and your colleagues that you should take those fees; but I think it would have been a little more delicate if you had left the fees out at present.

Mr. PETERS: I do not think anybody would be more surprised if this balance-sheet were passed without discussion than the directors themselves. It is my

GOOD OR BAD FORTUNE

to be connected with a great many mines, several of which our chairman presides over, and I must say that this is one of the most extraordinary reports that I have ever seen. I think the fees drawn by the directors—namely, 800*l.*—excessive, considering our position. The only possible way in which the directors could hope to get those fees is by taking them out of the pockets of the shareholders—by dragging another 6d. or 1s. 6d. out of the shareholders' pockets. The chairman attempted to defend the London office expenses, but he must know from his experience that there are companies paying dividends possessing efficient secretaries and staffs, where they do not pay more than 100*l.* a year for the accommodation. But let us waive the past, and do the best we can with our present position. Is it worth while going on with the mine?

A WISE ANSWER.

A SHAREHOLDER: Do not let us hastily decide that.

Mr. PETERS: Are we to pass these accounts in their present state?

A VOICE: Certainly not.

Mr. PETERS: There are large mines, and dividend-paying mines, with no more than three directors. Our chairman knows what I say is correct. With a produce of 440*l.* of gold, and the enormous expense we have of raising it, I do not think the directors can conscientiously take their fees. I do not wish to say anything offensive, but it seems to me that the directors are not working in the interest of the company.

The CHAIRMAN: The last speaker has fallen into the mistake of supposing that these accounts comprise one year only, whereas it is fifteen months. I would remind you, gentlemen that after all, in drawing our fees we have only obeyed your mandate. You offered us this position on certain terms and we accepted it on those terms. If you do uot want me to stay I will resign.

Mr. SHERIDAN: We are getting on the wrong tack. I ventured to ask for some information from Mr. Power. Let us hear what he has to say.

VIEWS OF THE MANAGING DIRECTOR.

Mr. F. POWER: When I addressed you last year we had only erected the battery, and we had not had a proper test of the ground. We had one test sent to Gympie—6 tons—which gave a return of over an oz. We had every reason to expect the same return from a lot of other ground from the 100-ft. level. It turned out, however, that this did not yield a similar quantity. The ore that was sent to Gympie must have been a little rich pocket. I am quite sure that it was fairly taken out of the mine—that it was not a picked specimen. I brought home a great number of picked specimens with me. We have found no body of ore that would pay to crush down to the present level. But the indications have been

IMPROVING AS DEPTH IS ATTAINED.

The only thing to do now is to decide whether we are to sink down on the probability of finding something payable below.

A SHAREHOLDER: Where did you get this 1 oz. ore?

Mr. POWER: From the 250 level, and it is suggested that we should go down another 100 ft. as the ground improves in depth. Sinking would cost about £5 a ft., because they would have to sink from a winze, and there would be a lot of hand labour in hauling.

Mr. SHERIDAN: Is it the opinion of experienced men on the spot that if we sink lower we will come upon something payable?

Mr. POWER: Yes. I may say that I had a private letter recently from a gentleman, who said he considered it well worth our while to go

DOWN ANOTHER 100 FT.

There is no doubt that from the upper levels we cannot get any quantity of gold to pay to crush. If all the ore taken out could be crushed and gave 1 oz. to the ton, it would pay; but a lot of stuff of inferior quality has to be taken out, which means adding to the expense. Our only chance is by sinking deeper.

A SHAREHOLDER: What would it cost to sink another 100 ft.?

Mr. POWER: It would mean at least 500*l.*

Mr. PETERS: I think before we attained a depth of another 100 ft., we should have 1,000*l.* more to our debit at least.

PRESENT FINANCIAL POSITION.

A SHAREHOLDER: How do we stand financially?

The CHAIRMAN: We have no debts.

The SHAREHOLDER: And how much money?

The CHAIRMAN: 600*l.* We sent 400*l.* out to the mines at the beginning of the month, and we have 600*l.* here, besides which there are some un-paid calls which we are trying to get in.

The SHAREHOLDER: Then the 600*l.* would be enough to sink the 100 ft.?

Mr. POWER: In my rough estimate just now I did not include the cost of the superintendent out there. I am simply speaking of what we should have to pay to the miners for sinking. If you wished to do away with the superintendent out there you could do so, but you must have someone to take charge of the property.

A PROPOSITION.

Mr. NORTON: I beg to move that a committee of investigation be appointed, consisting of six shareholders, hereafter to be named.

The CHAIRMAN: There is one point you have not considered, namely, that the directors contribute on equal terms with yourselves.

Mr. PETERS: I have no doubt that Mr. Power has done his best for the company, but I think when he was appointed two gentlemen might have gone off the board to make room for him—evidently economy has not been studied in that respect.

Mr. SHERIDAN: Can you assure us that there are no liabilities outstanding; and furthermore, can you fix anything like a reasonable amount at which the sinking can be performed?

The CHAIRMAN: I can assure the shareholders that there are no liabilities whatever. We have only to give three months' notice to the manager if you decide not to go on further, and I may also assure you that since these accounts have been made up the old company has been liquidated, and the sum of 500*l.* has come into the coffers of this company from the old company.

THE CHAIRMAN'S ADVICE.

What I would advise the shareholders to do is to go on to the extent of one call more.

Several VOICES: A threepenny call.

The CHAIRMAN: I think if you were to agree to one sixpenny call more it would make it absolutely certain whether we should succeed or not. As to the motion for a committee of investigation—those of you who have to do with companies know that committees of investigation mean the winding-up of the company; and here there is positively nothing to justify that. If we do not attain success by the time we have expended another sixpence a share, then I would advise you to relinquish the enterprise; but from all that has reached me I think it is well worth while trying the experiment.

Mr. LATHAM: Will you limit the London office expenses to, say, 500*l.* or 600*l.*, including directors' fees?

The CHAIRMAN: At the first board meeting I shall be happy to place my resignation in the hands of my colleagues.

Mr. SHERIDAN: I do not think that is the desire of the shareholders. You have been connected with the company from its conception, and the shareholders' desire is that you should carry it to a successful issue, but they fancy you are a little

TOO COSTLY

for them.

The CHAIRMAN: I should like to remind you of one thing. On the original Kaboonga Co. we had four directors, and the shareholders at our first meeting made a most pathetic appeal to us not to draw any fees, and we were weak enough to comply. The work connected with that company was very hard, and we drew no fees. When the company was wound up a shareholder, who I do not see present to-day, declined to pass the accounts unless the directors would agree not to have the fees which had accumulated credited to them—although it would not have benefitted the shareholders one penny piece if they had done so. The consequence is, we worked for four years without a farthing, and I appeal to the human instinct of everyone here when I say I do not like working for nothing. (Hear, hear.) We will cut down the office expenses as low as possible.

Mr. WINDUS: I beg to propose that the call be limited to 3d. per share. I think that would be ample.

The CHAIRMAN: There is no question of a call before the meeting.

Mr. WINDUS: What would 3d. per share yield?

The CHAIRMAN: About 3,000*l.*, if we got it all.

Mr. WINDUS: Will the directors pledge themselves to keep the London expenses within 500*l.* a year.

Mr. ALTEN: Do you mean office rent, secretary and everything else?

Mr. WINDUS: Yes.

Mr. ALTEN: I doubt whether it can be done at that rate. We are all shareholders, and I think I personally am as large a shareholder as any one present. I believe that 500*l.* is cutting it too fine.

The CHAIRMAN: At our next board meeting we will do our very utmost to bring the expenses down to the lowest possible limit.

IMPORTANT STATEMENT.

Mr. CLAYTON: I have very great confidence in your present manager—Mr. Fishborne. I may say that he was in my service receiving 50*l.* a month, and the amount you are paying him is 600*l.* per annum. I think, therefore, that he must have seen something in the lower levels of this property which has induced him to leave me. For that reason I have lately purchased shares. I have known the man for many years, and it is my firm conviction that something has

happened in the lower levels of our property which has led him to undertake the management. Unless that is the case, he certainly has not bettered himself, for it seems that he is liable to have three months' notice to leave at any time, and only receives 600*l*. a year. He is a smart 'cute Yankee.

Mr. SHERIDAN: I think the last speaker has made a most valuable addition to the information we have gained to-day. I think we ought to make an effort to carry on the mine, but the board should fall in with the propositions that have been made to-day, namely, to keep the expenses down to 600*l*. a year, and limit the first call to 3d. per share.

Mr. C. CLAYTON: I think a 3d. call would enable us to sink 100 ft. and then unless Mr. Fishborne recommends you to go further, I should say throw up the mine and do nothing.

A HAPPY SUGGESTION.

But in the interests of the shareholders here, I think it would be well if a cable were sent to Mr. Fishborne now, asking him what his advice is as to continuing sinking. I think the cable should be couched in terms that we can all understand, and let his reply be published in the papers. If he advises that we should sink another 100 ft., then we had better proceed; but if not, we meet again and wind up.

The CHAIRMAN: I think the proposition just made is a most admirable one. It is the best for your interests and for ours, and I and my colleagues are prepared to entirely endorse it. We have heard so much of Mr. Fishborne out there and our experience of him is so satisfactory that I shall be prepared to go entirely by his opinion; and if Mr. Clayton will pen the telegram I will promise that it shall be sent exactly as he states it, and that the answer shall appear in the papers in the identical way in which it is received. Now I will ask you to vote upon the resolution—that the report be received and the accounts be passed.

ADJOURNMENT.

Mr. SHERIDAN: I think we had better adjourn until we receive a reply to the cable.

Mr. LATHAM: I beg to move that the meeting be adjourned until this day fortnight for the purpose of receiving an answer to the cable from the manager on the other side.

Mr. SHERIDAN seconded the motion which was agreed to.

The telegram was then drawn up in the following terms:—"Shareholders require to know you full and candid opinion whether prospects are sufficiently good to justify continuation of sinking. If not, what other course do you advise? Reply immediately."

A vote of thanks to the chairman, proposed by Mr. LATHAM, and seconded by Mr. SHERIDAN, was unanimously passed and the proceedings then closed.

THE ROBURITE EXPLOSIVES CO., LIMITED.

SHAREHOLDERS UNANIMOUS AS TO RE-CONSTRUCTION, BUT OFFER CERTAIN MODIFICATIONS IN THE SUGGESTED SCHEME WHICH THE BOARD PROMISE TO CONSIDER BEFORE THE NEXT MEETING.

AN extraordinary general meeting was held at the Cannon Street Hotel yesterday, "for the purpose of receiving the reports of the Consultative Committee appointed at the last general meeting of the company, and considering certain resolutions."

Sir John Stokes, K.C.B.

(chairman of the company), presided.

Mr. H. A. KROHN (secretary) read the notice of meeting.

OBJECT OF THE MEETING.

The CHAIRMAN: Gentlemen, you have in your hands the report of the joint committee of your special representatives *ad hoc*, and of members of your board, and the separate report of your said representatives. I think it hardly necessary for me to make a very long speech to you, when you have two such documents which lay before you in clear terms the present position and prospects of the company, and proposals to enable you to turn those prospects to the best account. As regards the business of the company which we have laboured so assiduously to build up in the last four years, I am glad to say that your representatives have been unable to impugn any of the statements made by your board, and that they found a growing business of most encouraging prospects. Since they reported the home business of the company has shown such satisfactory progress that the manufacture of roburite, the orders, and deliveries for the month of Apl. exceed those of any previous month in the company's history, both for the home trade and for the foreign.

PROGRESS.

The figures being 40½ tons for the month against 23¼ tons in Apl., 1890. The only difficulty aheadof the company is the accumulation of expenses incidental to building up the business, and of preference interest since 1887, which threatens to absorb all profits for years to come. It is for the removal of this difficulty that the board, on the recommendation of the joint committee, have prepared a scheme for the re-construction of the company, the heads of which have been placed before you. Under this scheme there appears to be no doubt of the new company very shortly assuming the position of a dividend-paying company, but as the articles of association of the present company do not provide for this contingency, it was proposed to submit additional articles to you for your adoption to-day. One of these has, however, given rise to objection, and the board wishing in this matter to carry the whole body of shareholders with them, do not press it. Article 109 will, therefore, not be submitted in the special resolution, only Article 108. Before submitting the special resolution to you, I may say that the scheme of re-construction, which will be eventually brought before you, and is already sketched in the report of the joint committee, has received striking testimony to its being a good practical solution of the problem, for we have received complaints from the ordinary shareholders that it has been devised entirely in the interest of the preference shareholders, and complaints from these latter that it has been conceived solely with a view to benefit the holders of ordinary shares. The fact is that both classes of shareholders are very largely represented on the board and shareholders' committee, and the scheme sketched out to you is the outcome of an honest desire to adjust fairly the claims of both. The board, are however, anxious to make the scheme to be eventually submitted to you as equitable as possible, and due consideration will be given both to the letters received and to the observations that may to-day be offered. The first resolution that I put to you is—

"That the articles of association of the company be amended by adding the following additional articles:—108. The dissolution of the company may be determined on for any purpose whatever, and whether the object be the absolute dissolution of the company, or the re-constitution or modification of the company, or the amalgamation of the company with any other company, or any other object."

General SIM: I have great pleasure in seconding the motion. I think your representatives went thoroughly into all matters, and did not leave any stone unturned to find out the true state of the case, and we were met more than half way by the directors. (Cheers.)

OBJECTIONS.

Mr. W. G. BARNES: I have carefully considered the documents sent, and cannot come to the conclusion that the scheme is equitable from the point of view of the ordinary shareholders, more especially in regard to the fact that at the present time the preference shareholders have only a preference as regards dividends and not capital. If the ordinary shareholders are to be practically wiped out from any division in the event of the company being wound up, I think it will be an unjust proceeding. Practically the arrangement is putting preference shareholders in the position of debentureholders, and I cannot consider, if the company were wound up, that its goodwill, the works at Gathurst, and other assets would amount to anything like so much as the preference share capital. Therefore, I feel it would be better for my interest, as an ordinary shareholder, to have the company wound up at once, for then I should have something divided. I will not have anything to do with this scheme; I will not take any of the new shares, and I consider it illegal and almost a robbery of the ordinary shareholders.

Mr. GODEFROI: I to some extent agree with the last speaker, and three years ago pointed out that this result was likely to come. I told you then you were over capitalised, and that you gave too much in the first instance for your patent, and also that there was too much financing in connection with the company when it started. The result of too much financing is re-construction, and of re-construction, liquidation.

Mr. JOHN NEWTON: I think the scheme is impossible and impracticable and inequitable. It is impossible for you now to transfer the preference shares from the position in which they now stand by giving them priority as regards capital.

YOU CANNOT TRANSFER THEM TO THE POSITION OF FIRST MORTGAGEES,

because it is legally impossible unless you get the consent of every subscriber, and that you will not be able to obtain. I think you made a fatal blunder in excluding Mr. Spark from your committee, and the consequence is you will not re-construct, but sooner or later you will liquidate, and then the ordinary shareholders will come into possession of their fair share of the capital of the company. Unless you can develop the company to such a point, which is scarcely possible, the dividends that you can pay to the preference shareholders will be the case. You are in a cleft stick, and you can only make your arrangements with your enemies—if I may call them so. You have to make your peace with Mr. Spark. (Laughter.) I know what I am talking about—perhaps you do not. (Renewed laughter.) I am sure you cannot carry this scheme, for you will not have money enough to pay the dissentients. The person who asked me to come here to-day is a dissentient, and he said you were trying to pass an Act of Parliament rather than a resolution. We ought to know the names of the counsel who have advised you in the manner you are proceeding. I say that the committee appointed was not a representative one, and that you have made a fatal blunder which will cost you your re-construction scheme.

MR. SPARK REPUDIATES MR. NEWTON.

Mr. SPARK: Mr. Newton has made reference to me in a way which, to some extent, I must repudiate, because he says that a re-construction has been brought forward, which is fatal, as I did not happen to be on the committee, and because I and my friends will oppose it. This, I emphatically repudiate. (Cheers.) However, I cannot, in common with other ordinary shareholders (I also have some preference shares), agree to the idea of giving the preference shareholders priority as to capital, which they do not possess at present. I can well conceive our representatives have had great difficulties in reconciling conflicting interests. I wish to repudiate the insinuations of my friend, Mr. Newton, that the committee did not represent the shareholders, for I am not aware that I protested at the time as to the manner in which the votes were taken for the committee. Now, that committee having been appointed and no protest having been made, coupled with the fact that they courteously received certain communications from me, and that I had a conversation with one of their number (Mr. Bohn), I must

REPUDIATE ANY SUGGESTION THAT THEY DID NOT REPRESENT ME

as a committee. (Cheers.) At the same time they did not represent my views in reference to the scheme—which is another matter altogether. I think they have not taken one matter into consideration that they might do even now, namely, that when this company was formed, the public subscribed for 10,900 ordinary shares, whereas only 1,308 were taken up by the vendors, whereas of preference shares 4,000 were taken by by the vendors, and 3,783 by the general public. It also happens that for the most part where the public applied, they did so equally both for preference and ordinary shares, so that it does not make much difference to them, whereas you will find that those who hold a superabundance of preference shares, at any rate in the larger proportion, are vendors. Now these gentlemen received a large amount of cash, and I think we might justifiably ask them, not as a legal matter, but as a sort of moral claim, to make some concession for the good of the company. (Hear, hear). It has been sug-

gested to me by a shareholder that if you write down the capital by half, leaving the liability as it stands, you can clearly show that if you made a profit of 6,600*l.*, it would be for the benefit of the preference shares. They would lose a little, but if you came to over 11,000*l.* profit, they would be in a better position than under this scheme, and the net result would be this, that the ordinary shares in the immediate future would be more likely to get something, and we should be happy all round and the long-headed gentlemen who took preference shares would in that result be gainers. Whether that suggestion is feasible or has already been taken into consideration, I do not know, but should like to hear remarks about it. (Cheers.)

A PREFERENCE SHAREHOLDER STANDS AT EASE.

Mr. RIDLEY: I am a preference shareholder, and personally do not consider it matters much whether the scheme is carried or not, but think it would be better for the company if it were. If it is not carried, all we have to do is to wait long enough. (Laughter.) I do not think it will be so very long now, and we shall get all the earnings of the company for some considerable time, while the ordinary shareholders will not get any. (Hear, hear.) Therefore, as it stands now, the ordinary shares are valueless, while the preference shares are of value. May I be permitted to ask a question, Mr. Bohn, on the report of the shareholders' committee. I have in my hand a pamphlet on the Securite explosive, which is the explosive of the Flameless Co. It says that there are two kinds of Securite—No. 1, which is used for non-fiery mines, and No. 2, which is specially intended for fiery coal mines. In our report it only mentions the word "Securite." What kind of Securite does your report refer to? I saw about a week ago a letter from a shareholder in the Flameless Explosive Co., speaking of the great increase of their business in Oct., namely, 2½ tons, and Mar. 9 tons. Is our increase as good as that?

Mr. BOHN: The committee were informed:—1. The quality used was No. 2 Securite, recommended in the Flameless Explosive Co.'s pamphlet for use in fiery mines, and invoiced as such. 2. The explosive, when analysed by the company's chemist, was found to be the mixture licensed by the Home Office last year as "Flameless Securité." 3. The name "Flameless Securite" has now been removed from the Home Office list of licensed explosives. 4. The Flameless Explosive Co. now recommend the use of Securite in a "flameless casing," thereby placing it on the same footing as explosives which do not contain the element of safety in their own composition, and have to be used with the water cartridge or similar external contrivances. Securite may be a good explosive for ordinary open blasting, but we need not fear its competition in coal mines.

Mr. RIDLEY: I think that is a very satisfactory answer. Is there any other explosive that at all approaches ours in safety?

NOTHING LIKE ROBURITE.

The CHAIRMAN: We do not know of any. I cannot tell the progress month by month with Securite, but the letter referred to states that the sale for six months, from Oct., 1890, to Mar. 31, 1891, was 33¼ tons, and in the same time Roburite sold 175 tons. (Cheers.) The sales of Roburite for Apl. alone were 40¼ tons.

Col. GERARD SMITH (director): With reference to the re-construction scheme, and the discussion at the last meeting, I was very anxious to see the arrears of interest wiped off, and for a long time was difficult to convince that it was not a good thing to deal with it by means of a debenture stock, I came to the conclusion that it could only be issued at a rate of interest not less than 4½, or probably 5, per cent., against which you would have put yourselves in the position that the debenture stock so created might foreclose in event of default, and take possession of everything. I thought it an admirable alternative when it was proposed to me that the preference shareholders should take accumulative 5 instead of 7 per cent., and simply as a concession to them take priority in the distribution of assets. I take it that this, on the whole, is

THE BEST AND WISEST COMPROMISE WE COULD MAKE.

I am the third or fourth largest preference-holder, and am told I am absolutely the largest ordinary shareholder, so that I think I have endeavoured to bring to bear upon the subject a spirit of equity, and honestly think that if the scheme be carried through (though modifications may be necessary) we have an excellent company, which is increasing in public favour every day, and the interior administration of which is excellent so far as I know, and that we are in sight of not only paying dividends on our preference, but (within a reasonable date) on our ordinary shares. (Cheers.) I wish to express the pleasure I feel at

THE CONCILIATORY TONE OF MR. SPARK'S REMARKS,

which I most cordially value and reciprocate. In accordance with his request, the correspondence we had was placed before the directors and consultative committee, and his suggestions were exhaustively considered line by line, and some (though not all) were agreed to. From the general tone, the discussion has taken, though there are certain shareholders who are irreconcilables, as there always will be, I hope the great majority will think we have done the best in the interests of both classes, and what cannot but be of permanent advantage to the ordinary shareholders in particular in the long run.

Mr. SHARP: You tell us in the matter of re-construction we must meet each other, but the tone of the speeches shows that there has been very little meeting of the ordinary shareholders. I should like to point out to the preference holders the great advantages this scheme confers upon them if carried through, and that it is far in advance of their legal or just rights. I look to the third suggestion.

"The issue of ordinary and preference shares in the new company in exchange for the ordinary and preference shares in the old company."

That means ordinary for ordinary, and preference for preference. This company has been a failure. (Loud cries of "No.") It is proposed to wind it up. (Cries of "No.") You cannot re-construct without winding up.

Col. SMITH: A mere matter of form. We shall be in liquidation 48 hours at the outside.

Mr. SHARP: Unfortunately for the preference shareholders that matter of form conveys the gravest issue. They have not a right to priority of assets. When the company was formed no shareholder anticipated things would come to their present pass, and the bargain between both classes was distinct, and the preference knew that the ordinary shareholders were entitled to participate in the assets. This was an original creation, and was not the case of a company creating preference shares long after its formation to provide extra capital. No. 4 says:—

"The issue also to the preference shareholders in the old company of fully paid up preference shares in the new company to an amount equal to the interest due."

There is no interest or dividend. There is no dividend due, for the articles say, "no dividends shall be paid except out of profits earned by the company." They may be cumulative, but they are not due until they are earned.

ACCUMULATIONS OF ZERO

ncver come to more than zero, and the profits have been zero. (Laughter.) As to No. 5,

"The preference shareholders in the new company to be entitled to a cumulative 5 per cent. preference dividend, and in case of winding up, a priority as to capital."

At present, preference shareholders have not that right, but it is proposed to give it to them in the new company, and you are overreaching yourselves, because, looking at the history of the new company it is not too much to say that in another two years there will be a further winding up. (No.) Then where shall we be? As to No. 8, it says:—

"No amounts to be written off on account of depreciation for five years after date of re-construction, except with the special consent of the preference shareholders."

The preference shareholders will receive their dividends if matters go on well, but there may come a new explosive such as Col. Smith referred to at the last meeting, and in five or six years the company may be wound up, in which case the ordinary shareholders would find precious little left, even supposing the company goes on so long. Col. Smith seems to have modified the views he expressed at the last meeting, when he said that cumulative capital and cumulative preference interest would have to be wiped out. As to No. 10, it may be of substantial importance to have that clause, but there should be after the word dividend—"after a dividend of so much per cent. is paid to the ordinary shareholders."

VIEWS OF THE COMMITTEE.

Mr. BOHN: I have great pleasure in supporting the joint report of your board and the committee of shareholders, because, having given a great deal of time to it, and worked all day for many days together with my friend, Genl. Sim, and Mr. Weatherley, and then jointly also with your board at the meetings, every single point has been thrashed out, until I think we have arrived at the best solution possible. I do not say some modification may not have to be made, but I will say that all points have been considered. I should like to acknowledge the courtesy of Mr. Spark, who came to me at Hull, where I said, "I am a member of the committee, and do not know that I ought to see you, but we have a common interest," and so we discussed matters together. Personally I have 1,000*l.* in each class, and, therefore, have a great interest in the company. Mr. Spark admitted my interest in the ordinary shares, and Genl. Sim has exactly an equal number, and Mr. Weatherley has 75 ordiuary and 11 preference shares. Therefore, you will see that the ordinary shareholders were thoroughly well represented. Mr. Spark and I discussed, first of all, the original formation of the company, and we were glad your resolution did not require the committee to report on what had been done at the commencement. Mistakes have been made principally through the board having been misinformed by certain people they trusted, and by giving more for roburite than they ought to have done. Those mistakes would not occur if the work had to be done over again. I quite agree it would have been a good thing if Mr. Spark had been on the committee, and I offered to resign in his favour. I am certain from the courteous way in which he behaved to me that he would have got on well with my brother committeemen, and most likely would have come to the same conclusion. (Hear, hear.

WITH REGARD TO THE WRITING DOWN OF CAPITAL,

that seems both indiscreet and useless. If you do it, and you do not make any profits, what does it matter; but if you make 10 per cent. on half your capital that would be 5 per cent. on the whole. Pay your ordinary shares 5 per cent. and they will fetch par in the market; but pay 10 per cent. on half the amount, and they would not fetch double par. The moment you get to par, the price of the shares does not go up in proportion to the dividend paid. It might have saved a little stamp duty, but all reasons considered we thought it better to leave the capital as it stands.

DIRECTORS GREATLY REDUCE THEIR FEES.

As to directors' fees, they were originally 2,500*l.*, and were afterwards reduced to 1,250*l.* We told the directors that even this amount was excessive, and finally they were cut down by agreement to 750*l.* There are nine directors, and we have thought that five would be sufficient, and that then the payment would be adequate. I must confess that there is not a member who does not do good work for the company. (Cheers.) I have met Genl. Stokes at Wigan, and Mr. Cockon goes weekly to the factory, and Mr. Loewe looks after the books in London, and in fact all the directors are useful. It may be said that, as a matter of business, any one or two of them could do the work, but there is great strength in the full board, and if they liked to keep their number of nine they can do so, but the remuneration will be the same. I should say the directors have frequently to go to Wigan, and that takes two days. They must do so if they are to keep in touch with the business. I am in a good many companies in the north which pay 20 and 25 per cent., but it is only because we can look after them ourselves. I am quite certain that any business man, without being a specialist, can go over a factory like that of Gathurst, and can make valuable suggestions as to small savings, and

IT IS OUT OF THE HALFPENNIES AND THE FARTHINGS

cut off the expenses that the dividends are made. (Cheers.) The working should be perfect, but it should be as economical as possible. When we went over the works we tried to get things simplified, and made a few suggestions which will be of use. As to winding up, everybody knows you must do that for re-construction, but to talk of it as one shareholder has done, conveys a false impression although the statement is literally true. You are not bound, however, to wind-up or re-construct, because the directors can make a call

The re-construction is for the benefit of the ordinary shareholders, and not for that of the preference shareholders. If the company should go on as it is, the first thing that has to be done is to pay 10,000*l*., which has been lost in establishing the business, and everybody knows that you cannot make a new business profitable at the start. Roburite has been violently attacked in various directions, but we have lived all that down, and are beginning to prosper. In what position are the ordinary shareholders? If we want more capital they will have to contribute it. Who will get the profit? When this 10,000*l*. is paid, the preference shareholders will get their 7 per cent. cumulative until arrears are all wiped off, and that on the most favourable showing would take 8 years, after which the ordinary shareholders will come in. It is quite true the cumulative dividends are not due until earned, but they have to be paid before the the ordinary shareholders can get anything. The only object in re-construction is to pay the ordinary shareholders a dividend, and the committee wish that to be done as soon as possible, though whether they have been right or wrong in their scheme is another matter. If anybody suffers by this scheme it is the preference holder, for he relinquishes 7 per cent. for 5 per cent., and I may tell you we had a great many growls from preference shareholders. Is that not so Mr. Secretary?

Mr. KROHN: More from them than from the others.

Mr. BOHN: I think you will agree that when both parties abuse us we must be pretty near the happy medium (Cheers). I think it is admitted that this scheme of re-construction is for the benefit of the ordinary holders, and them only. Now have we squeezed the preference shareholders as tightly as we could? (We have). We acted from the point of view of the ordinary shareholders, and found this the best solution possible, and if the preference shareholders would consent to reduce their future dividends to 5 per cent., there would be 2 per cent. paid, and they would take their arrears in paper. That being done, I believe that within the next two years there will be a dividend for the ordinary shareholders, unless something quite totally unforseen happens—I mean in 1892, but probably we shall have earned it long before the end of next year. Probably it is too late to suggest that the scheme should be thrashed out paragraph by paragraph.

The CHAIRMAN: We are not voting on the scheme to-day.

Mr. BOHN: As to the No. 5 suggestion, the preference shareholders are making a great concession in taking their 7 per cent. in paper, and it is one that our friends have not quite grasped. When they are taking 5 per cent. instead of 7 per cent., is it common sense or reason to refuse it?

Mr. SHARP: We object to priority as to capital in winding up.

Mr. BOHN: That is a common clause iu dealing with preference shares and founders' shares, but it was not the original suggestion of the committee. It was done to obviate the opposition of the preference shareholders, and I do not think there is anything in it. As a preference shareholder myself, I do not care anything about it, and should be glad to yield the point if the others will. With regard to No. 6, there is no difference of opinion; and as to No. 7, uo debentures can be issued without the consent of the preference shareholders.

Col. SMITH said that the latter provision was made at his suggestion.

Mr. BOHN: As to writing off the depreciation, you may be of a different opinion, but we found everythng at

GATHURST KEPT IN AN ADMIRABLE STATE OF REPAIR,

and improvements going on in various directions, all out of earnings. I think depreciation in such a case is unnecessary. We might write off depreciation in the value of the patents, but that is a matter of sentiment more than anything else. Roburite is a trade mark, and if 20 factories made roburite they could not call it by that name. By the time the patent expires we have our trade mark and our connection, and nothing can hurt us. For five years at any rate there is no need to write off anything. As to the qualification of directors we thought it ought to be raised from 25 to 50 shares, and the directors met us on this as on every other point in the frankest possible way. I thank you very much for the courtesy with which you have listened to me, and will ask you to believe one thing, that your committee honestly tried to do all they could in the general interests whilst discharging the difficult task imposed upon them, and without any personal interest or feeling whatever. (Loud cheers.)

Admiral COLOMB said that the dividends of the ordinary shareholders were much nearer than some of them seemed to think, though, of course, the board could not guard against the unforseen. He was inclined to think that the preference shareholders had made very substantial concessions, and pointed out that their cumulative dividends had already amounted to the end of last year to 16,000*l*., and at the end of six years would be another 31,000*l*., or 57,000*l*. in all, which would have to be paid before the ordinary shareholders could get anything. If even 10,000*l*. a year were made during those six years the ordinary shares would only receive 3,000*l*., whereas if the scheme went through and the same amount were earned, the preference shareholders would get 28,000*l*., and the ordinary 32,000*l*. It was in reality an ordinary shareholders' scheme. (Cheers.) The directors had steadily increased their holdings, which were much above the nominal qualifications. In conclusion, he expressed thanks to Mr. Spark for the change in his tone, which he attributed to the fact that inquiry had led him to a clearer perception of the position of the company than he had previously entertained.

Mr. NEWTON repeated his argument as to the desirability of the preference shareholders giving up their claim to priority of right, and quoted several precedents so show that they could not legally claim it. He judged from Mr. Sparks' changed tone that he saw something good in the company. (Cheers and laughter.)

Mr. SPARKS: You have the right sort of idea about me now. (Laughter.)

VIEWS OF THE SOLICITOR.

The SOLICITOR: There is no question as to your power to re-construct or to issue in the new company fully paid preference shares in respect to the dividends which would be due if the profits had been made on the preference capital. Any ordinary shareholder, who does not like to go into re-construction, need not do so, and then the Act provides as to how his interest is to be dealt with. It is not for me to say what would be the respective values of the shares in the old and new company, but it evidently must be the intention in forming this scheme to give greater value to both the preference and ordinary shares in the new company, so that it is clear that any person remaining outside will be likely to receive considerably less than if he elects to join the new scheme. The immediate question is whether or not you will re-construct, and is not a question of winding up, which is only a formality, as the last balance-sheet shows a profit. There must be the assent of three-fourths of the shareholders, and, of course, it is impracticable to expect to get the assent of everyone. We ask the preference shareholders to give up 2 per cent. of their rights, and what are they to receive in return? Shares in a new company, with 5 per cent. instead of 7 per cent., and the way I got over the difficulty was by giving them what was valueless, priority of capital in the case of a winding up under circumstances not like the present, but of discomfiture—winding up as ordinarily understood under pressure to pay creditors. That is a contingency we may consider not as an impossibility, but as such an improbability that it is not worth consideration.

Mr. LOEWE said that if priority of capital were the the stumbling block, they would be all ready doubtless to reconsider that point. (Cheers.)

Mr. SPARK thanked the various speakers for their kindly references to himself, and particularly Adml. Colomb, who had spoken of his changed tone, but he would ask the gallant Admiral if when he was making war he did so under the flag of truce? You change your tone when you got your flag of truce, and when you were making your parley. They were having a parley now, and his tone was changed accordingly. (Laughter.) He hoped that the preference shareholders would waive their priority of capital.

Col. SMITH: I think after the discussion we have had to-day that will in all probability be done.

CHAIRMAN SUMS UP.

The CHAIRMAN: One gentleman said we made a great mistake in not putting Mr. Spark on the committee, but those gentlemen were elected by the meeting wholly and solely. (Hear, hear.) Another gentleman has called the company "a failure," but I do not think that word applicable to a concern that is making steady and even rapid progress. I have said before that at the outset the company was checked by untoward circumstances. It came into the world to displace dangerous explosives like dynamite and gunpowder, and those interested opposed roburite by every means they could employ; but in spite of that you have a business increasing 50 per cent. year after year, and the fact that dynamite has gone down in price from 120*l*. to 75*l*. is a proof of the progress that is being made; but you cannot achieve these results in a day. No doubt we have made a mistake through relying on unsound advice. It was through the advice of our brokers that these cumulative preference shares were created, and that we paid the vendors cash instead of shares. Everybody looking back on his life will see that he has made mistakes, and it is so with us. We were misinformed, and that is how we did not get the quotation. Our greatest misfortune was in making these preference shares, and giving them cumulative interest. We are now trying to undo that mistake, and I honestly believe that we have taken the *juste milieu* between the two classes so as to extricate the company from the difficulty. As things are now going, the

ORDINARY SHAREHOLDERS WILL GET A DIVIDEND IN 1892

if this re-construction be adopted. The chairman closed a vigorous address by acknowledging the courtesy of Mr. Spark, and by saying that if he had said anything on the spur of the moment to hurt that gentleman's feelings, he wished to withdraw it now. (Cheers.) He moved (with a slight alteration) the resolution that had been intended: "That the report of the committee of consultation be received, and that the directors be requested to prepare, for the approval of the shareholders, a scheme for the re-construction of the company, based, as far as possible, on the conditions recommended in the said reports." The words introduced were "as far as possible."

The resolution was carried unanimously.

The CHAIRMAN pointed out that from the special resolution there would be omitted article 109, as they did not wish any contention but they could not go into re-construction without an article added to enable them to do it, and therefore he put the resolution to add No. 108 to the articles of association.

Admiral COLOMB seconded the motion, which was carried unanimously.

THANKS.

The CHAIRMAN: I beg to propose a vote of thanks to the representatives of the shareholders whom you elected at the last meeting to enquire into your affairs. (Cheers.) The board found in that committee a most inquisitive and (as far as they could) fault-finding body of gentlemen who tried to pick holes in their coats, and were very searching in their observations, but they treated the board with great courtesy and kindness, and he felt it both a duty and pleasure to propose this resolution.

Mr. SPARK seconded the motion, which was carried by acclamation.

Genl. SIM returned thanks, and said that they were met with every courtesy by the directors and the staff, and the result of their enquiries was that they believed in the course of next year the shareholders ought to have a very satisfactory dividend.

On the motion of Mr. C. F. MOZLEY, seconded by Mr. SPARK, the chairman was cordially thanked for presiding.

THE EMERALD MINES OF COLUMBIA, LIMITED.

NO LEGAL CLAIM AGAINST THE VENDOR.

THE adjourned ordinary general meeting of this company was held on Thursday, at the Offices, 23, College Hill.

Mr. W. B. M. Lysley

presided.

The CHAIRMAN said that he was sorry to have had to call the shareholders together again, and he had very little to add to what he had said on the previous occasion. He believed that the future

of the mine would be successful, but what they would require in a short time would be extra capital. He thought that the mine would turn out as satisfactory as had been anticipated by the people who were at the mine. The board were doing all in their power to keep the expenses as low as possible until they were in a position to show satisfactory results to induce the shareholders to subscribe for the extra capital. There was money owing to the company in Paris, which ought to be received in a very short time. It was always the object of the board to lay all the information that they possibly could before the shareholders, and they sent out all information likely to be of interest to the papers.

A BOX WAS BEING FORWARDED

from the mine, and when it arrived its contents would be open for inspection. It was a well-known fact with emerald mining that the lower they got the better the quality of the stones, and although they had not received any stones of sufficiently good quality to be valuable, he hoped they would shortly obtain them. He concluded by moving the adoption of the report and accounts, which was seconded by Mr. HEINE, and carried.

In answer to questions,

The CHAIRMAN said that it was not his opinion that the company could have any legal claim against the vendor of the company, should the property not turn out valuable. The vendor had received the whole of the purchase-money in shares with the exception of 2,000*l.*, which he had spent upon the mine during the negotiations for the purchase. They had employed, on the average, about 100 men upon the mine, and as the manager's work of overseeing was the same, whether 500 or 10 men were employed, they could not reduce his salary.

The proceedings terminated with a vote of thanks to the chairman.

REPORTS OF MEETINGS.

THE NITRATE RAILWAYS CO., LIMITED.

A SATISFACTORY YEAR DESPITE THE CIVIL WAR — £157,000 CARRIED FORWARD, AND 20 PER CENT. PAID IN DIVIDENDS.

THE ninth ordinary general meeting was held at Winchester House on Tuesday, "to receive the directors' report and accounts, to elect directors in place of those retiring by rotation, to elect auditors, and to transact the ordinary business of the company."

Col. J. T. North

(chairman of the company) presided.

Mr. J. M. COWPER (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I am going to ask you to adopt the report and accounts for the year 1890. The report has been carefully prepared by the directors, and the auditors have carefully looked after the balance-sheet, and both, I think, are very satisfactory. I think that the last time I had the pleasure of meeting you I told you as far as I could the prospects of the line. I then promised you something that I am sorry to say I have not carried out—that was an extra 5 per cent., to make the 25 in 1890 the same as we had paid you in the previous year. Now, on account of what is going on on the West Coast at present, we thought it advisable not to pay you that 5 per cent., but to keep the money in case of emergency. I really think you ought to be satisfied with 20 per cent., which we are well able to pay you even as things are now going on. Many will say, Are you going to pay 10 per cent. this half-year? My reply is—yes, we could pay you that now. You may be sure of your dividend being paid about the same time on the preference shares for the nine months—that is, it will be paid at the same time as your interim dividend for the first six months of the year. Now, gentlemen, as regards the railway, I think you all agree with me and my colleagues here that the way the line has been worked within the last year as regards working expenses is satisfactory. We have had a lot of traffic, and with the stock we have had I think we have done very well. We have during a certain period of the year had to

WORK NIGHT AND DAY TO PUSH MATTERS FORWARD.

The traffic on this railway is not equally divided. We have two seasons during which we have to work night and day, and at other times we are not fully employed, but I think we have now arrived at a position that can compete with that of any of the old lines here, and that certainly can do so in working expenses, for we have reduced them considerably. In 1885 they were 57.53, and in 1890 41.12. We have 5 per cent. gradients on this line, and we have also to get up all our coal and provision for the working, so that we think the results very satisfactory. (Hear, hear.) There is one thing that is helping us now, namely, that we have succeeded in making a contract with the Tarapacá Water Co. If you look into the accounts you will see a big item for water. Water is a great consideration, and it has had to be transported to us in steamers. The water was taken from the Pampas formerly, but it used to injure the boilers. Now, though we have paid for this water coming from Pica, we have been able to reduce our working expenses to the extent named. Since last year we have had a contract with this company to pay so much, and this year we have made a contract at one-third less cost for the Iquique section. We are working, in fact, on better terms this year, so that there is a prospect of a still further reduction in working expenses. You will be pleased to hear something that is not generally known. The last time I saw you I asked your permission to have a preferred share as well as an ordinary one, and it was a question of getting Parliamentary sanction. I am pleased to say

OUR BILL HAS PASSED,

and any gentleman who has 1,000 ordinary shares will have a thousand deferred shares given to him bearing 7 per cent. If you take it that we are making 21 per cent. a minimum, you get your 7 per cent. on the preferred, and then 14 on the ordinary shares, and, I think, your ordinary shares will be worth then perhaps as much as they are now. Possibly we have been making too much money, because the public think this is a speculative line. It is

THE BEST PAYING RAILWAY IN THE WORLD,

and we have wanted to reduce the dividends by dividing the stock into deferred and ordinary. Before long you will have the deferred shares. In 1889 we carried over 17,000*l.* and paid you then 25 per cent. dividend. Now

WE CARRY OVER 157,000*l.*,

or 140,000*l.* more than we did last year. This 140,000*l.* goes a long way towards remedying the two or three months we have been stopped this year; and speaking about the prospects of peace on the West Coast, I think it will not be very long before we go on as we were going before, and with more security and guarantee than we had then. You have seen in the papers an exaggerated account of heavy damage done to our rolling stock, but it is not true. There has been slight damage, but we shall be repaid. In the last 14 days, for which we have the return, we earned 7,600*l.* more than in the corresponding period of last year. Some of the papers would like you to believe that we have all "burst up," but we have not. I am sorry to have to draw your attention to the lamented death of our manager, Mr. Rowland, who was out there for many years, and in whom we had every confidence. We have a very good man out there still (Mr. Griffin), who has been there about 20 years and is accustomed to the work. During Mr. Rowland's absence at Santiago, Mr. Griffin used to represent him on the railway, and he is giving every satisfaction. Now, gentlemen, it is my pleasure to move the resolution, and it will be yours to carry it, but I invite every discussion and all questions you may like to put.

Mr. LOCKETT (director) seconded the motion, which was carried.

SHAREHOLDERS' VIEWS.

A SHAREHOLDER: We should like to hear about the extension.

The CHAIRMAN: As far as I know they are not doing so much with the extension as they would in times of peace. I do not know that the rails have arrived, and the nitrate companies could not have worked on account of the trouble they have gone through. If they were to go on with the line energetically now it would be more expensive than in ordinary times.

A SHAREHOLDER: How long shall we be able to maintain present rates, and can you give us any information about the contract with the various companies?

The CHAIRMAN: I, as one of the biggest nitrate makers, am perfectly satisfied with the rates I am paying. There are other nitrate makers on the board, and that is the sort of representation we want so as to

BRING ABOUT COMMUNITY OF INTEREST.

Our object all round is to facilitate the working of the nitrate fields, and it was not a question of railway freight. We made more nitrate than the market would take at one time, but at the same time I am pleased to say that the low price of nitrate has done us good. Now the price is coming back and the market is taking our stock. As to the railway, there is no fear of our having to lower our freight. Our contracts are just finishing, and as they finish each company is renewing them, and if they do not they have to pay the maximum rate, and you may make your mind up that they are anxious to have a contract at half the price rather than at the full price. The line has a concession from the Government for so many years on certain terms—1½c. per quintal per mile. If the nitrate maker does not make a contract with the railway, he is charged the maximum rate. There was one private firm that would not pay the rate, and carried his case to the courts, where he was condemned in costs, and the next day he came and made a contract. That is exactly how we stand with all the nitrate companies, and they have made contracts for another three years. We have never had a complaint.

A SHAREHOLDER: How far has the line extended towards Pampas Lagunos? I hear there are large deposits of borax likely to be of use to the railway.

The CHAIRMAN: I see a syndicate is going to be brought out at the works. As far as I know, I own them to date, and I shall only be too pleased if anybody wants to work the borax. We go for miles right through a borax territory. I saw a prospectus a short time ago about it, but, what is more, I saw the borax when I was there. Anyone can have the properties by applying for them and paying certain rates. It would affect the railway traffic, as the line goes right through the territory.

A SHAREHOLDER: What is the gross decrease in the receipts from Jan. this year to Mar. 31, compared with the same period last year?

The SECRETARY: Up to Apl. 30, 115,200*l.*

BOARD CONGRATULATED.

Mr. BOULTER: I rise to congratulate the board on the conservative policy they have adopted in carrying forward a considerable sum this year. I wish to do that, for the reason that the price of the shares evidently shows the public have not the same faith in the railway that the shareholders have. Depend upon it you will make our securities far more appreciated if you will consolidate your forces, and build up the institution by putting by year by year such a considerable sum as you have to-day. My congratulations are somewhat tempered, I must own, by the fact that had it not been for the civil war in Chili, in all probability you would have been tempted to pay another 5 per cent. I think that would have been an unwise policy to adopt. In a railway such as this there must be contingent circumstances which would make it necessary for us to have a considerable reserve. As I read the accounts, apart from the sum that is carried forward, there is very little reserve at all, and, remember, there is a debenture debt of something like 2,000,000*l.* The bonds are at 90, a ridiculous price, considering the security they have, and here, again, we see the feeling of the public, and how desirable it is for the directors, by every means in their power, to avoid being led to pay excessive dividends in order to achieve, perhaps, some popularity for the moment. We see directors thus tempted over

and over again. Take the case of American Breweries—though I admit the case is not parallel. Why is it that the public estimate the shares of these breweries at so low a price, when 15 per cent. is paid on the ordinary shares? It is because there is no carrying to reserve a fund to pay off the debentures, and because the directors will persist in distributing large dividends which, naturally, the public think a most unwise policy. I hope you will pile up the reserve, so that we may all feel that we have shares in an undertaking which is likely to be successful, and permanently successful. (Cheers.)

The CHAIRMAN: If we had paid 25 per cent. we should have carried forward 88,000*l.* as against 17,000*l.* the year before. I will ask the auditor to give further explanations about the debenture bonds.

The AUDITOR: If you turn to the first statement you will see in the capital account on the credit side mortgage bonds redemption account 315,500*l.*, which has been wholly provided out of revenue, and has already been applied towards the redemption of the mortgage debts of this railway, and if the same processes be proceeded with, and on the same scale, at the end of the concession we will have provided

NOT ONLY FOR THE BONDS BUT FOR THE WHOLE OF THE CAPITAL.

The SECRETARY: The exclusive privilege in regard to the first concession ends in 1896; of the second in 1897, and of the third in 1900. The line lapses under the first concession in 1936; under the second in 1957; and under the third in 1974.

The CHAIRMAN: You understand the terms — the exclusive privilege. That is, we have the exclusive privilege in the province of Tarapacá for these lines. We have three different concessions, and if anyone wants to put up nitrate works we have the preference. We have already succeeded in getting the Lagunos privilege, and anyone opening a line there would not get the nitrate. We have made a contract with the Buena Ventura Co. for 10 years to bring the nitrate down from the date of opening the line.

A SHAREHOLDER: As I understand it, we have a reserve fund for about one-tenth of the opening of our whole capital.

The retiring directors and auditors were unanimously re-elected, and the chairman was cordially thanked for presiding.

NERBUDDA COAL AND IRON CO., LIMITED.

THE YEAR, FOR THE FIRST TIME FOR A LONG PERIOD, SHOWS A LOSS—PROSPECTS OF FINDING FRESH COAL—NEW CONTRACT WITH THE GREAT INDIAN PENINSULA RAILWAY.

THE thirty-first ordinary general meeting was held at the Offices, Gresham House, Old Broad Street, on Tuesday, "for the transaction of the general business of the company, including the election of directors and auditor."

Mr. Samuel J. Wilde

(chairman of the company) presided.

Mr. FREDK. R. BLUETT (secretary) read the notice of meeting.

NEW CONTRACT WITH THE GREAT INDIAN PENINSULA.

The CHAIRMAN: Gentlemen, in this company we have, unfortunately, had a great many ups and downs—more downs than ups, I fear, but, nevertheless, this is the first time for many years we have had to come before you with a loss on the year's working. The reason is that the Great Indian Peninsula Railway put such a pressure upon us to reduce the price of coal below one at which we could afford to sell it, that we had no alternative except to stop working until they came to terms with us. Your board decline to sell coal at a loss, and judge it to be better to leave it where it is rather than go on exhausting the property unprofitably. (Hear, hear.) We had great difficulty with the company, but now we have obtained new terms from them, though slightly under the price we previously received. We used to get Rs9; we now get a little under Rs8½. That is a high price compared with the usual selling price of Indian coal, but then we are a long way from any other colliery. We also, as all old shareholders will know, have had to contend with great difficulties in our seams. Everybody who has ever seen the mine has always declared that they have never examined a coal mine with so many faults and disturbances of strata and all kinds of difficulties as ours. We have almost every difficulty to contend with that any colliery can have. The next point I must direct your attention to is that we are coming to the end of the present coal seams.

WE ARE GOING TO CONTINUE TO SINK THE SHAFT

through to the three and four seams which for a large portion are untouched, and ought to give us a great deal of coal, but till we get into them we cannot tell how much. We have had great difficulty in sinking the shaft owing to the fire in No. 2 seam, which we have to pass, because we have to keep that seam full of water to prevent the fire from spreading. Various plans have been suggested for going down, and I will read you a paragraph from the manager's report where he says:—

"Before the end of 1890, we were in the position of having very little virgin coal to work at. It was, however, considered unwise to begin all at once to remove the pillars won out in the new area between the Old Fire workings and the Helen workings, but towards the close of the year this was begun with, as I had, after the very fullest consideration, decided that the time had come for exhausting the area at present proved to its boundary."

In order to get the coal out as well as possible he is adopting the plan of erecting pillars of stone to keep the reefs up so that he may take away the greater portion, or perhaps the whole of the coal, which may be existing in the pillars. He says:—

"If I succeed, as I hope to, in working out a larger proportion, amounting to almost the whole of the coal, we shall have a life of about seven years. Long before even four years I am almost confident that the borings will prove other coal."

Then he expects to get out enough to bring that life up to seven years. I must call attention to this, that years ago I tried very hard to persuade my colleagues, who were then on the board, and the shareholders, to spend more money in making borings outside our present seams, so that when they were exhausted we might be in a position to raise coal in other parts, but

OBJECTION WAS TAKEN TO MY PLANS,

and I could not get them adopted. Shareholders said "There is time enough; do not let us spend money in borings, but let us wait." All I can say is that I was outvoted both on the board and by the shareholders. The result at present is that we have but a limited time for getting our coal from our existing workings, and for the moment we do not know where to find fresh coal. We have now done what I said ought to have been done years ago—sent out a boring "rig" to go down to 1,000 ft. to search for coal in parts where we have reasonable grounds for supposing we shall find it. It is, however, such a desperately disturbed district that until you find the coal you cannot say whether it is there or not, but we are searching for it in parts about the success of which I am very hopeful indeed. The Government, I am happy to say, has consented for another year to

WAIVE THEIR RIGHT TO ROYALTY

on the coal, and we are glad to get that help from them. I will read to you an extract from the letter that arrived this morning:—

"Boring rig: This went together quite easily, and is about ready to be sent to No. 14 bore hole. We have much difficulty this week in getting men owing to the local holidays; the contracter promised men enough to turn out 1,000 tons this month, but for the last few days he has been behindhand owing to the holidays. We can still do it if we get men enough by the end of the month."

With reference to the stone pillars and No. 2 seam, he says, "The packing in this seam is answering well, and will, I expect, enable us to get the pillars out clean without letting down the surface. It is not such straightforward work as it might be, owing to the dip of the seam varying in its direction, but when we get back a few pillars into a more regular gradient we shall find it much easier. The first pillars built were of square stone, which, however, we found could not be bought at a low rate, and cost from Rs22 per 100 cubic ft. when all is finished, including lime, labour, stone, and everything." That is a very low rate for that kind of work in India. "The second lot 1 was successful in getting stones for at a much lower rate, and they cost us only Rs9 per 100 cubic ft., and this will be about the cost in future." I think I may say we are in strong hopes of being able to get almost, if not quite, the whole of the pillars out, and long before four years have passed I am almost confident the borings will prove other coal." That bears out what I said, that I am hopeful of finding the coal. I now move the adoption of the report and accounts.

Mr. JAMES R. CORBETT: I second the motion.

QUESTIONS ELICIT FURTHER INFORMATION,

Mr. CUFF: How long do the Government waive the royalty?

The CHAIRMAN: They have done so for the current year—they only do it from year to year.

Mr. CUFF: Then up to the present you have not discovered any coal actually up to the 14-in. seam?

The CHAIRMAN: That is the No. 14 boring only. We have a great many borings.

Mr. CUFF: I understand you came across a boring, and expected to find something below it.

The SECRETARY: There was a thread of coal beyond the present workings, and that ended in nothing. It merely showed that there are other faults beyond and nothing more.

Mr. CUFF: Who are our sundry creditors, 962*l.*?

The SECRETARY: The chief item is in respect to a deceased lady, whose money we have had for many years. It has gradually dwindled down to 100*l.* as the calls have been made. There is an amount of 95*l.* 18s. which the Government has remitted for royalty. There is also a tradesman's account which has since been settled, and there are sundry payments due to workmen; we have also borings and explorings, which is a credit allowed to us by the Government. Eventually we shall exhaust the whole of that (about 300*l.*) in boring operations.

The report was unanimously adopted.

ROUTINE BUSINESS.

The CHAIRMAN: I propose the election of the retiring directors, Mr. J. R. Corbett and Mr. J. R. Manning, who are both useful men.

Mr. W. O. ROBINSON seconded the motion, which was carried unanimously.

Mr. CUFF proposed the re-election of the auditor, Mr. William Westcott, at the same remuneration as before. His work had been done very satisfactorily.

Mr. TAIT seconded the motion, which was carried unanimously.

Mr. BLYTH: We ought not to disperse without conveying our best thanks to the chairman and directors for the care and attention they bestow upon this troublesome and uphill work. We are all the more indebted to them for sticking to it so bravely and closely as they have done. I am an original shareholder, and therefore feel myself very much indebted to them.

The motion was seconded and carried unanimously.

The CHAIRMAN: We have to remember that in doing our best for your interests we are also doing our best for our own.

The meeting then closed.

THE DE KAAP GOLD MINES, LIMITED.

RESOLUTIONS CONFIRMED—WORK STOPPED AT THE MINE—THE BOARD DECLINE TO REAPPOINT A FORMER DIRECTOR.

AN extraordinary general meeting was held at Winchester House on Monday, to consider and, if thought fit, to confirm as a special resolution, the following resolution duly passed at the extraordinary general meeting held on Apl. 15, 1891, viz.:—

"That article 79 of the company's articles of association be and the same is hereby rescinded, and that in lieu thereof the following shall be a regulation of the company:—'The board shall be entitled to receive out of the funds of the company by way of remuneration in each year such sum as the company in general meeting may decide.'"

The CHAIRMAN: You are aware that this meeting is purely formal, and therefore I will simply move the resolution as above.

Mr. HALDENSTEIN, in seconding the motion, said: Have you any information from the mine? I have been asked by one or two gentlemen in the room to put that question to you. I do not suppose you have, or you would have let us know it, but if you have any information now we shall be glad to hear it.

The resolution was carried unanimously.

PRESENT POSITION AT HOME AND ABROAD.

The CHAIRMAN: Of course we have no news of any importance from the mine. I think you are all aware that after the meeting held on Mar. 23, when the present board was elected, we immediately cabled to the manager as much money as we could to enable him to discharge his liabilities, and at the same time told him to suspend work. We learnt only by the last mail, a week ago, that he had not acted on our instructions to the letter—he had not suspended work absolutely. He had got to what he considered an interesting and important point, and was completing a drive, which was to communicate with the principal shaft, and was very anxious to continue that work; so he ventured to cut down the expenses as much as possible by discharging all hands not absolutely necessary, and went on with his work during April. Whilst we commend him for doing what he thought best in the company's interest, the financial position is such that we cannot continue to work the mine at the moment, and accordingly we are instructing him to discontinue work absolutely. The most important point that we have to consider is

THE RECOVERY OF THE MONEYS OF THE COMPANY

which the original directors (not the board which existed on Mar. 23) wrongly parted with. We lost no time in putting that matter in hand, and I am glad to say there is some reason to believe that we may be able to get a large proportion of the money without the delay which an action at law would certainly necessitate; but until we have that money we have no means practically of keeping the mine at work, and the board, after considering the subject very carefully, have come to the conclusion that they could not invite the shareholders to take up the preference shares, which you have authorised, until they have obtained this money from the directors. We felt that that should be absolutely the preliminary step. (Cheers.) As soon as we get that money we shall be in a position to resume work at the mine, and hope under very much improved auspices. There are certain arrangements in contemplation which will materially improve our chances of working, when we do re-commence, and as soon as we have any satisfactory news from the property, after we have re-commenced working, we shall, of course, communicate it to the shareholders, and then invite them to take up some of the preference shares to enable us to work the mine properly. There is no advantage in working it at present. We shall be able to discharge the liabilities on the other side, and the few that exist on this, and

WHEN WE GET THE MONEY FROM THE ORIGINAL DIRECTORS

it will be perfectly free for use at the mine, and as soon as we have any news we shall only be too delighted to communicate it to you.

Mr. HALDENSTEIN moved a vote of thanks to the chairman, which was seconded and carried unanimously.

The CHAIRMAN: Whilst we have undertaken a very anxious——

A DIRECTOR: And a very unpleasant——

The CHAIRMAN: Yes, and a very unpleasant task, we shall do our best as Englishmen to discharge it.

DIXON AND HOSKING.

Mr. HALDENSTEIN: Have you had any trouble from the old directors—Dixon and Hosking?

The CHAIRMAN: We have been requested to re-appoint one gentleman who caused us some trouble on the last occasion, but our answer was that we should not do anything of the kind. (Cheers.) We said the shareholders had taken the matter in their own hands and decided it, and we should not think of making any alteration. We anticipate no further trouble from them. (Hear, hear, and laughter.)

NORTHUMBERLAND LAND AND COAL CO., LIMITED.

THE CHAIRMAN DETAILS THE POSITION—MR. PRICE WILLIAMS GIVES HIS VIEWS AFTER A VISIT TO THE PROPERTY—A RE-CONSTRUCTION SCHEME IS UNANIMOUSLY DECIDED UPON.

THE fourth annual ordinary general meeting of this company was held at the Cannon Street Hotel, E.C., on Thursday last, to receive the directors' report and statement of accounts to Dec. 31, 1890, and transact the business of an ordinary general meeting. And notice was also given that, immediately at the close of the ordinary general meeting, an extraordinary general meeting of the above-named company would be held at the same place, for the purpose of considering, and if thought fit, of passing the resolutions following, viz:—

(1.) "That it is desirable to re-construct the company, and accordingly that the company be wound up voluntarily, and that Mr. Richard Rabbidge, chartered accountant, 32, Poultry, E.C., be, and he is hereby, appointed liquidator for the purpose, of such winding-up." (2.) "That the scheme of re-construction referred to in the circular issued by the board on Mar. 6, 1891, be approved, and without limiting the general powers and authorities of the liquidator, that he be authorised, pursuant to section 161 of the Companies Act, 1862, to adopt and carry the same into effect in such manner or with such modifications as he may be advised." (3.) "That the liquidator be also authorised, pursuant to such section, to receive in compensation or part compensation for the transfer of the property and assets of this company to the new company to be formed to acquire the same under the proposed scheme, shares or other like interest in, or other benefits from, the said new company, for distribution among the members of this company."

Mr. Wilberforce Bryant

presided.

Mr. GEORGE NOBLE (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said that he thought the remarks that they had heard from Mr. Price Williams were such as to encourage the shareholders to hope that, with good management, the company, when re-constructed, and having the advantage of the assistance that Mr. Benham had promised, had every prospect of proving a good and profitable concern. Unless any of the shareholders wished to ask any questions they would proceed with the business.

No questions were asked.

The CHAIRMAN said that in the first place he would move the adoption of the report and balance-sheet, and if that was carried it would close the business of the ordinary meeting, and they would then hold an extraordinary meeting for the purpose of passing the proposed scheme of re-construction; he therefore begged to move "That the statement of accounts and the report presented to this meeting be, and is hereby, approved and adopted."

Mr. FOVEAUX seconded the motion, which was at once agreed to unanimously.

EXTRAORDINARY MEETING.

An extraordinary general meeting was then held, for the purpose of considering, and, if approved, passing the resolutions, as given above.

Mr. GEORGE NOBLE (the secretary) read the notice calling the meeting and the proposed resolutions.

The CHAIRMAN: Gentlemen, the

SCHEME FOR RE-CONSTRUCTION

is as follows:—A new company to be formed with a capital of 100,000*l*., divided into shares of 1*l*. each. The existing company to be wound up voluntarily and its property and undertaking to be transferred, subject to its liabilities, to the new company, for 75,000 shares of 1*l*. each, fully paid-up. (The capital of the existing company being 150,000*l*., this will give to each shareholder of the existing company one fully paid-up share of the new company in exchange for each two shares now held by him.) The holders of the 25,000*l*. of debentures of the existing company to release their charge upon the assets of the company, and receive in exchange for their debentures 25,000*l*. shares of 1*l*. each fully paid-up in the new company. The new company to create an issue of 50,000*l*. of first mortgage debentures bearing interest at 6 per cent. per annum, and charged upon the whole of the property and assets handed over, such debentures to run for 10 years, subject to the power of the company to redeem the whole or any part thereof earlier, on six months' notice, at the rate of 110*l*. for each 100*l*. of debentures. The subscribers for the debentures to have the option of either paying up in full on allotment or paying 10 per cent. on allotment, and the balance by instalments, not exceeding 10 per cent. on one month's notice as required. A meeting of the shareholders in the new company to be called as soon as practicable, for the selection and appointment of the board of directors and the officers who will control the company's business. The expenses of the liquidation and re-construction of the existing company to be paid by the new company. I now beg to move the first resolution if someone will second it.

Mr. BENHAM seconded the resolution, which was carried.

The CHAIRMAN then proposed the second resolution, which was also seconded by Mr. BENHAM and agreed to.

The CHAIRMAN then moved the third resolution.

Mr. BENHAM seconded the motion.

Mr. BAKER said that he would like to offer a few words on behalf of the shareholders' committee. He must express the opinion that the shareholders were somewhat indebted to the directors for their having agreed to take shares in the new company in lieu of the debentures that they held in the old company. There was no doubt that the shareholders were making a certain sacrifice in only receiving a 1*l*. share for every two shares previously held, but

THERE WAS NO DOUBT THAT IT WAS A GREATER SACRIFICE ON THE PART OF THE DIRECTORS

in surrendering their debentures in return for shares in the new company. (Hear, hear.) He would like to be allowed to suggest at this meeting, which he thought would be a more representative meeting than the confirmatory one which would be held to confirm the resolutions passed that day, that one of the chief objects of the re-constituted board would be to look closely into the expenditure in New South Wales. What they had heard that day from Mr. Price Williams was, in a measure, ancient history, because in the original prospectus of the company there were statements made which gave them reason to believe, and they still believed, that they had a large quantity of really good coal, which could be worked, and what was more, worked in a manner to return a satisfactory dividend to the shareholders. He did not consider that the management in Australia since the incorporation of the company had been energetic or economical enough, and he should suggest that this matter should receive greater consideration in the future. He also thought it

VERY DESIRABLE THAT THE SHAREHOLDERS' COMMITTEE SHOULD BE REPRESENTED ON THE NEW BOARD,

and he hoped that this would be acceded to, and that some gentleman from the shareholders' committee would be elected on the new board, and that there would be an endeavour to secure some practical and efficient control over the expenditure which took place in the colony, and which he thought had been allowed in the past to be undertaken without sufficient control upon the London board. (Hear, hear.)

The CHAIRMAN then put the third resolution to the meeting, and it was unanimously carried.

The CHAIRMAN said that the shareholders, having now, by passing the resolutions that day, sanctioned the liquidation and re-construction of the company, it would be the duty of the liquidator after the confirmatory meeting to carry out the scheme as rapidly as possible. He (the speaker) could not at the preseut time speak as to the constitution of the new board, but he took it that later on it would be the duty of the liquidator to call a meeting for the purpose of appointing the new board. He did not think that they could do anything definite that day as to the appointment of directors for the new company. But he was quite certain of one thing, that not only the directors but the liquidator, and everyone else connected with the company, were only too anxious to do all they possibly could in its iuterests. He could not say what the views of Mr. Benham might be as to the new directors. As to the

remarks of Mr. Baker, in reference to the London board not maintaining sufficient control over the actions and expenditure of the colonial people, he must point out that Australia was so very far from this centre that it was impossible to control all affairs out there as they could do at home, but he might remind them upon this point that they had done all in their power to regulate the expenses out there, and as his colleague, Mr. Marks, reminded him, two of the directors went out to Australia at their own expense, three times altogether, for the purpose of looking after the interests of the shareholders, who it did not cost a penny. (Applause.)

Mr. BAKER: What did they do?

Mr. MARKS: They spent their money. (Laughter and Hear, hear.)

The CHAIRMAN said there was no further business before that meeting, but they would have to hold a confirmatory meeting in due course according to law, which would be subsequently convened.

Mr. BAKER begged to propose a vote of thanks to the chairman for his conduct in the chair that day.

Mr. BENHAM seconded the motion, which was carried.

The CHAIRMAN, in acknowledging the compliment, said he was very much gratified at the unanimous manner in which the scheme proposed by the directors that day had been received. The shareholders' committee had worked very cordially with the directors, they having only had

ONE INTEREST AT HEART,

namely, to carry out the re-construction of the company, and he believed that when that re-construction was carried through, they would prove very successful, and be giving good returns to the shareholders. (Cheers.)

The proceedings then terminated.

TRANSVAAL ESTATES AND DEVELOPMENT CO., LIMITED.

A STOCK EXCHANGE QUOTATION TO BE APPLIED FOR.

AN extraordinary general meeting of the shareholders in this company was held at the Offices, 27, Broad Street Avenue, London, E.C., on Wednesday, May 7, for the purpose of altering the articles of association to meet the requirements of the Stock Exchange in order to obtain an official quotation.

Mr. G. M. Kiell

presided.

Mr. RUSSELL DAY (secretary) read the notice convening the meeting.

THE DISADVANTAGES OF NOT HAVING A QUOTATION.

The CHAIRMAN: Gentlemen, I think the notice which has been sent out to the shareholders sufficiently explains the object we have in calling you together to-day, and, therefore, very few words will be required from me to recommend these resolutions for your acceptance. We have long felt the disadvantage of not having an official quotation on the Stock Exchange list, and we have been unable to obtain one, in the first instance, because when the company was formed we did not comply with the hard and fast rules of the Stock Exchange committee, which required that two-thirds of the capital should be applied for and allotted to the general public. At that time the vendors of the property to this company were all of opinion that they would rather have shares than cash, and in that opinion subsequent events showed they were right, and notwithstanding what has taken place with regard to the present value of the shares, I still think it is right. The time has now arrived, however, when the shares having been absorbed to a large extent by the public, we are in hopes that in complying with those requirements we shall be able to get placed on the official list, which will be a great advantage to the company. I beg to move, "That article 7 be altered by inserting the words 'or lent upon the security of,' after the words 'purchase of' in the last line."

Mr. GORDON seconded the motion, which was carried unanimously.

The CHAIRMAN then moved, "That article 25 be altered by striking out the words 'either of fixed amount, or regulated by the amount of dividends from time to time to be paid by the company, or its net divisible profits or otherwise.'"

Mr. BATTINSON seconded the motion, which was carried unanimously.

A vote of thanks to the chairman closed the proceedings.

THE GOLDFIELDS OF SOUTH AFRICA, LIMITED.

EXHAUSTIVE STATEMENT ABOUT THE COMPANY'S AFFAIRS, WITH MANY SIDE-LIGHTS ON AFRICAN AFFAIRS.

AN extraordinary general meeting of the Goldfields of South Africa, Limited, was held at Winchester House, Old Broad Street, on Thursday last, in order that certain special resolutions might be proposed. Should the resolutions be passed by the required majority, with or without modification, they will, the notice stated, be submitted for confirmation as special resolutions at a second extraordinary general meeting, to be summoned hereafter.

Mr. Thomas Rudd

presided.

Mr. HENRY D. BOYLE (the secretary) read the notice calling the meeting.

The CHAIRMAN said: Gentlemen, the object of our meeting to-day is to approve the agreement entered into by the managing directors of our company with Messrs. Johnson, Heaney and Borrow, and to increase the capital of the company.

THE FIRST RESOLUTION BEING AN EXCEEDINGLY FAVOURABLE ONE FOR THE COMPANY,

will readily commend itself to you. The second may not perhaps at first sight appear to be equally acceptable, but by referring to the history of the company we hope to show you that this resolution also is advantageous to the company. The first question that you will probably ask is, who are Messrs. Johnson, Heaney and Borrow? secondly, why not carry out the arrangements with them by realising some of the existing assets of the company? Dealing with the latter proposition first, I will detain you a few moments while I review the history of our company. In the first place, let me state that it is the opinion of the managing directors that the present capital of the company is fully represented, and that the holdings in the British South Africa Company, the Matabele Concession, and in diamond mining companies, afford ample prospects of fair distributions of dividends for some time to come. The directors, however, feel it their duty to submit to the shareholders offers of what they deem really first-class business, although such offers may involve some increase of the capital. It has always been the policy of your directors to endeavour to arrange so that the capital subscribed by shareholders is represented by securities of undoubted value, bearing interest, and they prefer to apply the reserves of profits to the more speculative class of business rather than to trench upon capital, so that at the worst the board could always account for the subscribed capital of the company to shareholders. To illustrate this I would remind you that the company was formed some four years ago to invest in

GOLD MINES IN THE WITWATERSRANDT,

and although the company were not, perhaps, as fortunate as others in securing first-rate properties, the board at least have succeeded in paying good dividends, viz., 32½ per cent. in cash up to June 30, 1889, and a distribution of shares equivalent to 50 per cent. for the year ending June 30, 1890, and the company still have a considerable holding in the Transvaal, which, coupled with the investments in diamond shares, fully represents the original capital, that is, 250,000*l*. The last issue was made, as you will remember, for the purpose of developing the Matabele Concession, and for acquiring interests, under the charter granted to the directors of the British South Africa Co. This issue you gentlemen made a handsome profit out of by compelling the directors to issue the shares at par, against our distinct advice, as we had offers at the time to take the whole of the issue at 3*l*. per share. Had you not forced our hands then, and helped yourselves, there would have been no need for us to come to you now. We foresaw the great developments which must take place in British Zambesia, and wished to be first in the field with capital to secure the best business; however, this portion of the capital is now represented, in the opinion of the directors, many times over by the company's vast holding in the Matabele Concession, and the British South Africa Co. I have endeavoured to point out to you that the object of your directors is to keep the capital of the company on a sound basis, and only enter into rather more speculative business with the reserve of profits we have behind us, and I think you will agree with me that this is a sound policy, and one which must ultimately prove the wisest, and which will cause the company to be regarded as a sound and substantial one.

TURNING NOW TO THE AGREEMENT,

which we ask you to ratify, and the heads of which our solicitor will give you when I have concluded, you will doubtless desire to know who are Messrs. Johnson, Heaney, and Borrow? Well, gentlemen, we believe them to be, first of all, capable business men, well acquainted with Mashonaland and with South Africa generally, and who now have a transport business and a good deal of the trade of Mashonaland, and are thus brought intimately into contact with the prospectors there, and more important still, they were the leaders of the original pioneer force which first occupied Mashonaland, and Messrs. Heaney and Borrow are still resident in that country. These gentlemen contracted to make the Selous Road, and transported the Chartered Co.'s expedition to Fort Salisbury. On the disbanding of the force, when pioneers, numbering over 200, were set at liberty to seek for the gold they believed to be there, they left in parties, Messrs. Johnson loaning among them many of the numerous waggons, oxen, &c., which transported the pioneer force. These pioneers consequently came into contact with Messrs. Johnson and Co., and they were thus enabled to remain in touch with this large body of prospectors seeking for reefs throughout Mashonaland. By these means, in addition to pegging out numerous claims on their own account, Messrs. Johnson were able in many important instances to obtain various interests through these prospectors, and they are in a position to know of any good discoveries which are made in that country. It would weary you too much to give you in detail the numerous interests which Messrs. Johnson and Co. have thus acquired in Mashonaland, but to put it shortly, they have about two-thirds of 955 claims, spread over different reefs in different parts of Mashonaland. They are divided up into some 70 blocks on some 33 reefs. I have in my hand details of work done and the position of each, but let it suffice to say now that Mr. C. D. Rudd, in writing to me, says:—"The latest gold news is, I may say,

ALMOST SENSATIONAL.

Borrow (that is our man) is down 100 ft. on two reefs, and writes of well formed reefs, 8 ft. wide, showing visible gold throughout;" and the managing directors, in writing to the board, state:—

"They are now in possession of private letters up to Feb. 27 last, which give sufficient specific news of the developments done, even during the wet season, to make them sanguine that Mashonaland will turn out the finest reef country in the world. This promising private news is fully confirmed from outside official sources."

The broad basis of the agreement with Messrs. Johnson and Co. is that a company is to be formed having a capital of 200,000*l*., of which 100,000*l*. is to be handed in fully-paid shares to Messrs. Johnson and Co. for the whole of the assets of their firm, as they stood on Jan. 14 last, while the Gold Fields of South Africa are to put in the claims obtained by the Cock and Cherry expeditions, and undertake to subscribe 100,000*l*. working capital for which they are to receive 100,000 fully-paid shares, thus uniting the interests of the Gold Fields of South Africa with Messrs. Johnson and Co., and receiving half share of the profits of the united undertaking. The assets which Messrs. Johnson and Co., bring into the concern on their part, besides the numerous claims and interests to which I have already referred, consist of plant valued at 40,000*l*., consisting of over 1,000 oxen and horses, 80 waggons, iron stores, saw mills, flour mills, corn crushers, ploughs, an engine, steamer, a Fraser and Chalmers battery, a large quantity of general stores and plant, with grants of land in Bechuanaland, and generally, all properties or rights of whatever

nature or kind soever acquired by the firm of Johnson, Heaney, and Borrow, up to Jan. 14, 1891. So much for

WHAT THE NEW COMPANY WILL ACQUIRE

from Messrs. Johnson and Co., but the value of the agreement with them does not stop there, as you will see at once that it would be impossible for our managing directors to exercise much personal supervision, as far as residing in Matabeleland and Mashonaland is concerned. It therefore becomes of great importance to secure the services and goodwill of three persons like Messrs. Johnson, Heaney, and Borrow, and the agreement with them consequently provides that the managing director of the company shall be Mr. Johnson, while Messrs. Heaney and Borrow shall remain in Mashonaland as local managing directors. To preserve control of the company to the Gold Fields of South Africa it is provided that the board shall consist of Messrs. Johnson, Heaney and Borrow, and the managing directors of the Gold Fields of South Africa, who will have power to vote any purchase, work, or appointment, made on behalf of the company, of which they shall individually disapprove. It will be seen from this that while Messrs. Johnson, Heaney and Borrow conti nue to work for us, they do so

UNDER THE CONTROL OF THE MANAGING DIRECTORS OF THE GOLD FIELDS OF SOUTH AFRICA.

I will not detain you further in reference to the details of the agreement, which you will hear from our solicitor, but will conclude this portion of my address by saying that I think it will be hard indeed for the Gold Fields of South Africa if in acquiring interests in all these, the first selected claims in Mashonaland, we have not acquired for the company something which will yield a handsome return on the money we ask you to provide. As regards the agreement, your managing directors, who have so well conducted the work of the company in the past, strongly recommend it for your acceptance, as, in their words, it entails comparatively little risk, with almost unlimited possibilities of profit, and places at their disposal the undivided services of men of proved energy and intelligence, in a district in which they themselves cannot personally reside. In conclusion, I suppose the subject next to the fact of our having acquired so important an interest for the Gold Fields of South Africa is, at what price the directors propose to make the present issue ; we propose to make it at 1*l.* premium, and it will be so arranged that these shares will only be called up—premiums and calls *pro ratâ*—as the money is wanted, and that they will not rank for dividends until the beginning of our new financial year, on July 1 next. In addition to the sum required for the Johnson, Heaney, and Barrow agreement, we have a contingent obligation by virtue of our interest in the Matabele Concession, which will probably amount to 55,000*l.*, for the construction of the extension of the Northern Railway, and the managing directors of the company look upon this as a necessary and not undesirable investment. And your directors consider that ample opportunity will be afforded for the further investment of any surplus in connection with the Johnson Company, and subsidiary companies in Southern Zambesia. Gentlemen, in conclusion, it is the opinion of the directors that the managing directors have, in the Johnson agreement, secured prospects of splendid business for the Gold Fields of South Africa, for which

THE HEARTY THANKS OF ALL SHAREHOLDERS ARE DUE,

and the board ask you to testify your appreciation of their services by unanimously passing the resolutions which we have put before you. I will now ask the solicitor, to explain the heads of the agreement which it is proposed to adopt, and I beg to move (1.) "That the agreement, dated Apl. 10, with Messrs. Johnson, Heaney and Borrow, the purport of which has been explained to the meeting by the chairman, be and is hereby approved, and the directors are hereby authorised to take all such steps as may be necessary for adopting and giving full effect to the provisions thereof in the interest and on behalf of the company." (2.) "That the capital of the company be increased to 500,000*l.* by the sanction of 130,000*l.* additional shares of 1*l.* each."

The SOLICITOR then read in detail the agreement, but his remarks are too long for publication, and are fully and concisely expressed in the following *resumé* of the directors, viz. :—

"The objects for which the meeting is summoned are : 1. To approve an agreement entered into with Messrs. Johnson, Heaney and Borrow by the managing directors on behalf of the Gold Fields of South Africa, Limited. The full text of this agreement, which is now on its way to England, will be laid before shareholders at the meeting. In the meantime the directors have to report that the object of the agreement is to unite the interest of the Gold Fields of South Africa, Limited, in Mashonaland with those of Messrs. Johnson, Heaney and Borrow, and to develop the same, and to acquire further interests by the formation of a company, and to provide such company with a working capital of 100,000*l.*, which working capital it is arranged that the Gold Fields of South Africa, Limited, shall wholly subscribe. 2. To increase the capital of the company. This becomes necessary to meet the above-mentioned subscription of shares, and to place the directors in a position, if necessary, to contribute to the construction of the Vryburg-Mafeking Railway. It is the opinion of the managing directors that any balance can be very profitably employed in Mashonaland. It is proposed to issue

ONE NEW SHARE FOR EVERY THREE NOW HELD

pro rata to the shareholders, including the holders of founders' shares, at such premium as the board may determine. This will absorb 123,333 shares of the new issue, leaving 6,667 shares in reserve, to be issued as required, at the discretion of the board."

A CORRECTION.

He (the solicitor) also explained that there was a slight alteration to be made in the resolution as originally sent out to the shareholders. In that it was stated that the agreement was dated Jan. 14, 1891, and that mistake, as a matter of fact, had arisen in consequence of a little confusion in the telegram. The real date was Apl. 10, 1891, instead of Jan. 14, 1891, and therefore the resolution that had been proposed by the chairman was amended in that particular, but covered exactly the same ground as the printed resolution.

Mr. FARMER seconded the motion, which he said he had pleasure in recommending to the shareholders, as it had been arrived at by the directors after the most careful consideration for some time past. He felt that progress was absolutely necessary, and that the course of progression must be in the direction of Manicaland and Mashonaland. The present opportunity offered to the shareholders was one that was not likely to occur again. The proposed

CONGLOMERATION OF INTERESTS

must be beneficial to all concerned. The agreement was complete as far as it went, and all that was wanted was capital to bring it to a successful issue. He hoped that the resolution would be carried unanimously, as he felt confident that it would benefit the interests of the Gold Fields of South Africa, Limited. (Hear, hear.)

DISCUSSION.

Mr. FERGUSSON did not for one moment wish to appear to be in opposition to the directors and their proposal, but he thought that the shareholders ought to have received an interim dividend after profits had been made, and as they had not had that dividend he thought that they ought to receive some consideration in another direction, and be allowed to have the new capital at par, instead of 1*l.* premium. (Hear, hear.) If they had had an interim dividend, he thought that it would have been right to have issued at a premium, but as they had not had that divideud it seemed to him that they ought to be allowed to have the new shares at par. (Hear, hear.)

The CHAIRMAN said that he had better reply to that question at once, and he could tell the shareholders that the managing directors were

VERY MUCH ANNOYED

indeed that the last issue of capital was made at par, and they had stipulated, as a *sine quâ non*, that the present issue should be at a premium, otherwise they would not agree to the company participating in the benefits which would undoubtedly largely increase the future dividends paid. (Cheers.) That was exactly the position in which the directors were placed. The managing directors thought that the issue should be made at a higher figure still.

Mr. GODEFROI objected to so large an increase of capital as 260,000*l.*

Mr. OGLE presumed that the directors would not issue so large a sum or ask a premium unless they were confident that they could employ the money to the advantage of the company. (Applause.)

The CHAIRMAN : Hear, hear.

After further discussion.

The CHAIRMAN said that they were contented on that board to accept the advice of the managing directors of the company on the other side, who it must be conceded had done exceedingly well in the past (hear, hear), and he believed would continue to do so in the future. (Hear, hear.) The point really was, were they going to continue to have confidence in their managing directors or not. If they believed, and were contented that their managing directors had done good service in the past (as they had done), well and good ; let them continue to do so in the future. If not, the matter was in the hands of the shareholders ; they could reject the resolution, and carry on the affairs on a different basis.

Mr. GODEFROI thought that if the managing directors in Africa were so powerful they should have given further information for the benefit of the shareholders on the present matter.

The CHAIRMAN repeated that the board had perfect confidence in the managing directors, and were acting upon their advice.

Mr. BRENT asked whether it would be the intention of the board in the new issue of shares to issue fractions of shares. The holdings of shareholders, he believed, were generally in multiples of 10 or 5, while the division proposed was one share in three, and this, he thought, should be met by the issue of fractions of shares, say two shares for each five held. He also wished to know if the founders were to have any special privileges in the matter.

After remarks from other shareholders,

Mr. H. E. M. DAVIES said that he had been asked by the chairman to reply to some of the questions that had been put, and, first of all, on the point of further information and the allowing shareholders to see the agreement prior to the meeting ; he would like to state that the agreement only arrived by the mail on Monday last. The meeting was convened upon the receipt of the telegraphic advice from the managing directors on the other side, who had advised the board upon this side that it would be advantageous to use all expedition in convening the meeting. He wished next to deny that the directors on this side were in any way "the tools" of the managing directors on the other side. The directors were

SENSIBLE BUSINESS MEN,

who realised the advantage and benefit to be derived from the agreement submitted by the chairman, who, therefore, recommended it for the acceptance of the shareholders, the total amount, as he understood it, that the company could be committed to in respect to the railway was 55,000*l.* As to benefits to directors from the new issue of capital they would have no benefit or advantage over ordinary shareholders, none of them being founders.

THE MANAGING DIRECTORS WERE READY AND WILLING TO SUBSCRIBE FOR THEIR PROPORTION OF NEW CAPITAL AT THE PRICE OF 1*l.* PREMIUM.

The founders and managing directors would hold the same position in regard to their profits in the new capital as in the old. He strongly advocated the scheme.

The CHAIRMAN said that as to the remarks made in reference to the fractions of shares, he did not see that there would be any difficulty in the way if a reasonable suggestion was offered, but he could not go into the matter now.

Mr. OGLE thought that the replies that had been given to the various questions were quite satisfactory, and had so cleared the ground that they might now proceed to the vote. (Hear, hear.)

The CHAIRMAN put the resolutions, which were duly carried.

The meeting then separated.

RUBY MINING CO., LIMITED.

PROPERTY BEING DEVELOPED BY TRIBUTERS—PROSPECTS GOOD —HUSBANDING RESOURCES.

THE ordinary general meeting of the shareholders of the Ruby Mining Co., Limited, was held at the Cannon Street Hotel, on Tuesday, Apl. 28.

Thomas Dickson Esq.,

presided.

THE SECRETARY ABSENT THROUGH ILLNESS.

The CHAIRMAN: Gentlemen, before proceeding to the business of the meeting, I have to remark that our secretary, Mr. J. Forster Hamilton, who has been identified with the company for a long period, has been unwell for some considerable time, and we have given him three months leave of absence to try and recover himself. He has proved himself a very valuable servant to the company, and I regret he is not here. I trust, however, that he will soon be better; meanwhile, Mr. Robinson is acting for him. The list of shareholders is here on the table for anyone to inspect who wishes to do so. The number of shareholders now on the register is 673.

Mr. ROBINSON then read the notice convening the meeting, and also the minutes of the previous meeting, which were duly confirmed. The directors' report was taken as read.

A BRIGHT OUTLOOK.

The CHAIRMAN: Gentlemen, this is the first meeting that we have had in the re-constructed company, and I regret that we have not a more satisfactory or more prosperous report to place before you. The weekly reports that come to hand are posted up in the Stock Exchange, and published in the financial and mining papers, so that everyone can see exactly how things are progressing at the mines. Every time the board meet we read over the reports from our executive on the other side, and from the mine manager, and there is not one single week in which we do not turn something out of the mine. There are, as you may be aware, many mines in which people invest their money which are of a highly satisfactory character, because ore is continually being extracted from them in large quantities and considerable profits are made. There are other mines which are very soon perceived to contain no ore worth working for, and these are generally wound up. Our property, however, is not one of the latter class; and although we cannot claim to be in the first rank, yet we are always getting ore—not a week passes without our finding some—and we are led on by strings and seams from one cave to another, continually hoping to burst into some of those big caves in which large quantities of ore are found in the limestone formation, and thereby to do something very satisfactory for our company. That we are of this sanguine temperament is not singular, for this reason: Although we had every confidence in Mr. Fraser, the mine captain, and our executive there, we thought it advisable, after the re-construction, to have the best advice as to working the mine properly in the future, and we employed Mr. Hooper, of the well-known mining firm of Messrs. Bewick, Moreing and Hooper, of this City and San Francisco, to go up to the property and from time to time report upon it. This he does, and his reports are very encouraging. He is always of opinion that we possess a valuable property, and that sooner or later we must come upon something which will retrieve our past misfortunes, and put us all right again. He makes

ONE VERY STRIKING REMARK

to which I should like to draw your attention, namely, that in close proximity to one of our principal mines (the Lord Byron) there is the celebrated Diamond Mine—the richest mine in all that district. It lies alongside our Lord Byron Mine, and on the same strata; and it is towards that that we are now projecting our tunnels, and we hope and trust to meet with the same success as our neighbour has met with. To do this, and to facilitate our working, we have, as mentioned in our last report, bought an air compressor, which we were able to get on very moderate terms and in good condition, and with this air-compressor and drill we are working as fast as we possibly can towards the place where we think a body of ore will be found which will pay us well. In the Lord Byron what ore we have found has always been of a rich character. In this respect it is different from the Bullwhacker and other mines—it has always been rich in gold and silver, but, unfortunately, we have not had the quantity that we should like to get. As you are all aware, we

WORK THE MINES BY TRIBUTE.

In this way the whole of our property is being worked, and it is undoubtedly the best and cheapest method of developing it. The tributers give us a portion of the ore raised, and they do all the work. If you look at the accounts you will find that even as it is now the output of ore has very nearly balanced the expenses, and if certain charges in the accounts, which will not occur again—notably 420*l*. for legal expenses incurred in the re-construction of the company—were eliminated, you will see that it would take very little to turn the scale, and enable us not only to meet expenses, but put us on the road to something better. The very severe winter has been a great drawback to us, as it has to all mines in America situated in the high mountain districts, such as Nevada and Colorado. It has prevented the transport of ore from the mines to the furnaces, and the furnaces themselves stopped working. The output has, therefore, been much restricted. I may remind you that we are working

IN THE LIMESTONE FORMATION,

which is full of large caves. It is so dry that there is no chance of floods, and the various levels are now in a better state for working than they have been in for a considerable time past, on account of the ventilation being very much improved. A neighbouring mine has connected with one of our tunnels, and has thus allowed the fresh air to get into our mine. This will be of great benefit to the workmen in the 700 and 800 levels, where they are working now, and we intend to go down to the 1,000 level, where Mr. Hooper thinks we shall probably touch the Diamond strata. The report from Mr. Fraser, just to hand, will be interesting to you, and I will therefore ask the assistant-secretary to read it. (Mr. ROBINSON read the report referred to.) The chairman then formally moved the adoption of the directors' report and accounts.

Lieut.-Genl. J. WALPOLE D'OYLY (director) seconded the motion.

Mr. ARTHUR HEIRON: What is the amount of uncalled capital at our disposal, and is it contemplated to make a call in the immediate future?

The CHAIRMAN: About 3,000*l*. is the amount of capital not called up.

A BUSINESS-LIKE VIEW.

Mr. HEIRON: I must confess when I had this report placed in my hands I was a little disappointed with its contents. Since I have heard your remarks, however, I think we are not in such a bad way as one was tempted to believe. In mines of this description there is a great deal in the way of chance and luck. You are not working fissure veins, or contact veins, and until you find caves, or bodies of ore, you cannot expect any results. And yet I agree with you that it would be impossible to find the ore that we are finding in almost every direction on our property if there were not large chambers in the immediate vicinity. The shareholders must, therefore, wait and see if, during the time their finances hold out, any of these bodies are struck, and that was the reason why I desired to know what sort of a run we should have for our money. I notice the output of ore very nearly balances the expenditure, and if you can keep the mine running on for another two or three years in the steady way you are doing now, without embarking in any great expenditure, I think you have a good chance of finding something which will pay you for your efforts. The general expenses seems remarkably low, and I assume by this that you are not paying your manager the salary that we generally consider is due to a mine manager. I take it that it is an increased allowance to the foreman for undertaking the position, because I do not think any manager of standing would accept a post at such a nominal fee as that stated. I am sure, however, we all desire to leave ourselves in your hands, but, as our money is limited, I hope that the development of the mine, while not unduly restricted, will be kept within those limits that will give us a fairly long life, because if you order developments on a large scale it will not take long to expend our 2,000*l*. or 3,000*l*. If, however, you continue to adopt the system of getting tributers to work the bulk of our property, it is quite possible that our means will not be exhausted before we obtain the desired end. (Cheers)

CRITICISM.

Mr. COOKE observed that they appeared to be working simply for the benefit of the officials of the company, and the shareholders were getting nothing. He complained of the heavy expenses, and particularly of the item of 420*l*. for legal expenses.

Mr. SNELL (solicitor) stated that nearly half that amount was for costs out of pocket in connection with the registration of the new company and the winding up of the old.

The CHAIRMAN said he had as great a repugnance to paying legal fees as anybody could have, but still they had to be paid sometimes. Economy was, however, strictly adhered to in this as in all other matters.

Mr. COOKE thought the amount excessive, and moved that the solicitors' bill be overhauled by some competent shareholder or shareholders.

The CHAIRMAN said the motion must come as an amendment to the resolution before the meeting.

A RECENT VISITOR TO THE MINES.

Mr. CHARLES W. C. HUTTON (director): Permit me, Mr. Chairman, to say a word or two, as I am pretty conversant with the affairs in Eureka. The difficulties we are subjected to there mainly arise from a number of utterly unprincipled persons, who "jump" a claim, or take a claim, and they run us into expenses, having nothing to lose themselves. In order to avoid this constaut annoyance we have retained a counsel named Mr. Baker, a leading man in the neighbourhood, at a fee of 125*l*., and I think he has been instrumental in saving us 1,000*l*. To show you the benefit we derive from this arrangement, while I was over there a man "jumped" a claim, and brought an action against us, but as soon as he saw that Mr. Baker was on our side he drew off, and had to pay all expenses. If you compare the general expenses with those of a year or two ago you will find that they are larger were then instead of smaller. I was entrusted by the board to go over there and discharge the old staff. I went, and I was very pleased indeed to find so reliable and thoroughly good a man as Mr. Fraser to undertake the management. You have in him

A THOROUGHLY RELIABLE AND HONEST MAN.

Of course he cannot make the ore if it does not exist, and if you had been as much into limestone as I have you would know it.

Mr. HEIRON: From what I know of our directors, I am quite sure that they would not conscientiously pass any bill that they did not think fair and just. (Hear, hear.)

The amendment not finding a seconder, the resolution proposed by the chairman was carried, with two dissentients.

The CHAIRMAN: I am very much obliged to Mr. Heiron for his remarks. We are continually endeavouring to husband our resources, for we know that if we lose all blood we will become a corpse. (Laughter.)

FORMAL BUSINESS.

On the motion of the CHAIRMAN, seconded by Mr. HUTTON, Mr. William Bellingham was re-elected a director.

On the motion of Lieut.-Genl. J. W. D'OYLY, seconded by Mr. ISAAC SEAMAN, Mr. Hutton was re-elected a director."

Messrs. W. B. Peat and W. Russell Crowe were appointed auditors for the ensuing year, and the meeting closed with a vote of thanks to the chairman and directors.

THE Middlesborough Town Co. have received official information that the large tannery works in Middlesborough, Kentucky, have just started and are now in full swing.

MONTANA CO., LIMITED.

MONTHLY RETURN.

THE secretary of the Montana Co., Limited, begs to state that the following information has been received by cablegram from the resident director at the mine :—Total weight of ore crushed during April, 6,210 tons ; yield from the mills, $70,000 ; working expenses for the month, $52,800. N.B.—The estimated number of ounces contained in returns by assay being, gold, 2,607 ozs. ; silver, 12,480 ozs. Mr. R. T. Bayliss cables that the changes intimated by him at the general meeting, viz., in the management and pan treatment of the ores, are now (May) in operation and that the working expenses will in consequence be materially reduced.

AMERICAN BELLE MINES, LIMITED.

May 7.—Silver Bell : The managing director cables, under date of the 6th inst. :—"Shipped 8 cars, about 80 tons. Railway has only just been opened to Silver Bell."

National Bell : The mine manager reports as follows :—The south end looks much as it did, some ore showing in and around small caves. The quartz is very hard and progress slow. I am cross-cutting now in two directions and both breasts have ore in them. The shaft was sunk 60 ft. last month, and 75 ft. of drifting done during the month, working by hand. I had to stop compressor on account of fuel. Excuse brevity of this report as I am laid up with *la grippe*. Hudson Mine : The following work has been done on the Hudson for the month of March :—Shaft sunk, 28 ft. with nine men ; drifting 86 ft. with four men. We had a very hard piece of ground in the shaft during the entire month, and the progress was very slow until the last two days, when we got through it into very fair breaking ground. I expect to begin drifting in No. 3 level about the 9th or 10th of this month. The ore body in No. 2 level has been opened up a little over 20 ft. in length, and the ore looks very good.—MCNEILL, Secretary.

NEW GUSTON CO., LIMITED.

MINE CONTINUES TO OPEN OUT WELL.

May 4.—A cable has to-day been received from the mine superintendent to the effect that the No. 7 level, driven to intersect the main ore shoot, has just entered ore, and that it looks well. He also states that between Apl. 27 and 30 he had shipped 32 cars (about 320 tons) of ore, the value of which will follow as soon as ascertained. Mr. Harvey, under date Apl. 14, reports on the mine, viz. :—No. 3 level : The south drift has been driven 10 ft. We have driven a cross-drift east 15 ft. Here we have met with a streak of medium grade ore 18 ins. thick, and anticipate the ore will improve in value. No. 5 level : Winze, 70 ft. from Robinson boundary : We have been raising good ore from this point, but have now suspended operations to work this ground from No. 6 level. Raise to midway drift and boundary back stope : These points look well, and are in good shape for shipping ore. Winze at old No. 5 stope : Winze sunk 11 ft. 6 ins. ; total depth, 40 ft. 6 ins. The dimensions of ore chimney have not yet been determined, the immediate object being to communicate with the stope on the ore-body at No. 6 level. The winze (size 5 ft. by 7 ft.) is being sunk entirely in solid ore, yielding from 80 ozs. to 500 ozs. silver per ton. No. 1 winze north level : Winze sunk 16 ft. ; total depth, 42 ft. 6 ins. In sinking we have frequently met with layers of porphyry, but the grade of ore improves. Some ore extracted being worth from 150 to 200 ozs. of silver per ton, with an improved value for copper. No. 6 level—No. 6 ore body.—We have a fine stope of shipping ore at this point. North level : Level extended 36 ft. 6 ins. ; total distance driven 62 ft. We have approximately 23 ft. more to drive to get under the winze which is being sunk from No. 5 level north of the shaft. No. 7 level : No. 7 level has been driven 49 ft. ; total distance driven 120 ft. The mine continues to look well.—BEDFORD MCNEILL.

YANKEE GIRL SILVER MINES, LIMITED.

May 7.—Shipments : A cable received this morning from the general manager is to the following effect :—"Have shipped 41 cars (about 410 tons) since re-opening of railroad to the mine. Value of ore will follow as soon as ascertained."

Mr. Harvey's monthly report dated Apl. 18, is as follows :—Yankee Girl.—No. 4 level.—North ore body stope : Height of stope over back of level 18 ft., length, 29 ft. ; average width of ore 18 ins. ; value of ore, 70 to 100 ozs. of silver per ton. Orphan Boy : Height of stope 66 ft. ; length 60 ft. ; average width of ore 4 ft. ; value from 80 to 120 ozs. of silver per ton. No. 5 level—Yankee Girl : The stope from 5½ level south of shaft is now 18 ft. over No. 5 level ; length of stope 22 ft., average width of ore 10 ft. ; rich Stromeyerite ore (a rich ore composed of sulphide of silver and copper) is frequently being met with ; the stope looks well. No. 6 level—north-east drift : This drift has been driven 85 ft. ; total length driven 220 ft. ; the ground is becoming more favourable in mineral. Yankee Girl—No. 6 stope : Length of stope 66 ft., height 36 ft., average width of good shipping ore 15 ft. There is considerable Stromeyerite mixed with the ore throughout the stope ; this point looks well. Six-and-a-half level, winze : about 45 ft. below No. 6 level, south, a drift has been driven north-east 20 ft., and communicated with an old stope from No. 7 level. Some fair shipping ore, carrying a high percentage of copper, has been met with. No. 7 level—south-west drift : Two cross drifts have been driven, one north-west 24 ft., the other south-east 19 ft. At these points there is a mass of copper ore, yielding from 12 to 93 ozs. silver, and gold ½ oz. per ton. It also contains, by assay, 17½ per cent. of metallic copper. East drift : Operations have been suspended here for the time. No. 8 level—west ore body : Over the back of this level a stope has been worked during the past four weeks. Height of stope 13 ft., length 20 ft. Ore distributed for 10 ft. wide. Value from 30 to 50 ozs. of silver per ton. Copper 15 per cent. No. 9 level : A drift has been driven west 30 ft. ; nothing of importance has yet been met with. Shaft : The water is being kept a few feet below No. 9 station. Robinson Mine.—No. 2 level : South drift has been driven 28 ft. through good shipping ore, averaging from 1 to 2 ft. thick ; width of ore in the forebreast, 2 ft. ; value from 40 to 80 ozs. of silver per ton. South-east drift : This prospect drift has been extended 48 ft. ; total length driven, 85 ft. Fair shipping ore has been met with. South drift.—No. 1 stope : Height of stope, 70 ft. ; length, 94 ft. Ore varies from 1 to 6 ft. thick ; value, from 30 to 800 ozs. of silver per ton. The stope looks well. South drift.—No. 2 stope : Length of stope, 45 ft. ; height, 50 ft. The stope has considerably improved ; since my last some fair shipping ore has been encountered. No. 3 level, south drift : Drift extended 35 ft. ; thickness of ore in forebreast, 2 ft. ; value 100 ozs. of silver per ton. South drift—No. 1 stope : Height of stope, 75 ft. ; ore up to the base of No. 2 level ; length of stope, 24 ft. This stope has revealed good ore, standing on the east side of No. 2 south level. South drift—No. 2 stope : There is no change to report. South drift—No. 3 stope : Near the face of drift, a stope has been worked for an height of 13 ft., length 20 ft. ; ore met with from 1 to 2 ft. thick of fair shipping quality. No. 4 level—south drift : Drift driven 23 ft. ; total length, 118 ft. ; concentrating ore in the face 18 ins. thick. North drift—stope : Length of stope 50 ft., height 15 ft. ; ore from 1 to 2 ft. thick ; value from 30 to 100 ozs. of silver per ton. No. 5 level : Cross drift extended 108 ft. ; total length driven 183 ft. Recently the "ore break" was met with at this point, but has not been cut into sufficiently to report on. Plant and machinery : The surface plant and machinery are in good working order.—B. MCNEILL, Secretary.

GOLDEN LEAF, LIMITED.

SATISFACTORY RETURN.

THE secretary of Golden Leaf, Limited, begs to announce the following telegram received from Mr. J. Henry Longmaid, the company's general manager :—"During Apl. the mill at Empire worked 60 stamps for 27 days, crushed 4,000 tons, and the yield was as follows :—Bullion, $11,400 ; sundries, $300 ; total, $11,700. The working expenses for the month were $8,500, leaving a profit of $3,200 ; expended on capital account, $2,000."

Mr. Longmaid, in his letter last to hand, gives the following information :—Store at Barnack : I am now looking for someone who can take charge of the store at Empire, and Mr. Haurahan will go east to purchase stock of goods. In the meantime we will either build a store or rent one temporarily in Bannack. The Bannack trade will be in excess of Empire. Golden Leaf plans : At first opportunity I will have plans completed and clearly marked, which, with explanations, will be satisfactory. Electric light plant : I have asked Mr. Tong, at Carlisle, to forward to Bannack, with rest of machinery, also all extras and tools belonging to same. To expedite building of mill, I have ordered all framework of last 20 stamps erected at Carlisle to be shipped, and should our ore supply then warrant it, can go ahead at once, and put in 20 stamps completing pans and vanners, after those required for the first 10 are in good working order. As soon as advisable a millwright will be employed, and he says not more than 90 days should be required to complete mill.

WE have received from Messrs. Dennis and Co., of 11, Billiter Street, E.C., copies of the new issue of tables and data for the use of consumers of wire. The two previous editions were very much appreciated by the trade, and the present one has been issued with additions and improvements, one feature being the tabulated breaking strain, &c., of the "Imperial Standard Wire Gauge."

SECRETARY (*pro tem.*), EDWARD MARSHALL.
TEMPORARY OFFICES: 53, Brown Street, Manchester.

PROSPECTUS.

THIS Company has been formed for the objects mentioned in the memorandum of association and for the purpose of acquiring and developing Six Silver Mining Grants, known as "The Badger State Group," situate in the neighbourhood of the City of Aspen, Colorado.

The Group includes the "Badger State," "Last Effort," "Evening Star," "James," "Tara's Hall," and "John Bull" Grants, all of which are the property of the Company, with the exception of the "James," and one-third each of the "Tara's Hall" and "John Bull," which are held by lease and bond according to the laws of the State of Colorado.

Machinery has already been erected, and a vertical shaft sunk on the "Badger State" to the depth of 300 ft., at which point the existence has been proved of the celebrated Contact Lode of that district, containing branches of silver ore assaying 112 ozs. of silver to the ton, and revealing the same general characteristics of the lode as are presented in the richest mines of the camp.

Capital is now required to continue the sinking of the shaft, with a view to the driving of levels and general development of the lode, and also to the acquiring of other claims.

The City of Aspen, with a population rapidly increasing, owes its prominent position among the mining centres of the United States to the great mineral wealth of the district, which has only been discovered within the last 10 years, and during that period the mining industry has advanced to enormous proportions. Reports as to mining operations in the district appear in the *Mining and Engineering Journal*, of New York, and other American mining papers, from which it can be seen that the Aspen Mines in 1889 shipped 120,750 tons of silver ore, and 147,880 tons in 1890.

Recent developments at Aspen have shown the existence of the valuable mineral lode above referred to, extending for about 40 miles, and so far as has been proved, the ore deposits are richest and greatest in the Aspen and Smuggler Mountains, on the latter of which the grants to be purchased by this Company are situated. These grants are also exceptionally placed as to transit of ores and materials, inasmuch as they are within 2 miles of the Colorado, Midland, and Denver and Rio Grande Railroads, the depôts of which are at the foot of the Smuggler Mountain just mentioned.

Mr. J. Nasmyth Sidebotham, Assoc. M. Inst. C.E. (Messrs. Smith and Sidebotham, Civil and Mining Engineers, Manchester) was employed by the Pitkin (Colorado) Mining and Exploration Company, Limited, to report on the properties which this Company has been formed for the purpose of acquiring, and has recently visited the district; special attention is directed to his enclosed report. It will be observed that Mr. Sidebotham asserts that from personal inspection and searching enquiries he has found that the grants to be purchased by this Company are situated directly upon the great Aspen lode, and form a large property which in the future should prove most valuable, and one of far greater extent than a number of paying mining properties in the district.

Mr. J. Nasmyth Sidebotham also states that he was permitted to examine the private books of one of the neighbouring mines for the past 18 months' working, the profits of which were so consistent and so vast as to be hardly credible.

The Company propose to engage as manager, Mr. William Derry (a Cornishman), who is well acquainted with the district, and has had large mining experience in England, France, and the United States. They also have the offer of the services of a very capable underground Cornish captain, who is at present employed at the mine at Aspen.

It is estimated by Mr. Derry, judging from the results obtained from the neighbouring mines, that the company should be able to produce 50 tons of ore per day, the nett profit on which (after deducting all expenses at the mine, and in the offices) would, it is expected, be £5 per ton at the lowest computation. This would be, for 300 days per year, a nett profit of £75,000, or 75 per cent. on the total capital of the company.

The directors are so satisfied with the prospects of the Company, that they have agreed to take no remuneration until a dividend of 10 per cent. is paid to the ordinary shareholders.

After proper provision for contingencies and reserve fund, and 20 per cent. per annum (non-cumulative) has been paid on the ordinary shares in accordance with the articles of association, the surplus profits will be divided equally between the two classes of shareholders, one moiety to the ordinary shareholders, and the other moiety to the deferred shareholders.

The purchase price to be paid by the Company is £50,042, the vendor agreeing to take at least £45,032 in ordinary and £10 in deferred shares, and the remaining £5,000 in ordinary shares or cash at the option of the Company.

It will be seen that the balance of the issue, £49,858, will provide ample capital for the development and working of the mine and purchase of other claims.

The following contracts have been entered into:—A contract dated the 16th day of March, 1891, and made between the Pitkin (Colorado) Mining and Exploration Co., Limited, of the one part, and Andrew Pattison Smith of the other part, and a contract dated the 30th day of March, 1891, made between Andrew Pattison Smith as vendor of the one part, and Edward Marshall as trustee for the company, of the other part. The vendor, who is the promoter, is to be entitled to retain for his own benefit all profits made by him on the sale to the company, and will pay all preliminary and formation expenses of the Company (including brokerage) up to and including the first general allotment of shares to the public (except the registration fees, and except so far as such preliminary expenses are covered by any contribution made by the deferred shareholders). In relation to these expenses the vendor has entered into various contracts, and there may be other contracts relating to these and other matters. Applicants for shares must be deemed to have accepted the information given in the prospectus as full and sufficient notice and particulars of all such contracts, and to have waived all right to any further notice or particulars thereof, whether under section 38 of the Companies Act, 1867, or otherwise.

Application for shares should be made on the forms accompanying the prospectus, and sent with the deposit to the Company's bankers.

In every case where no allotment is made the deposit will be returned to the applicant in full, and where the number of shares allotted is less than the number applied for the surplus will be credited towards the amount payable on allotment.

Copies of the contracts, the memorandum and articles of association, the report of Mr. J. Nasmyth Sidebotham and the estimate of Mr. Derry may be inspected at the offices of the solicitors to the Company.

Prospectuses and forms of application may be obtained from the bankers, solicitors, brokers, and auditors, and at the offices of the Company.

MANAGER AND ACTUARY,
WILFRED A. BOWSER.

EXTRACTS FROM THE TENTH ANNUAL REPORT.

In submitting their report upon the operations of the Company during the tenth year of its existence, together with the accounts and balance-sheet for the year 1890, the directors congratulate the shareholders on the progress which continues to be made.

ORDINARY LIFE BRANCH.

In this department 1,910 new proposals for the assurance of £214,697 were received, of which 142 proposals for £17,900 were declined, and 1,375 policies assuring £151,345 were issued. The remaining proposals were either not proceeded with, or were under consideration at the close of the year,

In the previous year the number of ordinary life policies issued was 731, assuring £101,368; so that in 1890 there was an increase in new business of 644 policies and £49,977 in the amount assured.

The premium income of this department (after deducting re-assurances) was £25,899 17s. 4d., compared with £23,179 7s. in the previous year, being an increase of £2,720 10s. 4d.

The claims by death amounted to £4,249 0s. 1d., and endowments and endowment assurances to the amount of £8,133 15s. 5d. also matured.

The life assurance (ordinary) fund has been increased during the year to £49,735 1s. 11d.

The second quinquennial valuation of the ordinary life branch, as on December 31, 1890, has just been completed. The result, it may be mentioned, is in every respect satisfactory.

INDUSTRIAL BRANCH.

During the past year 311,972 new policies were issued.

The industrial premium income for the year was £187,139 19s. 11½d., compared with £158,474 9s. 6½d. in 1889, showing an increase of £28,665 10s. 5d.

The percentage of expenses during the past year again shows a considerable decrease on that of the previous year.

The claims by death (including grants) for the year amounted to £78,423 2s. 2d.

The endowments and endowment assurances matured amounted to £11,542 0s. 11d.

This Company shared the experience of all industrial offices in a heavy death rate during the past year.

The life assurance (industrial) fund has been increased during the year to £27,909 0s. 7d.

Satisfactory progress has been made with the preliminary work connected with the quinquennial valuation of this branch. The whole of the staff is engaged in the work, and will be so for some time to come.

ACCIDENT BRANCH.

The number of new accident policies issued was 1,583, compared with 1,703 in the previous year. The reduction in the number of new policies issued arises from the fact that the directors have discontinued a certain class of accident business, the results of which have not proved so profitable as was expected. Notwithstanding the reduction in the number of new policies issued, the new premium income for 1890 was £5,138 5s. 3d., being an increase of 14 per cent. on the new premium income of the previous year.

The accident premium income of 1890 was £12,119 15s. 3d., compared with £10,812 in the previous year, being an increase of £1,307 15s. 3d.

The accident claims were £7,181 11s. 5d., including an unusual proportion of fatal accident cases.

The accident insurance fund amounted on December 31 last, to £4,251 15s. 0½d., which the manager reports is more than sufficient as a reserve fund for the accident liabilities.

GENERAL.

The total premium income of the Company for the year (including £396 15s. consideration for annuities purchased) was £226,001 11s. 11½d., compared with £193,347 0s. 6d. in 1889, showing an increase of £32,654 11s. 5½d.

This large premium income has, through the enterprise of the shareholders, been built up in the comparatively short period of 10 years, a result which, the directors believe, has never been accomplished in the same time by any other British life office.

During the same period upwards of £375,000 has been paid in claims to policyholders or their representatives at their death.

The accounts show that the policyholders have not only ample security for the due fulfilment of the Company's obligations, but all the advantages arising from a large and rapidly increasing business; whilst the shareholders have created a valuable property at a total expenditure well within the amount originally estimated by the manager. All interested in the Company have thus the satisfaction of knowing that the policy which the shareholders have sanctioned is being abundantly justified by the results.

DIVIDEND.

Interest by way of dividend for the past year, at the rate of 5 per cent. on the paid-up capital, has been duly paid; and the directors, with the concurrence of the shareholders, propose to continue that payment.

As soon as the quinquennial valuation is completed, the result will be communicated to the shareholders and policy-holders.

London, May 6th, 1891.

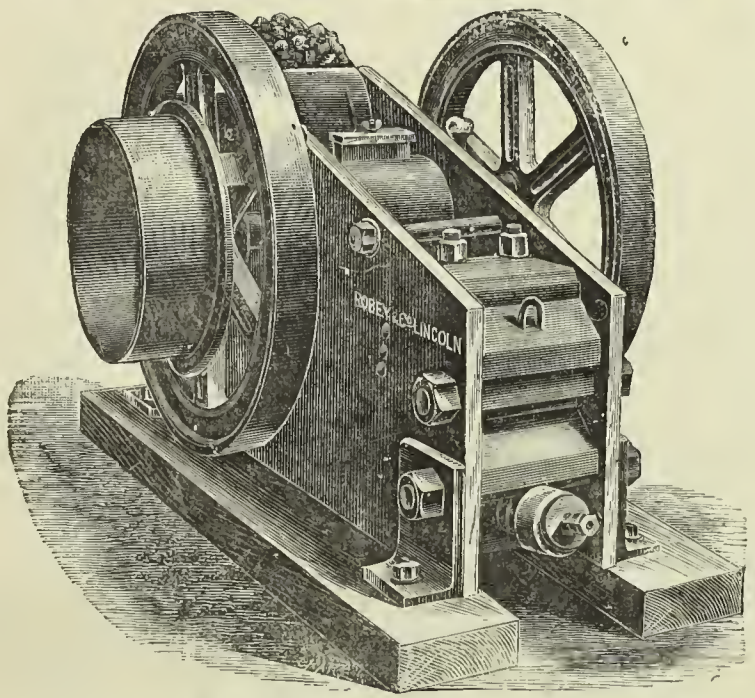
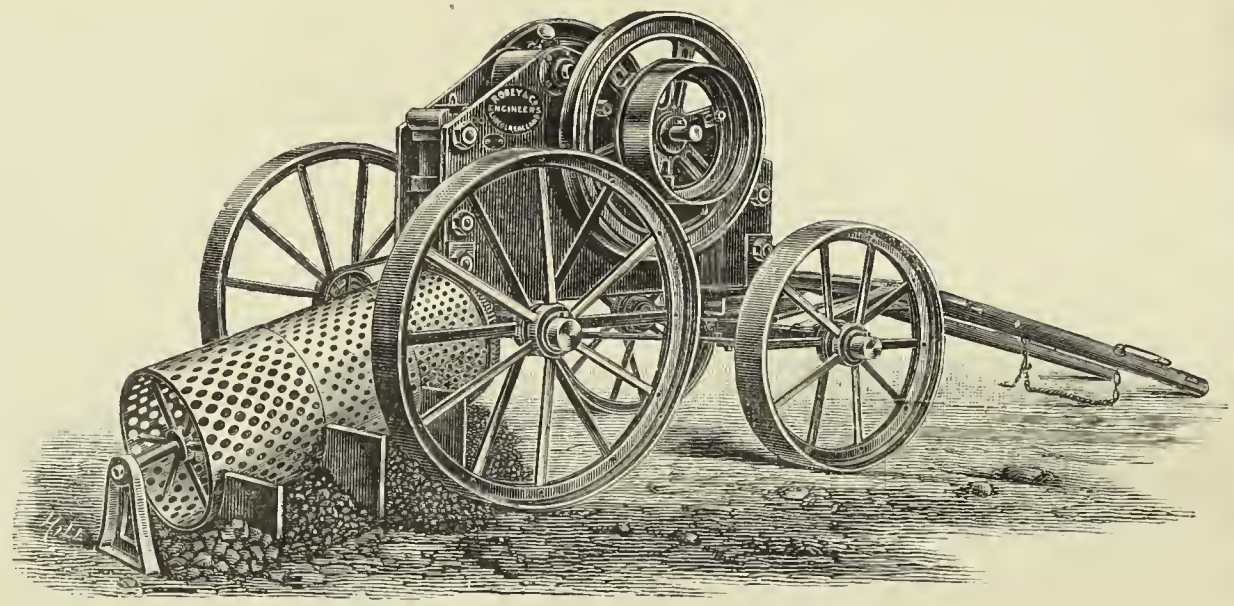
ROBEY & CO., Globe Works, LINCOLN.





ROBEY & CO.'s IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

ROBEY & CO., Globe Works, LINCOLN.

FIFTY-EIGHTH ANNUAL REPORT OF

THE NATIONAL PROVINCIAL BANK OF ENGLAND, LIMITED.

14th MAY, 1891

SUBSCRIBED CAPITAL - £15,900,000.

CAPITAL:

Paid, £2,417,235; Calls Unpaid (since paid), £3,390; Uncalled, £2,879,375; Reserve Liability, £10,600,000; total, £15,900,000.

RESERVE FUND (invested in English Government Securities), £1,626,835 16s. 2d.

NUMBER OF SHAREHOLDERS, 10,075.

DIRECTORS.

CHARLES BARCLAY, Esq.
Right Hon. VISCOUNT COBHAM.
GEORGE HANBURY FIELD, Esq.
MAURICE OTHO FITZGERALD, Esq.
JOHN OLIVER HANSON, Esq.
CLAUDE VILLIERS EMILIUS LAURIE, Esq.
FRANCIS CHARLES LE MARCHANT, Esq.
DUNCAN MACDONALD, Esq.
GEORGE FORBES MALCOLMSON, Esq.
HENRY PAULL, Esq.
RICHARD BLANEY WADE, Esq.
ROBERT WIGRAM, Esq.

JOINT GENERAL MANAGERS.

THOMAS GEORGE ROBINSON, Esq., FREDERICK CHURCHWARD, Esq., and WILLIAM FIDGEON, Esq.

SOLICITORS.

ERNEST JAMES WILDE, Esq. WALTER EDWARD MOORE, Esq.

RICHARD BLANEY WADE, Esq., in the Chair.

The Directors have the pleasure to report that after making ample provision for all bad and doubtful debts, and providing for the rebate of discount on current bills, the profits for the year 1890, including £54,706 14s. 6d. brought forward, amount to £565,048 14s. From this sum the Directors have transferred £25,000 to the credit of Bank Premises Account, and £10,000 to the Bank's Benevolent Fund.

The directors recommend that a bonus of 6 per cent. be paid, free of income tax, to the proprietors in July next (making, with the dividends and bonus already paid, 20 per cent. for the year), and that the balance of £74,892 9s. be carried to the profits of 1891.

The Share Capital issued last year has been fully subscribed, and the amount received for premiums on the sale of the 2,500 unappropriated shares credited to the Bank's Premises Account, in accordance with the last annual report.

During the year Branches have been opened at Warrington and in Finchley Road, Hampstead, both of which will, it is expected, prove advantageous to the Bank and useful to its customers.

In conjunction with the Bank of England and the leading Banking and Financial Institutions throughout the Kingdom, this Bank joined, to the extent of £750,000, in a guarantee in connection with the liquidation by the Bank of England of the estate of Messrs. Baring Brothers and Co., the Directors believing it to be to the general interests of the country that the threatened crisis and consequent injury to credit should be prevented.

The Directors retiring by rotation are Duncan Macdonald, Esq., George Forbes Malcolmson, Esq., Maurice Otho Fitzgerald, Esq.—all of whom, being eligible, offer themselves for re-election.

The Directors regret to have to announce the death of Mr. Roderick Mackay, one of the Bank's Auditors.

In conformity with the Act of Parliament, the shareholders are required to elect the Auditors and fix their remuneration. Mr. Edwin Waterhouse (of Messrs. Price, Waterhouse and Co.), the retiring Auditor, offers himself for re-election.

RICHARD B. WADE,
D. MACDONALD,
ROBT. WIGRAM,
Directors.

T. G. ROBINSON,
F. CHURCHWARD,
W. FIDGEON,
Joint General Managers.

I beg to report that I have ascertained the correctness of the Cash Balances, and of the Money at Call and Short Notice as entered in the above Balance-sheet, and have inspected the securities representing the investments of the Bank, and found them in order. I have also examined the Balance-sheet in detail with the books at the Head Office and with the certified returns from each Branch, and in my opinion such Balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs as shown by such books and returns.

EDWIN WATERHOUSE, *Auditor.*

At the Annual Meeting the Report was adopted, and the retiring Directors were re-elected, and Mr. Edwin Waterhouse, and Mr. William Barclay Peat were elected Auditors for the current year.

The best thanks of the Proprietors were given to the Directors, General Managers, Branch Managers, and other Officers of the Bank, and to the Chairman.

MINING MARKET.

CITY, FRIDAY EVENING.

THE SETTLEMENT AND THE HOLIDAYS DO NOT INTERRUPT THE STEADY FLOW OF BUSINESS—PRICES FIRM AND ORDERS NUMEROUS—RESULTS *v.* PROMISES—OUR "SELECTED LIST."

THE Mining Market this week has been very much in the position of Mahomet's coffin. In its earlier part, attention was chiefly engrossed by the settlement, and in its later part, thoughts as to the Whitsuntide holidays predominated. Still, upon the whole, a fair amount of business has been done, and considering the dual circumstance we have named, it is even in excess of what might have been expected. We take this to be a sign that confidence in mining securities is reviving, and that, with *proofs* of positive success in one or two instances, there will be a sharp and almost all-round rise in prices.

We have italicised the word "proofs," for the simple reason that the day of promises has gone by, and the clock of the mining watch-tower is striking the hour of performances. It is no use for Emma and Flagstaff, not to speak of other concerns, to tell us they have ore on the dump, ore in the levels, in fact. ore everywhere but in the market where it should be. It is of no use for the Professor (with us there is only one professor, and his name is Vincent) to tell us he has seen this ore and measured it, because although all who know him take everything he says as from the mouth of an apostle, the general public who do not know him want to see this ore sold—realised—cashed. So far, Flagstaff and Emma ore has merely been a promissory note ; the time has come when that note must be presented for payment. We say this for the simple reason that the Emma telegram has fixed the date when the snow will have melted, and when the means of shipment will be available ; and what applies to that mine applies equally to Flagstaff. The Professor has been burrowing in the tunnels long enough ; we want to see some of the results of these burrowings on the surface, or, better still, on the market.

The last report from Flagstaff is very encouraging. The manager speaks of a large body of ore being in the immediate neighbourhood of the workings, and, in fact, he is in 96 ft. of it. He mined last week 11 tons of first-class, and 5 of second-class ore.

Then there is that wayward lady, Emma, whose praises have been chanted in a refrain as long as a Gaelic hymn by Mr. Snell, as chief soloist, and Dr. Dunhill, Mr. Hutton, Judge Bennett, and Manager Wallace as chorus. The ore we are told is there and we believe it, but we believe also it is in the wrong place—it should be on the market. It will no longer suffice for these practised singers to warble about the brilliant results of neighbouring companies, for in this case, as in the fish trade, each herring must hang upon its own hook.

Talking of Emma and Flagstaff, we have several letters asking how it comes to pass that the shares have fallen when they should have risen, and how neither the satisfactory prospects of the one mine, nor the glowing predictions, combined with the enthusiastic meeting, of the other, have sufficed to lift prices. The truth of the matter is that causes are sometimes at work which human reasoning is not at fault if it fails to foresee. For example : who was to tell that, owing to the failure of a broker on the Stock Exchange, and the forced realisation of a large block of shares by executors, in two accounts alone, upward of 20,000 Emma shares would be cast helter-skelter upon the market? The wonder is that Emma shares are not lower, and, we think it a proof of the strength of the market that this large number has been so readily absorbed. The broker who failed had also a large interest in Flagstaff shares, but his holdings in both cases have been absorbed, and the market breathes all the more freely now that this is known to be the case. Prices of Emma's have indeed somewhat revived.

We think there is a fair outlook for copper shares, and that present prices are too low. Our readers would do well to keep their eyes upon such concerns as Libiola, Panulcillo, Namaqua and Copiapo. Sulphate of copper is being largely used, not merely for the destruction of the phylloxera, but for other insects that plague agriculture, and also for electricity. When we read of one company alone, in the City of London, laying down 90 miles of copper wire, and reflect that this is but an index of what similar concerns are doing both in this country and abroad, it is evident prices will be well maintained at about 50*l.* a ton, at which all the companies named can give a very good account of themselves to their shareholders. Quebrada declares 10 per cent. for one year on the preference shares and 5 per cent. on the ordinary shares, carrying forward 7,821*l.* Mason and Barry shares fell on the meeting, which was not altogether of a pleasing character, for the directors, who, as we show elsewhere, constitute a very nice family party. According to Sir John Pender the Chili copper production may be expected to re-commence, and the worst of the labour difficulty caused by the withdrawal to the nitrate industries he now considers to be over. Incidentally he made a remark which will hit Col. North under the fifth rib, that as much nitrate has been produced as the world is likely to use for a long time to come.

The feature in the Indian market has been the Mysore and Nundydroog dividends, which have given great satisfaction. One large shareholder has expressed the general feeling when saying "It has fully come up to my expectation." It was 4s. 6d. in the case of Mysore, and 1s. 4d. in that of Nundydroog, and the payments will be made on June 10, with the sure and certain hope of "more to follow."

The report of Callao Bis is very satisfactory, from the only point of view from which it could be namely—that of gold production. Since crushing commenced towards the end of Nov., 14,000*l.* worth of the precious metal has been produced. The average yield per ton has been satisfactory—1 oz. 3 dwts. 8 grs. The original properties of the company are now practically abandoned, and the whole attention concentrated upon the new one, the acquisition of which was a most wise and politic step.

There has been a good deal of inquiry for St. John del Rey shares, and though prices have not altered, the fact we name is some indication that the circumstances connected with this company, which we have so long proclaimed from the housetops, are becoming better understood. St. John del Reys, we repeat, are about the best lock-up on the market.

Coming by these easy stages to the actual business of the week, we find that in the Kaffir section prices have continued to droop, and in Land descriptions there has been an all round fall. Capt. Williams comes out this week with a trenchant rejoinder to Mr. Conybeare's epistles of last week. As the *Cape Argus* observes, "Mr. Conybeare's letters and speeches are a poor substitute for

dividends." Diamond shares have continued to fall, and the last state of De Beers is worse than its first.

The Rand output for Apl. being telegraphed as 56,362 ozs., the monthly comparison comes out as follows :—

	1888.	1889.	1890.	1891.
Jan. ...	11,269	24,986	35,038	53,205
Feb. ...	12,161	25,800	36,886	50,073
Mar. ...	14,706	23,705	37,600	52,949
Apl. ...	15,853	27,131	38,799	56,362
May ...	19,002	38,298	38,844	—
June ...	16,328	31,272	37,412	—
July ...	19,966	32,407	39,452	—
Aug. ...	19.877	32,142	42,881	—
Sept. ...	20,219	34,369	45,467	—
Oct. ...	27,775	31,914	45,250	—
Nov. ...	27,336	36,116	46,795	—
Dec. ...	26,148	39,600	50,352	—
Totals ...	230,640	377,740	494,756	...

Copper shares are all down, with the exception of Libiola, but the market for Australians has been looking up, and prices are better.

Indian shares have moved downwards in the cheaper descriptions, but the heavy shares show firmness. The market seems to be very short of these shares, and notably of Balaghats.

There has been active business in De Lamar shares (15s. paid), the first news from which is good. We mentioned this company with special favour when it came out about two months since, and our opinion is that prices will yet see a considerable rise. There have been active dealings in some of the cheaper shares, to wit, Golden Leaf, La Luz, West Argentine, Glenrock, Emma, Flagstaff, and a few others. Potosi has gone to allotment. The shares have been well taken up.

In the Home section an improvement is noticeable in Van, Dolcoath, and Wheal Basset, but other descriptions in this section have been on the down grade.

The report of the Mining Exchange, Limited, has been issued, and shows a profit of 209*l*. 17s. 2d., of which 120*l*. has been appropriated to the Benevolent Fund, leaving a balance of 89*l*. 17s. 2d.

The directors and committee consider that "the sphere of usefulness of the Mining Exchange may, in several important phases, be considerably extended, and members will be consulted upon this subject at their meeting on May 25."

The outlook is sufficiently indicated in this column as well as in our article on "After the holidays," and need not be referred to further here.

Kaffir Lands.

This class of shares has again been neglected by the public and dealers alike, and in consequence prices are lower all rouud, the chief falls being in Exploring and Goldfields of South Africa.

Business.—There is no rise to record, but the following have receded :—British South African Chartered, $\frac{1}{16}$; Exploring, $\frac{1}{4}$; Goldfields of South Africa, $\frac{1}{8}$; Johannesbnrg Estates, $\frac{1}{16}$; Moodies, $\frac{1}{8}$; Transvaal Gold, 1s.; and Transvaal Lands, $\frac{1}{8}$.

Kaffirs.

There have been very restricted dealings in this department, but on the announcement of the Apl. crushing at Crown Reef, the shares improved slightly. The same remark applies to Geldenhuis and Simmer and Jack, but, on the other hand, Ferreira, Langlaagte, Henry Nourse and Randfontein are all lower.

Business.—A rise is shown in Crown Reef of $\frac{1}{8}$; Geldenhuis, $\frac{1}{8}$; Salisbury, New, 6d. ; and Simmer and Jack, $\frac{1}{16}$; whilst the following are lower :—Piggs Peak Preference, $\frac{1}{16}$; Sheba, 1s.; Durban Roodepoort, $\frac{1}{16}$; Ferreira, $\frac{1}{2}$; Henry Nourse, $\frac{1}{8}$; Kleinfontein, $\frac{1}{16}$; Langlaagte, $\frac{3}{16}$; Ditto Block B, $\frac{1}{8}$; May Consolidated, 1s. ; and Randfontein, $\frac{1}{8}$.

Diamonds.

De Beers, as we forcshadowed last week, have continued to fall, and although they do not close at their worst they are in anything but a strong position. The labour market is being rapidly drafted off to Mashonaland, and with the restricted output at Kimberley the outlook is not bright by any means.

Business :—A rise is shown in Gordon of 6d., and North-Eastern Bultfontein, $\frac{1}{16}$; whilst a fall is to be noted in De Beers of $\frac{1}{8}$; Griqualand West, $\frac{1}{8}$; New Jagersfontein, $\frac{1}{4}$; and Burma Ruby, $\frac{1}{16}$.

Australians.

We have again strong dealings to record in Australian Broken Hill Consols and Wentworth (both priority and ordinary shares) with largely varying prices, and changing hourly. The first-named changed hands up to 2½, but close 2¼, 5/16, or 3/16 higher on the week, while Wentworths close at last week's prices. Bonnie Dundee, Day Dawn Block and P.C. are firmer, but Scottish Australian are lower.

Business.—A rise is shown in Australian Broken Hill of 3/16; Day Dawn Block, 1s.; Day Dawn P.C., 9d., and New Queen, 3d., whilst a fall has taken place in Scottish Australian of ⅛. Others remain as last quoted.

Indians.

This section has remained very firm, and shares are scarce. This remark applies especially to Balaghats, which are still being dealt in, 18s. paid, so that the buyer wonld have to pay the call of 1s., which has lately been made. These shares certainly appear a cheap purchase. Goldfields and Ooregums are a shade lower, but, with their present prospects, should be held. Harnhallis have been freely offered, but there are no buyers.

Business.—A rise is shown in Balaghats of 6d., but a fall has taken place in Glenrock of 9d.; Gold Fields of Mysore, 1/16; Mysore Reefs, 3d.; Mysore Harnhalli, 6d.; and Ooregnm, ⅛.

Copper.

We have again to record a fall in prices in most copper shares, especially in Rio Tinto, which closed last week at 22⅜, 22⅝, but on selling orders from Paris fell to 19½. They have since somewhat recovered, closing 21, 21¼, but the market is in anything but a strong position. Capes, Panucillo and Tharsis have fallen slightly, while Masons fell 7s. 6d. on the meeting, and at the moment have every appearance of going lower.

Business.—The only rise is in Libiola of ⅛; whilst a fall has token place in Capes of ⅛; Mason and Barry, ⅜; Namaqua, ⅛; Panulcillo, ⅛; Rio Tinto. 1⅜; and Tharsis, ¼.

General Foreign Shares.

There has been considerable dealing in low-priced shares, and the account showed that the public are quietly absorbing stock. Therc was certainly not a heavy carrying over on Monday, although charges were higher. Don Pedro and Elmore have remained firm, but without alteration; while Barretts and Lisbon Berlyns are slightly lower. La Luz shares improved on some good bnying, and at the present low price appear to be a cheap purchase.

Business:—A rise has taken place in Golden Leaf of 3d.; Silver Mines of La Luz, 9d.; and West Argentine, 6d.; whilst the following have fallen:—American Belle, 6d.; Barrett's, 3d.; Callao Bis, 3d.; Colon, 3d.; Colorado, 3d.; Colombian Hydraulic. ⅛; El Callao, ⅛; Elkhorn, 1/16; Esmeralda, 6d.; Frontino, 1s.; Linares, ¼; Lisbon Berlyn, 3d.; Montana, 6d.; New California, 3d.; New Guston, ¼; Orita, 1s.; Pahang Corporation, 3s.; Pinos Altos, 1s.; Spitzkop, 3d.; Tesoro, 3d.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

Indians.

Mysore.—The directors have declared an interim dividend (free of income tax) of 4s. 6d. per share, payable on June 9.

Nundydroog.—The directors have declared an interim dividend (free of income tax) of 1s. 4d. per share, payable on June 10.

Colonial Mines.

Brilliant.—Messrs. Arthur Forbes and Co., agents of the Brilliant Gold Mining Co., Charters Towers, have received the following cablegram, dated 9th inst.:—"Have crushed 1,260 tons stone for 1,960 ozs. gold; value, 7,100*l*. A dividend (the 20th) of 2s. per share is declared."

British Broken Hill.—The company report that for the week ending 14th instant the yield from furnace to mine has been:—573 tons ore treated (including 16 tons irou ore), yielding 132 tons lead, containing 4,584 ozs. silver.

Broken Hill Proprietary.—The usual monthly dividend of 2s. per share, amounting to 96,000*l*. for the month of May, has been declared on the 960,000 shares, and will be paid both in London and Melbourne on the 20th inst.

Broken Hill Proprietary.—The company report that they have received a cable stating "that during the week ending May 14, 4,627 tons ore were treated, yielding 833 tons lead, containing 175,826 ozs. silver."

Day Dawn Block and Wyndham.—Cablegram from the general manager at Charters Towers, giving the result of thc crushing for the fortnight ending the 9th inst.:—"410 tons crushed; yield of gold, 781 ozs.; approximate value, 2,675*l*.; fortnight's expenses, 900*l*."

Day Dawn P.C.—A cablegram from the manager at Charters Towers gives the results of this company's crushing for the fortnight ending May 9, viz.:—"1,020 tons 1,053 ozs." (Estimated value, 3,580*l*.)

Mill's Day Dawn United.—Crushing for fortnight ending 9th instant, 820 tons, 771 ozs. of gold; approximate value, 2,650*l*.

Mount Leyshon.—The manager at Charters Towers gives the fortnightly crnshing:—"820 tons crushed; 300 ozs. gold; 20 stamps "mill ran 288 hours; value 700*l*."

Mount Zeehan.—The following has been received by cable:—"Have shipped 20 tons first-class ore per s.s. Port Victor, making total first-class ore shipped 350 tons. We have 400 tons second-class ore, valued 5,000*l*. at grass."

New Queen.—A cablegram gives result of fortnight's crushing:—350 tons (yielding) 400 ozs. (gold).

Wentworth Gold Fields.—Cablegram:—"Shipment will be made shortly. 250 tons ready for crushing. Concentrates will be above the average of 60 ozs. to the ton, and promise very much better."

Foreign Mines.

Almada and Tirito.—Cablegram from the mines:—"Month's profit for Apl., $1,200. Tunnel roadway re-opened and operations resumed."

Cortez.—A cablegram from the snperintendent at the mines shows the resnlts for Apl.:—"Production, 35,106 ozs.; expenses, $13,630; tons crushed, 625; development expenditnre, $3,130."

De Lamar.—A cablegram from Capt. Plummer states: "During the month of Apl. the mill has been working 25 days, and crushed 1,250 tons; shipped bullion, amounting to $38,000; estimated valne of selected ore $10,000; total produce, $48,000; total expenses, $18,500*l*."

Dickens Custer.—A cable from Mr. A. H. Axford, the manager at the mines states:—"Mill starts working May 11."

Elkhorn.—Information from the manager:—Dnring the month of Apl. the mill ran 28½ days, and crushed 967 tons; bullion produced, $33,220; smelting ore sold, 210 tons, $13,500; total produce, $46,720; total cxpenses, $21,340.47. A cable says: "Bullion produced for week ending May 9, $8,700."

Golden Feather.—Col. Frank McLaughlin cables that all the walls were completed on thc 8th inst., and that the canal will be finished this month.

Gold Fields of Uruguay.—Telegraphed result of milling for month of Apl.:—"3,500 tons of ore crushed, 580 ozs. of bullion produced, value $7,000; 51 stamps running 29 days."

Ouro Preto.—A telegram, dated May 12, gives last month's return of gold as follows:—"3,165 tons of quartz produced 8,538 oitavas of gold (984 ozs.)."

Pinos Altos.—The out-turn for the week ended 25th ult. was $7,000.

Rio Tinto.—The company notify that at the fourteenth half-yearly drawing of their Five Per Cent. Bonds, 1884, to be held on the 1st proximo, bonds amounting to 10,080*l.* will be drawn to be paid off at par on July 1.

Ruby. Telegram received May 12 from Eureka :—"54 tons tribute ore shipped and smelted, prodncing to company $184 ; 15 tons ore on company's account shipped and smelted realised $190."

San Luis.—A telegram from Nicaragna gives the result of the bullion produced for the month of Apl. last :—"Bullion shipped, Apl. 27, 700*l.* ; May 8, 600*l.*" The bullion produced for the month of Mar. has realised, through Messrs. Rothschild and Sons, 1,226*l.*

United Mexican.—San Cayetano : Gross returns for week ending May, 2, $2,890 ; expenditure, $4,000 ; loss, $1,110. El Cubo : Gross returns for week ending May 2, $5,700 ; expenditure, $5,750 ; loss, $50.

Home Mines.

Cook's Kitchen.—A call of 7s. 6d. per share was made at the meeting on Thursday. The labour costs were 3,678*l.* 6s. 9d. ; merchants' bills, 1,682*l.* 8s. 7d. ; Illogan rates, 60*l.* 11s. 7d. ; total debits, 5,421*l.* 6s. 11d. Tin sold, 70 tons 5 cwt., for 3,795*l.* 15s. 3d. ; extra carriage, 7*l.* 5s. 3d. ; discounts, 17*l.* 3s. 11d. ; total credits, 3,620*l.* 4s. 5d. ; loss, 1,601*l.* 2s. 6d. ; balance against the mine, 1,963*l.* 9s. 6d.

Roman Gravels.—The stopes throughout the mine are equally as good as when last reported on. We have sold to-day 20 tons of blende for 120*l.*

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN AND HOME MINES

SEE PAGES 782 AND 783.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES

Simmer and Jack.—Apl. profit, 4,500*l.*

Glencairn Mainreef.—"Crushing for Apl., 507 ozs."

Crœsus.—The crushing for Apl. yielded 210 ozs.

United Langlaagte.—Crushing for Apl., 761 ozs. from 5,100 tons.

Spitzkop.—The company has received a further shipment of 143 ozs.

George Goch Amalgamated.—A cable advises the receipt ex Norham Castle s.s. from Cape of "178 ozs. of gold."

Jubilee.—The transfer books will be closed during the month of June, in compliance with the requirements of the Natal Law.

Central Montrose Estate.—The crushing for April with a 10-stamp battery amounted to 515 tons of quartz, yielding 610 ozs. gold. Expenses on revenue account, 570*l.*

Graskop Mill and Mining.—A cablegram announces the result of the Apl. crushing as follows :—"Crushed 757 tons ; yield, 281 ozs.; estimated cost, 600*l.*"

Geldenhuis Estate.—The company has secured the use of 50 of the stamps of the Jumpers Co. for a period. They will recommence crushing on June 10.

Sheba.—In reply to directors' cable instructing the general manager to wire progress, the general manager cables "750 tons crushed since 2nd inst., viz., in eight working days."

Moodies.—A cable received from the head office states :—"349 claims rented or leased ; 1,766 tons crushed by claimholders yielded 776 ozs. of gold." The transfer books will be closed during the month of June, in compliance with the requirements of the Natal Law.

Big Golden Quarry (Apl. 6).—Water race : Chain 38 down to formation level, and generally clearing up along race, which has in places slipped in during bad weather. Trimming banks, &c., to batter. Finished getting out and levelling ground for the standards and tressles for fluming. Heavy rains daily, four days during the week.

Crown Reef.—The crushing for April during 27 days of 24 hours was 5,686 tons, yielding 2,922 ozs. of smelted gold. The revenue of the month was 10,446*l.* 3s., and the working expenditure was 5,793*l.*, leaving a balance of profit for the month of 4,653*l.* 3s. The expenditure on capital account for the month was 925*l.*, making a total expenditure for the month of 6,718*l.*

Wassau.—The yield of gold for the month of Feb. last was 172½ ozs. standard weight, of the nett value of 659*l.* During this month the Adjah Bippo mill worked 20 days, and the Crockerville mill about 18 days, crushing together 250 tons of ore, giving a yield of gold per ton equal to 0.70 ozs. The manager, under date Mar. 25, writes as follows :—The new parts of the boiler (referred to in our last circular) arrived on Saturday last, and it will be tested to-morrow. The Bishop shaft will be working early next week.

Transvaal Gold Exploration and Land.—General manager's advices Apl. 13 :—Mines : Ophir Hill, Theta vein : Ore extracted, 6 tons ; assay value, 10 ozs. 4 dwts. of gold per ton. The wagons had commenced hauling ore from this place, and good work was done during week. Brown's Hill, Nu vein : Ores extracted at Nos. 1,211 and 1,216, 40 tons ; assay value, 1 oz. 2 dwts. per ton ; and at No. 1,209, 60 tons ; assay value, 2 ozs. 5 dwts. per ton. A road had been made up to No. 1,209, so that the ore could be brought down in light carts to the wagon-loading dump. Mill : The battery and pans were working as usual.

Edwin Bray (Apl. 11).—Mine—Working No. 2 quarry : During last week our reserve of quartz at No. 2 quarry has been increased by over 200 tons, and we have now fully a month's supply ready for the ropeway. Ropeway : The repairs to the ropeway will be completed to-day, and the transport of quartz resumed at once. Mill : The battery has not been working for want of quartz. The erection of the shed is advancing rapidly, and the contractors hope to have the frame of the building completed by the end of the month. N.B.—Since the above was written a cablegram has been received (on Apl. 15) stating that the ropeway was again in working order.

Jumpers.—During the half-year the capital was increased to 100,000*l.* The board expect that the proceeds of the shares, after satisfying the debts, will place at their disposal about 60,000*l.* for additional working capital. The mining and milling operations for the half-year resulted in the profit of 5,796*l.* 13s. 3d., but there was a loss on the operations of 5,366*l.* 8s. 1d. during the previous six months. The board have written off for depreciation 4,245*l.* 16s. 1d. The most noticeable features have been, firstly, the low yield of gold, which has, within a fraction, averaged 8 dwts. per ton ; and, secondly, that although the yield is so low it still leaves a profit of 3s. 6.9d. per ton. The low average yield of the ore is chiefly caused through the state of development being insufficient to supply 100 stamps, therefore the management has been compelled to crush a mixture of reef and sandstone during the period under review.

Cerro de Pasco.—The following report has been received from the mine, dated Barberton, Apl. 3 :—The 500-ft. level drive middle reef has been driven 16 ft., making total distance 445 ft. ; average width of reef, 5 ft. ; quartz extracted 32 tons, making total 92 tons since we commenced work in this drive (working day time only). Main shaft on block F has been sunk 14 ft., making total depth 95 ft. ; four wall plates and 10 sheets of corrugated iron 8 ft. each have been put in to secure east side of shaft. At 90 ft. we put in a platform, and commenced to drive north. This drive has been driven 14 ft. From this point we commenced to cross-cut east, which has been driven 34 ft. When this cross-cut was in 9 ft. we cut a quartz leader 18 ins. wide, which was barren. At 28 ft. we cut another quartz leader 10 ins. wide, which carried a little gold. Air shaft on block F : We commenced this shaft on Mar. 11, which has been sunk 50 ft. Size of shaft, 5 ft. by 4 ft. Two sets of timber and 10 sheets of corrugated, 6 ft. each, have been put in to secure collar of shaft ; 2 ft. from surface we cut a quartz leader 9 ins. wide, which gave a little gold. At 21 ft. from surface we cut another quartz leader, 8 ins. wide, which was barren.

Pigg's Peak Estate.—The following information came to hand by the last mail from Mr. Murray :—Mine report for week ending Apl. 11 :—Devil's reef—Drive on top of the hill driving south-east : Drove 23 ft. ; total, 93 ft. ; no change in ground. Winze in bottom drive sunk 8 ft. ; total, 25 ft. ; shown a little gold in panning ; 100 ft. of cutting over main shoot ; six boys getting mine timber ; remaining boys getting stuff, filling bags, and loading waggons. Tamblyn reef : Shaft has been sunk 6 ft. Drive has also been started. No change to report as yet. Peak : South drive No. 2 : Drove 6 ft. for the week ; total, 34 ft. ; no change. Pigg's drive : Drove 15 ft. for the week ; total, 35 ft. ; the ground requires timbering. No. 1 works : Drove 22 ft. ; total, 117 ft. Numerous small bands of quartz are cut in the face, which give a few colours in panning. Progress is slow, as the ground requires timbering ; five days' fine weather ; waggons took down 52 loads to battery. Huntington Mill : I would advise the immediate purchase of the same. I could do with two of the mills out here, and more than pay the expenses of the work now going on. It would also enable me to extend my operations somewhat. Since the foregoing was written the company has arranged to purchase two Huntington mills in South Africa.

Horo Concession Exploration (Apl. 2).—Report from the superintendent at the mine.—I beg to send you below the report of the work done here during the month of Mar. last. No. 2 tunnel winze : A sump, about 4 ft. deep, has been sunk at the bottom of the winze, and a tunnel has been driven a distance of 21 ft. to meet the intermediate tunnel. The rock driven through in the tunnel is very hard, and contains a little free gold near the winze, but none at the face of the tunnel. Intermediate tunnel : This tunnel has been driven 47 ft. 3 ins. during the month. The rock excavated in the first part of the month contained a little gold, but the last 20 ft. did not show a colour in the pan. To connect this tunnel with the winze in No. 2 tunnel there is a distance of 53 ft. to drive. Battery reef : The prospects on this reef to the east of the battery did not justify further expense on that part of the reef. I have cut through the reef on the west side of the battery, but as the quartz here only shows colour, I have stopped the work here for the present. Battery and pipe line : The ore shoots at the battery have been erected, and the ground tramway from mine to battery is being constructed. We are putting in place the pipes which came with the battery machinery. The large consignment of pipes is still at Moreni. Prospectors : The prospectors out have reported nothing of importance during the month.

Organisation of Mining Interests.—A meeting of the members of the London Chamber of Commerce interested in mining industries was held at the offices of the Chamber this week, at which Sir Vincent Kennett Barrington presided. It was decided to form a section within the Chamber with the object of taking concerted action in regard to any matters affecting mining industries. The following gentlemen, with power to add to their number, were appointed an organising committee to take the necessary preliminary steps :—Mr. W. Pritchard Morgan, M.P., Mr. Thomas Cornish, Mr. R. S. Archbold, Mr. N. F. Robarts, Mr. H. E. M. Davies, Mr. Charles Clark, and Mr. Frederick Brough Scott.

BRITISH MINING INTELLIGENCE.

D'ERESBY AND GWYDYR (May 13).—No. 10 level, south cross-cut: Since my last report we have had an improvement in the end driving south from this cross-cut. We have cut into some vughs, which are filled with some very fine cubes of lead, and the lode is letting out a strong feed of water. On Saturday one of the pump bucket rods parted, and this stoppage gave the water time to rise, so that we have not been able to do anything at the bottom till to-day. We hope now to resume driving without interruption, and watch this point with much interest. No. 9 level: The stope going south behind the shaft still looks promising, and yielding 15 cwt. of lead per fm. I have now started to cross-cut the lode about 10 fms. in advance of this stope to further prove this lode, which has not yet been tried, south of the shaft. The stope at south end of this level is worth 12 cwt. of lead per fm.; ground rather hard. I have two men making some trials about the new shaft, and breaking a little lead as well. A set of tributers are working between No. 7 and No. 8, and doing fairly. At surface work is going on as usual. The weather has become very dry again, and we are now obliged to resume pumping at night with the engine.—H. NOTTINGHAM.

EAST GRASSINGTON (May 13).—Report from the mine manager: —Hammond shaft: In the 47 west the lode is in two divisions, with a horse of limestone coming in between, valued together at 21 cwt. of lead ore per fm. Stope in back of level valued at 10 cwt. of lead ore per fm. We have commenced sinking No. 3 sump at a point 20 fms. 2 ft. west of the heave, in a lode 2 ft. wide, and producing 22 cwt. of lead ore per fm. Stope in roof of intermediate level valued at 10 cwt. of lead ore per fm. Stope in back of 37 level, valued at 11 cwt. of lead ore per fm. Harris's main engine shaft: In the 47 east we have a very pretty lode, 2 ft. wide, the filling matter chiefly spar and gossan, intermixed with boulders of lead ore, worth 22 cwt. per fm., and promising for a further improvement. Stope behind the end in a lode 2 ft. wide, worth 16 cwt. of lead ore per fm. Stope west of shaft worth 10 cwt. of lead ore per fm. In the 37 east the lode and encasing rock are rather easier for progress, and producing saving work for dressing. Two stopes in back of level valued together at 18 cwt. of lead ore per fm. The preparatory work towards deepening the mine are completed, and are now waiting the directors' instructions to resume sinking the main shafts to the next level. We are taking advantage of the favourable change of weather to secure a good supply of plats as smelting fuel for the ensuing season. Machinery throughout the mine in good trim and working smoothly. Dressing and smelting operations in full swing. April lead has been smelted, sold, and delivered, and a fair profit realised upon the month's operations.

LEADHILLS (11 May)—Brown's vein: The 145-fm. level north of Jeffrey's shaft keeps in solid quartz 18 ins. wide, with ore worth 35 cwt. per fm. The stope above the 145 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The two stopes above the 145 south of Wilson's shaft are worth 30 and 40 cwt. of ore per fm. respectively. The stope above the 145 north of Wilson's shaft is worth 35 cwt. of ore per fm. The 130-fm. level north of Jeffrey's shaft is still in a vein above 4 ft. wide, mixed with kindly quartz, but without ore. The three stopes above the 130 north of Jeffrey's shaft are worth 30, 20, 25 cwt. of ore per fm. respectively. There are only spots of ore in the rise above the 130 north of Jeffrey's shaft. The stope above the 130 south of Jeffrey's shart is worth 20 cwt. of ore per fm. The stope above the 130 north of Wilson's shaft is worth 25 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, mostly quartz of a kindly nature, with ore worth 20 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The stope above the 115 south of Wilson's shaft is worth 25 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, well mixed with quartz, but keeps without ore. The 85-fm. level north of Jeffrey's shaft is in a vein 3¾ ft. wide, charged with quartz, and shows dampness, but no ore. The 70-fm. level south of Wilson's shaft is in a vein 5 ft. wide, mixed with kindly spar as well as being damp, but yet without ore. The 35-fm. level south of Flat-rod shaft keeps in a vein above 4 ft. wide, charged with some quartz and ore worth 5 cwt. per fm. The stope above the 35 south of Flat-rod shaft is worth 80 cwt. of ore fm.—T. NEWBIGGING.

MID-DEVON.—Report for week ending May 9.—A shaft: Water in fork to bottom of the 80. C shaft: The 60 east driven obliquely 1 fm. 2 ft. 6 ins. towards south wall of lode; total distance from shaft, 97 fms. 2 ft. 6 ins.; the strata is still composed of capel and compact garnet, spotted with ore and arsenical mundic. The lode to the east of the last cross-course has so far been very disordered, but expect as we get away from its influence to find it more settled, and more productive of ore. I think we are nearing the south wall, therefore shall next week turn the drivage to the north of east. The point on which the two men are working east of winze; testing branches of ore does not show any material improvement. The branches are fairly regular, but small. We have raised 10 cwt. of ore this week.—J. NEILL.

NEW MINERA.—Fortnightly report for two weeks ending May 8.—The 275-yd. level: South level west in a lode 3 ft. wide, worth 3 tons blende per fm. The level east from this still looks well, and worth 2 tons blende, and 1 ton lead ore per fm. It is proposed to start a winze on this next week. No. 1 rise: The driving west from this rise has been resumed, worth 1 ton blende and 1 ton lead ore per fm. No. 2 rise: Up 9 yds.; worth 6 tons lead ore and 2 tons blende per fm. No. 2 winze: The intermediate level is now being driven east and west from the winze. The west level is in a very good lode 5 ft. wide, worth 8 tons blende and 1 ton lead ore per fm. The east level, 7 ft. wide, worth 6 tons blende per fm. Next week a winze will be commenced from this level to the 315. The 315-yd. level: In about 18 yds. from the cross-cut in a nice lode, composed of limestone and spar. Dressing: 30 tons of lead ore have been despatched to Messrs. Walkers, Parker, and we have 20 more to go next week, while about 30 tons of blende a week are being sent off.

PRINCE OF WALES (May 13).—The shaftmen are still driving east and west at the 180-fm. level by the side of the lode. We purpose continuing until in sufficiently far to enable us to case and divide the shaft so as to bring down the whim kibble before taking down the lode. In the 166-fm. level west we have intersected the cross-course, and are in it from 3 ft. to 4 ft,, but not yet through. In the cross-cut south towards the Goodluck lode there is no change since last reported. The stope in the bottom of the 166 east, which is being worked on tribute, is looking exceedingly well.—J. PROWSE.

SOUTH CONDURROW (May 6th).—There is no new feature to report on in the bottom of Marshall's Shaft. The 123 end east is worth 8*l*. per fm. The stope in the back is worth 9*l*. per fm. We have noted the rise in the back of the 100 north of Marshalls. The 40 end east of engine shaft is worth 8*l*. per fm. Two stopes in back of the 40 east are worth 12*l*. per fm. each. The north lode in the 40 cross-cut is letting out more water than usual and carries low quality tin stone.—WM. RICH, WM. THOMAS.

SOUTH CONDURROW (May 13).—We have sunk Marshall's shaft 15 fms. below 123-fm. level, and have begun to open out eastward for plat, preparatory to fixing skip road to the bottom. We have started to sink a winze below the 123 north of Marshall's on the new lode, which is worth 12*l*. per fm. This lode is nearly vertical, and will unite with the main tin lode in depth. The 123 end east on the flat lode is worth 8*l*. per fm. The stope in back of this level is worth 10*l*. per fm. There is no new feature to report on in the eastern part of the mine.—W. RICH, W. THOMAS.

SOUTH DARREN (May 7).—Satisfactory progress is being made in sinking the shaft. It has been deepened 5 ft., being now 14 ft. 4 ins. under the 142. The lode in the 130 end west is wide, containing several small branches of ore, worth fully 10 cwt. of silver-lead ore per fm. The drawing of ore stuff is being pushed on.—J. MITCHELL.

SOUTH DARREN (May 14).—The shaft has been sunk 4 ft. 8 ins. this week, being now 19 ft. under the 142 level. The 130 end west continues worth 10 cwt. of silver-lead ore per fm. Drawing and dressing is being carried on regularly.—J. MITCHELL.

VAN (May 14).—In the stopes along the mine there is no change whatever to notice; they are all turning out lead ore as when last reported on. The cross-cut at the 150-fms. level towards the south lode is driving by six men, in hard and compact ground, with occasional spots and thin strings of lead and blende ores crossing the forebreast. Seaham's winze has been deepened 2 fms. below where the 150-fms. level will be driven from, and at the bottom we have driven out west 10 ft., and shall drive 8 or 10 ft. more there to make room for holding the water over Saturday nights and Sundays. This finished we shall cross-cut north (at the 150) into the lode, and then drive eastward upon it. The lode in the 120-fms. level east (driving by six men) has been without lead ore for a couple of fathoms, but to-day it coutains good spots of ore again with strong blende, and we are looking for an improvement. In the cross-cut going south behind this end the ground is stiff for driving through, and contains small branches of blende so far, but is without lead.—J. PAULL.

WEARDALE.—Report for week ending May 9.—Ore raised for week, 82 tons.

WEST WHEAL GRENVILLE (May 5).—The cross-cut driving north at the 120-fm. level is extended 105 fm. 4 ft., and continues in a well-defined granite rock. The 120-fm. level, driving east of cross-cut on No. 2 lode is extended 29 fms. 3 ft. The lode in this end continues of about the same size and character as reported last week.—Capts. J. SKEAT, N. TEMBY.

WHEAL CREBOR (May 12).—The part of the lode carried in the 156 end driving east of the new shaft will yield 5 tons of good quality arsenical mundic per fm. The lode in the stope in the bottom of the 144 will yield 4 tons of copper ore, and 4 tons of mundic per fm. The lode in the stope in the back of the 132 west of cross-cut will yield 3 tons of copper ore and 4 tons of mundic per fm. The lode in the stope in the back of the 132 west of shaft is worth 2 tons of good quality copper ore per fm. There is no change in the tribute part of the mine to report.—P. D. HOLMAN.

WHEAL METAL AND FLOW (May 13).—During the past month we have driven the 27-fm. level east of engine shaft 3 fms. 2 ft. 6 ins. In this drivage the lode has changed considerably and become harder and split up in branches and is also changing its course, and these branches contain a quantity of sulphur, mundic, and other minerals characteristic of this district. The flow is producing about the same quantity of tin.—S. P. CURTIS.

WHEAL UNY (May 13).—We are pushing on the sinking of Hind's shaft with all possible speed. Lode without change since the meeting. The 244 end west with all other points unaltered.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (Apl. 23).—Extracts from a letter from the superintendent at the mine.—Mine: In the drivage for the new road a piece of hard ground has been met with, which has diminished our daily progress, but we will soon connect again with the Primera Veta drift. The tunnel road is repaired and re-timbered as far as the north slide. The cave at this point is the most difficult part of the work, there being a large amount of fillings to go through, and the spilling is progressing rather slow. We hope, however, to get through this section within a few days. The fittings falling from above are still so hot that they cannot be easily handled. At Cruz Verde Mine we have still a considerable number of men. The drift from the bottom of Cruz Verde shaft was already connected with the winze, sunk from the first level, 119 ft. north of shaft. About 30 ft. below the mouth of this winze we are driving north and south on a branch of green ore, which produces from 1 to 2 tons daily. From the dump at the spalling floors we are obtaining a little ore, and we have started to open a shaft through the filling of the floors, and have begun to find some ore also. Reduction: The ores from Cruz Verde and the dump have only been enough to run two or three batteries, and not continuously, but this has been of considerable assistance to prevent a stoppage of the chlorination furnaces. We shall do all we can to avoid an interruption. If we once let our furnace men loose it will be difficult to get them back afterwards, especially with their great "San Juan" holidays so near at hand. From the leaching works we expect to obtain a good clean up of precipitate next Saturday, as it will be the product of two weeks. From the refinery we obtained last Saturday 12 bars silver, worth about $12,000, or a little less, which were sent to the Mint for coinage.

ANGLO-MEXICAN.—The superintendent writes on Feb. 8:—West Drift: 814 ft. level has been advauced during the past week 18 ft. by hand drilling, making the total distance 281 ft. We are still working in soft ground, but within the last day or two Mr. Ham has been able to report the appearance of a small streak of ore, about 6 ins. wide, of a promising character, the assay value of which, however, I regret to say, could not be determined in time for this mail. Winze: 814 ft. level (below) was sunk during the past week 21 ft.,

making the total depth 21 ft. Mr. Ham is able, I am glad to say, to report very favourably with regard to the appearance of this winze. Samples of ore recently taken from same have proved to be of a high grade, assaying 110 ozs. in silver per ton, as shown by the enclosed assay report. Mr. Ham is, I am pleased to state, very sanguine indeed, with regard to the promising nature of this winze, and sincerely trusts that his surmise of the existence of a fine body of ore below the 814 feet level may prove correct. Upraise: 646 ft. level; total, 25 ft.; progress, 5 ft. Mr. Ham is able to make a somewhat more favourable report than last week. He has encountered a small streak of ore, about 1 ft. in width, the assay value of which however, is very low. He is preparing to drift on this streak, and trusts to be able to announce in his next report the appearance of a larger and more valuable body of ore. Surface drift above Sta. Herlinda Tunnel level has been advanced during the past week 5 ft., making the total distance 189 ft. Since my last report no change worthy of note in the appearance of this drift has taken place. Mr. Ham does not report the reappearance of the streak of ore we have been previously following. The face of the drift shows only small spots and bunches of ore, and samples taken from same have uot assayed as well as hitherto. East drift on the main vein above Sta. Herlinda Tunnel level has been advanced during the past week 4 ft., making the total distance 94 ft. We are still drifting on the foot-wall, but I regret to say there is no change for the better to report here. Main Incline shaft has been sunk during the past week 19 ft., making the total depth of 1,001 ft.

ARGENTELLA (May 7).—Weekly report:—No. 2 Marine, east: The ground continues fair for driving. The joints are larger, letting out water. The quartz on the hanging wall is wider and more pyrites through the killas. Quartz reef, cross-cut south: Speedy ground for driving; cut into a few small veins of killas containing iron pyrites. I mention these on account of their heavy underlay east, which leads me to expect the same when the lode is reached. If the supposition is right, we shall reach the lode sooner than we expected. Ogliastrone Valley: The forebreast is now out of the bed of pyrites. I wish to push on further so as to have more ground overhead before cross-cutting. No. 3 Rowse's workings, cross-cut south: We are now driving a wall running in the direction of the cross-cut. The spots of lead are now more scattered through the ground. We are making better progress. In prospecting last week I found an outcrop of a band or lode running nearly north aud south and crossing underneath the rubbish pile of No. 3 Rowe's workings. What the true nature of this is I cannot very well say.—J. B. ROBERTS.

AUSTRALIAN BROKEN HILL CONSOLS.—Manager's report for fortnight ending Apl. 2:—Engine shaft sunk 8 ft., total 548 ft. For last few feet lode has become vertical and therefore further sinking has to be suspended until a chamber has been cut to receive necessary hauling gear for vertical sinking. As hanging wall of lode has not been seen for last 20 ft. of sinking it is impossible to say how wide lode is at bottom. 280 level west driven 18 ft., total 406 ft. Water coming freely from footwall. Rise on rich vein: Rich vein continues strong and has given an improved yield during fortnight, output being 5 tons 2 cwt. of sulphide of silver, chloride and native silver, containing in all 40,055 oz. of silver, which is being cased for shipment to London. Incline following rich vein driven 4½ ft., total 37½ ft. Owing to failure of contractor to deliver air-winch on due date, progress here has necessarily been retarded. Air-winch, however, purchased from Fulton & Co. three days back, is now on the ground, and will be at work in a day or two. Good portion of lode in face incline has beeu stripped and will be broken early next week. North-west cross-cut driven 10 ft., total 30 ft. Following up lode which is now showing chloride, galena and carbonate of iron. Block 95: Shaft sunk 6 ft., total 123½ ft. Seam of flucan being passed through appears to be lode formation about 3 ft. wide. Block 97: North shaft sunk 12 ft., total 46 ft.

AUSTRALIAN BROKEN HILL CONSOLS.—A telegram from the managing director, resident at Broken Hill, dated May 15, says:—"6 tons of ore, containing 46,326 ozs. of silver, raised during the fortnight. Eleventh shipment, consisting of 6 tons of ore, containing 46,326 ozs. of silver, will be shipped for London per steamer leaving Adelaide on May 27. Additional output from other parts of the mine, 25 tons of ore, containing 7,684 ozs. silver, shipped this week, London."

BRATSBERG.—Report for week ending May 2:—Hoffnung Mine: No. 2 adit level is now looking very promising, and yielding ½ ton per fm. No. 1 rise in the back of this level is still producing 1 ton per fm., but at No. 2 rise the lode has become very small, and difficult for mining, hence we have decided to stop it for the present, and resume rising at a more convenient spot, which the stopers will soon make available. At No. 3 adit level the lode is worth ¾ ton per fm., and composed of a very congenial matrix. The rise here is also worth ¾ ton per fm. No. 4 level, I am pleased to say, is improving, now yielding ½ ton per fm., and appearances indicate a further improvement. The trial level in Murchison's section is worth 1 ton per fm. 53 miuers employed at this mine during Apl. month. Johannes Mine: The level driving west on Howard's lode has been very irregular in value lately, at times worth 1 ton per fm., but to-day is yielding only saving stuff. The eastern level is producing about ½ ton per fm. The rise in the back of this level has, and continues to open up more ore than any other point on this lode; its present value is fully 1 ton per fm., and it is encouraging to see the ground now being excavated by the stopers in this section of the mine. 11 miuers employed here during last mouth. Surface work and remarks: The dressiug machinery continues to work with regularity and satisfaction, and recently we have been trial runniug the inner set of machines and classifiers in order to get all to run smoothly before operating on stuff. The steamers have been moved out of their winter quarters, and after a fruitless attempt to cut through the ice, are now waiting only on the condition of the ice to be such as to admit of steaming through it to Strengen. I estimate the quantity of 20 per cent. mined during Apl., a five weeks' month, to be 120 tons.—J. D. HOLMAN.

CUMBERLAND (Mar. 7).—I beg to submit my progress report for the month of Feb:—No. 2 shaft: I find that in my last report I stated the total depth of this shaft was 772 ft., at that time I had not taken accurately the depth of the well beneath the point where No. 7 level starts. I now find the total depth to be 788 ft. I wish again to draw your attention to what I have before mentioned, that the quality of the ore met with in the last 10 ft. in this shaft was most encouraging, and we ought to resume sinking as soon as possible. No. 7 level north was started at a depth of 768 ft. The stone mentioned in my last report, although maintaining its size to a point 50 ft. from the shaft, did not keep up its quality of from 8 to 10 dwts. to the ton for more than 20 ft. when it became practically void of mineral. At a point 80 ft. from the shaft we met a formation so soft as to be altogether without precedent in the history of the mine. It lasted some 15 ft. when the formation resumed its ordinary characteristics, and there are now indications of ore of far better quality than we have left behind us. You must understand this level is only being taken in as a prospecting drive. on the footwall of the lode 6 ft. by 4 ft., and since we left the shaft we have not been able to prove the hanging-wall. By putting in a drive of this description we reach the point that we desire much quicker and cheaper than if we carried in the whole formation with us. When No. 1 winze is connected with the drive we intend to prove this hanging wall in at least two places, and shall, doubtless, find another body of stone: the size and quality is, of course, unknown to us at present. No. 1 wiuze north: A contract was let during the past month to finish off this winze at 40s. per ft.; fair progress has been made, and the contractors will be through into No. 7 level before the end of Mar.—A. GALLAGHER.

EAST BROKEN HILL CONSOLS.—Manager's report:—In compliance with your instructions I have to-day made a careful examination of the surface of land comprising Blocks 98 and 99, and from the result of the same, coupled with what the mining operations have already shown to us in both these blocks, I beg to submit the following report:—In Block 99 the lode would not be struck until a greater depth was attained, and it could perhaps be more economically worked in this block by means of driving easterly on the lode from Block 98. This northern lode, so far as it has been exposed up to now, shows quite as good indications as did our main lode at the same depth from the surface, and, in my opinion, should become as valuable when similar development work has been done on it. My chief reason for expressing this belief is that the silver-bearing diorite dyke, in which the rich shoot of ore exists in Block 96, shows unmistakeable signs of continuing north-easterly through this parallel lode. On Block 98, shaft No. 2, which has been sunk to a depth of 65½ ft., struck in its course a lode running north and south, but as water was met in such volume as to render further sinking impossible without machinery, operations had to be suspended. I strongly advise the continuation of this shaft, while as regards shaft No. 4 on block 99, which had to stop for similar reasons, I recommend cross-cuts south and west as a means of readily getting at the main and cross lodes. Both of these shafts are excellently located, as the rush of water alone proves that they are in strong lode country, apart from the important fact that rich silver-bearing galena has been taken iu considerable quantity from their vicinity. I feel sure that with the same vigorous policy of development now being pursued in block 96, blocks 98 and 99 would open out equally well.—C. J. KLUG.

ELMORE (Apl. 28).—Mr. G. McCornick writes:—We cabled yesterday as follows:—"Test return, yield per ton, $3. 20 stamps running on Star ore. Letter sent explaining." The above test was made from the vein cut to ascertain if the ledge as it is would pay to mill; we have not doue enough work on the vein as yet to determine the value of the veiu, or quartz it contains. Our intention is to drift both east and west on the vein, and raise every 50 ft.; also cross-cut into the little vein or Elmore. I have faith that we will find good milling ore before we are through prospecting this lode.

ETHERIDGE UNITED (Mar. 18).—Fortnightly report:—Since my last report of Mar. 2, the Caledonian No. 1 south shaft has been sunk 26 ft.; total depth from surface, 128 ft. The contractors are making good headway, and I think the sinking will be finished about the eud of this month. Then we will have to cross-cut about 60 ft. to cut the reef, which I will try and push on as quick as possible. The south level at the 80 ft. has been advanced 15 ft.; total from shaft, 38 ft. The reef in this level is making again; it is now 15 ins. thick of very heavy mundic, but rather flinty, to my liking, for carrying good gold. I believe it is about ½ oz. ore at present, but the country rock is becoming much softer, and I am of opinion that the ore will get soft also; it is a sure indication on this field where the mundic ore gets soft and crumbly the gold is richest. We have broken down very little of the reef since going through the fault, but I will be able to give you more information regarding its quality by next report.—M. FERGUSON.

FLAGSTAFF (May 2).—Since my last report I have been exceedingly lucky in finding ore in breast of main 6th. I sent you a cable that I had struck a body of ore 4 ft. wide and 3 ft. thick, it is now 5 ft. long and 4 ft. wide. This seems to be a pipe and is going downwards. It looks to be very good ore; there is very fine galena mixed all through it, and the yellow crystallise carbonate also. I am putting it in a drift to itself. Have struck another bunch of ore 1 ft. ahead of where we found the other; it is now 7 ft. long and 14 ins. wide. It is right in top of drift, we are driving just under it. I shall continue to drive this level ahead, and put other men to take out the ore as soon as we can get in far enough, so that they will not be in one anotners' way. I think that we will find a great body of ore here in this neighbourhood. We are now in 96 ft. I have started a drift on seam to see if we cannot cut the ore down there, we are now 7 ft. The rock is well stained up with iron. We will have to drive about 150 ft. to be direct under where we are on 6th level, but we may cut other bodies in driving. Number of tons mined the past week 16, being 11 first-class and 5 second.—A. L. SWOPE.

HARRIETVILLE (Apl. 3).—Fortnightly report:—Mons Meg Mine: The rise on the new shoot north of tunnel J has advanced 10 ft.; total, 42 ft. The prospects have much improved, gold being more freely distributed through the lode, which is 4 ft. wide, and there are indications of further improvement. The rise at the back of the 100-ft. level north above tunnel J has advanced 22 ft.; total, 32 ft.; the lode is 4 ft. wide, being payable throughout, and improving as we rise. The north drive 170 ft. above tunnel J has been extended 10 ft.; total, 110 ft.; the lode is 4 ft. wide, and shows gold freely throughout. The south drive 100 ft. above tunnel J has advanced very little, the lode being small and poor. South Mons Meg Mine: The rise at the back of drive south of lower tunnel has advanced 12 ft.; total, 192 ft.; the lode, which consists of quartz, is 3 ft. wide, and carries a little gold. The shaft from the surface north of rise has been sunk 5 ft. on the same lode; total depth, 18 ft. Guerdon Mine: Tunnel J has been extended 12 ft. towards the Guerdon, making a total of 478 ft. from the Mons Meg main lode. At 465 ft. the main Guerdon lode was met with, which, on being

traversed, proved to be 9 ft. wide, and to carry colours of gold. Driving both north and south has been commenced on this lode, and a vein of quartz, 1 ft. wide, has been disclosed showing gold freely in the stone. The drive south of tunnel J on the hanging-wall portion of the Guerdon lode has advanced 10 ft.; this is 4 ft. wide, and carries the auriferous quartz vein above referred to, as also does the north drive, which has advanced 2 ft. There is a distance of 380 ft. from this level to the upper workings, so that should the shoot here prove to be so extensive and valuable as it did nearer the surface this portion of the company's property will be much enhanced, and large reserves will be developed. Driving will be carried on as rapidly as possible. Tiddledee Mine: The drive south of tunnel D towards Mons Meg has advanced 32 ft.; total, 1,009 ft.; the lode formation is 4 ft. wide, but poor. New lease: The winze on the new shoot south of tunnel D has been sunk a further distance of 8 ft.; total, 56 ft.; the lode is 3 ft. wide, and continues payable. The drive south-east of tunnel C towards new shoot has advanced 39 ft.; total, 264 ft. The lode is small and poor. The drive south-east of tunnel B towards new shoot has advanced 27 ft.; total, 244 ft. We have here just met with what appears to be a continuation of the new shoot. It is 4 ft. wide, and shows free gold in the stone; we have 230 ft. of backs at this point. Surface: The cross-cut east of the drive north of shallow tunnel near tunnel D has advanced 4 ft.; total, 17 ft. A small vein has been intersected here, which carries a little gold. Returns: The returns for the past four weeks are: Mons Meg, 316 ozs. 17 dwts. from 580 tons crushed; new lease, 61 ozs. 12 dwts. from 315 tons of ore, and 162 ozs. 16 dwts. from 57 tons of pyrites treated, making a total of 541 ozs. 5 dwts. melted gold. Machinery: All the machinery is in good working order, and the late rain has insured us an ample supply of water for all purposes.—T. G. DAVEY.

KECHAU (PAHANG) (Mar. 31).—I am pleased to be able to report this month as being a most successful one with regard to our operations in Mount Siam. Since my last, dated 2nd inst., we have struck very rich stone in our main south drive, and that I believe to be a very extensive shoot. We have already proved about 30 ft. of it along the strike of lode, and are still going through visible gold—how far this will extend above and below this level, of course remains to be proved. There is one thing that can be said (and as will be seen by the Section No. 1 sent you last mail), that we have about 100 ft. of backs above us here, and as soon as the No. 2 Underlie Shaft reaches the level, which, at the present rate of progress, will take another month or so, we shall have an immense body of ore available for stoping. The mines in Mount Siam are looking really splendid in every part, in fact they could hardly look more promising than they do, and everything is working splendidly. Fine weather continues, and the health of the camp is good.—G. H. HONE.

LEEDS COPPER (Apl. 23.)—Herewith my report for week ending as above:—Kent's shaft: The 20 fm. driving west of shaft continues in good bed ore, and worth fully 4 tons of ore per fm.; fairly good progress is made with this drive. The 20-fm. level driving east is not producing quite as much ore as last reported; the bed is mixed with gangine, but produces 2 tons ore per fm. The midway level spoken of in my last is now communicated with the 15-fm. level, which gives us the desired ventilation. The stope in the back of the 20-fm. level is producing good ore; bed 3 ft. wide. I am expecting this further to improve as we advance. The stope in the back of the 15-fm. level continues in good ore, worth 4½ tons ore per fm. The drive opposite steam drill stope is in full operation. Bed, 3 ft. 6 ins. wide, and worth 2 tons ore per fm. Steam drill stope has again improved; we are still looking for better ore, here producing 3½ tons per fm. Adit: This work is still in abeyance for want of hands to go on with the work. Surface: We have got out our foundation for mill, crusher, &c., but cannot begin masonry until the ice leaves. We are still in depth of winter here. Cannot get any heavy pieces of machinery in; we are doing all that is possible under the circumstances.—T. R. DAVEY.

MYSORE REEFS (Apl. 22).—Fortnightly report.—Harvey's shaft: This shaft has been sunk 6 ft., which makes a depth of 50 ft. 2 ins. below the 460-ft. level. The rock is still very hard for drilling, but I am in hopes that we shall soon have a change. Two days since we cut a large stream of water with a sinking hole. Hitherto the shaft has been dry. We have been hauling out the water with barrels, expecting that it would abate, but up to this it shows no signs of abating; we shall be obliged to get a donkey-pump before we can do much sinking. Winze below 460-ft. level: Has been sunk 1 ft., now 22 ft. 6 ins. below the level. The ground is so hard, and the progress made by hand so slow, that a week since I suspended this and put the men to drive and stope in the south end of shaft 215 ft. from surface. You will remember in sinking the shaft that we had some very good assays from here. The quartz, so far seen, is 2 ft. wide, and a sample broken from it gave, according to assay, 3 dwts. 6 grs. of gold to the ton. This is rather low, but to test its value I am to-day putting a few tons through the mill. The 400-ft. level south: Has been extended 7 ft., now 90 ft. 11 ins. from shaft; the lode is disordered with black rock showing patches of quartz. A sample of same gave, according to assay, 1 dwt. 7 grs. of gold per ton. Prospecting shaft, north of Harvey's: The cross-cut east has been extended 10 ft. 8 ins., now 47 ft. 4 ins. from shaft. We are through the formation, and as no quartz has been met with I suspended this a week since, and put the men to blast out a piece of lode in the bottom of the 140-ft. level north of air shaft. We broke a sample of the quartz here before commencing work which washed very well, and I have since had an assay made which gave 1 oz. of gold to the ton. I cannot of course tell whether this is a mere patch or not for the present, but shall in a day or two haul a lot to surface, and put it through the mill to test its value.—M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED.—The mining manager reports by mail for the fortnight ending Apl. 22:—Tank mine, north shaft: This shaft has been sunk 6 ft., making a total depth of 150 ft. 9 ins. from surface. During last week sinking was suspended for three days, whilst the cistern and standing lift were fixed, and a short sinking lift put in. We shall now make better progress than we have done of late, unless the water continues to increase; it is quite as much as we can manage at present, and causes much delay in sinking. South shaft: This shaft has been sunk 7 ft. 6 ins., making a total depth of 79 ft. from surface. During the last week we have had two drills at work here, but I find the compressor is not capable of working these satisfactorily as well as one drill at north shaft; we shall, herefore, have to continue the sinking here with one machine. The rock is very hard, but we have no water as yet. The two boilers for the pumping engine for south shaft have arrived, and are in position. All work is going on satisfactorily.

NEW DEVALA-MOYAR (Apl. 21) The 116-ft. level—drive west: We have driven here 5 ft.; total distance, 138 ft. Reef continues very hard and of no value. No. 1 winze: In this winze we are carrying both walls with us, and they are both well defined. The reef is from 6 to 7 ft. wide, and at present carries some country rock with it; but I hope to cut the shoot of stone to the west of this winze as we open out our next level. Our stopes are all in good order and at work. We have sent to the mill during the week 108 tons of quartz.—R. B. JOHNSTON.

NEW EBERHARDT (Apl. 26).—The mine manager reports:—Mine: Total weight of ore extracted and assorted, 45 tons; assay value of same, as per mine samples, $38.60. The general outlook at the present time is unchanged. Mill: Our mill has run steadily during the week; total weight of ore crushed, 93 tons; assay value of same, as per battery samples, $43.14 per ton. Ore team: The ore team is still hauling, having brought to the mill for the week 52 tons. The coming week I hope to have an increase in the weight of ore brought down from the mine, for the roads are becoming good. I note your remarks respecting the re-opening of the old mines of Eberhardt and Treasure Hill, and in returning there (which I shall do at the earliest moment possible) it will be my constant hope and aim to bring the Aurora and Ward Beecher Mines again to the foremost ranks, but in order to do this large developments of ore have to be made, and that developments of a substantial nature will be made I have not the least doubt in my mind. Our field for prospecting is large, and there are in our tunnel levels good and promising prospects, but what they will develop none of us as yet can tell. The ground in our old mines, generally speaking, is very hard, and our progress will, of course, be slow, but let us hope that the progress we do make will be in the right direction, and towards the prize for which our shareholders have so long and patiently waited.

NEW GOLD HILL (Apl. 30).—To-day I measured up the underground work for the month. The 435-ft. level west of Barnhardt was driven during the mouth 38 ft. 3 ins. by six men; we have been in a slide, and had to timber up the ground, and have cut strong streams of water; we have had some vein matter all along, but in the present end there is nothing of much value, the vein being split up with slate. The 300-ft. level was driven during the month 28 ft., also a cross-cut driven 6 ft. by six men; here we have had a number of small veins running in from the hanging-wall, but nothing yet of much value. In the 160-ft. level west the winze has been sunk during the month 14 ft. by six men; the vein is showing very well going down. In the Martin shaft we have taken down the stopes 10 ft., and the latter part of the month sunk the shaft 9 ft. and timbered it up; the vein has improved somewhat in width, and in places it is 10 ins. wide, and shows well in panning; we have a good lot of ore up ready for the stamping mill. Everything is working well. Mr. R. Eames, jun., has arrived, and will take charge to-morrow, viz., May 1.—F. H. MAUNEY.

NEW HOOVER HILL.—Report for month of Apl.:—Driving south of the Briol's shaft at the 130, advanced for the month, 12 ft.; we have not cut into any water as yet. Sinking below the 50-ft. level south of Provost shaft, the vein is very small, and we cannot do the work we should like to owing to the water we have to contend with. The mill ran for the month five days, crushed 120 tons of ore, yielding 19.74 ozs. of bullion, which I am shipping you.

OSCAR (May 5).—Hodgkinson's lode: The shaft is being sunk by four men, and very fair progress has been made. The present depth of shaft is about 100 ft. below the 200-ft. level. The lode during the last 20 ft. has been poor in quartz, but as the footwall is intact and the ground most favourable for working and containing several strings of quartz, we anticipate in a very short time being able to report improvement. The 200-ft. level south is 123 ft. from shaft, and has been communicated with the winze sunk from the 150-ft. level. The quartz has been of considerable width in this level, but is now somewhat narrower, being reduced to 4 ft., whereof 1 ft. on the footwall will mill ¼ oz. to the ton, the remaining 3 ft. being almost valueless. We are pushing this level ahead with two men. The same level is also being driven north by two men. The lode is very flat, and the quartz 10 ins. wide. Above this level—that is, between the 150 and 200-ft. levels—we are working a stope on a shoot, which we can say we have closely followed from surface. Its length is not great, but we are breaking some very good stuff which, if treated apart from the general stuff, would mill over ½ oz. to the ton. We intend to sink a winze in bottom of 200-ft. level on the continuation of this shoot, so that by the time the 300-ft. level is in under this point communication can be made with the winze, and a good section of ground will be ready for stoping. In the back of the 150-ft. level south we have put up a rise about 100 ft. from shaft nearly 50 ft.; the lode is 3 ft. wide, whereof one half is quartz, assaying 3 dwts. In the 80-ft. level we are driving in the dyke, and hope soon to be able to advise that we are through it. Hewlett lode: The lode is about 4 ft. wide, but we appear to be on the top of a disturbance similar to that met with in Hodgkinson lode. The assays show the quartz to contain only 2 dwts. of gold per ton, but when mixed with mineral it is considerably richer. We have three men driving a level on York's lode about 35 ft. from surface. The composition is almost identical with the old Oscar lode, and appearances to-day predict that we shall soon find some rich bunches of gold. In conclusion, we may remark that the mine certainly improves as the development of the lode proceeds.—J. DAW, jun.

PACHUCA (Apl. 11).—Extracts from reports received from the company's manager, F. W. Bawden:—I am glad to inform you we have made very satisfactory progress at the mine during the week past. We have driven and timbered 13 ft. 6 ins. on the vein, making a total drivage of 25 ft. 6 ins., and next week, as the ground appears more favourable, I expect to drive more. The vein shows strong indications of ore, assaying, on the average, 10 ozs. of silver per ton. The engine and pump work are working well.

— (Apl. 18).—We have driven 10 ft. this week, a total of 35 ft. 6 ins., and secured the same, and have also cleaned up the shaft bottom or sump. During the last 5 ft. drivage the vein appears to have a more promising appearance, and contains small pockets of low grade ore, and it has also increased in size. We are carrying the drift 7 ft. high and 4 ft. 9 ins. wide, and the vein is still standing to the north of the drift; thus the vein is over 5 ft. wide now. In the coming week I shall cut in north to explore the vein and know its full size.

PINOS ALTOS (Apl. 15)—The mill superintendent sends up the following estimate for the week :—Lost time: General repairs, 5¼ hours ; repairing mortars, 2 hours ; total, 7¼ hours. Ore worked in pans : 300 tons free ore, at $19, $5,700 ; 160 tons black ore, at $21, $3,360 ; 7.429 tons custom, $515 ; total, $9,575. Of the customs ore $294 03 were paid to the owners, the rest remained to the company in charges and percentage. The face of the tunnel seems to be improving rapidly, and I think in a few feet more we shall cut ore. I will do some assays from here as soon as I can get time, and let you know the result.

CALLAO BIS, LIMITED.

THE SHAREHOLDERS ARE CONGRATULATED ON THE IMPROVED POSITION OF THE COMPANY AND A RETURN OF NEARLY 14,000*l*.

WORTH OF GOLD PROVES IT.

THE report of the board in anticipation of the meeting on the 21st inst. will prove satisfactory reading to the shareholders. The shareholders are first reminded, at the extraordinary general meeting held in May last, approved of the provisional contract entered into by the board for the purchase of the mining properties known as Independiente and Nueva Providencia. Work was started at the Independiente No. 2 shaft on the Independiente Mine in July last, and has reached the depth of 144 ft. From the commencement of the work the appearances at the various points have been of a very encouraging character, both as regards permanency, width, and richness, and it soon becamc evident that the indications were such as to warrant the concentration of all energy and expenditure upon this mine, in order that returns might be obtained from it as speedily as possible. Accordingly mining operations both at the Unda shaft, in the original Callao Bis property, and at Sosa y Mendez were suspended, and the undivided attention of the staff devoted to the more promising work at Independiente. The mill was started on Oct. 20, and the result of the treatment of the 500 tons was 586$\frac{3}{10}$ ozs. of gold, which realised 2,262*l*. 0s. 9d. The realised returns with a hired mill up to the present time have been as under :—

		Yield.	Amount Realised. £ s. d.
To Nov. 21, 1890 ...	500 tons ...	586$\frac{3}{10}$ ozs. Gold ...	2,262 0 9
„ Dec. 19, „ ...	380 „ ...	556 „ „ ...	2,181 1 11
„ Jan. 16, 1891 ...	455¾ „ ...	343 „ „ ...	1,333 10 6
„ Feb. 13, „ ...	547½ „ ...	696$\frac{8}{10}$ „ „ ...	2,685 13 10
„ Mar. 27, „ ...	823 „ ...	978$\frac{7}{10}$ „ „ ...	3,641 17 7
Totals ...	2,706¼	3,160$\frac{8}{10}$	£12,104 4 7

These returns show an average yield of 1 oz. 8 dwts. 8 grs. per ton, and an average realised price for the gold of 3*l*. 16s. 7d. per oz. The return for Apl., as advised by cablegram received on the 7th inst., is 415 tons, yielding 510 ozs. of gold. Mr. Chartier has furnished the board with a detailed report upon the operations during the year 1890, and upon the value of the new properties, with especial reference to the timber lands. In reviewing the progress of the company's affairs during the past year, the directors feel that they can congratulate the shareholders upon the great improvement which has taken place in the company's prospects.—J. H. THORNTON, Secretary.

THE SILVER MINES OF LA LUZ, LIMITED.

THE BOARD ISSUE A VIGOROUS REPLY TO RECENT ATTACKS, AND THE MANAGER SHOWS THAT THE POSITION OF THE COMPANY IS RAPIDLY IMPROVING.

May 15.—The directors have pleasure in forwarding the following extracts from the last letter received from Mr. Hilton, the company's manager at the mines, dated La Yesca, Mexico, Apl. 22, 1891, which they believe will be considered highly satisfactory, and desire to state that as soon as the developments are sufficiently advanced, the machinery now at Guadalajara will be sent to the mines and set to work. In the meantime the plant which is now on the property will be utilised. As several anonymous attacks have been made on the compauy, the directors sent one to Mr. Hilton, and think it only right that the shareholders should peruse his reply, to which the directors draw special attention.—S. BANNING, Secretary.

EXTRACTS.

The Zapopan Mine is now being worked on royalty and producing ore. The company's share I am storing awaiting the time when I will be in condition to treat it. There are about 25 men stoping and extracting. I can soon have a force of double that amount at work. I desire to hear further before letting further contracts. Yesterday I made assays of samples of assorted ores, which gave the following results :—From dump, 105 ozs. silver per ton of 2,000 lbs. ; from copper and iron coarse, 105 ozs. silver per ton of 2,000 lbs. ; from dark ore oxide of iron and manganese, 140 ozs. silver per ton of 2,000 lbs. ; all the samples having a trace of gold. There is probably about 30 tons of unassorted ore on the dump extracted within the past two weeks belonging to the company. Next week I will endeavour to have this ore assorted and let you know what proportion of the same is equal to the assays above reported. My idea as to the mill would be to placc it at a point near the San Miguel Mine. At this point there is plenty of water for all milling purposes the year through. Let the company rest assured of one thing, that the Zapopan and San Miguel are grand mines. The San Miguel cross-cut is now in white porphory, or solid formation, and the rock is impregnated with iron pyrites, and we are nearing the vein. I expect to cut the same in less than 60 days, but remember I cut it at a long distance from the old workings, where so much rich ore was extracted, still I may find good ore away from the ore shoot proper, aud if I do the San Miguel will soon be a producer. I have read with amusement the observations of "Observer," and for a man who pretends to be so well posted, and who knows so little about what he is writing—he has made out quite a letter. What is he driving at? Has he got a pointer and trying to bear the stock so as to load up, or does he want a say in the management? The arrival of the mule train does not prove that there are no tools or provisions at the mines, but the contrary, that tools and provisions have arrived and active work begun. The Zapopan Mine has been entered within the memory of man, and is being entered daily by myself and others. That the San Miguel has not been entered for some time I presume no one denies, but it may surprise the gentleman if he learns that in less than 60 days we will probably have the San Miguel vein, and drifting on same for the rich ore bodies. He says the Zapopan Mines are only cesspools, and during the last 12 years of work ending about 1885, only about an average of 2 tons 17 cwt. was brought to bank. I suppose he means that an average of 3.700 lbs. was daily extracted. Allowing that to be the case, and $100 the average value of same (I have seen the average estimate as low as $90 per ton), why it just looks as if the Zapopan had produced over $2,000,000 in the time stated, rather a good showing for "cesspools and Mexican ladders." As to the machinery stored nearly 200 miles away, which is *not* too heavy to take to the mines, let him rest assured when the company order it placed in La Yesca, it will reach there even on a mule train. The Zapopan, so called section, and the San Miguel ditto, can be worked, and the Guadalupe tunnel can be entered every day in the year. But it seems foolish to notice an article like "Observer's," and I will write no more on the subject.

QUEBRADA RAILWAY, LAND AND COPPER CO., LIMITED.

WE heartily congratulate this company on having secured as its chairman Mr. Hugh M. Matheson, who has rendered such conspicuous service in a similar capacity in connection with Rio Tinto. We regard the accession of Mr. Matheson to the Quebrada chairmanship as an event of the highest importance and happiest augury for that well-managed enterprise. The report and accounts to be presented to the proprietors at the ninth ordinary general meeting, to be held next Friday, states that, after a long period of suspense, caused by various incidents which limited the producing power of the mine, operations are now being satisfactorily conducted on an extended scale. Machinery of adequate power has been placed upon the mine, and smelting furnaces of modern type have been erected, with the result of bringing up the produce of the mines to 4,872 tons of metallic copper for the year 1890.

The revenue account shows that the receipts for the year amounted to 299,684*l*. 5s. 3d., and the expenses to 199,869*l*. 4s 8d., leaving a balance on the year's working of 99,815*l*. 0s. 7d. ; to this must be added increase on previous year's ore stock at mines ready for despatch, 2,468*l*. 15s., and the amount brought forward from 1889, 34,091*l*. 9s. 6d.—together, 36,560*l*. 4s. 6d. ; in all, 136,375*l*. 5s. 1d. ; less : debenture and other interest, 32,416*l*. 2s. 10d., interest on preference shares for the year 1889, 3,751*l*. 16s.—36,167*l*. 18s. 10d., leaving a disposable balance of 100,207*l*. 6s. 3d. The year's outlay shows a total balance against capital account of 49,337*l*. 17s. 7d. The condition of the railway has been steadily improved during the year. The new railway to Barquisimeto was opened on Dec. 15, 1890, and the mileage now worked by the company is as follows, viz. :—Quebrada Co.'s line, 55½ miles ; South-Western of Venezuela (Barquisimeto) line 54⅝ miles ; together, 110 miles. The result of opening the new railway has so far proved encouraging, the traffic receipts on the Quebrada line for the first four months of the year 1891 showing an increase over the corresponding period of 1890 of 5,310*l*., equal to 33 per cent. In the mining department the quantity of ore sent to the coast and smelting works respectively was :—From Aroa to the coast, 17,874 tons of 20 cwt. ; to the smelting works, 48,561 tons of 20 cwt. ; total, 66,435 tons of 20 cwt. From Titiara to the smelting works, 9,188 tons of 20 cwt. ; in all, 75,623 tons of 20 cwt., and the costs generally were reduced. In the smelting department, the improved results, which the board was able to announce in the last annual report, have been fully sustained. The quantity of regulus produced from the period Jan. to June, 1890, was 3,538 tons, and from July to Dec., 1890, 5,351 tons ; total, 8,889 tons. The prices realised per ton of nett copper were :—For export ore, 50*l*. 14s., 2d., and for regulus, 53*l*. 5s. 8d. ; the average price realised being 52*l*. 7s. 10d. The nett disposable balance is 44,117*l*. 12s. 8d. Out of this sum the board will recommend a dividend of 5 per cent. on the ordinary shares for the year 1890, which will absorb 36,296*l*. 11s., leaving a balance to be carried forward of 7,821*l*. 1s. 8d. The report is highly satisfactory, and we sincerely hope that now, after having passed through more than the ordinary vicissitudes of mining, the company is on the threshold of a prolonged period of prosperity.

A NEW SEWING MACHINE.

THE latest labour saving invention—the fruit of 14 years of labour and the final result of over 100 models—the "two-reel lock stitch sewing machine," was exhibited at the Cannon Street Hotel, on Monday last, by the inventor, Mr. Daniel Jones, of Cardiff. It is a most ingenious and, at the same time, most simple contrivance, and briefly may be described as follows :—"An ordinary reel of cotton is used direct, in place of the cotton having to be wound on a spool or on a bobbin for the shuttle. In general appearance the new machine is similar to most others of its class making the lock-stitch, but the mechanism in connection with the under thread is widely different, having been greatly simplified, there being very few moving parts, and what few there are being of very plain construction and direct action. A rotary looper, with a peculiarly formed hook at the rear, and a guard in front, is used in conjunction with a take-up, in such a way that, when a loop has been carried by the hook partly around the reel carrier, a part of the loop is taken up so that the loop will clear the hook, and the remainder of the loop will subsequently be taken up by the action of the hook during the formation of the succeeding loop." A company to supply the machine is now in course of formation, and the prospectus will be in the hands of the public directly after the holidays. The offices are at 5 and 6, Great Winchester Street, where any information may be obtained.

NEW MORGAN GOLD MINING CO., LIMITED.—The offices have been removed to Copthall House, Copthall Avenue, E.C.

REPORTS OF MEETINGS.

NATIONAL PROVINCIAL BANK.

THE REPORT REVEALS REMARKABLE FIGURES, AND THE SHAREHOLDERS RECEIVE A 20 PER CENT. DIVIDEND.

THE annual general meeting was held on Thursday, at the Head Office, Bishopsgate Street.

Mr. R. Blaney Wade

(chairman of the company) presided.

The JOINT-GENERAL MANAGER (Mr. T. G. Robinson) read the notice calling the meeting.

The CHAIRMAN: I will proceed at once to move the adoption of the report. If after a year of ordinary character we feel satisfaction when the time comes to meet our shareholders to render an account of our stewardship, you will readily believe that this year we feel an increased satisfaction in meeting you to set before you the results of the working of the bank since we last met, and the position it occupies. We are confident that whether you regard the question of profits or the position of the bank, our exertions, which I may say have not been light, will receive the seal of your approbation. Now, so far as the value of money was concerned, the year 1890 was a good one for banks. The rate of money was high, and the average discount rate of the Bank of England for the year was as high as 4*l.* 10s. 4d.

ALTHOUGH OUR PROFITS ARE SATISFACTORY,

still it is to be remembered that banks do not always reap the large harvests that are sometimes expected during periods of very high rates. (Hear, hear.) Periods of dear money necessitate, if possible, more caution on the part of banks in transacting their business, and reserves have to be strengthened to meet possible future troubles. Trade was very active during the greater part of the year, and a very large volume of business was transacted in every department. As the year wore on a certain amount of uneasiness was felt. It disappeared at times, but only to return with greater force. And to show you how very uncertain was the state of the money market during the year, I may mention that three times the Bank rate stood at 5 per cent.; in November it was increased to 6 per cent., and during the year there were no less than 11 alterations in the Bank rate. In Nov., as you are all aware, the uneasy feeling that prevailed that something was to happen came to a head when it was announced that the house of Barings was in difficulties. You will see from the account which you hold in your hands that we joined the guarantee which was started by the Bank of England, to enable them to carry out the liquidation of that important house, with

A SUBSCRIPTION OF 750,000*l.*

Now our only object in making this subscription was to assist in preventing that severe shock to credit which must have taken place if there had been a sudden stoppage of that great house. (Cheers.) Any want of confidence on the part of the public at that time would have caused a panic feeling, and we all know what a serious state of things such a feeling may produce. Now, gentlemen, in making that subscription we did not conceal from ourselves that it was a very serious step indeed for us to take; but, having regard to the very important and large interests which you have committed to our care we took that course which seemed to us to be the most wise and the most prudent one. (Cheers.) Moreover, the statement and the affairs of the house which the Governor of the Bank of England was able to communicate to us was sufficieutly satisfactory to enable us to hope and believe that the liquidation of the affairs of that house might be brought to a close without a loss. The guarantee fund amounted to something like 7,000,000*l.* before the representatives of the five large joint stock banks in London left the Bank of England on that

VERY EVENTFUL MORNING IN NOVEMBER.

The amount of subscriptions very speedily amounted up to 17,000,000*l.* Of course, that very materially improves the position of the guarantors. You will, do doubt, have read the remarks of the Governor of the Bank of England at the meeting held a few weeks ago, when he was able to tell his shareholders that, up to that point, the liquidation of the house was going on as satisfactorily as, under the circumstances of the case, could be expected. The ability and courage exhibited by the Governor of the Bank of England and his colleagues at this crisis merited, I think, our warmest approbation. (Cheers.) The only other very important matter I have to mention in connection with the events of last year is that in this year we acceded, in conjunction with the joint stock banks of London, in agreeing to Mr. Goschen's wish that we should publish in our offices monthly a statement of our assets and liabilities. We await, as all banks do, with anxiety and expectation, to learn the details of Mr. Goschen's measure for increasing our gold reserves, but until we have his whole plan before us it is impossible to discuss it. After providing a dividend and bonus of 20 per cent. on the whole capital and 10 per cent. on the instalments on the new shares, we propose to place 25,000*l.* to the credit of the building fund. Our next proposition which we adopted was to place 10,000*l.* to the credit of the benevolent fund, that is, the benevolent fund for the widows and families of officers who have died. You may be interested to hear that the fund was created in the year 1870. It began chiefly by the sale of a certain number of forfeited shares. In 1874 the shareholders made a grant of 5,000*l.* in aid of that fund, and, in 1875 there was a further sale of forfeited shares, which produced over 3,300*l.* In 1881 our kind old friend, Mr. Atkinson, whose name we always mention with reverence —(applause)—left a legacy to the fund of 200*l.*, and with the grant, which I am sure you will approve of, the fund will amount to 50,000*l.*, or something more. We have found the interest derived from this fund of the greatest use in providing for those who have been accustomed to all the comforts and conveniences of life, and who, from no fault of their own, find themselves in a certain amount of difficulty. We all know—and I have repeated over and over again how much we are indebted to the staff, and it is just as true, of course, to-day as it has been in years past, for whenever we visit any of our branches I am sure we come back positively refreshed by seeing the activity and energy and loyalty which distinguish the gentlemen and the numerous staff under them who represent us in the country and in the departments in London. (Applause.) Of

OUR FRIENDS THE GENERAL MANAGERS,

Mr. Robinson, Mr. Churchward, and Mr. Fidgeon, I can only state, as I have done on so many former occasions, that we, the board, derive the greatest advantage from their ability and energy, and, of course, you, as shareholders, as well as ourselves, share in the success that their efforts tend to bring about. (Applause.) We propose to carry over 74,000*l.* to the credit of the new account. The

RESERVE FUND STOOD AT 1,626,835*l.*,

an increase of 176,835*l.*, derived from the premium on the new shares. The amount due by the bank on deposits amounts to 39,587,476*l.*, showing an increase on the year of 276,698*l.* The acceptances, which are covered by cash and securities, figure for 258,952*l.*, which is an increase of 23,927*l.* compared with the year before. After providing for the dividend and bonus mentioned in the inner line, we leave off with a balance to carry forward this year of 74,892*l.* 9s. Now on the other side of the account—the assets—you will find that at the Bank of England and at the head offices and branches we had 4,148,846*l.*, which is an increase of 1,134,878*l.* Our investments in English Government securities amounted to 7,578,504*l.*, which in an increase of 102,610*l.* Our other investments—Indian and Colonial, Government, railway debentures, and other securities amounted to 5,831,770*l.*, which is an increase of 713,939*l.*; and our total investments amount to 13,410,075*l.*, showing an increase of 816,550*l.* (Applause.) The other item of bills discounted, loans, and so forth, amounted to 21,408,732*l.*, which is less by 997,346*l.* Our bank premises show an increase of 21,929*l.*, standing at 615,649*l.* Now, gentlemen, I shall follow my usual course of making no comments on these figures, which I can commend to your attention. (Applause.)

Mr. J. O. HANSON seconded the resolution, which was unanimously agreed to.

The retiring directors, Messrs. Duncan Macdonald, G. F. Malcolmson and Mr. M. O. Fitzgerald, were re-elected.

Mr. Edwin Waterhouse was re-elected an auditor of the company, and Mr. W. B. Peat appointed as auditor in place of the late Mr. Roderick Mackay.

Votes of thanks to the directors and staff closed the proceedings.

LADY FRANKLIN MINE.

WINDING-UP TO RE-CONSTRUCT.

AN extraordinary general meeting of the company was held on Thursday, 7th inst., at the City Terminus Hotel, for the purpose of considering, and if thought fit, passing resolutions for voluntary liquidation and re-construction.

Mr. P. Penn Gaskell

presided.

The CHAIRMAN said that they met together on that occasion to consider the scheme which, according to promise, had been prepared. He thought that the scheme was a very favourable one, and that they were very much indebted to the priority debenture-holders for the way in which they had met them. As regarded the new share capital of the company, they had got it down to 80,000*l.*, instead of 200,000*l.* and 27,750*l.* worth of debentures. This he considered very satisfactory, as the area of the mining property now extends to 90 acres, or nine times the extent of the Lady Franklin proper, upon which the company was originally formed. He thought that perhaps there would be some shareholders who would not come into the new scheme, through various reasons, but he would like those shareholders who did intend to come in to apply for more than their strict proportion of shares, so that the shares of those gentlemen who did not agree to the scheme might be allotted *pro rata* to those who wished for a larger holding. He concluded by moving the following resolutions:—(1.) "That the company be wound up voluntarily, and that Mr. Harry Middlebrook Bentley, of No. 6, Lombard Street, E.C., be, and he is hereby, appointed liquidator, for the purpose of winding up the affairs of the company and distributing its property." (2.) "That the said liquidator be, and he is hereby, authorised to consent to the registration of a new company, by the name of the New Lady Franklin Mining Co., Limited, or by the name of the Lady Franklin Mining Co., Limited, if the registration of a new company under either of those names should be considered expedient." 3. "That the said liquidator be, and he is hereby, authorised to make or enter into an agreement for the transfer or sale of the property and business of the company to another company as is contemplated by section 161 of the Companies Act, 1862, and to receive in compensation for such transfer or sale, shares (either fully or partly paid-up) or other like interests in such other company."

Mr. MOORE seconded the resolutions, which were agreed to.

Subsequently Mr. W. T. HOLBERTON, M.E., who has just reported on the property, made a statement in regard to it, and expressed the opinion that under the present circumstances it would be a very great pity indeed if they allowed the re-construction scheme to fall through.

A vote of thanks to the chairman closed the proceedings.

THE EMMA CO., LIMITED.

AN IMPORTANT CABLE FROM THE MINE.

May 12.—The following cablegram has been received to-day from the manager at Salt Lake City.—"Report from mine:—12 ins. high-grade ore and 18 ins. concentrating ore in drift from old Emma tunnel north-west; 12 ins. galena ore and 24 ins. concentrating ore in raise above drift in Illinois tunnel level; 24 ins. conceutrating ore in first drift above level No. 4 north-west. Quality of ore improving daily at first drift above level No. 4 north-west and raise above drift in Illinois tunnel level. The vein at raise above drift in Illinois tunnel level 4 ft. wide; drift above level 6 ft. wide. Vein at drift from old Emma tunnel north-west, 2 ft. wide; outlook improving constantly; mill starts twentieth tramroad June 1."—R. H. HOBBS, Secretary.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers THE COMMERCIAL BANK OF AUSTRALIA.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

Board.

B. B. TRENCH, Esq., Chairman.

Sir Charles Metcalfe, Bart. | Major J. W. M. Cotton.
L. Balfour Burns, Esq. | Richard Smith, Esq.
Sir Stuart S. Hogg. | Edward Dicey, Esq., C.B.

Head Office.—19, ST. SWITHIN'S LANE, LONDON, E.C.

South African Office.
NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.
W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.
THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business :—

The skilled investment in South Africau Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

ARTHUR FORBES & CO.,

AUSTRALIAN INVESTMENT AND MINING AGENCY,

BRISBANE, QUEENSLAND,

And at 16, CORNHILL, LONDON, E.C.

Telegraphic Address:—"ORPHARION, LONDON."

Have special business in Australian Securities generally, and in the following Australian Mining Stocks :—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva, Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

H. F.—No. 1 seems good to hold for a market rise, but not as an investment. Hold No. 2 for the market rise simply. Also No. 3. No. 4 is being vigorously worked, and the shares should be held. No. 5 promises the earliest rise. The news this week is good. Of No. 6 we have but little hope. We should have advised the sale of Nos. 1, 2, 3, but that prices seem to be at their lowest.

J. B. Johnson.—Sell and secure your profit by all means.

F. W. B.—Cannot advise them. Think they are too high.

Cornelius (Whitstable).—Yes. You should hold on. This latest scare we think has done its worst, and prices may be expected to improve.

Dragon.—Sell.

Novice (S.W.)—The average yield is first-rate, and the prospects are most encouraging. Hold your shares.

Enquirer (Chester).—It is rumoured that another dividend of 1s. will shortly be declared, but it is not officially announced. Write to the secretary as suggested.

Justice.—Shares should improve. You are mistaken as to the management. We believe it to be thoroughly respectable and trustworthy.

Ryde.—There is no quotation for the shares. The mine is not working at present, but awaiting results of neighbouring properties.

S. M. M. (Bradford).—Purchase a few. The time is favourable.

Churchill.—It is what is known as a watery mine, and will be of very little profit to the shareholders for some time to come. Do not buy the shares.

Doubtful.—It is a bad "system," at least, for the investing public. We advise you to have nothing to do with the parties named.

Appreciative Reader.—Hold all for better prices. A very good selection.

Chanticleer.—Likely to go lower, therefore cannot advise you to operate as suggested.

The Mining World.

LONDON: SATURDAY, MAY 16, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

PRICES AFTER THE HOLIDAYS — A SELECTED LIST.

THE firmness with which the market closes this week justifies the belief that when the public have settled down to business after the holidays there will be a revival of prices, and a fair number of fresh issues. Of late the public have been disgusted by numerous trials of the financial type in the law courts, as well as failures of prominent members of the House, and of the outside share broking fraternity, and they have also been morally, if not pecuniarily, shocked by the disclosures in the cases of several concerns, the inception of which has been in sin, and the production of which has savoured of iniquity. The public are apt, in their haste, to class all enterprises in the same category, but in their leisure, reason, which is another name for common sense, will tell them that such conclusions from the premisses are unjust, and such inferences from the facts unwarranted. There are in the mining lists many companies—the great majority of them, indeed—which are well worth any attention the public may see fit to bestow upon them, and the shares of which promise a substantial rise in market prices, whilst in not a few cases dividends are likely to take the place of calls. It is not possible to forecast with certainty, and assuredly it is not wise to prophesy, that these concerns will be successful, but we unhesitatingly say that the risk of buying a few of the shares we shall name is worth running by those who have the money to spare. If that money be wanted for the purposes of rent, of food, or of clothing, or even for the summer's holiday, it should not be put into mining shares. If, however, it can be spared from the immediate purposes of life, then it may be put into the shares that are named, with an extremely fair prospect of doubling itself in the near by-and-bye. It would be easy to show the utter inconsistency of the persons who decry mining as an industry, without which the world could not progress, or its population in a measure exist. The judge on the bench, and the lawyer who addresses him, think they have said a wise thing when they utter some common place remark against mining; and the jury, who are surprised at the folly of the plaintiff's conduct, or the recklessness of that of the defendant, may think by their verdict to teach the one or the other a lesson, but it would be interesting to know in what our monitors have themselves invested, for the public would be glad to hear of a security yielding a big dividend, but without risk. Information such as this would be much more welcome than the platitudes of the preachers who lay down maxims for the public in general, which they themselves are wisely careful not to practise in particular. We beg to inform these guides of the public that mining is as legitimate an industry as any that can be named, but that, unfortunately, it cannot be always protected from the machinations of the designing, though we have still to learn that the reverse can be said of any other occupation to which man gives the contents of his purse, or the thoughts of his brain.

In mentioning, therefore, the following concerns as worthy of the attention of investors, we do so not because we profess to see further into the ground than other people, but because we are persuaded the concerns are honestly managed, that they have, in most cases, a reasonable amount of capital at their back, and that there are fair (in some cases a stronger word would be justified) prospects of success. To avoid invidious distinctions we give our "selected list" in alphabetical order:—

Almada.	Glenrock.	New Devala Moyar.
American Belle.	Golden Feather.	New Eberhardt.
Antioquia.	Golden Gate.	New Guston.
Balaghat.	Golden Leaf.	Nine Reefs.
Bonnie Dundee.	Goldfields of Mysore.	Nundydroog.

Colorado Silver.	Leadhills.	Potosi.
Copiapo.	Libiola.	Quebrada.
Day Dawn Block.	Loma Gold.	Roman Gravels.
Day Dawn P.C.	Montana.	Sheba.
De Lamar.	Monte del Oro.	Silver Mines of La Luz.
Dickens Custer.	Mount Zeehan.	South-East Mysore.
Don Pedro.	Mysore.	St. Augustine.
Elkhorn.	Mysore Reefs.	St. John del Rey.
Elmore.	Mysore West.	Tesoro.
Emma.	Mysore Wynaad.	Vogelstruis.
Flagstaff.	Namaqua Copper.	West Argentine.
Frontino and Bolivia.	New California.	Yankee Girl.

THE METAL MARKETS.

THE position of the metal markets is on the whole strong, with every prospect of an early all-round rise in prices. The stocks of copper have been reduced within the last four months by 5,000 tons, and the demand for the metal is increasing weekly. These facts, combined with the announcement that the Anaconda mine will be closed for some months, is almost sure to have a favourable effect on the market from the producers' point of view. The tin market is also looking strong, the visible supply being 1,000 tons less than last year, while the actual orders booked by the tin plate works for delivery by the end of June amount to 3,600 tons. Seeing that no shipments from the Straits can be delivered here before that date, our stocks will be reduced to about 1,000 tons. As regards iron, the decrease in stocks during April was 56,395 tons, and were it not for the falling off in demand for shipbuilding and other purposes we might expect a rise here also. However, the market is in a very healthy state, and should a renewed demand spring up the price must advance immediately.

THE MASON AND BARRY FAMILY PARTY.

WE have several times taken up our parable upon this company's affairs, and called attention to the family party character of the direction. We are quite aware that Mason and Barry, on its capital of 1,851,640*l.*, has paid dividends in 13 years to the amount of 1,729,362*l.*, and whilst rejoicing with those who do rejoice in this satisfactory result, we are bound to say that it does not apply to the majority of the shareholders, who paid very high prices for their holdings. With this, of course, the board have nothing to do, and for this they cannot reasonably be held responsible. At the same time, when the shareholders see with what Sir John Pender described at the Panulcillo meeting as a very fair price for copper their dividends dwindling from 12½ per cent. to 3 per cent., they are disposed to search for the cause. That the shareholders are dissatisfied with the state of affairs as presented to them on Monday is evident from the hostile nature of the discussion that took place, and the amendments that were proposed. The directors were reminded that on the announcement of the dividend the shares fell from 7¼ to 5¾, and that the market since then has been in an extremely flabby condition.

Our view of the management of this concern has been pretty freely expressed throughout. It is now seven years (see MINING WORLD, May 3, 1884) since we called attention to the peculiar constitution of the Mason and Barry board. It is all Mason or all Barry. What is not Mason is Barry and what is not Barry is Mason. Seven years ago the direction was so constituted that the Mason and Barry element could, if it wished to do so, dominate the company. The board consisted of Mr. James Mason, Mr. F. T. Barry, and a little later the chairman's son was elected. There were three other directors it is true, but as the chairman (one of the "family") had the casting vote, the position of what may be termed the independent members of the board, that is those who were not originally interested as vendors, may be easily understood. Add to this, that even the secretary is a Barry. At the present time the board is composed of Mr. F. T. Barry (chairman), Mr. J. F. Mason (deputy chairman), Mr. J. Mason (*ex officio*), and only two other directors, who rejoice neither in the appellation of Barry nor of Mason. Thus the old state of things is preserved, and the Mason and Barry interest is in a position to dominate the company should the wish provoke the action, which we are far from saying it ever will. Still we held in 1884, and riper years do not alter the opinion, that to place the supreme power of any company, much less of a company with a capital verging on two millions sterling, in the hands of the vendors is unwise. The principle is unsound, and if from that principle we were not diverted by the 12½ per cent. divi-

dend of 1884, much less shall we be diverted from it by the 3 per cent. dividend of 1891.

DON PEDRO.

THE tide has fairly turned in favour of Don Pedro Mine, but when the shareholders are in receipt of those dividends, of which the prospect is so good that it almost amounts to an absolute certainty, they will, of course, owe them, first of all, to the wealth of their mine, and next to the indomitable pluck and determination of their directors, their secretary, and their present manager. Mr. Touzeau has only become connected with the company in recent times, but the other gentlemen, and particularly Mr. Dawson, have stood by it for a period of years with a courage worthy of the race, and with a devotion beyond all praise. When the shareholders, who, it must be owned, in later years have endured much disappointment from Don Pedro, would do nothing for it in the way of finding more capital for the completion of the work in hand, the directors have advanced it themselves, and had they not done so it is not difficult to forecast what would have been the position of Don Pedro to-day. As it is, that position is such that we do not scruple to say we share the confidence of the chairman and his colleagues as to the prosperous future that, according to all human reasoning, awaits this concern.

In the MINING WORLD of Feb. 7 last we gave a lengthened description of "Don Pedro—Past and Present." In our article we reminded the reader that the original company (of which the present is a re-construction) was formed in 1862, and that three years later, Capt. Treloar, the first manager, discovered the auriferous formation of Maquiné. In Mar., 1865, it was that the vein was discovered, and to the Dec. following the produce of gold was 14,949 oits. An oitava is one-eighth part of an ounce. In 1866 the production was no less than 70,348 oits., obtained from 12,779 tons, or 5⅛ oits. per ton, and 14 per cent. was paid to the shareholders. In 1887 the production of gold was 182,397 oits., and the happy shareholders received 92 per cent. upon their capital. In 1888 the production was 204,652 oits., and the dividends paid equalled 100 per cent. In 1889 the production was 201,581 oits., and the dividends paid were in all 100 per cent. Shortly after came the water difficulty, which, strange to say, was never overcome until Mr. Dawson devised the system of dealing with it, to which the chairman, in his speech, referred. The point for the shareholders to remember is this, that at the time Capt. Treloar was overcome by the water difficulty his report spoke of "a splendid lode in depth." Even since 1889 Maquiné lode has yielded 694,733 oits., or nearly 3 tons of gold, but it has all been absorbed in working expenses. The statement in Capt. Treloar's report was confirmed at Monday's meeting by Mr. Touzeau, as the result of his actual experience, for the value of the lode has been proved, and though the statement would be a rash one if made respecting any mine of whose past history nothing was known, it is reasonable as respects Maquiné, that "what has been may be again." It is for this reward the directors and the staff have toiled and moiled for years, and no more than justice was done to their labours by Mr. Tolputt, who carried the shareholders with him in his expression of thanks. The directors are large shareholders—in fact, the chairman said that he and his friends hold one-eighth of the capital. The statements at the meeting, together with the solid facts by which they were supported, all point unmistakably to a renewed period of prosperity for Don Pedro.

THE PROSPECTS OF THE CLUTHA GOLD MINES.

THERE were several features in connection with the meeting of this company that deserve more than passing notice. In the first place it is satisfactory that though the chairman (Viscount Grimston) was at one time in low spirits about the 3,000*l*. he has invested in this concern, he now distinctly regards the barometer as pointing fair. He is justified in doing so, because Mr. Edgar Taylor, the South African representative of Messrs. John Taylor and Sons has seen the property, and has blessed it in a report which utters no uncertain sound as to its prospective value. But to realise this prospective value, certain things have to be done, and the board are determined that if the task lie within the scope of mortal effort they shall be done. Shareholders were reminded that the company has considerably extended its borders since the time of the original purchase. It then owned the Clutha Gold Mines, but now possesses the Victoria Mill and Mine. By the one it added a property of, we might say, proved value to its sett, and by the other it saved an immense amount of money and time. The company, despite careful management, has not been without the ills to which mining, like flesh, is heir, and the chairman had to refer to one or two little mishaps, of a vexatious rather than of a serious character. The water-race had to be put in order, and the Clutha ore, instead of being put through the mill as found had to be selected. The last letter, however, shows a "distinct improvement in both mines"—that is, both the Clutha and the Victoria. It is upon the latter that operations are now being mainly conducted by Mr. Stevens, as manager, with Mr. Edgar Taylor, as consulting engineer. The last report speaks of 35 dwts. to the ton in the Victoria, and the chairman seems justified in his statement that "we have proved that we have a veritable gold mine." Certain further expenditure, however, is necessary, and the directors being without funds propose to raise them by means of debentures rather than by the cumbrous, expensive, tedious, and drastic process of re-construction, and we earnestly trust the shareholders will support them in this effort. There was no disposition on the part of anyone at the meeting to let a property of this value pass out of their hands; a property of which, as Mr. Marshall Jay truly said, the Messrs. Taylor think highly, or they would not allow their South African representative to become identified with its management.

PANULCILLO COPPER.

THE efforts of the directors have been largely devoted during the past year to placing the company on a more solid basis, and particularly to making it less dependent than in past times on outside help in regard to the supply of carbonate ores, which are used for the purpose of fluxing with those of Panulcillo. The chief step taken in this direction has been the purchase of the Condesa Mine out of revenue, but for which it is reasonable to suppose a dividend would have been paid. The next step has been to secure an adequate supply of labour, which is increasing owing to the cessation of railway construction, and lastly an improvement in Panulcillo ore, which it is hoped will be realised. It is gratifying to know that the horrible war now going on has not caused the company any inconvenience, and the shareholders will accept without reserve the statement that the company abroad is well managed, and equally may they take ours, that its conduct at home leaves nothing to be desired. Sir John Pender (the chairman) threw out some valuable bints as to the probable future of copper. When one company with which he is connected is found laying down 90 miles of insulated copper wire for electric lighting purposes, and others at home and abroad are working on a similar scale, and when the demand for sulphate of copper to kill the insects that are the plague of agriculture, proceed apace, whilst at the same time the demand for the ordinary purposes of commerce does not diminish, and the supplies do not increase, one may well look for that cycle of prosperity for Panulcillo of which the chairman spoke, and also for better times for the industry as a whole.

DURBAN-ROODEPOORT MEETING.

THE record of this company, as given by Mr. Archibald Parker at the meeting on Tuesday last, was received with well-merited satisfaction by the shareholders. Notwithstanding difficulties and disasters by flood and field, the accounts for the year 1890 showed a net profit of nearly 24,000*l*., out of which the directors were able to declare dividends amounting to 20 per cent. on the capital. In addition to this another 10 per cent. was distributed in January on account of the current year, with every prospect of more in the near future. In fact the company is progressing in a manner that many of its neighbours might envy. The production is increasing while the costs are decreasing. Under these circumstances the shareholders are likely to have greater cause for congratulation on the result of the present year's working even than on that of 1890.

AFFAIRS IN SOUTH AFRICA.

Kimberley, Apl. 20, 1891.

THE NEW DIAMOND MINE.

I NOTICE that in a leading article in your issue of Mar. 21 you say:—"The discovery (of this new mine) is evidently awakening keen interest at the Cape, though operators for the rise in De Beers shares here affect to regard the whole matter as of about as much importance as the sea-serpent or the gigantic gooseberry of the dead, or silly season." I do not pretend to be intimate with the intricacies of the market, but I can assure those operators that this new mine is not such an insignificant matter as they suppose it to be. In a little more than two months Mr. Ward's concession will have expired, and then great changes will undoubtedly take place. On June 30 he will have to find 150,000*l*., or the mine reverts to the owner, Mr. Wessels. Meantime, Mr. Ward and his co-partners are hard at work, and have put up machinery, judging from which one would think they have no intention of clearing out in June. Although they have gone down no depth, they are finding at the rate of a thousand carats a day, and one day last week they turned out a 99-carat diamond, which is acknowledged to be one of the most beautiful and valuable stones ever found on these fields. In my recent letters I informed you that there was every probability that there would be a lot of work for the lawyers. The ball has already commenced. Your readers will remember that in my first letter on this subject I mentioned the fact that a Mr. Fabricius was the actual discoverer of diamonds in this mine, and that he came across them in a most accidental manner. At that time Mr. Fabricius was in Mr. Ward's employ, but in consequence of the discovery Mr. Fabricius obtained from Mr. Ward a certain agreement which enabled him to work a certain number of claims on his own account. He did so and was finding well, but a few days ago Mr. Ward applied to the High Court for an interdict restraining Mr. Fabricius from working his claims, alleging that he had not complied with the terms of the agreement. Those terms were not made public when the application

was made, but Mr. Ward obtained the interdict, and we shall know all about the matter when the principal case comes on. Whilst this application was before the court it transpired that Mr. Fabricius, whilst working his claims, has been supplied with money and gear by the De Beers Co. On the subject of throwing the mine open as a public digging I have little to write about in this letter. Public feeling here still runs very high on the question, but as I have before remarked it is more a question of colonial politics than of commerce. My firm conviction is that so long as Mr. Rhodes is Premier of the colony the mine will not be thrown open. For obvious reasons Mr. Rhodes has flung himself into the arms of the Africander Band—a most unnatural coalition, seeing that he is the apostle of progress and the Africander Boers are the most conservative people on the face of the earth. Mr. Rhodes is clearly endeavouring to kill two birds with one stone; he wants to secure the support of the Africander Band in carrying out his Mashonaland schemes, and, having secured that, he knows very well that they are so utterly indifferent to the diamond industry that on that topic they will give him a free hand, and willingly play "follow my leader." That is all very well for the present moment, and looks very clear and smooth, but unless Mr. Rhodes takes very great care he will find some very ugly rocks ahead. Our Parliament meets at the end of next month. On the opening day it is beyond a doubt that the Premier can confidently rely on a large majority, but I should not be one bit surprised if, before the session is half over, he finds that majority becoming small by degrees and beautifully less. The Africander Boers are a funny lot to deal with, and the Africander Band a broken reed to depend on, and it is quite on the cards that this threatened

TREK INTO MASHONALAND

may prove a terrible sword in his side. For many months past there have been rumours that some hundreds of Boers from the Transvaal Free State, and this colony, with all their belongings, intended to migrate into Mashonaland, starting next month, there to settle and establish a Government of their own on the same principle as the Transvaal Republic. As usual, the British authorities treated the matter with contempt, but quite recently certain particulars were published which clearly proved that these people are in earnest, and that they were acting on an alleged concession said to be obtained by one of their number from a native chief. Whereupon, out came a proclamation in the Government Gazette by the High Commissioner, warning all whom it might concern that if they trespassed on the Chartered Co.'s territory they did so at their peril. Then all the fat was in the fire, and at Pretoria—which is supposed to be the birth-place of the trek project—the anti-British feeling is strongly accentuated. It is only fair to say that the Boers themselves are very much divided as to the expediency of forcing on this trek, but there are a lot of turbulent spirits amongst them, and there is quite enough mischief brewing to give Mr. Rhodes many a bad *quatre d'heure*. Of this his political opponents will only be too glad, and unless other influences have been at work to cause Sir Gordon Sprigg to care less for the sweets of office than he used to do I should not be at all surprised to see him take up the popular cry and advocate the opening of the new diamond mine.

RAILWAY PROGRESS.

As time flies we find that every month adds materially to the progress of railways in South Africa, but for all that the obstinacy of Paul Kruger stops the way. It is now two years and a-half ago since I ventured to predict in your columns that, owing to Paul Kruger obstinately declaring that no railway should enter his territory from a British Colony until his pet line from Delagoa Bay reached Pretoria, the latter line would not be completed in 10 years from that time. I foresaw that there were political, scientific, and financial difficultics in the way, and although something may happen to shorten the time, I feel convinced that the railway will not run from Delagoa Bay to Pretoria within five years from this date. I am led to make these remarks in consequence of the recent festivities which took place at Coldstream, on the Natal border, to celebrate the opening of the extension of the Natal railway to that frontier town. President Kruger and a host of Transvaal officials were invited, and being escorted by the Governor of Natal from Coldstream to the Port of Durban, the affair partook more of the nature of a triumpbal progress than anything else. The evident object of the Progressive Party in Natal was to try and get Paul Kruger to relent, and consent to the continuation of the line from Coldstream to Johannesburg, a distance of only 170 miles, but the old President was obdurate. It is well known, however, that during the journey he and some of his officials, who are more progressive than himself, had some high words on the subject, and, indeed, from a variety of circumstances that have transpired within the last few days, I should not be in the least surprised if there are not great political changes in the Transvaal before the end of the year, and if there are they will materially affect the whole political atmosphere of South Africa.

MESSRS. GEORGE GREGORY AND CO.'S CIRCULAR.

SHREWD business acumen is shown in the circular issued by Messrs. George Gregory and Co., dated May 11, prepared as usual on contango day of each settlement. They describe the features of the money market and the vicissitudes through which stocks and shares have passed during the previous fortnight, and are likely to pass during the present one. Leaving the general and coming to the particular, they deal first with Home Railways and the state of quotations, which largely justifies what was written at the time of previous settlement. They point out that the traffic earnings and outlook leave nothing to be desired, and add that "with such encouragement in view, and only seven weeks of the half-year to run, a comparison of past and present carrying-over prices may be not only edifying, but highly profitable if promptly acted upon." This comparison is given, and from these facts shown, and other deductions, they draw the following conclusion :—The highest claims to present speculative support may be classified as follows, viz. :—"Midland, Brighton 'A," Metropolitan, Sheffield 'A,' Caledonian Deferred, District, Dover 'A,' Hull and Barnsley." Then follow some shrewd remarks as to American Railways, and a reference to "the evil influence" which has so largely controlled the course of the market in the past fortnight and worked to depress prices. In the mining department the Messrs. Gregory fully agree with our remarks (see Mining Market) relative to Callao Bis, for which there is a great future, and we also think their recommendations of Wentworth and Broken Hills fully justified by the facts.

WEST ARGENTINE.

SATISFACTORY NEWS FROM MR. JENNINGS ON THE SILVER LEDGE PROPERTY.

A CIRCULAR has been issued giving extracts from Mr. Jennings' letters as to the opinions of experts on the Silver Ledge group of mines. The views expressed are highly favourable, and are those of gentlemen well qualified to speak. Mr. Weston, for instance, speaks of Silver Ledge as "one of the finest prospects in the district," and he saw no reason why it should not turn out equal to Yankee Girl. Mr. Argall seems to have thorough faith in the property, and has told Mr. Jennings he is ready to "plank the money down himself" should the present negotiations fall through. Mr. O'Brien is of opinion that there is plenty of good concentrating ore up the creek ; it is 12 ft. wide ; also some good shipping ore, 40 oz. stuff, and 30 to 40 per cent. lead. Mr. Sutter considers improvement in depth is so marked that it is better to go for shipping ore than to spend the money in concentrating plant. Everything points to supplies of shipping ore soon available. Mr. Crawford thought highly of Silver Ledge, and would "rather put his money in it than in hundreds of Red Mountain claims now offering." The following cablegram has been received from the manager, dated May 8th :—" Have struck good ore in the mine. Will continue sinking. Ore improving in quantity as developed. Will start uprise."

THE MONEY MARKET.

CITY, FRIDAY EVENING.

FIVE PER CENT.

THE advance of last week in the Bank Rate has been followed by a rise this week to 5 per cent. Early in the week it was fully expected, but on Wednesday, notwithstanding that it was Settlement day, the fears were dissipated, favourable rumours being current as regards the bullion movements, so that surprise was felt when the directors yesterday notified "5 per cent." From what has lately transpired in the way of rumours affecting credit, mostly emanating from "bear" channels through the Continent, it was for a time thought it indicated trouble, but it was soon recognised that the directors' only object was to augment the reserve, which has been depleted rather seriously for this season of the year, especially when the exceptional position of financial affairs is taken into account. Discount has risen to $4\frac{5}{8}$, $\frac{3}{4}$ per cent., but is easy at that, and money rose to $4, \frac{1}{2}$, although it has since weakened to 3, $\frac{1}{2}$ per cent. The discount houses have raised their terms for deposits to $3\frac{1}{2}$ and $3\frac{3}{4}$ per cent., and the Exchanges have all moved in our favour. The Bank return, owing to an influx of bullion, shows an improvement in the Reserve of 235,000*l*., to 12,445,000*l*., against 13,676,000*l*. last year, and the proportion is $\frac{5}{8}$ better, at 34 per cent.

Upon the Stock Exchange the week has been fraught with anxiety, owing to the Portuguese crisis, which upset the Bourses, and, in fact, everything. The settlement, notwithstanding dear money, commenced under hopeful auspices, as the account was of a "bear" nature, and, in foreign bonds particularly, was very extensive. This fortunate circumstance has, no doubt, saved this market, and for once the foresight is to be commended. Without going into the financial position of Portugal, it has long been a matter of common notoriety that the country was in a bad state, and that were it not for French "bulling," their bonds, with Spanish and Italian, would months since have found a much lower level. However, the shock here has been admirably borne, and after our terrible Argentine experiences, would show that the situation is inherently good. The fall in Portuguese has been as much as 10 per cent., when they touched 38, and generally the decline is four or five points. Home Railways too have suffered, Brighton "A" especially, owing to difficulties in the provinces, which caused a rather important failure here. The traffics, nevertheless, continue favourable, and holiday prospects are encouraging. Consols have changed hands under 95, and Colonial Inscribed are lower. Canadian Railways show a decided fall, as do American, which market is undesirous of relieving Wall Street of their huge purchases at enhanced prices.

Mexican Railways have literally collapsed on extensive liquidation and Banks, Miscellaneous, &c., only showed the faintest steadiness. The whole record is melancholy reading, but there is a gleam of sunshine, however, in that the shake-out must eventually stir business.

The bullion operations at the Bank of England to-day consisted of 22,000*l.* in bar gold bought, and 11,000*l.* absorbed for Portugal. About 800,000*l.* is being shipped to-night from America for Europe. The Imperial Bank of Germany has raised its minimum rate of discount from 3 to 4 per cent., which act is ascribed as a feeling for protection of their huge stock of gold rather than to any pressure in that centre. Money this afternoon was much wanted at 4½, 5, partly to provide an instalment of 800,000*l.* on the Victoria loan, and bills of three months were equally firm at 4⅝, 4⅞. Tenders for 2,000,000*l.* Treasury Bills produced applications for 14,850,000*l.*, but the only result was 50,000*l.* sold to a Government department at 12 months at 3 per cent. discount. The rest were either withdrawn or allocated to the Bank of England, for it is assumed that the terms offered were too high.

The approach of the Whitsuntide holidays has checked business to-day at the Stock Exchange, and in the absence of support prices have fallen away after much fluctuation. The Funds were dull, and closed ⅛ to ¼ lower, at 94⅞, 95 for money, and 95 1/16, 95⅛ for account. The Two-and-a-Half per Cent. have also receded ¼, and Local Loan and India Three-and-a-Half per Cent., ⅛, while Colonial Stocks were generally lower under the monetary influence. Foreign Stocks have been heavy. Portuguese and Spanish improved in the morning, but relapsed again this afternoon, the former on expectations of a Ministerial crisis at Lisbon, and Spanish, with other "Internationals," reduced about ¼. Italian have fallen nearly 1 per cent., and Turkish, Series "A," and Greek issues ½ to 1 per cent. Argentine Securities fell, owing to the further rise in the gold premium to 290 per cent. and fears of a fresh commercial crisis in view of a forced paper currency. Chilian fell 1, but Uruguay are firmer. In Home Railways the "rates" question has agitated the market, and prices have fallen, the heavy stocks as much as 1¼ to 1¾ per cent. Brighton "A" fluctuated violently all day, partly due to the failure of Hurst, Daniel and Co., through the South-port broker, who has disappeared. The price touched 141¼, but closed at the best at ¼ higher than yesterday. The American market declined, but closed slightly firmer, with a fall of ¼ to ⅜. Trunks were weaker, but Mexican better by ½ to 1 per cent. Other Securities were featureless.

Annexed are the final quotations to-day:—Consols Account, 95 1/16, 95⅛; Egyptian Three-and-a-Half per Cent., 88¾, 89¼; Egyptian Unified, 93⅞, 94⅛; French Four-and-a-Half per Cents., 103, 104; Hungarian, 89⅛, 89⅜; Italian, 90, 90¼; Mexican, 30¼, 30¾; Peru Five-per-Cents., 8¼, 9¼ per cent.; Peru Six-per-Cents., 26¼, 26¾; Russian, 1889, 95¾, 96¼; Portuguese, 42½, 42¾; Spanish, 69⅜, 69⅝; Turkish, 1871, 93½, 94; Turkish Defence, 91¾, 92¼; Caledonian Railway, 116⅜, 116⅝; Great Eastern, 91⅜, 91⅝; Great Western, 153¾, 154; Brighton "A," 144, 144¼; North Western, 168½, 168¾; Metropolitan, 81¼, 81¾; Metropolitan District, 29½, 30; Midland, 149⅝, 149⅞; North British, 43⅛, 43⅜; North Eastern, 157½, 158; South Eastern "A," 90½, 90¾; Mexican Ordinary, 37⅛, 37⅜; Grand Trunk, 8 11/16, 8 15/16; Grand Trunk First Preference, 58⅜, 58⅝; Grand Trunk Second, 38⅜, 38⅝; Grand Trunk Third, 21⅜, 21⅝; Canadian Pacific, 78¼, 78½; Denver 17¾, 18; Erie, 20⅛, 20⅜; Milwaukee 64½, 64⅝; Lake Shore, 112, 112½; Louisville, 78⅛, 78⅜; Atlantic First, 31⅜, 31⅝; Ontario, 16¾, 17; Ohio, 17⅛, 18⅛; Norfolk and Western, 53½, 53¾; Reading, 15⅞, 16⅛; Reading Bonds, 81, 82; Union Pacific, 47, 47¼; Wabash Preference, 20⅞, 21⅛; Ottoman Bank, 12 9/16, 12 11/16; Anglo-Telegraph, 46¾, 47¼; National Telephone, 4⅜, 4⅝; Hudson's Bay, 17¼, 17⅜; Suez Canal, 102¾, 103¼; Guinness, 310, 312; Allsopp's Ordinary, 30, 33; Bryant and May, 13¾, 14; Nitrate Rails, 14, 14½; Eastmans, 7⅝, 7⅞; G. H. Hammond's, 2⅞, 3⅛.

REPORT OF MEETING.

THE PAHANG-SEMILIANG, LIMITED.

DISAPPOINTMENT WITH THE REPORTS OF MR. FRASER.

AN extraordinary general meeting of the Pahang-Semiliang, Limited, was held at Winchester House, recently, when the following resolution was submitted for confirmation as a special resolution:—

(1.) "That it is expedient to effect an amalgamation of this company with the Pahang-Kabang, Limited. (2.) That with a view thereto this company be wound-up voluntarily, and that the Honorable Arthur George Brand and Thomas Russel Kent, Esq., be, and they are hereby, appointed liquidators for the purposes of such winding-up. (3.) That the draft agreement submitted to this meeting expressed to be made between this company of the first part, the said liquidators thereof of the second part, and the Pahang-Kabang, Limited, of the third part, be, and is hereby approved, and that the said liquidators be, and they are hereby, authorised, pursuant to section 161 of the Companies' Act, 1862, to enter into an agreement on behalf of this company in the terms of the said draft, and to carry the same into effect."

Mr. Russel Kent

presided.

Mr. ERNEST F. SHAW (the secretary) read the notice calling the meeting.

The CHAIRMAN said that the shareholders were aware that under the Act of Parliament the resolution, which was carried by the meeting on Mar. 19 last, would have to be confirmed by a subsequent meeting, and it was for that purpose that they were called together on that occasion. He did not propose to go over the ground again as to the reasons for confirming the resolution as that had been thoroughly thrashed out at the last meeting, presided over by the chairman of the company. He therefore proposed, "That the above resolution should be confirmed."

Dr. PHILPOT seconded the resolution.

Mr. BACHELOR said that although the meeting was a formal one, he presumed that the shareholders were there for the purpose of gaining any information that they might wish to have. He was not present on the last occasion, and he was very much surprised that Mr. Brand, who presided at the last meeting, was not in the chair on the present occasion. He thought that the statements which were made in the prospectus had in no way been justified. That prospectus had given particulars of the labour, and means of transport in the country, which were very favourable, but had not been carried out, and had stated that the ore which they would be able to treat would give a return of 50 per cent. on the capital of the company. He maintained that those statements had in no way been realised, and he was very much disappointed that the reports of Mr. Fraser had not been fulfilled.

The CHAIRMAN said that all the board had lost money in the same way as Mr. Bachelor. They had believed in the enterprise, like that gentleman, and were just as much disappointed at the unsatisfactory results. Mr. Fraser was a gentleman who was largely connected with mining concerns, and the directors had the greatest faith in his reports, and were considerably disappointed as time went on at the disappointing returns from the mine. He knew that all mining enterprises were speculative, but in connection with the Semiliang,

THEY HAD ALL BEEN GREATLY DISAPPOINTED.

As a gleam of sunshine, he would like to add that they had received a communication from the Pahang Corporation to the effect that their superintendent had returned a decidedly favourable account of the Semiliang property. He thought that the course proposed was decidedly the best to follow, while they had yet funds to endeavour to bring about a better state of things.

Mr. BACHELOR said that the shares of the company were at present unsaleable in the market, or at least quoted at 2s., and the question, he thought, at the present time was how much they could get back of the money which they had lost, and how could they get it back. If there were funds in the company sufficient to give them more than 2s. per share, he thought that it would be better to wind up the company, and get what they could out of it. He had been introduced at one time to Mr. Fraser whom he thought an experienced and competent gentleman, and he thought that there should be some remedy for the manner in which they had been deceived.

A SHAREHOLDER asked if the company would have the same number of directors, or if the number would be increased.

The CHAIRMAN said that the directors would be the same as the directors of the Pahang, with the exception of a vacancy, which would be filled up, and Mr. Brand would remain the chairman, and the call of 5s. recently made would remain intact.

Mr. BACHELOR said that that would make a large sum of money, and there was no reason therefore why the shares should be at such a low figure.

The resolution was then put and unanimously confirmed.

A vote of thanks to the chairman closed the proceedings.

THE NEW CALIFORNIA, LIMITED.

THE DIRECTORS SHOW THAT DEVELOPMENT IS PROCEEDING WITH GOOD RESULTS.

THE report of the board will give satisfaction to the shareholders, but, unhappily, there is no mention of a dividend. It will be noticed, from the manager's very complete description of the property, that the more profitable portion of the output is still being derived from the bottom levels of the California, but the cross-cutting and other works intended to develop and open up the company's new claims have discovered some new veins from which ore of paying quality has been obtained, and the B lode at the 1,400 level east, which are now being further explored by the new works. Since Jan. 1 the California shaft has been sunk another 100 ft. to the 2,100-ft. level. Throughout this sinking the lode has yielded pay ore, being in places rich in high-grade rock, but "in the bottom of the shaft," the manager says, "it has a finer appearance, and is richer, being worth from $500 to $600 per fm." With such prospects in sight, he proposed that the shaft should be continued another 100 ft. forthwith, and the directors immediately gave instructions for the work to be pressed forward. The accounts show that the debenture debt has been reduced by 1,500*l.* The revenue account shows that the amount realised by sales of gold and ore, &c., was 24,716*l.* 2s. 8d.; the working and other expenses at the mine amount to 15,402*l.* 8s. 5d., leaving a balance of 9,313*l.* 14s. 3d., of which a sum of 7,795*l.* 15s. 3d. has been spent on general development account, sinking main shaft, and on new claims, the balance of 4,517*l.* 19s. being carried to profit and loss account. Practically, the result of the year's work is, that the directors are assured and believe that the company now has ore ground in the lower parts of the mine sufficient for two or three years' operations.—W. H. ROWE, secretary.

MCNEILL'S CODE.—In the course of a few weeks an important mining and general telegragraphic code will be publised, which we have good reason to believe will supersede the other codes now in vogue. It has been arranged to meet the requirements of mining, civil and metallurgical engineers, directors of mining, smelting, and other companies, stock and share brokers, solicitors, financiers, and general merchants. The code, we understand, contains over 40,000 sentences, and embraces all the required technical terms. We understand the publishers will be Messrs. Whitehead, Morris and Co., of Fenchurch Street.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—I have read Mr. Conybeare's reply to my letter with much interest, but as he evades the most important part of it, I will merely ask him to read the following letters :—

Copy.

"Suffolk House, Laurence Pountney Hill,
"London, Apl. 23, 1891.

"Dear Capt. Williams,—I am certainly not going to contradict any of the wonderful statements made regarding the *Silati* business, but I can assure you I never said, or thought, that you were incompetent as a mining man, and the statement that I said so is untrue.

"Sincerely yours,
"CHARLES J. ALFORD."

I would also call your attention to a letter written by Mr. Henderson, a director of the Silati Co. :—

Copy.

"Silati River Gold Mining and Prospecting
"Co., Limited, Pretoria, Transvaal, S.A.R.,
"Nov. 6, 1890.

"Capt. Williams, Burgersdorp.

"Dear Sir,—I have to acknowledge yours of even date, and from your personal explanation I have to accept your resignation on behalf of the company, with much regret.

"You wish to return to England as soon as possible, to which I have no objection, after your charge has been handed over and information rendered up to date.

"Again with regret,
"I am, yours most faithfully,
"J. C. AITKEN HENDERSON."

My testimonials are in the office of the Silati Co., London, for the past 30 years' services, which will show that I have given every satisfaction to my late employers in Cornwall, India, Africa, and United States of America, as to character, integrity, and ability, and now I will ask the public to judge for themselves if they think I am suitable for the post of manager in such a mine as the Silati.—I am, &c.,

JAMES WILLIAMS.

10, Falmouth Road, Redruth,
May 13, 1891.

SILATI MANAGEMENT—A WORD FOR CAPT. WILLIAMS.

(From the *Cornish Post.*)

CAPT. JAMES WILLIAMS, of Redruth, is a Cornishman whose whole life has been devoted, so far as worldly pursuits are concerned, to mining. His experience as a manager of gold mines is what might without undue exaggeration be termed enormous. He has acted in that capacity in America, India and Africa, and had always been spoken of in the very highest terms by his employers until he had the misfortune to be appointed agent to manage the Silati Mine. Having been appointed to serve in that capacity under the Silati Co. of which Mr. Conybeare is chairman, he was, according to the MINING WORLD, set the "impossible task of bringing ounces of gold from quartz that only yielded pennyweights." Much sympathy is felt among mining men for Capt. Williams on account of the cruel aspersion which has been cast upon his professional ability by Mr. Conybeare. Capt. Williams is the father of a family who are dependent upon him for a competence, while he, himself, has to depend upon his good name to obtain retainers and employment. To take from him his good name is to take from him and his children their means of support. We sincerely trust that Capt. Williams will not suffer seriously through the groundless slander that Mr. Conybeare uttered in the Silati meeting concerning him. Certainly in Cornwall where both Mr. Conybeare and Capt. Williams are known, nothing which Mr. Conybeare could say would detract in the slightest degree from the deep respect, and high esteem in which Capt. Williams is held, nor could it diminish the implicit confidence which exists in his capacity as a miner. But among shareholders resident in other parts of England who may read or hear that a Member of Parliament and chairman of a Gold Mining Co. described Capt. Williams as incompetent, the results may be serious indeed to Capt. Williams. Who in future would invest money in a mine managed by Capt. Williams if they believed Mr. Conybeare's word ?

HARROGATE LAND (CUMBERLAND GAP) KY., U.S.A.—The compauy have just received a cable from the president of the company stating that they held a sale of lands on the 14th inst. The sale was limited to one hour and a-half. 47 lots were sold which realized $52,300.00, the average price per acre being $5,500.00. The bidding was spirited and the result is considered satisfactory.

PUBLICATIONS RECEIVED.—We have received from the Institution of Civil Engineers the following publications :—"Abstracts of Papers in Foreign Transactions and Periodicals" ; "Thurston on Authorities on the Steam-Jacket" ; "Spencer on Machine Stoking" ; "Capper on the Development of the Port of Swansea" ; "Allen on Auxiliary Engines in connection with the Modern Marine Engine" ; "Higgins on the Von Schmidt Dredge" ; "Dwelshauvers-Dery on Steam-Engine Governors" ; "Martens on the Influence of Heat on the Strength of Iron."

COMMERCIAL NOTES.

METALS.

THE Metal Market has been fairly active during the current week. Bank Rate was advanced yesterday to 5 per cent. Bar silver closes 44½d.

COPPER has been steady. A moderate business has been done in G.M.B. Warrants, from 51*l.* to 51*l.* 5s. cash, and 51*l.* 10s. to 51*l.* 15s. three months. To-day's prices are 51*l.* 15s. cash, and 52*l.* 10s. three months. A sale of about 5,000 tons of argentiferous Anaconda matte in Liverpool was reported on private terms. The stocks in Liverpool and Swansea show a decrease of 2,249 tons during the last fortnight. We quote English tough, 54*l.* to 56*l.* ; best selected, 56*l.* 10s. to 57*l.* 10s. ; strong sheets, 64*l.* to 65*l.* ; India sheets, 59*l.* 10s. to 60*l.* 10s. ; yellow metal, 5⅝d. to 5⅞d. ; ore, 9s. 3d. to 10s. 9d. per unit.

TIN has been active at advancing prices. Straits was sold on Monday at 90*l.* 2s. 6d. cash, and three months at same price. From this there has been a gradual advance to 92*l.* 10s. cash, and 92*l.* three months, 93*l.* having been paid yesterday for delivery middle of June. To-day's prices are 92*l.* 10s. cash, and 91*l.* 15s. three months. The Dutch Market is steady. Banca, fl54½ ; Billiton, fl54¼ ; English ingots, 95*l.*

TINPLATES still unsettled, prices dependent on time of delivery. We quote May-June delivery 16s. to 16s. 6d., and July-Aug. 13s. to 13s. 6d. for ordinary coke, Liverpool.

SPELTER steady. Sellers of ordinary brands at 23*l.* ex ship here.

LEAD easier. We quote soft Spanish, 12*l.* 10s. ; soft English, 12*l.* 12s. 6d. to 12*l.* 15s. ; L.B., 13*l.* ; sheets, 13*l.* 10s. to 13*l.* 15s.

QUICKSILVER quiet. Rothschild's price 8*l.* ; seconds, 7*l.* 19s. to 8*l.*

ANTIMONY weak. Hallett's price for May shipment to America, 61*l.* 10s. ; to Continent, 56*l.* ; ordinary brands and delivery, 52*l.* to 54*l.*

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING MAY 16.

Bank of Adelaide...	7 per cent.
Bankers' Investment Trust	5 per cent.
Chester Racecourse	7½ per cent.
City of Chicago Brewing and Malting ...	10 per cent.
Doom Dooma Tea...	13¼ per cent.
Indo-China Steam Co.	2½ per cent.
Liverpool, London and Globe	30s. per share.
Positive Government Security Life	7½ per cent.
Rolands	4½ per oent.
National Provincial Bank	6 per cent.
Nobel Dynamite	11 per cent.
Indemnity Mutual Marine	6s per share.
West London Dairy	4 per cent.
Universal Life	2*l.* per share.
First Scottish American Trust...	4½ per cent.
James Hinks and Son	7½ per cent.
Massey's Burnley Brewery, Preference ...	6 per cent.
Massey's Burnley Brewery, Ordinary	8 per cent.

REVIEWS.

SOUTH AFRICAN MARKET MANUAL.

Messrs. Lockwood, Whitlark and Co. have issued to their clients a neat little volume, compiled by Mr. Kindell, on the South African companies. No expense has apparently been spared in getting the book up, and, apart from the value of its contents, its exterior is such as to merit a place on the library table. It is of handy pocket size, and contains full particulars of South African mining and other companies, giving the capital, claims held, directors, dividends, crushings, and highest and lowest prices. The book is complete, and will no doubt be found exceedingly useful to investors and operators in this class of security.

The Peninsular and Oriental Steam Navigation Co. have printed for distribution at the Naval Exhibition a guide book for passengers travelling by their boats. The book will be very useful to travellers, and contains some exceedingly good prints.

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES, 1890.

This is a report of Mr. Edward O. Leech, Director of the Mint at Washington, giving statistics as to the production of precious metals in the United States for the year 1890. The information is very full, and the book will be handy for reference.

WIRE—ITS MANUFACTURE AND USES, by J. Bucknall-Smith, C.E., Offices of *Engineering*, London.

This is a work giving comprehensive descriptions of the constrictions and applications of wire ropes. The subject is dealt with in a popular manner, so that anyone of average intelligence may read it with interest aud profit.

DEATH OF MR. ARTHUR H. EVANS.—It is with deep regret that we have to record the death of Mr. Arthur H. Evans, the editor of the *Bullionist* and chief proprietor of *Vanity Fair*. Mr. Evans was immensely popular with a large circle of friends, who have heard with sorrow of his death at the early age of 38. He had been in failing health for some time. The interment takes place at Abney Park Cemetery to-day (Saturday).

REPORTS OF MEETINGS.

PANULCILLO COPPER CO., LIMITED.

SIR JOHN PENDER GIVES A HOPEFUL FORECAST OF THE COMPANY'S POSITION—WAR IN CHILI HAS NOT HURT THE COMPANY—IMPORTANT FACTS AS TO COPPER—GENEROUS CONDUCT OF THE BOARD TO THE LATE SECRETARY.

THE twenty-eighth ordinary general meeting was held at Winchester House, on Thursday, "for the purpose of receiving a report from the board, electing two directors, and other business."

Sir John Pender, K.C.M.G.

(chairman of the company), presided.

Mr. W. LEIGH HUNT (pro-secretary) read the notice of meeting.

FORECAST REALISED.

The CHAIRMAN: Gentlemen, when I last had the pleasure of addressing you 12 months ago, it was just after the collapse of the great copper speculation, which caused a complete disorganisation of the copper market. I, however, stated that after careful consideration we thought that we were likely to have soon a much more satisfactory state of things, and although the growth might be slow, it was likely to be sure. This, more or less, has been realised, and the price of copper since then has advanced to a point which is likely to be maintained, and which is upon the whole a satisfactory price for Panulcillo. I then pointed out that the labour question was a serious one, and also the difficulty of obtaining carbonated ores. We are solving all these questions now; labour is more abundant, and we have secured an important carbonate mine, which is likely to prove very valuable.

COMPANY PLACED ON A MORE SOLID BASIS.

With a little further extension in this direction we are looking forward altogether to a very much better state of things. Our efforts have been directed to placing the company on a more solid foundation, by increasing the supply of labour; acquiring new properties which might make us independent of the precarious supply of outside ores; by strengthening our mining and smelting staff, and by adding to our business the smelting of argentiferous ores produced in the neighbourhood of Panulcillo. In carrying out this policy we have necessarily had to employ more capital, and this explains why we have not been able at present to distribute the sum standing at the credit of profit and loss. No doubt these new mines ought to go to capital, and when we have completed our purchases in that direction we will deal with it as a whole. The price of copper has remained satisfactory and seems, likely to remain so, everything seeming to indicate that we may, for a considerable time at least, look on 50*l.* as a probable, at least an average, price for Chili bars, while values will probably range somewhat above this figure, which is all we can desire. With our smelting and mining staff sufficiently strengthened, and with to-day's prices for copper, there are three elements necessary to secure really large profits:—(*a*). An adequate command of labour. (*b*). A full supply of carbonate ores; and (*c*). A small improvement (½ per cent. would suffice) in our Panulcillo ores. Our supply of labour by last accounts was increasing owing to the cessation of railway construction. The acquisition of the Condesa Mine promises to make us largely independent of outside ores; while from the mining report it will be seen that the prospects at Panulcillo itself are decidedly encouraging, so much so that we hope we are on the eve of an important improvement in the quality of the ores; at the same time that the estimate of the ores in sight has been very largely increased. We are disposed to attach all the more weight to these favourable changes and indications, as the present mining superintendent is in no way responsible for previous statements, while he is a man of experience, ability, and trustworthiness.

NOT TOUCHED BY THE WAR.

The unfortunate war in Chili has, so far, not touched us at Panulcillo, nor interfered with our communications. Our operations have continued without interruption, both as to the make and delivery of the regulus. At the same time the suspension of railway extensions in the province has assisted us by increasing the supply of labour since the year closed. On the other hand, the great fall in exchange tells very seriously on the remittances that have to be made against profits, and to pay for coke and other foreign importations. It is true that, on the other hand, we are being benefited from the same cause by the lower sterling cost of labour, and by the improved currency prices paid for our regulus, though the gain from this cause has not been so large as it should be, in consequence of the disturbed political position and the difficulty of negotiating bills, preventing Chilian currency quotations from corresponding as closely as usual with our English values. Altogether, however, we look on our future prospects as eminently hopeful, and we trust it will not be long before substantial proof is given of a greatly improved position. I may again refer to the new markets for copper. The other day, when I was addressing a large meeting of shareholders of the Metropolitan Electric Light Co., I had occasion to point out that during the 15 months of that company's existence it had put down 90 miles of insulated copper wire, and when we look at the large number of similar companies springing up, not only in London, but in every important town in this and other countries, it will give you some idea of the large quantity of copper that is being used for electric lighting purposes. We are also encouraged by the fact that the sulphate of copper, which is being largely used for destroying insects, not only in vines, but in general agriculture, is likely to prove a success. The consumption is growing, and the ingenuity of the times is such that wherever anything can be proved to be productive of good, whether copper, iron, or any other metal, it is readily seized upon. Therefore, gentlemen, while I ask you to approve of this resolution, I do it with a certain amount of confidence that we are getting altogether into a more settled state of things. I believe that Panulcillo now, as it has done before when copper was at 50*l.*, and when all the surrounding advantages I have pointed out are settled, may look forward to a happier and better state of things in the future.

TWO QUESTIONS.

I received a letter from a gentleman in which he puts two questions to me. Why did we not distribute the money which we had, although not large, and also in regard to the directors' fees. I may tell you that in regard to the money, we bought the Condesa Mine. We paid for it out there instead of remitting the money from home, which could only have been done at a great loss. Therefore, if we have not put the money into your pockets we have increased materially the value of your property. (Cheers.) In regard to directors' fees, I would tell you that

WHEN YOU ARE GETTING NO DIVIDENDS WE ARE GETTING NO FEES.

(Cheers.) We are not putting a shilling of directors' fees into our pockets. We think it is fair in keeping up the accounts that the amount should appear before you, but as to putting anything into our pockets, we do not do it. We share prosperity with you, and we share adversity, and I really do speak with some little confidence when I say that I think there is a cycle of prosperity coming in our Panulcillo affairs. With these remarks I beg to move "That the report and accounts be, and are hereby, adopted."

Mr. JOHNSTONE (director): I second the motion.

DISCUSSION.

Mr. WHITE: It would be as well to be told how much will be expended before the mine is finally purchased. We are going to put 6,250*l.* aside for that purpose, which I take it is to assist the ores at Panulcillo. I do not want to say a word to detract from our position, which is satisfactory, but the outlook is not a happy one. The Panulcillo is virtually extinguished. (Cries of "No.") Whilst the output of copper has been largely increased all over the world the output from Chili has seriously diminished. Is there any reason for it? I suppose the Chili mines are in the same position as our own—they have not benefitted by acquiring new properties, and it will be satisfactory to know how much we have still to pay on that account.

The CHAIRMAN: I think you are speaking under a little misapprehension.

Mr. WHITE: I think so myself.

MISAPPREHENSION REMOVED.

The CHAIRMAN: You are assuming that the Panulcillo ores of themselves have enabled us to make copper, whereas we require to buy flux, or carbonate ores, to enable us to smelt the Panulcillo ores. Heretofore, with the scarcity of labour it was almost impossible to get the carboniferous ores from the outside. The labour could not be obtained, and when it was, the ores were enormously expensive for us to consume. We have told you that our object was to get these carbonate mines into our own hands. Now we have got one important mine, and I do not think we have much more to add to the cost. When we get outside mines sufficient to give us the carbonate ores we want, then Panulcillo will be in an independent position. As regards the exhaustion of copper mines in Chili, I think the answer to that is, that what with Col. North's nitrate and other speculations in those parts labour has been led away from our particular neighbourhood, but I think we have seen the worst of that. They have produced more nitrate than the world is likely to take for a long time to come. Labour is coming back, and we are likely to have a steadier class of it than we have enjoyed for a considerable time. That accounts for the other mines not having produced so much as formerly. Labour is coming back to us. I believe the mines of Chili are as promising to-day as they were years and years ago, and Chili, in my opinion, will always continue to be a large copper producing country. I hope I have satisfied you.

Mr. WHITE: How much more have we to pay?

The CHAIRMAN: I think if we get another mine it will be about equal to our requirements.

Mr. WHITE: I mean as to money.

The CHAIRMAN: I think I mentioned on a former occasion that to get the ores necessary for our full smelting arrangements would involve an additional capital of 30,000*l.* But if instead of giving you a dividend we avail ourselves of the low rate of exchange to get hold of these mines, we will be able to pay you a higher dividend later on.

Mr. WHITLEY: How much have you had to pay in past years for your carboniferous ores? I think that will satisfy this gentleman. As an old shareholder I have always had the greatest confidence in the directors, and am glad to see there is such good grounds for expecting an improvement as are shown in the report. We have been quiet and patient, and before long I have no doubt we shall find a different state of things.

BIG RESERVES.

The CHAIRMAN: It is difficult to give the exact money, but the next time I have the pleasure of addressing you I will tell you all about that point. I think the amount of ores, roughly speaking, judging from the working, must have been a third of the whole of the ores consumed. In regard to the prospects of Panulcillo, if you read the mining report you will see that we have before us an amount of reserves such as we never had previously since we took Panulcillo in hand.

Mr. WHITLEY: I certainly have never seen such an amount myself.

The CHAIRMAN: I think not, and I have had to do with Panulcillo now from the beginning. I have had some good times out of it, and I think I remain at present nearly as large a shareholder as I have ever been.

Mr. CLUFF: I should like to ask whether the mine purchased is worked in the ordinary way, and to what extent?

The CHAIRMAN: If you read the mining reports you will find a pretty careful description of the points you raised, as well as of others of great interest. That report I read myself with very great interest, and were I could give you the information "off my own bat," as the saying is, I would be telling you a story not so well told as it has been in the report which has been in your hands for some time. The mine is being worked upon the shaft and level principle.

The report was unanimously adopted.

ROUTINE BUSINESS.

Mr. JOHNSTONE: I propose the re-election of the chairman and Mr. Bond, both of whom are well known to you. Our chairman has been in his present position from the beginning of the company, and you have heard him express his faith in its ultimate success, and I entirely

share his views. In Mr. Bond we have a man of practical knowledge, who has given us great assistance.

Mr. BERTHOUD seconded the motion, which was carried.

THE CHAIRMAN'S FAITH.

The CHAIRMAN: My interests and yours are the same, and as long as I have a penny in the locker, I shall be found with one half of it in Panulcillo. I have been largely interested from the beginning, and I intend to stick to the company in the hope of eventually realising good dividends. (Cheers.) The auditor is a most valuable representative, and one that it is your exclusive right to appoint. The better, the stronger, and the more careful the man you choose, the greater will be the satisfaction of the board.

Mr. GENT proposed the re-election of the auditors, Messrs. Hurlbatt Winney and Co., at the same remuneration as before, and the motion on being seconded was carried unanimously.

THE STAFF THANKED.

The CHAIRMAN: Panulcillo is in Chili, where there are great uncertainties and anxieties at present. I think it only right and just that we should acknowledge the wisdom and prudence and discretion shown by our manager, Mr. Jones, during these trying times. It will encourage him to know that the shareholders appreciate his work, and I can assure you, if you will only take the word of the board, we fully appreciate all his labours and those of the staff that surround him. We think he is steering the ship now with great sagacity and wisdom. I move a vote of thanks to him and the staff under his charge.

TRIBUTE TO THE LATE MR. PYE.

Mr. REID: I second the motion, and I observe a paragraph in the report in which the directors express their regret at the death of the late secretary, Mr. Pye. I was often brought in contact with Mr. Pye and found him a most courteous and hard working man. (Hear, hear.) If it is not impertinent I should like to express a hope that you have provided for his widow and children. I, as a shareholder, would only be too pleased to give my quota. (Hear, hear.)

The CHAIRMAN: Mr. Johnstone has done a work in this matter which I can only say has relieved me from a large amount of labour. I am very pleased you have brought forward the question as to Mr. Pye. I think there is no man better qualified to tell you something about him than Mr. Johnstone, who was in constant contact with him

GENEROUS ACTION OF THE DIRECTORS.

Mr. JOHNSTONE: The subject touched upon by Mr. Reid is one that received the anxious consideration of the directors, and after mature deliberation they decided to continue Mr. Pye's salary to June 30, but this is done without entailing one farthing of expense upon the shareholders. A gentleman has come forward and done, and is doing, the work gratuitously till June 30. (Cheers.) At the same time, we are providing for Mr. Pye's family, but you, shareholders, do not suffer one penny loss thereby. His wife, unfortunately, died shortly before he did, and of the children they have left we have got four into orphan asylums, and the others are provided for; and should any more money be required after June 30, we have resolved that the first charge shall be on the directors' remuneration. (Loud cheers.)

The CHAIRMAN: Mr. Johnstone has been shy, and does not want to say all that he might say, but I wish to add that

MR. JOHNSTONE'S SON IS ACTUALLY DOING THE SECRETARIAL WORK

in the office in the place of Mr. Pye, and that he is doing it in a manner that is satisfactory in every possible way. (Cheers.) I cannot say more than that I personally feel grateful to Mr. Johnstone for placing his son in this position, because it is one of trust, and also to Mr. Johnstone's son for showing his devotion to an institution with which his father and grandfather have been so long and so honourably associated. (Loud cheers.)

The motion, proposed by the CHAIRMAN, was carried unanimously, as was also, on the proposal of Mr. WINTON, a vote of thanks to the chairman.

The CHAIRMAN: I am accustomed, as a rule, to address meetings where I do not move the adoption of a report that does not mention the declaration of a good dividend, and therefore in Panulcillo, as you can understand, it takes a little out of one to feel that one is obliged to address you without declaring a dividend. I think, however, that is but temporary, and if a dividend could only be got by a resolution of this board, you might depend on it you would get one. But if we cannot do it by resolutions, we will endeavour to do it by labour and good management. (Cheers.)

THE TASMANIAN SILVER MINING CO., LIMITED.

A LITTLE MORE PATIENCE IS ASKED FROM THE SHAREHOLDERS.

THE second ordinary general meeting of the shareholders of this company was held at the Cannon Street Hotel, on Thursday. Notice was also given that an extraordinary general meeting of the company would be held at the same place and on the same day, in order that the subjoined resolution might be proposed, viz.:—

RESOLUTION.

"That the articles of association of the company be altered in manner following:—'(*a*) The following clause shall be inserted after clause F, in article 2, namely: (G) The registered offices of the company means "the registered office in England." (*b*) In article 95 the word "Lot" shall be substituted for the word "ballot." (*c*) The following article shall be inserted after article 122, namely: '122a. As regards those members (whether registered in the Colonial Register or not) who have no registered address in the United Kingdom, a notice posted up in the Registered Office shall be deemed to be well served on them at the expiration of 24 hours after it is posted up.'"

Col. A. P. Garnett

presided.

Mr. F. A. ABRAHAM (secretary) read the notice calling the meeting.

The CHAIRMAN alluded to the fact that the latest news as to the Government railway was that it was likely to be completed and at work by July. The directors were proceeding to make the necessary tramway which, while it would not only be a great saving to themselves, would also prove a source of revenue, as they believed that several other mines would send their ore over this tramway. They had had 2 tons of ore over (which entailed a great expense to bring), but they thought they would like to have some to show at the Mining Exhibition. After the exhibition was over they

SOLD IT FOR WHAT IT WOULD FETCH,

and it returned 14*l.* 15s. per ton. (A sample of the ore was exhibited to the meeting). When the tramway was completed they would be able to have an uninterrupted route by rail and tram from the mine to the important harbour of Strahan. They would then be able to work the mine and to develop it more rapidly. The advices of Mar. 23 stated that the light pumping and mining machinery had been shipped from Hobart to Trial harbour, and their manager expected that this machinery would be in working order within a month after its arrival. Mr. Provis estimated that when they were fully at work they would be able to raise 92 tons of ore per week. He (the chairman) thought that the profit should come out about 8*l.* 13s. per ton. The question of the sale of some portion of the company's northern sections was under the careful consideration of the board, and he thought if they could form a subsidiary company, it would be a very good thing. In conclusion, he thought things looked very well for the future. The directors had decided not to spend a lot of money until the tramway was made, and they would be justified in the outlay for heavy machinery, &c., and they hoped the shareholders would consider the expenses up to the present time had been moderate. He thought that they could endorse the remarks of their engineer, that it was now only a matter of a little more time, and asked the shareholders to exercise a little more patience. The railway when opened would make all the difference in the world. He moved the adoption of the report.

Mr. LOMER seconded, and the motion was carried.

The other formal business was transacted, and the special resolution given above having also been passed, a vote of thanks to the chairman closed the meeting.

LA GUAIRA HARBOUR CORPORATION, LIMITED.

FULL EXPLANATION OF THE POSITION—CRITICS REPLIED TO.

THE ordinary general meeting of the above corporation was held on Tuesday, May 12, at the Offices, St. George's House, Eastcheap.

Lieut.-Genl. Sir Andrew Clarke

presided.

Mr. T. H. EVANS (secretary) having read the notice convening the meeting,

CRITICS ANSWERED.

The CHAIRMAN said: Gentlemen, the report which the directors have just issued, with enclosures, is so voluminous and exhaustive that I need not detain you very long with any lengthened remarks of mine. I shall have to ask your attention, however, to one or two unauthorised statements which have appeared with reference to this work, which have not been dealt with in the report, and which require some further explanation. Although the course that has been taken by your directors, and approved of by the general body of shareholders, is absolutely ancient history—for the satisfaction of the directors and yourselves, I must again call attention to it. The broad assertion is that the necessity for the additional capital to enlarge the work was not required, and that the damage that was done originally to the breakwater was of so trifling a character, that, in fact, it meant an increase of expenditure, merely for the sake of profits that might arise to some persons. Now, what are the facts? The original breakwater, as first designed by the engineers, and the design accepted by the contractors, was considerably south of where you see it now upon the plan which I have prepared. It was moved more towards the ocean, and removed altogether from the natural protection of the point. I am not going to reflect upon the engineers; it is very well to speak after events, but for myself, personally, when I took charge of this enterprise I did have a little anxiety, and so did Mr. Carey, our chief engineer, as to the strength of that work. It was strong enough where it was orginally placed, but it had not sufficient strength for where it was afterwards placed. The result was that during the first exceptional storm at the very most important part of the work, namely, the commencement, when works of this kind are exposed to the greatest dangers, it was swept away, and had not the measures that had been taken at that very moment to stengthen the work, by placing an enormous quantity of stone there as a natural breakwater, the rest of your work would be altogether swept into the ocean and with it your money. You will see by the section that was then adopted that there was nearly one and a half more volume put into it than in the original design, and it was this difference that required the further capital. I trust, therefore, the absurd assertion that there was really no damage done, and that it was a trifling matter, and that there was no necessity for strengthening this harbour, will not be again repeated

FURTHER OBJECTIONS REPLIED TO.

There is another point to which I should like to call your attention. It has not perhaps in my former statements, or even in this report, obtained the prominence which I think it deserves, and that is that we take our stand on the decree of June 20, 1890. That decree states that the company has complied with the stipulations of articles 4 and 13 of the contract. After the Government had issued that decree, no action whatever on their part can go behind it; and even with the incident with reference to that, and the time that always passes before they make up their minds to do anything practically, that decree and the assent to issue that decree was sanctioned by the Government of the Republic eight or nine months before we were able to obtain it and to collect the revenue. It was the same thing with the subvention. The subvention became due very early in the history of the work, and it was not until this decree had been issued, and, indeed, sometime afterwards that the subvention was paid; in fact, not until a year and a half after we had earned it, and I fancy it is the same way with the claims that we have on them now, irrespec-

tive, I say, of their wish to purchase the harbour. Before passing to the question of accounts, and listening to the report of the auditors, there is one point to which I should like to allude. It has been said that this is what is called a contractors' company, and that we are a contractors' board. I do not know whether there is any reproach in this being a contractors' company, provided that the contractors and the board have honestly kept faith and done their work properly and efficiently. A contractors' company means, more or less, that the contractors are paid in paper, and do the financing of the company. In this case it is true the contractors have been paid in paper, and by our books at this present moment the contractors hold of the company's paper no less than 302,000*l*. But I want to call your attention to the fact that this work contrasted yard for yard with any other in Europe compares favourably. There is at least one million of gold in that work; therefore, if there has been any reproach whatever in your having put your money into a contractors' company, or that we are the directors of a contractors' company, I do not think that reproach can hold good either to the shareholders or to the directors. It has been stated—and I know the shareholders have been communicated with—that the directors have been qualified by the contractors. If this statement had been limited to myself I would have taken no notice of it, but, on behalf of my colleagues—and I unite with them—I wish to say that there is absolutely no truth in the statement. (Cheers.) I will leave that question there, and ask the secretary to read the auditors' report.

The SECRETARY having read the report,

THE ACCOUNTS.

The CHAIRMAN continued: The auditors have made a very exhaustive examination of our accounts, and the valuable report they have given to us will be sent out at once to the manager, and the new accountant we have sent out there for his guidance, and the question of a local auditor will meet with our immediate attention. It is a suggestion which I thoroughly appreciate.

ENGINEERS' CERTIFICATES.

There is another question which I have omitted to answer, and that is with reference to the engineers' certificates. The shareholders must be aware, from the contract, that not only were the certificates for work actually executed, signed by our own engineer on the spot, countersigned and approved of by the engineer in this country, but each certificate had a certificate of the engineer appointed by the Government of Venezuela itself, who certified as to the character and extent of the work, and that was also ratified by the Public Works Minister, and the whole of this expenditure has been certified and accepted as actually correct by the Government of the Republic. I trust, therefore, no attempt will be made to say that we have done this work in any way irrespective of the Government. The Government of the Republic up to this moment have been absolute partners in this work, and are responsible for every single thing that has been done as much as the directors themselves. They cannot go behind that. Now, with reference to the future. First of all, the removal to a great extent of the extensive plant and railways, and the opening of the third jetty, have facilitated enormously the traffic of the port. The absorption of so much of our revenue in working expenses has now, I am glad to say, practically ceased. The cessation of those worries and difficulties that were placed in the way of your servants working the traffic out there by the Government has been partially removed. I hope the experience and the energy of the young Scotchman we have sent out to take charge of the work will tell; in fact, it has already begun to tell. I had a telegram in the month of Apl. when, instead of the tale we had repeated to us in former months, out of the receipts of 8,000*l*. there was a profit of 3,500*l*., and he hopes the profits will be extended to 5,000*l*. a month. That is 5,000*l*. a month for working traffics, and exclusive of the 25,000*l*. a year which we hope shortly to obtain from the dues of ships visiting that port. I tell you personally, as I have repeated before, I am not very anxious that this should be levied too strictly. The ships have hitherto gone there under very heavy insurance. Gradually this insurance is being removed, and when that is done, we can insist upon the whole of the dues being paid. We contemplate that we shall have 60,000*l*. from the ordinary dues for the remainder of this year. I do not wish to raise hopes, but there are indicatlons from communications I have received that the last appeal I made to the President of the Republic, in reference to keeping faith with his European creditors, has had its effect. I will not make it a promise, because there are difficulties in the way, but I believe they are going to make an arrangement, and approach us as to the settlement of the debt.

PROSPECTIVE DIVIDENDS.

But, irrespective of that, I hope at the end of this year we shall be in a position to pay not only our bondholders, who, I hope, will help us during the next few months, but to wipe out our liabilities, and give a substantial dividend to our shareholders. (Applause.) I say I cannot promise it, because the negotiations that have been opened with me are not of such a character as I can disclose them at present, but they give me sanguine hopes that we are going to have a satisfactory settlement of our difficulties with the Republic. I will now conclude, gentlemen, by moving that the report and accounts now submitted to you be, and are hereby, received and adopted. (Cheers.)

DISCUSSION.

Mr. STRINGER: I wish to know if the chairman will be good enough to read the whole of the letter which he received from Genl. Guzman Blanco, dated Oct. 20, 1888, and which is printed in the report. My reason for this is that both Col. Graham and myself have seen the letter, and we think that a portion of it has been left out.

The CHAIRMAN (indignantly): Do you think that I would publish or place before you a letter garbled, without indicating that any portion of it was suppressed. That letter in the report is identically the same as the one I received.

Mr. STRINGER: May I ask Mr. Evans to produce to me the letter that Col. Graham and I read here? (Cries of "Chair," and "Sit down.")

Mr. EVANS produced the letter, which the CHAIRMAN asked Col. GRAHAM to read himself. This was done, with the result that the contents proved to exactly coincide with the copy printed in the report. Col. GRAHAM and Mr. STRINGER then apologised to the chairman for the mistake they had made.

The CHAIRMAN, in answer to Col. Graham, said whatever mistakes the directors might have made, the actual completion of the harbour was a sufficient justification of everything they had done. They had worked their very hardest in the interest of the shareholders, and if any irregularities or illegalities had been committed, the responsibility was with the board, and they accepted it on behalf of the shareholders.

Mr. HUGH WATT, M.P.: Mr. Chairman, I am very glad to think that there is considerable unanimity among the shareholders at this meeting, and that the action of the board has met with the approval of the majority present. (Hear, hear.) It is more satisfactory to know that the directors see their way to make this a paying corporation, irrespective of the Venezuelan Government. (Cheers.)

Major-Genl. G. D. BERESFORD then seconded the motion for the adoption of the report and accounts, which was put, and carried unanimously.

EXTRAORDINARY GENERAL MEETING.

The meeting then resolved itself into an extraordinary general one, for the purpose of passing the following resolution:—

"That, with a view to the debenture stock and debenture-holders being represented on the board, the articles of association be altered as follows:—Article 72. By substituting for the word 'nine' the word "ten." Article 86. By substituting for '500*l*.' '400*l*.,' and for '250*l*.' '200*l*.'"

The CHAIRMAN, in moving the resolution, said its object was to raise the authorised number of directors from 9 to 10, so that the two classes of bondholders could be represented on the board.

The resolution was adopted.

Sir GEORGE RUSSELL moved a hearty vote of thanks to the chairman and directors, which was carried with acclamation, and the proceedings then terminated.

THE CLUTHA GOLD MINES, LIMITED.

THE MINE SHOWS IMPROVED PROSPECTS — CHAIRMAN AND SHAREHOLDERS GREATLY ENCOURAGED — IMPORTANT REPORT AND TELEGRAM.

THE second ordinary general meeting was held at Winchester House, Old Broad Street, on Wednesday, "for the purpose of receiving and adopting the directors' report and accounts; electing directors and auditors, and transacting the ordinary business of the company."

The Viscount Grimston

(chairman of the company) presided.

Mr. L. J. LANGMEAD (secretary) read the notice of meeting.

A BRIEF RETROSPECT.

The CHAIRMAN: The directors have felt it their duty to call you together at an earlier period than they are obliged to do for the purpose of consulting you as to the course to be pursued for the future working of the property. You are all aware of the circumstances connected with the formation of this company. You know how we got reports through Mr. Edgar Taylor, Mr. W. Blake, and various other persons, all of which appeared to be very favourable, and, consequently, we did not hesitate to form this company. I am not going through the history of the mine again, because you know it. Suffice to say that after the statutory meeting we continued the business, and at that time stated that we were in negotiation for the acquisition of the Victoria Mill and Mine. That business was carried through, I think, in a very satisfactory way, thanks to the energy of Messrs. Webster, Trubshawe, and Mr. Leopold Herz. They had great difficulty in getting the shareholders of the old Victoria Mine to part with what they considered an exceedingly good property, but they had not sufficient money to carry on, and so had to lose it.

A FINANCIAL DEAL.

We carried through the business at a total cost of 15,500*l*., payable 10,500*l*. in cash and the remaining 5,000*l*. in shares of the Clutha Co. We believed that was an exceedingly good bargain for this company, because, not wishing to work in the dark, we had the very valuable assistance of Mr. Edgar Taylor, who was then at Barberton, and is so still. He, on valuing this Victoria Mine, sent word to say that the machinery and plant alone, exclusive of the mine, were worth about 13,000*l*. That being so, we thought we were wise (although we tried hard to get it at a cheaper rate) in closing the negotiations on the terms I have named. It is obvious in such an unopened country as that it was important to get a plant which is in running order, and we are very pleased to have found the bargain satisfactory from actual experience in the running of the mill. It seems to crush the quartz submitted to it well, and to extract the gold in such a way as to show that the ore is free milling. But a misfortune or two has happened to us which we did not anticipate, and I will shortly describe what our mishaps were. The first was that we discovered the water-race banks, owing to the want of usage and care, towards the end of the time of the negotiations, had become weak and required strengthening, which entailed expenditure. Likewise, there was that which was the cause of the original parting of the Victoria Co. with their property—it was, in fact, the last straw which broke that camel's back—damage to parts of the water-wheel which they could not replace. We had some considerable trouble in getting it replaced. It was obtained at last, and placed in condition, but the various works altogether gave us some considerable trouble, and took some time, and a part of our available balance of capital was thereby trenched upon to a certain extent, though not seriously. There were two other very serious matters. One was that the Clutha Mine, which, although it showed an immense body of ore, and, we hope, of a very payable description, manifested a tendency on being opened up to show "streaky veins." That made a certain amount of selection necessary, and, as you know, when you have to select say one-third part of the ore in a lode, instead of taking the whole as it comes, you take three times the amount of ore, in order to exhibit 100 tons of payable quartz, as compared with what you would be able to show

if you dealt with the whole. That was the position of Clutha, but I cannot say we have lost any confidence in it. We have

MR. EDGAR TAYLOR'S OPINION, WHICH IS MOST FAVOURABLE,

that with proper care the mine will (as we have always confidently predicted) become both valuable and payable. With regard to the Victoria section, we have not done much work upon that. There was a reserve of ore, which we put through the mill, but regret to say that it was not of the quality which that property had been accustomed to yield, though I am not astonished at it on thinking all the circumstances over. It turned out an average of something like 3 to 4 dwts. per ton. Still we must not take that as indicating the value of the ore in the mine, because when the Victoria Mine stopped, as it did with a broken wheel and a debt of 8,000*l*., we may well believe that the workers took out the best portion of what they could find. However, that was our experience of the Victoria ore. What was left was of low grade, and I am shortly going to point out later advices show that it does not by any means represent the true value of the ore in the mine. But, gentlemen, these various misfortunes have brought us practically to the end of our tether. At the present moment, as you know, there is not working capital left, and we regret to state that about 1,500*l*. of what is due in calls has not been, and I fear will not be, paid. The reason of that is partly on account of a large holder having become bankrupt, to whom I need not refer by name, but simply state the fact. That is one ofthe reasons we have been unable to succeed in getting together the whole of the working capital which we had reason to expect. Let me for one moment speak of the later advices which we have had. We have had letters weekly, but we have had a letter just to hand which shows

AN IMPORTANT IMPROVEMENT IN THE MINE.

Mr. Blake, as you see in the report, resigned through ill-health. We were extremely sorry to lose his valuable services, but the directors in Barberton engaged Mr. Ogden to replace him, but his connection with the company was not a long one. It will be unnecessary to say why that was the case, and then he was replaced by another manager. The manager they chose was a gentleman whom they believe, and I believe, is a thoroughly experienced man, and certainly from the reports we have heard of him, and the reports we have had from him of his inspection of the mine, show an amount of mining knowledge and experience which, as the late manager of the Consort Reef Co., he might have been expected to show. I do not think I need give him a higher character than that, and I believe we have done well and wisely in choosing Mr. F. Stevens to manage the mine in Barberton. With regard to his reports, I must call special attention to the later ones, which have come to us in a somewhat different form, because we have had the great good fortune to secure the scientific knowledge, experience and assistance of Mr. Edgar Taylor, who is now in Barberton, and whose experience will be of very great use in advising us how to carry out the business of the mine. The report of Mr. Stevens, which I imagine has been submitted to Mr. Edgar Taylor before being sent to this company—his late reports show that he has made a detailed and exhaustive examination of the mine, and that his views are distinctly more favourable than any he has previously expressed. I would tell you that I was getting rather low, because I believe

I AM THE LARGEST SHAREHOLDER

of the company. (Hear, hear.) I do not know how many shares I possess, but my interest is about 3,000*l*. Anyhow, I was getting rather low, because of the constant reports which came of gold being found, but gold in only small quantities that was being discovered, but our late reports are distinctly more favourable. They are straight reports, and not got up for the purposes of this meeting. The present report is sent without them having even a knowledge that this meeting was going to be held at all, and the mention in the Victoria section of a discovery of

NOT LESS THAN 35 DWTS. TO THE TON

I look upon as a favourable sign. I have just been handed the following telegram from Barberton :—

"Latest reports are favourable of both mines. Particulars have been sent by letter."

After the report I have mentioned (and which I will read), to receive this cablegram is most encouraging, and it has given me a great deal of heart and hope in addressing you. (Cheers.)

Manager's report for the week ending Apl. 13.—Mine—Clutha Section : 50 ft. level, measurement at date, 171 ft. ; work done for week, 10 ft. During the week we passed through some very rich stringers, but are now in poor ground again. We have now a length of about 50 ft. of main reef, with several rich shoots in, and the one we have just passed through carries very heavy gold. The ore taken from the stretch of the main reef has been dumped by itself, and I intend this week to test the whole dump carefully, in order to ascertain the average value of this length of reef, which I think may prove payable. I expect to meet other shoots of gold a little further ahead ; only five days in the week have been devoted to drifting. North reef, easterly branch : Measurement at date, 49 ft. ; work done for week, 6 ft. The lode has been panning well the last fortnight, prospects ranging from 5 to 15 dwts., and of an average width of 2 ft. 6 ins. If the gold holds on, we shall soon have a payable stope to work on. Victoria section—120-ft. level north-east : Measurement at date, 301 ft. ; work done for week, 8 ft. The end is still in solid blue quartz about 5 ft. across, and the gold is becoming disseminated through the whole body, though the hanging-wall still pans best. The lode is worth from 12 to 15 dwts. for the whole width of 5 ft. Hauling water : The mine has been cleared of water excepting several feet in the sump at 300-ft. level, and the engine will be shut down to-night and the engineer discharged after he has cleared up and everything in order —a day's work.

A SHAREHOLDER : What is the date ?

FURTHER DISCOVERIES.

The CHAIRMAN : Apl. 13, 1891. On the top of this report we have received, as I say, the telegram I have just read to you, which indicates a most favourable turn in our affairs. (Cheers.) We have, I think wisely, but still at great expense, acquired the Victoria battery, and it is a going concern. We have opened up a large body of ore, mostly at the Clutha. We have also been working lately on the Victoria, and have discovered ore. We have not been working hard, so that this does not show what the Victoria may eventually pan out. We have, however, been working hard at Clutha, and driven a cross-cut from the north to the south side, and made the discovery which has been reported in the papers. We have discovered ore in addition at several places where we have cut into good payable quartz.

POSITION SUMMARISED.

On the whole I may sum up the position thus : We have proved to you what we said we would, that we have a veritable gold mine. (Cheers.) We have done our best to make it pay its way with the capital you have entrusted to us. We have paid our debts, and owe no man anything. (Cheers.) We have, I believe, a good responsible and scientific manager on the spot, with an admirable consulting engineer. (Cheers.) We have not been able to put up the ropeway, which we intended to do, for the reason I have told you, but we have to spend more money than was anticipated in opening out the various veins, and in putting the water race into efficient repair. Now, gentlemen, if you will be prepared to assist us with a little more money in the way of debentures, I have very little doubt that with these favourable reports we shall be able to develop the property to a success. We hear from all the managers we have employed that the property is a good one, and that it will not only be payable, but one that will be a credit to its managers, and a source of emolument to all the shareholders connected with it. (Cheers.) In this matter of debentures, the proposed course is this—that we shall be empowered to issue them up to an amount of 10,000*l*.—not less than 8,000*l*. to be subscribed, of which we have already 2,000*l*. promised, and if we find that respouse is not sufficient to produce the 8,000*l*., we shall then call a special general meeting for the purpose of considering some scheme of re-construction. I hope it may not be necessary for us to take such a course as that, and the directors will only propose it as a last alternative. I regret extremely I am not able to talk to-day of a mine absolutely paying its way. I am sure

IT HAS BEEN HONESTLY AND PROPERLY WORKED.

(Cheers.) Everybody connected with it, so far as I know (and I have given the matter weekly attention), has been doing his best, and I most honestly believe, from careful and uninterrupted steady business attention to the company, that we have a property that is worth something, and that it would be extremely foolish to allow it to pass from our hands. I propose the adoption of the report and accounts. (Applause.)

Mr. BROWN MARTIN (director) : I quite endorse what our chairman has said. After taking the opinion of experts, we decided to acquire the Clutha Mine, in which I for one firmly believe. (Hear, hear.) I believe that it is a gold mine in every sense of the word. I do not mean to say that it has high grade ore, but it has ore that will pay. When we went into matters, we found that to erect a mill and stamps and water race would mean a very large expenditure. That, of course, we were prepared for, but when circumstances occurred that gave us the chance of purchasing the Victoria, we gladly availed ourselves of that chance, and there is not the slightest doubt that the Victoria is a mine that if properly worked will pay exceedingly well. At the price we gave for the Victoria Mine we should have had to pay about the same for putting the machinery we found there upon the Clutha Mine. We not only got this mine at about the same price that we should have had to have paid for erecting machinery at the Clutha, but we also saved a considerable amount of time in having acquired the Victoria Mine, as it enabled us to get to work at once, instead of waiting until the machinery was erected.

WORKING CAPITAL INSUFFICIENT.

The working capital, from circumstances which your directors could not control, has not proved sufficient for bringing these mines to a success. But I feel confident that if we had sufficient working capital we should prove both these mines very successful properties, and no doubt they will in a short time pay very large dividends. (Cheers.) The Victoria Mine has always been looked upon in the Transvaal as a good property. The late company was, I believe, always short of capital ; otherwise it is the general opinion amongst mining men that they would have made this a very paying property indeed. That was the only thing that crippled them, and it is what is crippling us, and it is for us to consider whether we will allow this property, after having gone so far with it, to slip through our fingers. (Cries of "No.") I think that with the promise we already have of a subscription of 2,000*l*. towards a suggested issue of 8,000*l*., there is encouragement for all shareholders to give us a little assistance. I, for one, am quite willing to do my share. (Hear, hear, and cheers.) I should be sorry to find that we had to go outside the shareholders to get any of this capital. It appears to me that it is giving away a portion of the prize that ought to belong to the shareholders who have borne the burden and heat of the day. The chairman hinted at re-construction as a possible emergency, but I trust it will never come to that. I trust we shall be able to raise this small sum, which, we are informed by our professional advisers, will be sufficient for our requirements amongst ourselves. It is only recently that we have secured the services of Mr. Edgar Taylor, and I think most of the gentlemen in this room know

THE FIRM OF MESSRS. JOHN TAYLOR AND SONS

far too well to think that they would sanction Mr. Edgar Taylor acting as our consulting engineer unless they had made every examination, and had very fair proofs that our property is such as they could father. I am quite confident of this—if the mine had not been valuable we should never have secured the services of Mr. Edgar Taylor ; the more so, at the time we secured those services he was aware that we were getting short of capital. As a rule, engineers of their repute do not go into affairs without plenty of working capital to carry out their plans. Hence, we must look at that as a most favourable circumstance as indicating the value of the property. (Hear, hear.) I trust that those present will not only endorse the action of the board, but will be willing to subscribe for small amounts of these debentures, and a slight effort all round will accomplish the object. The 2,000*l*. promised does not take into account what the directors themselves will do. (Cheers.)

VIEWS OF A MEMBER OF THE STOCK EXCHANGE.

Mr. MARSHALL JAY: Mr. Edgar Taylor, who has been so often referred to, reprcsents the firm of Messrs. John Taylor and Sons, of London, and his opinion must carry great weight with us all. If the Messrs. Taylor had not believed in the value of a mine, they would not practically have taken the management into their own hands, and under these circumstances, it would be lamentable if we were to allow the concern to come to grief for the want of subscribing a trifling amount like 8,000*l.* or 10,000*l.* (Cheers.) I appreciate what Mr. Brown Martin has said as to the inadvisability of entertaining the idea of re-construction. (Hear, hear.) I think the chairman only suggested that as a last resource, and I trust that no shareholder present, or absent, will think of such a course for a moment. He has told you that 2,000*l.* has been promised, on condition that 8,000*l.* is subscribed, so that the balance is only 6,000*l.* among a body of shareholders in a company with 100,000*l.* capital. It only remains that the debentures should be issued at a fair rate of interest, and that they should be payable at par or at a premium at a certain date. I am well aware there are many large and wealthy shareholders in our company, and I think there ought to be no difficulty in raising this money.

AN IMPORTANT QUESTION.

I have been asked by one shareholder (who is prevented from being present by domestic bereavement) to put to the directors this straight question—whether anything has happened since the formation of the company to make them alter their opinion as to the value of the two properties—the Clutha and the Victoria? (Cheers.)

The CHAIRMAN: Nothing has occurred to alter our opinion, and I said so in my speech. I was getting low at one time, but the later news has distinctly changed my opinion for the better.

Mr. JAY: Can the ore be treated by the well known McArthur-Forrest process, which is now treating the ore of the Robinson, Sheba, and other properties so advantageously?

The CHAIRMAN: I believe it is unnecessary to treat the ore by any proccss, because it is free milling, whereas the process you named is very valuable for ores difficult of treatment. Our ore can be treated by the ordinary amalgamation process, and is without pans or anything of that kind to add to the cost. (Cheers.)

Mr. HAMMOND: I see that the balance-sheet is made up to Dec. 31, and apparently, in round figures, we have expended about 10 000*l.* in prospecting, working, and developing the mines. I gather from the remarks made by the chairman that at the present time we are, financially, at the end of our tether.

The CHAIRMAN: We have about two months' working capital left.

Mr. HAMMOND: I noticed that the shares are 15s. paid.

The CHAIRMAN: Yes, and the balance will be accounted for in the next fiuancial statement.

Mr. HAMMOND: Are we to take it that the 11,000*l.* has also becn absorbed in working the company?

The CHAIRMAN: Yes, since the end of last year. There was first of all the cost of the property, which was borne not by one, but by several calls—in fact, spread over the whole. You must not reckon that the whole of every call was available for a particular period. We had to pay both the working expenses and the remaining balance of the unpaid purchase-money.

Mr. HAMMOND: With regard to the Victoria Mine, there is a remark in the report of Mr. Stevens (Mar. 31, 1891): "We have been in water all the week."

VICTORIA AND CLUTHA.

The CHAIRMAN: We temporarily shut down that mine, and the water came in. We went to the Clutha, and the ore in the stopes was not of sufficiently high quality to pay. As soon as the Victoria was stopped, naturally the water came in, but the new manager wishes to explore the Victoria, and satisfy himself as to the value of the lode, and, if necessary, to work the lower levels.

Mr. HAMMOND: Is the mine clear of water now?

The CHAIRMAN: Yes, with the exception of a few feet in the sump. I should mention that we have received from Sir Luther Vaughan a letter apologising for non-attendance, as he has been attacked by influenza.

The motion was carried unanimously.

The CHAIRMAN: The debentures constitute a very important subject for consideration, and I hope they will be largely subscribed by the shareholders, and with promptitude. We propose to issue them in the denomination of 50*l.* at 10 per cent.

Mr. BROWN MARTIN: We have something to raise debentures upon, for in addition to the properties, which are freehold, there is all the machinery.

THE SECRETARY WILL NOT SPARE HIMSELF.

Mr. JAY: I suggest that you should make the debentures of the denomination of 20*l.* (Hear, hear.) If the secretary were to interview the shareholders in or near London, there would be very little difficulty in raising the money.

The CHAIRMAN: The secretary is prepared to do that if necessary.

Mr. PRESTON proposed, and Mr. T. I. FORD seconded, in cordial terms, the re-election of the chairman as a director, and the motion was carried by acclamation.

Mr. PRESTON: Did you say the Victoria Mine ran between 3 and 4 dwts.?

The CHAIRMAN: I said that that was what the tailings left by the former workers yielded.

Mr. PRESTON: How many pennyweights will cover costs?

The CHAIRMAN: We have many opinions on that subject, but I fancy from 3 to 4 dwts., under certain conditious, with ropeways, &c. It is my experieuce that 5 dwts. will often pay the expenses, and sometimes more. The original Victoria Mine made it pay with 4 or 5 dwts., and we have 35 dwts. in the end.

On the motion of Mr. TRUBSHAWE, seconded by Mr. BROWN MARTIN, the auditors were re-elected, and the chairman was heartily thanked for presiding.

DURHAM AND LORD BYRON AMALGAMATED GOLD MINING CO., LIMITED.

£15,000 OF FRESH WORKING CAPITAL FOUND, AND UNDER THE HAPPY AUSPICES THE MINE MAKES A FRESH START, WITH EVERY PROSPECT OF SUCCESS.

AN extraordinary general meeting was held on Thursday, 7th inst., at Winchester House, for the purpose of considering, and, if deemed advisable, passing the following resolution:—

"That the capital of the company be increased to 155,000*l.* by the creation of 15,000 preference shares of 1*l.* each, such preference shares to be entitled to a similar preferential dividend, and to rank in all respects *pro rata* with the existing 20 per cent. preference shares of the company."

Mr. Henry Pelham Clinton

(chairman of the company) presided.

Mr. ALFRED B. SEEL (secretary) read the notice of meeting.

POSITION OF THE COMPANY UNTIL RECENTLY.

The CHAIRMAN: Gentlemen, before putting this resolution to you, I should like to make one or two remarks. The business of to-day will not last a few moments, but I should like to express my great regret that Genl. Arbuthnot, who has presided at your meetings so many times, is not present in the capacity of your chairman to-day. Genl. Arbuthnot was the former chairman of the company, and also trustee to the debenture-holders, but when it became apparent in Oct. last that the Oct. coupon could not be met, Genl. Arbuthnot, taking legal advice, was compelled to resign his position as chairman of the company, in order that in his position as trustee he might act independently, and in consequence of that we have lost a very energetic chairman, and I am very sorry for it, but it cannot be helped. You recollect that in Aug. last we came to the end of our resources, and, of course, at that time of the year it was quite impossible to bring forward any scheme for getting money. Aug. and Sept. are not good months for placing capital. In the autumn we put before you a scheme which was objectionable for two reasons—first of all, because it involved a compulsory contribution on the part of every shareholder, and, secondly, because it involved the liquidation of the company. We knew that certain shareholders had gone to the end of their tether, and would not subscribe any more money to the working of the Durham Mine, and we knew it would be expensive to wind up and re-construct the company, as the Queensland Legislature had just passed an Act which makes the registration of a company a very expensive matter—costing about 1,000*l.*, which would have been serious.

MR. LONGDEN GIVES FRESH HOPE AND LIFE TO THE COMPANY.

Fortunately, just then a gentleman arrived from Australia who knows the Durham Mine thoroughly—in fact, who knows it better than anybody here, and knows it, I think, quite as well as anybody out there now. This gentleman very kindly proposed to guarantee, with his friends, 6,000*l.* of preference shares, provided we could find 9,000*l.* (Cheers.) You know the scheme that was laid before you, and I am glad to say that it has been entirely successful. We have found the 9,000*l.*, and therefore we have actually obtained 15,000*l.* The scheme involved a surrender on the part of the ordinary shareholders of 50 per cent. of their holdings of ordinary shares, but any shareholders guaranteeing 15 per cent. of their holdings were able to retain all their ordinary shares. I am glad to say a large number of shareholders came into the scheme and did subscribe 15 per cent., and several others have guaranteed even more. The result is, that after the great amount of trouble and labour we have been put to we have been able to launch this scheme, and now the only thing necessary to complete it is to ensure that this resolution be passed. Before actually putting the resolution, I should like to point to the map and show you that the ground marked red to the south has been stoped out, and that the southern and northern part are about equally divided, as shown. Now, where the map is coloured pink is where the greater part of the ore has been taken out, and where our money should have been spent in deeper sinking and development, but, as a matter of fact, our money has been spent in the opposite direction. There you have one great reason why we have failed. What we ought to have done, and what we should have done, was to work on the southern part, and with the new money that will now be raised it is our intention to do so. We shall have in the task the supervision, to a certain extent, of the gentleman who has so kindly come forward to aid us, and who is returning to Australia. He will not be far distant from the mine for some little time at any rate, and we hope that if the stone is there, as we have every reason to believe it is, as the outcrops are seen in the levels at several places, and if we manage economically, we shall be able to make the success of this mine even yet, which I am afraid, so far, has not realised the anticipations which were put forward on previous occasions. I will now move the resolution as above. (Hear, hear.)

Genl. ARBUTHNOT seconded the motion.

The CHAIRMAN put the motion, and declared it carried by the requisite majority. He said: That concludes the formal business of this meeting, and if anybody has questions to ask I shall be happy to answer them to the best of my ability. I should like to introduce to the meeting Mr. Longden, and should be greatly obliged to him if he would tell the meeting what he thinks of the property.

IMPORTANT STATEMENT BY MR. LONGDEN.

Mr. LONGDEN, who was heartily received, said: Gentlemen, I have a thorough knowledge of this mine. I was the original purchaser of it when the miners were working in 1882—nine years ago. I went up to the mine, saw it, and afterwards formed a company in Melbourne, and the Melbourne company was vendor to the English company. I may say I was always totally opposed to the sinking of this new shaft. I knew where the stone was to be found, and felt all along if operations had been confined to the end of the mine the chairman has indicated,

IT WOULD HAVE BEEN A MAGNIFICENT SUCCESS;

but the directors were ill-advised in their managerial appointments, though they selected the best man they could. They undertook certain work in sinking the new shaft instead of continuing the sinking of the old one. And that is where the money has been spent,

in passing the shaft and the levels through blank and other unremunerative ground. (Hear, hear.) The directors have now decided to confine all operations to the southern end of the mine, which can be done economically and effectively whilst the mine is in such a condition, that I feel sure the capital now to be raised (15,000*l.*) will be more than sufficient to bring it into a dividend paying position. We have no reason to doubt that there is a splendid body of stone there. It is outcropping in the level, and there are spaces of 2 or 3 ft. of good stone that will give 4 ozs. to the ton. (Cheers.) What we have to do is to get underneath it and stope it out. The mine is all in good order and everything in connection with it, and in reference to the old shaft, it will be utilised for future purposes. A very small expenditure will make that a thoroughly workable shaft. I have guaranteed, on behalf of myself and friends, a large amount of this capital, which, I think, is a sufficient proof that I have every confidence in the mine, and, as a large shareholder in the Melbourne company, I have every reason to suppose that we are going to make this mine a brilliant success. (Cheers.)

THE FORMER CHAIRMAN'S VIEWS.

Genl. ARBUTHNOT: I should like to say a few words, having been at one time the chairman of this company, though not the chairman at the beginning, and not on the board when the new shaft was commenced. I agree with Mr. Longden that this was done under good advice—the advice of a man of great experience, and no wonder the directors elected to follow him at that time. What Mr. Longden has said is entirely accurate, for the great mistake has been the spending of money in the wrong place. I may say that I think Mr. Kirby (who is a good manager in some respects) was very much to blame for the way in which he spent such a lot of money. It is, however, very difficult from this distance in a place like Queensland to properly look after the manager. We did our best. We were always writing and telegraphing, and asking him what on earth he meant by continually saying he could do a thing for 1,000*l.* for which in the long run he wanted 5,000*l.*? We really were not treated well, although I am sorry to say it, by Mr. Kirby, because Mr. Kirby has in many ways done hard work out there. Still, I have every belief that what Mr. Longden has said will be justified. All our rich stone is on the side he indicates—the southern, and we have been spending all our money in speculating on the northern side. That really was not my fault, because I was not on the board when it was done, though the directors of that day were induced to do it by a qualified expert. I think we have come to better days, and quite agree with the forecasts of Mr. Longden.

Mr. GARDINER: Is Mr. Kirby the manager now?

The CHAIRMAN: No; he is on his way home.

Mr. GARDINER: Is he to be the future manager, and are we to follow him? It must be something like 18 months or two years ago that when there was a complaint about not getting our accounts home from Mr. Kirby, showing what it had cost him to get the gold, there was some proposal, or explanation, offered about the difficulty of controlling the people out there, and I said "Why do not we apply drastic measures and remove the old staff? The experience of Mr. Kirby has simply been confirming what I said. Now, if we are to follow the old experts, I do not hesitate to say

YOU WILL BE IN AS BAD A POSITION AS EVER YOU WERE.

Is Mr. Longden satisfied with the new measures that are going to be adopted in getting this gold, which was estimated originally to come out something like 4 ozs. to the ton, though it was found in our experience to cost 5 ozs. to get those 4 ozs.? A period elapsed before we found that out, which was not creditable to the old board. It is not out of place for me to tell you that if you had been the original board, and had asked for fresh capital, I should have

FELT MY COMMON SENSE OFFENDED

owing to the gross mismanagement of the past. You gentlemen (the present board) are free from that, but the old board should certainly retire, and hide their diminished heads.

The CHAIRMAN: As regards the management, Mr. Longden will look after that. I do not think that he or his friends would come in to the tune of 6,000*l.* unless they felt sure the management of the company would be a great deal better in the future than it has been in the past. They know the mine to be valuable, and that

IT HAS ONLY BEEN A QUESTION OF MANAGEMENT ALL ALONG.

Therefore, one of the first questions Mr. Longden will satisfy himself about will be that the management is what it ought to be in order to get out the gold. We do not care to talk too much about our arrangements, but I may say this, that if Mr. Longden is satisfied to put in that large stake you will be satisfied with the management, and I understand that is what you desire.

MR. LONGDEN SATISFIED.

Mr. LONGDEN: I am perfectly satisfied in regard to the future management of the mines, or I should not have compromised myself or friends to the extent I have done. I am satisfied that the present board is a practical one, and one that will profit by the lessons of experience. I do not think it altogether fair to blame the late board as Mr. Gardiner has done. They were guided by one of the first experts in all they did, and they had to carry out his plans. When Mr. Kirby went out he perpetuated the blunder that had originally been made, whereas if he had exercised a wise discretion he would have condemned the new shaft then and there.

The CHAIRMAN: Everything possible was done to insure good management; but when you are on a board, where it takes you two months to communicate by letter, and two months to get a reply, you can have no conception of the difficulties that are thrown in the way of management. I hope, by Mr. Longden being out there, and from our increased knowledge of the district, we shall be able to watch things in a much more careful manner than before. At the same time I am quite sure of this, that everything was done originally to insure success in the way of management, but there is no doubt about it, it was not successful, though that was not the fault of the former board. In reference to the accounts, it was in the time of Mr. Walpole that complaints were made and not in that of Mr. Kirby.

This concluded the business of the ordinary meeting, after which, Genl. ARBUTHNOT took the chair at an extraordinary meeting, when he proposed, and Mr. MARKS seconded, the passing of the resolution, which was carried.

The proceedings then closed.

POTOSI CONSOLS, LIMITED.—The allotment letters in this company have been posted. Applications for shares have so far come in very satisfactorily.

REPORTS OF MEETINGS.

DON PEDRO GOLD MINING CO., LIMITED.

A COMPANY THAT HAS PAID 100 PER CENT. DIVIDENDS, AND THAT IS LIKELY TO DO SO AGAIN — GRATIFYING STATEMENTS, SUPPORTED BY SOLID FACTS.

THE ordinary general meeting was held at the Great Eastern Hotel, Liverpool Street, on Monday, "for the purpose of receiving and considering the directors' report, and passing such resolutions as may be necessary to carry out the recommendations therein contained, and to transact ordinary business."

Mr. F. D. Dixon-Hartland, M.P.

(chairman of the company), presided.

Mr. JOHN E. DAWSON (secretary) read the notice of meeting.

SUCCESS ASSURED.

The CHAIRMAN: Gentlemen, they say "Hope deferred maketh the heart sick." For a great many years the directors of this company have come to you with the feeling of hope deferred. They have always had the feeling of coming before you with uncertainty, and without anything positive in the way of information; but though they had that feeling of deferred hope, and felt acutely the disappointment of delay, they always believed in the mine. They always thought they had only to pursue their work, and that a time would come when the shareholders would be rewarded for the exercise of their patience. They come before you to-day with the belief that success has been reached. They come before you with a knowledge that they have, for a very small remuneration, worked loyally for this company, and that they have been supported by the shareholders in a way that reflects great credit upon them, and I believe the prize is now within our grasp which we have so long coveted. (Cheers.) Mistakes have been made naturally, as they have been in all companies that have had to be managed at a distance, but they have not been of such a character as seriously as to interfere with the future of the mine, and the directors have at length succeeded in overcoming all difficulties. Last autumn, just after the Barings' failure, we were very near success, but a sum of money was still required to reach the point we had promised in our report, and which was the objective point when this company was reformed. A sum of 1,500*l.* we thought would do the required work.

DIRECTORS FIND FUNDS.

That sum, naturally, in such a state of affairs as then confronted us, we were unable to obtain from any of the shareholders, and we could not get any loans in the market or anything to finish the work. I have only to state that the directors became responsible for the 1,500*l.*, which enabled the manager to reach the lode, and to place success within our grasp. (Cheers.) With regard to what exists, I am not going into the engineering part of the work. We have Mr. Touzeau here, who will speak fully to you, but I should like to make this remark, that at the present moment we have a cross-cut 64 ft. long, through auriferous soil. When we mentioned to you at the opening of the company what we expected, we said, what we anticipated, the underlie lodes would be from 10 ins. to 14 ins. thick, and that the lode of auriferous soil might be lower down—say, 6 ft. to 8 ft. At the present moment we are through 64 ft. of that soil, and do not see the end yet. (Cheers.) We owe a great debt of gratitude to our secretary, Mr. Dawson. (Cheers.) Mr. Dawson brought before us a system by which we could conquer the water, which was the great difficulty we had always before us, and it was entirely through his recommendations, and the way in which he worked out the plans of the new machinery with Mr. Touzeau, that we have been able to gain the success which we announce to-day. (Cheers.) Then we cannot speak too highly of Mr. Touzeau, who went out to the works when everything looked black. He put himself loyally in the breach under great difficulties, and often when he was unable to receive money which we were obliged to dole out to him as best we could, he certainly has behaved in a manner that very few other gentlemen would have done.

JUSTICE TO MR. TOUZEAU.

Instead of losing heart and coming home, he loyally stuck to the work, saying, "I know you will do your best to send me money as you can, and, in return, I will do my best for you." Mr. Touzeau has done this, and we succeeded eventually in sending him all the money he required, and now have reached auriferous soil. (Cheers.) I have such confidence in the mine that I have increased my holding to 1,500 shares, which shows that

I AM A STRONG BELIEVER IN ITS FUTURE SUCCESS,

and several of my friends are in it for thousands. With my friends and myself we hold about one-eighth of the capital at the present moment. (Hear, hear.) I think that shows you what I believe personally to be the value of this mine, and if I were a shareholder in this room nothing would induce me to sell a single share. My belief is that the company's stock will be at a very large premium before long, if the mineral yields anything like what we believe it will. We have had the mineral sampled all along the lode. We have taken it out certain distances apart, so that it might not only be one part of the lode, and thus unfairly dealt with. We have found part of that gold is not less than 30 ozs. per ton, and it goes down to as little as under ½ oz., but taking the average of the whole lode it has worked out at 5 ozs. to the ton, and the mere samples produced 670*l.*, which has been paid into the bank towards expenses. That shows you, I hope, that every one of the shareholders who have stuck to us so loyally during the past when there were no profits will now come in and reap the benefit of the patience they have exhibited towards us. I have never spoken with any great enthusiasm about the mine before. I have always felt that mining is so uncertain that it needed the greatest caution in speaking of it, and so have simply confined myself to the statement that we were doing our duty. Therefore, when I speak to you like this to-day I speak what I believe, and what I think you will all find borne out. I shall be happy to answer any questions, and Mr. Touzeau, who has just come back from the mine, will give you an account of what has taken place there. I move "That the report of the directors be received and adopted." (Cheers.)

Mr. MORGAN LLOYD, Q.C. (director), in seconding the resolution, said: I have very great confidence in the mine, and although not to the same extent, yet, like the chairman, have invested my own money in it.

The motion was carried unanimously.

VIEWS OF MR. TOUZEAU.

Mr. TOUZEAU, who was heartily received, said: Mr. Chairman and gentlemen, I did not come prepared to make a speech on the subject of Maquiné, because I have set forth pretty fully all I have to say in my report. I went out at a time when considerable difficulties had to be faced. These have been overcome, and we have reached the bottom of the mine, and proved the value of the lodes. (Cheers.) They are rich beyond doubt, but in quantity their extent is not yet defined. There is one thing I might say, that in speaking of the Maquiné Mine it should not be inferred that it is *all* the property. It is not the only place where we find gold at Don Pedro. Another place is mentioned in my report, and there is also the point north of the north gulley, where we have had more than samples—even small workings, and I see by the latest report they have been prosecuting some work there, which shows that what we merely previously tried is turning out very good, and I have no doubt that extended workings on that part of the property will reveal the existence of good pay ore. It is not necessary to say how much gold we have to the ton, as we know we have mineral that will pay to bring away, under certain conditions. We have put down a new shaft to get under old workings. As the old workers reached the water they narrowed the extent of the workings, not caring to be far from the shaft, and, consequently, the lodes have not been tested to their full extent. The work is being done at unnecessary expense just now. When we get the new shaft carried down below the old workings we shall have a straight run from surface to the bottom of the mine, and then the mineral can be brought away economically. I shall be happy to answer any questions. (Cheers.)

The CHAIRMAN: The more you get out of Mr. Touzeau the better we shall like it. Ask him any questions you feel inclined to.

DIRECTORS CONGRATULATED.

Mr. TOLPUTT: I should like to say that it affords me, and I am sure my old colleagues on the committee of re-construction, the greatest possible satisfaction to find ourselves in the position we occupy to-day. I asked Mr. Touzeau a question, because I was not clear on the subject from the report. Remembering the long inquiry we made into the position of the mine (I forget the number we examined on the subject), it was always clear to me that the success of this enterprise depended simply upon whether the late Mr. Haymen scooped all the gold out, or whether he left any below to reward us. Mr. Touzeau assures me the 50-fm. level is the lowest point to which the original workings were carried. That being the case, and the lode being found intact, it is not a matter of surmise, but an absolute certainty, that the same rich shoot of gold from which we had such splendid returns formerly is left there for us now. I give the greatest possible credit to the directors for the plucky manner in which they have stuck to this mine through all its vicissitudes. It is fortunate for us that this has been the case. We often see good mines thrown away for want of raising a little extra money, and for the want also of a little courage, but here the directors are now likely to reap a handsome reward for themselves and for us. I was never more surprised in my life than to see the shares go down on the report lately issued. I can only attribute it to the idea, which I found one shareholder entertained, that the company was in immediate want of capital, although the report distinctly said not, and that the shares proposed then to be issued were simply to pay off debentures, and that, therefore, there would be no

increase of capital as my friend supposed. I again congratulate the directors on having brought us to what has every appearance of success.

Mr. Wilson handed a number of questions to Mr. Touzeau, who answered them as follows:—Mr. Wilson asks how many tons go to the cubic fm.?—16 cubic ft. of jacotinga is the mean average per ton of lode. I do not propose to select the quartz, because if you wish to work the mine to its full advantage you must remove every ton which will pay. Mr. Wilson asks if there are any royalties, but I believe not.

Mr. DAWSON: There are no royalties—only a tax on the gold raised.

RESERVES.

Mr. TOUZEAU: I am asked to give an approximate estimate of the values of the reserves already discovered down to the latest information. Well, when we have succeeded in cross-cutting the lode, and in extending upon it so as to define its boundaries, I shall be able better to answer that question. It is a fortunate thing for the company that we have not as yet cross-cutted through the lodes, and I hope it will take some time to drive through. I am also asked—what amount of ore can be treated on the floors per day? Does he mean the present floors or the proposed floors?

Mr. WILSON: The proposed floors.

Mr. TOUZEAU: They used to treat 70 to 80 tons per day, and obtained 100 per cent. dividends. We could treat the same quantity and very likely a good deal more. The quantity we could treat on floors we could construct would be very much greater than the mine ever turned out before. We have plenty of water and space. We could treat more than the mine could turn out.

QUESTIONS GALORE.

Mr. KOPPERS: How far below the 50-fm. level was the shaft sunk?

Mr. TOUZEAU: About 3 fms.

Mr. KOPPERS: How long will it take to sink the present shaft to the same depth?

Mr. TOUZEAU: Between three and four months.

Mr. KOPPERS: Can Mr. Dawson inform us whether he saw any of the gold-bearing roughs mentioned in the report?

Mr. DAWSON: Most certainly, and that has given me the confidence I have.

Mr. KOPPERS: Why were they not treated?

Mr. DAWSON: There were no stamps.

Mr. REDFERN: May we look forward to the mine as being thoroughly equipped? Is the new machinery equal to what it is designed to carry out? When may we look for divisible profits?

Mr. TOUZEAU: The water has been out of the mine since Nov. last. That we accomplished with our machinery working well within its power. If we are down 10 fms. further we shall have no difficulty with the water with the present machinery.

DIVIDENDS.

The CHAIRMAN: As regards the second question, the whole of the machinery has been either ordered or will be ordered this week. We expect it will be in position in four months, and then we hope to be producing gold in large quantities for the benefit of the shareholders.

Mr. REDFERN: Is there any chance of a further eruption of water?

Mr. TOUZEAU: There never was any eruption of water—simply a natural percolation, which the machinery on the spot is quite capable of dealing with.

Mr. DAWSON: Possibly the shareholders are not aware that the larger proportion of the ore does not require stamping—simply washing.

Mr. KOPPERS: The report says these gold-bearing roughs have been accumulating, and why have they not been treated?

Mr. DAWSON: Because the company has not been in a position to do it.

The CHAIRMAN: Our duty was to get down to the lode, and to that we have been devoting ourselves entirely.

A PLEASING REMINISCENCE.

Mr. WELCH: Those who can recollect the old days will remember that a great deal of the ore was so exceedingly rich that they had boxes and keys, and as the ore was taken out it was transferred to the boxes and taken to surface. I should like to ask Mr. Touzeau whether in the exploratory workings lately made they have discovered any more of this "box" ore.

Mr. TOUZEAU: I have had the pleasure of taking "box" work from Maquiné. We find the south line of gold, which was supposed to have pinched out at the 30-fm. level, existing 3 fms. above the 50 as strong as ever, and we took out about 100 ozs. from about 3 ft. of ground. The gold is in pieces as big as your hand. The line will pinch out, and again you will run into a rich portion. When I was there we took out 14 ozs. from a small box of vein stuff, large pieces in the form of almost pure nuggets of gold being taken separately.

CAPT. TRELOAR'S VIEWS CONFIRMED.

Mr. WELCH: The report entirely confirms what Capt. Treloar said when the workings were suspended. His words were: "Our troubles largely arose from water. The bottom of the mine is looking as well as ever."

Mr. DAWSON: That is perfectly true, and, I believe, those were his very words.

Mr. REDFERN: Are we to look upon the mine as pockety?

Mr. DAWSON: Not at all.

Mr. AUSTIN: What is the extent of the claim?

The CHAIRMAN: About 4 square miles. We have a capital manager in Mr. Kingsmill, who is a reliable and trustworthy man. We were lucky to obtain his services, and he will take care that no pilfering goes on.

Mr. KOPPERS: How is the ore treated?

Mr. TOUZEAU: The bulk of it was friable, and almost dissolved in water, and the gold is perfectly free.

Mr. KOPPERS: When the mine was so successful before, was it treated in the same way?

Mr. TOUZEAU: Yes; stamps were used for a certain percentage of roughs.

Mr. REDFERN: Is there any chance from storms that the machinery will be overcome

WATER QUESTION EXPLAINED.

Mr. DAWSON: I think you will go away with a wrong impression unless this explanation is made—that the greater portion of the water in the mine does not come from the surface, but comes down the cleavage planes of the country. The depth we are now from surface, scarcely admits of any appreciable amount of filtration; the incoming water is from the tapping of springs, which is possibly draining ground many miles away. You must not go away with the idea that we are liable to be flooded by temporary storms.

In reply to Mr. Welch, Mr. TOUZEAU gave a technical description of the pumping plant.

DIRECTORS RE-ELECTED AND EXTOLLED.

Mr. MORGAN LLOYD moved, in complimentary terms, the re-election of the chairman and Mr. Frazer Rae, whose zeal he greatly extolled, and whose devotion, under the difficulties through which the company had passed, was beyond all praise. Mr. Rae was one of those shareholders in the old company who received the 100 per cent. dividends, and he hoped he had them in his pocket now. (Laughter.) As to Mr. Touzeau—it was a pity they did not find him at an earlier date.

Mr. TOLPUTT seconded the motion, which was carried unanimously.

The CHAIRMAN, in returning thanks, said he did not claim any more praise for himself than he wished to share with his colleagues, who had most heartily and loyally supported him throughout. (Cheers.)

Mr. RAE also returned thanks to the shareholders, and expressed his indebtedness to his colleagues for the kind consideration they had extended to him during the time he was absent from the board meetings through illness.

The CHAIRMAN proposed, "That the nominal capital of the company be increased by the sum of 25,000*l*., divided into 25,000 shares of 1*l*. each, and forming part of the existing capital, and that the directors be, and they are hereby, authorised to issue the whole or any portion of such shares at such time or times, and to such persons, and either at par or at a premium as they may think it expedient." What we state, he said, in the report is perfectly correct. We have sufficient money at the present time to bring us, as we believe, to the time when we can get gold, if all the options are taken up, but there is the possibility that some of these gentlemen may not take the shares, and some have up to August, and the remainder to the end of the year, before they are obliged to declare what they will do. We think it is penny wise and pound foolish that we should not have sufficient capital to make this the great success we hope and believe it will be. If we were to issue the whole of the shares, the capital then would be only 150,000*l*., and the debentures would be converted. We think that is a small capital for such a company as this, and one which, so far as I can see, ought to

PAY OFF EVERY YEAR THE WHOLE OF ITS CAPITAL IN DIVIDENDS,

and which will certainly do so if the mine turns out anything as good as its sampling. We do not propose to issue one penny more of these shares than necessary. Our object is to keep the capital small, so as to make the dividends big. Any delay in the works would be serious, and, therefore, we want to guard against it. We simply desire power to issue these shares if necessary. You have trusted us in the past, and you must trust us in the future. We shall not issue them if we can help it, but we wish Mr. Touzeau to be unhampered, and to have the work done as it ought to be, and, in order to do that, we must be able to send him money if it is needed.

Mr. RAE seconded the motion.

A SUGGESTION.

Mr. WELCH: Will the directors offer the shares in the first instance to the shareholders according to their holding?

The CHAIRMAN: If the shareholders would take them up we should propose to do so at once. I wish to be quite frank with the meeting, and state that supposing we went to the shareholders, and they should not exercise their option, it would make it exceedingly difficult to negotiate with other persons. (Hear, hear.) If it is the wish of the meeting that the shares shall be offered at once *pro rata*, it shall, of course, be done.

The motion was carried unanimously.

Mr. COLLINSON moved the re-election of the auditors, Messrs. T. S. Evans and Co., at a remuneration of 20 guineas.

Mr. FISHER seconded the motion, which was carried.

THANKS.

Mr. TOLPUTT: We must propose a hearty vote of thanks to the chairman, the directors, Mr. Dawson, and Mr. Touzeau for their conduct of the affairs of the company in the past year. I hope that next year we shall be in a position to present them all with something more than a vote of thanks, and I shall be delighted to be the first to rise and do so.

The motion was seconded, and carried by acclamation.

The CHAIRMAN: We are very much obliged to you, and can only say that we have tried to do our duty. It will be a very great disappointment to us if you have not a good dividend before this time next year.

DURBAN-ROODEPOORT GOLD MINING CO., LIMITED.

A FAIRLY PROSPEROUS YEAR, WITH A BETTER OUTLOOK IN THE IMMEDIATE FUTURE—COSTS CONSIDERABLY REDUCED.

THE third annual ordinary general meeting of this company was held at the Terminus Hotel, on Tuesday, "to receive the report of the directors and a statement of accounts up to Dec. 31, 1890, and to transact the business of an ordinary general meeting." Notice was also given that after the conclusion of the ordinary business the subjoined resolution would be proposed:—

RESOLUTION.

"That the articles of association of the company be altered in manner following:—(*a*) The following article shall be inserted after

article 19, namely—19A. No call shall exceed one-fourth of the nominal amount of a share, or be made payable at an interval of less than two months after the preceding call was payable. (*b*) The following words shall be added after the word 'directors' at the end of article 89, namely, 'who shall attach their signatures to every document sealed in their presence in testimony of the fact.' (*c*) The following words shall be inserted in the last line of article 97, between the word 'securities' and the word 'as,' namely, ('other than shares of the company.')"

Mr. Archibald Parker

(chairman of the company) presided.

Mr. LEE WRIGHT (secretary) read the notice of meeting.

ACCOUNTS.

The CHAIRMAN: Gentlemen, I presume that we may take the report as read. In moving the adoption of the third annual report and accouuts, we would offer a few remarks. The mining reserve account shows that the quantity of gold obtained was about 1,000 ozs. more than 1890, working with the same number of stamps. The weight from which it was taken is given as 15,590 tons, which is very much greater than in 1890, but in both instances they are merely estimates, and in 1889 the quantity was much understated. The manager had at that time no means of weighing the ore. It is now arrived at by weighing a few loads, but as this was not done until Aug., the quantity for 1890 should also be greater than stated. Taking the tonnage on the same basis as the last five months, we conclude that the quantity crushed in 1890 was 17,372 tons, and the average yield about 18½ dwts. From the balance-sheet you will observe that after writing off 2,980*l*. 1s. 7d. for depreciation, the net profit for the year 1890 was 23,978*l*. 5s. 6d. Added to this is the credit balance from 1889, 6,237*l*. 2s. 11d., making 30,215*l*. 8s. 5d. Two dividends of 10 per cent. each were paid in Jan. and July, amounting to 19,994*l*., leaving a balance carried to 1891 of 10,221*l*. 8s. 5d. This enabled us in Jan. of this year to pay another dividend of 10 per cent. At our last meeting you were advised of our having lost part of the new machinery by the stranding of the Strathblane. Although every effort was made to have it replaced quickly, it could not be sent away from here till Aug., and, owing to the extraordinary dryness of the early part of the season in Natal, it did not arrive at the mine till near Christmas. The erection was pushed on as quickly as possible. It was early in Feb. before work was begun with the new machinery, and then not night and day, as is usual. From the cable returns for last month, however, we conclude that they are gradually getting into full work.

MACHINERY.

It was not the intention of the directors to attempt working more than 50 stamps, but during the great depression a new 20-stamp Sandycroft mill was offered at a price, delivered at the Randt, lower than English cost, and it was decided to purchase it. Although we should afterwards require to dispose of 20 of our old stamps, we were convinced that it would be more economical to buy, as by so doing we were enabled to go on crushing without cessation during the whole year. Had we stopped for the removal of the old stamps to the new site, we should probably have had two months' less crushing, which would have meant about 11,000*l*. less gold returns for the year. At present the manager is attempting to work the 45 stamps on the new site, and the 25 on the old, but whether he will be able to continue the whole with a full supply of payable ore is uncertain, but he is evidently making a strenuous effort to do so.

MANAGER'S DIFFICULTIES.

By a circular issued on Apl. 17 you have been informed of the difficulties that the manager has had to contend with. The poorness of the main reef where he is working, and the narrowness of the south reef at the 220-ft. level, have given your directors much concern. There has always been a considerable variance in the richness of the south reef, but this coming at the present time, when we were prepared to deal with a much larger quantity, has been particularly disappointing. Mr. Goodwin has, unfortunately, suffered considerably from fever, but is now better. During his illness the opening up of the mine did not go on to his satisfaction, but having secured the services of a new claim manager, who holds good certificates, we are hopeful of being able to advise considerable improvement ere long. The floods which prevailed two or three months ago also made working in some parts very difficult. This was particularly the case at the vertical shaft, where at present the richest of the south leader is situated. The ordinary pumping facilities were found insufficient to cope with this, but an extra steam pump and boiler having been obtained this will now be set right. There is one asset which does not appear in the accounts, viz., the tailings and blanketings. Of the tailings there were estimated to be 19,000 tons, and of the blanketings 500 tons, at the end of 1890. It has not yet been decided what shall be done with these. The tailings are estimated to contain about 7 dwts., and concentration is suggested as necessary before using any of the processes at present worked at Johannesburg. Some experiments have lately been tried with a new concentrating machine, but it has not yet proved a success. The manager believes that they can be sold, if we wish to do so, for a few thousand pounds, but our opinion is that before long we shall be able to make more of them ourselves.

WORKING COSTS LESS.

We observe the other companies in a similar position have been experimenting. The cost of working has been, until lately, very heavy, but now that the greater part of the work will be done at the new mill, and also because of the native labour being considerably reduced, Mr. Goodwin expects to be able to work at as low a rate as any of the companies that we have heard of. Whilst stating that the cost of working in the past has been great, it may be as well also to state that the cost of the entire plant, including buildings, dams, tramways, &c., is only at the rate of about 650*l*. per stamp, whilst many of the leading companies estimated in the same way cost about 1,000*l*. per stamp. During the past year and up to this date we have had an abuudant supply of water for all our requirements, and we believe that we shall continue to have all through the coming dry season. The extraordinary rainy season which we had was a severe test of the dams, but they have stood well and received no damage. As it is more economical to work at the new site, it is probable that at least part of the 25 stamps will be moved from the old one. According to the manager's letter of Apl. 3, he estimates that he will be able to work the main reef even as it is at a profit, and we trust that he will find the south reef, when further opened out, as rich as in the past. The crushing for the month of Apl., although not so good as we expected, shows a considerable improvement, and we hope that this will go on. When the manager wrote it was only at the 220-ft. level the reef was found narrow, and we understand that there is still a large supply of the ordinary width of reef at the 140-ft. level, but that it requires further opening up. The amount of work done to the 10 claims is inconsiderable, but we expect this will now be pushed ou. The starting of the new mill, and the completion of the adit continuous tramway, seems to have occupied most of the manager's attention. The main reef on this part of the property is richer than on the 13-claim block.

MANAGER'S PLANS.

The manager intends working 30 stamps on the south leader and the remaining 40 on the main reef from both blocks of claims. Although the latter is at present poor in quality, he is desirous of pushing on with both reefs, as he regards it as very important that prospecting should go on vigorously. Until the ground has been thoroughly opened up and prospected to the boundaries, he would prefer leaving the question of yield of gold to be expected per ton in abeyance. It has generally been found that the reefs improve in quality and thickness the deeper they go, but we have not found it so at the 220-ft. level. The manager, however, says that they will shortly be in a position to go deeper, and we trust that the result will be an improvement at the next level. We have now ample stamping and steam power for the working of the entire property, and except that we may find it advisable to get concentrators, and also to lay a tram line from the 10 claims to the mill, we do not anticipate much more heavy outlay for machinery and other plant. (Cheers.) The chairman closed by moving the adoption of the report.

"AN HONEST AND RELIABLE REPORT."

Mr. BRINTON: Mr. Chairman and fellow shareholders, I have very much pleasure in seconding the motion. The chairman has gone very carefully into the report, and you have no doubt studied it for yourselves, and he has touched upon all points of interest. If I said anything at all, it would be just to allude to the fact that the new tram lines which are laid down for the purpose of economising the working of the mine, and dealing with the large quantities of material that has to be crushed, have been most effectively laid, and we are quite satisfied that the outlay in regard to them has been wise, and also on the machinery. With regard to the mine itself and its equipment, we may rest assured, from all the information sent by our manager, that everything is in most excellent working order, and in that respect leaves nothing to be desired as regards the way iu which it has been got ready by Mr. Goodwin. With regard to the accounts, I must just say that we have been very careful to consider every item of expenditure. We have written off to depreciation all that we thought would meet its requirements, and believe that in presenting you with this report we lay before you an honest and reliable statement of the condition of your affairs. (Hear, hear.)

QUESTIONS.

Mr. GILES: Has the ore been proved at all from the different incline shafts shown upon the plan of block 13? I should also like to know what is the average width of the leader spoken of in the south reef. I may also mention that I think it may be of advantage to us in following the plan given in the report this year if we had a block plan showing the relation of the two properties to one another. I do not quite understand from the plan given whether the main leader on No. 1 block (the 10 claims block) is the same as it is in the 13 claims block. I do not wish to ask an indiscreet question, but think it would be of advantage if we knew the relative cost of mining per ton last year and this. The report speaks of economy in the working, and if you have the figures they will be welcome to the shareholders. (Cheers.) When we look at the profit and loss account I think the London expenses are very heavy. These expenses, apart from any question of winning the ore, which, of course, appeared in the mining revenue account, amount to the large sum of over 4,500*l*. I think that before we actually find that our receipts are dimiuished it would be well to bear in mind those poiuts upon which we can, perhaps, economise.

CHAIRMAN'S REPLY.

The CHAIRMAN, after inviting other questions, said: We cannot give you any idea of the assay value of the ore taken through each shaft, but Mr. Goodwin says that where they are working at present he does not think the main reef will yield more than 5 dwts., but expects to be able to work the main reef in the future at a cost of 13s. 6d. per ton in the 13 claims block, and 16s. per ton iu the 10 claims block. Iu the latter he estimates what it will yield at the mill at 8 dwts. We are told by the local directors that Mr. Goodwin is extremely careful, and that what he says represents perhaps the least sanguine view of the situation. The cost in the past has been very great, because they have been working the south reef, which has been difficult to deal with. It has been in the past about 10 ft. and 2 ins., with about 1 ft. of sandstone betweeu the two, though in the sandstone there has been a certain amount of gold. We expect that to yield well at the 140. At the 240 the 10 in. part has disappeared, and the other part remains at a width of from 1 in. to 4½ ins., but that is only in the adit level. The reefs in the 10 claims block are supposed to be the same as in the 13 claims block. The main reef is richer, however, than in the latter.

LONDON CHARGES.

The London charges include exchange, manager's commission, cablegrams, income tax, and the charges of the local directors. Many of these items, it is obvious, properly belong to the other end. (Hear, hear.) The expenses are kept down as low as possible. The transfer fees used to pay all the London expenses, but this year the transfers have not been so numerous. In regard to the position of the 13 claims block—we have a plan which shows the position between the 10 and 13 claims—the 10 claims belonging to the main reef, and six belonging to the Evelyn.

The report was unanimously adopted.

ROUTINE BUSINESS.

Mr. ALFRED JONES proposed the re-election of the chairman, whose services he extolled.

Mr. RHODIN seconded the motion, which was carried.

The CHAIRMAN returned thanks, and moved the re-election of Mr. Brinton, "one of our ablest directors."

Mr. MILLER seconded the motion, which was carried, and Mr. BRINTON'S acknowledgment followed.

Mr. CHAPMAN proposed the re-election of the auditors, Messrs. Welton, Jones and Co., at the same remuneration as before.

Mr. JOHNSON seconded the motion, which was carried unanimously.

SPECIAL MEETING.

The CHAIRMAN: The notice of the special meeting has been already read, and will have informed you of its object. We were asking for a quotation on the Stock Exchange, and, according to their rules, they require these trifling alterations. To us they are not of the slightest consequence, but the Stock Exchange require them, and there is no objection to the alterations. In regard to one of them, I may remark that our capital is paid up, and that, therefore, we have no calls. I move the resolution as above.

Mr. BRINTON seconded the motion, which was carried.

Mr. LYONS proposed a vote of thanks to the chairman.

Mr. GILES: I did not quite understand your answer to my question—is the 16s. 6d. per ton the working cost?

The CHAIRMAN: No; that is in the future for working the south leader, which is a narrow reef and which has been more expensive to deal with in the past.

Mr. GILES: The answer is not that it refers to the ounce of gold?

The CHAIRMAN: No, to the ton of quartz.

A SHAREHOLDER: Will the dividend come in July? (Laughter.)

The CHAIRMAN: You must give us a little more time, but we shall declare a dividend as soon as it is safe to do so. Some of the shareholders have expressed a desire that we should give more information than that conveyed in the monthly crushing, and it is our intention to do so.

The resolutions were carried, and the meeting ended.

MASON AND BARRY, LIMITED.

A 3 PER CENT. DIVIDEND—SHAREHOLDERS DISSATISFIED.

THE ordinary general meeting was held on Monday, at the Cannon Street Hotel.

Mr. F. T. Barry, M.P.,

presided.

DECREASED COPPER PRODUCTION.

The CHAIRMAN, in submitting the balance-sheet and accounts, said the quantity of ore broken and raised at the mine during 1890 amounted to 355,000 tons, and was in excess of the average annual breakage for the three years preceding 1889, in which year the breakage of ore was intentionally restricted. The deficiency in the production of copper precipitate was caused by the fact that as the large yearly breakage carried them lower down into the ore mass, the ore did not carry so good a percentage of copper, and also that it contained more arsenic. As regarded the bad debts, they would have noticed that the amount now written off was the sum (56,662*l.*) which appeared at the foot of the balance-sheet for 1889. The directors had also been successful in recovering in reduction of that loss a sum of 10,000*l.* as shown on the profit and loss account, and the loss was still further reduced by the sum of 9,752*l.*, which they had within the last few days received, under the recent decision in the Court of Appeal confirming the judgment given in their favour in the Court of Queen's Bench. They were claimants against the assets of La Société des Métaux for the amount of 56,662*l.*, and were endeavouring to obtain a judgment against the company for the loss realised on the re-sale of the shipment per "Dania" (14,293*l.*), and for loss sustained through the non-completion of the contract. On the open-cast they expended during the year 21,271*l.*, bringing up the total expenditure on that important work to the amount of 470,541*l.* That outlay had from time to time been written down in the balance-sheets, until it stood, as in the present balance-sheet, at 92,509*l.*, as for many years past the current expenditure on the open cast had been charged to revenue. The total amount written off from the commencement was 378,000*l.*

LAW.

With respect to the action brought against the Comptoir d'Escompte de Paris under their letter of guarantee, they were not successful in securing a judgment in their favour. The ground upon which judgment was given against them was that the letter of guarantee, approved and sanctioned by the directors of the Comptoir d'Escompte de Paris, was not authorised by the statutes of the company. The Comptoir d'Escompte de Paris, having been one of the leading banking establishments in France, or, as it had been described by M. Rouvier, after the Bank of France the most ancient and important of the credit companies, he could only repeat that if the fact had not proved otherwise, it was incredible that an institution of such public reputation and standing should enter into an obligation which it subsequently refused to carry out, or should decline to fulfil its monetary engagements entered into in the ordinary course of its business.

RETURN OF CAPITAL.

The directors, wishing to meet the views of the shareholders, had decided that as soon as the investments amounted to a sum, after making reservation for the amount of the reserve fund, that would allow of the payment of 1*l.* per share as return capital, they would make application to the authorities for permission to reduce the capital of the company by that amount.

DIVIDENDS.

They would see, however, that if the amount of the reserved fund, 114,000*l.*, were deducted from the amount of 257,355*l.*, the valuation of the investments shown in the balance-sheet, there would remain only a balance of 143,000*l.*, whereas a sum of 185,000*l.* would be required to pay 1*l.* per share. He concluded by moving the adoption of the report and accounts, and the payment of a dividend of 3s. per share, making a total dividend for the year of 3 per cent., carrying forward 2,193*l.* 16s.

Mr. J. F. MASON (director) seconded the motion.

AN AMENDMENT.

Mr. JACOBS moved an amendment to the effect that a sum of 20,000*l.* be transferred from the reserve fund to the revenue account, and that a dividend of 5s. a share be paid.

The CHAIRMAN ruling Mr. Jacobs out of order,

Mr. SERGEANT proposed a similar amendment, adding that the report should be referred back to the directors for alteration and further information. The announcement of the dividend had caused the stockbrokers to put the price of the shares down from 7¼ to 5¾, which showed their opinion of the mine.

Mr. ALFRED HARRIS seconded the amendment.

After a long discussion, the amendment was lost, and the original motion was carried by two to one.

The retiring director and auditors were re-elected.

OTTOS KOPJE DIAMOND MINES, LIMITED.

STATUTORY MEETING.

THE (statutory) general meeting of this company was held at the Offices, No. 79½, Gracechurch Street, London, E.C., on Thursday, May 14.

Mr. Walter Newman

presided.

Mr. T. C. WALTON (secretary) read the notice convening the meeting, and a further communication stating that: Since the notice was printed a telegram, dated May 5, 1891, had been received from the chairman, saying that he intended to commence work on the Yellow Ground on Monday next, and that one of the first experts on the diamond fields was confident of the richness of the mine.

The CHAIRMAN said the meeting was merely a formal one, and there was no business to transact. The telegram referred to had been confirmed by another reiterating everything that was said there, the only alteration being that the washing would commence on the 20th of the month. Mr. Stobbs also found he could not return until June 3. As soon as he did return a meeting would be called to receive his report, which there was no doubt would be very satisfactory. The transfer of the property had been completed.

The proceedings then closed.

HOLLOWAY'S PILLS.—Enfeebled Existence.—This medicine embraces every attribute required in a general and domestic remedy. It overturns the foundations of disease laid by defective food and impure air. In obstructions or congestions of the liver, lungs, bowels, or any other organs, these Pills are especially serviceable and eminently successful. They should be kept in readiness in every family, being a medicine of incomparable utility for young persons, especially those of feeble constitutions. They never cause pain or irritate the most sensitive nerves or most tender bowels. Holloway's Pills are the best-known purifiers of the blood, the most active promoters of absorption and secretion, whereby all poisonous and obnoxious particles are removed from both solids and fluids.

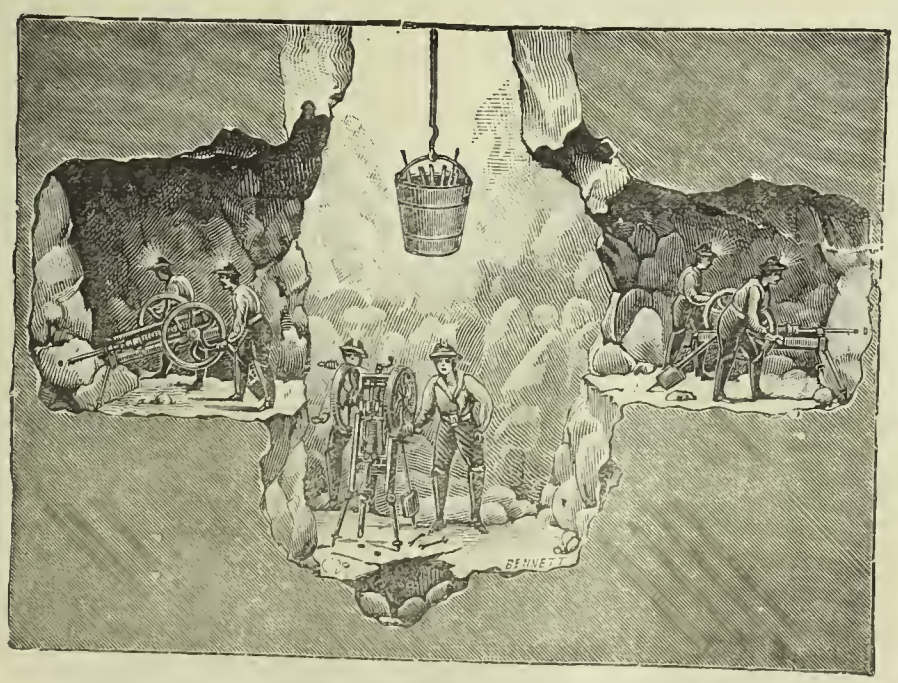
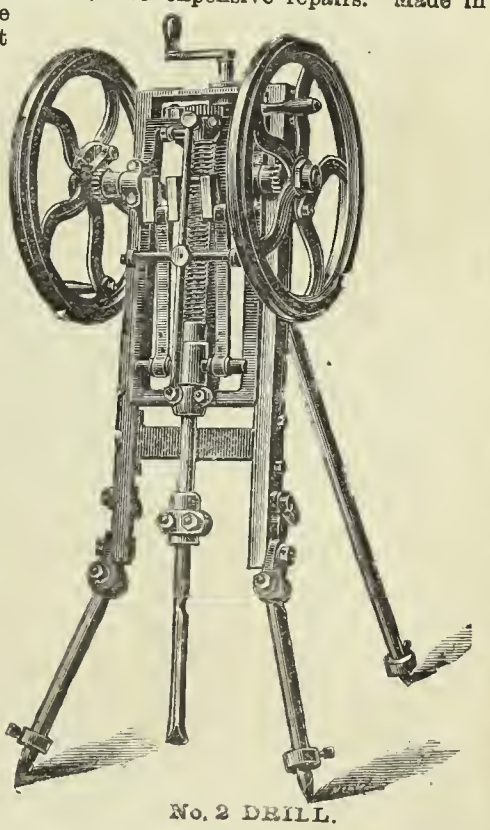
It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It wil work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.



SHOWING DRILLS AT WORK SINKING AND DRIVING.



No. 2 DRILL.

DIAMOND-CORE DRILLS for Hand or Steam Power for PROSPECTING or DEEP BORING.

MAY 11TH, 1891.

GEORGE GREGORY & CO.

STOCK AND SHARE DEALERS,

4, TOKENHOUSE BUILDINGS, LOTHBURY, BANK OF ENGLAND, LONDON, E.C.

Bankers: The London and South-Western Bank, Limited. Telegraphic Address: "GRAMMARIAN, LONDON."

DEAR SIR,—Our last fortnightly report was dated 25th ult., being contango day, and as the intervening changes in the markets have been of an unusually stirring character, it may be of advantage to readers to again refer to it. To those not already in possession of it, copies can be furnished free on application.

As before explained, our circulars are prepared on contango day of each settlement, and obtain a wide circulation during the remainder of the then current week in all the leading daily and weekly financial and society journals. They are thus readily obtainable by parties desirous of perusing them.

THE MONEY MARKET

Has throughout the period exhibited a very vibratory condition. General anticipations were sanguine of the continuance of heavy bullion receipts upon the 3½ per cent. minimum of 16th ult.; but the "incident" between the Russian Government and Messrs. Rothschild, and with it the apprehension of bullion withdrawals for Russia, resolved the Bank on 7th inst. to advance the rate to 4 per cent.

The reserve is now reduced to one-third of the liabilities, but most of the recent output of gold—£540,000 on balance in last week's return—has gone to Scotland, whence it will return in the course of next month, thus, by itself, leading to no disturbance of confidence.

The present rate is deemed sufficient to check the foreign demand from London, and even to attract to it a portion of the immense supply which New York has recently been shipping to Europe.

The importance of the Russian incident has been greatly over-estimated, but was used by the bears as a depressing element, in conjunction with the presently unsatisfactory position of the foreign bourses.

THE STOCK MARKETS

have suffered from the effects of monetary disturbance, and also in an increased degree from the anomalous circumstances attending the account now closing.

Saturday, 25th ult., having been continuation day, the settlement extended over four days, and was not concluded until Tuesday. The regular resumption of business was further retarded by a Stock Exchange holiday, extending from Thursday, 30th ult., to Monday, 4th inst. The absence of members prior to and succeeding these holidays served to derange the course of transactions between this market and New York, and the best consolation remaining is that the consequent relapse at both points leaves good opportunity for present "new account" operations.

In their regular course we refer, as follows, to the different circumstances governing the recent course of the markets, and their probable influence upon the early future:—

HOME RAILWAYS.

It will be remembered that with improved weather prospects—of which there has been an unbroken continuance—and satisfactory increases in the weekly traffic receipts, the tendency was strongly in favour of these securities, but the break alluded to in the settlement of the account and the then approaching holidays induced realisations, with the result that in only few instances were the carrying-over prices maintained to the end of the day. The exceptions were Brighton "A," Metropolitan, and Sheffield "A," the last of which advanced a full point.

In the succeeding days even these small gains were lost, and a disappointing Brighton statement, coupled with foreign and monetary considerations, seemed to demoralise the entire market.

Meanwhile the traffic earnings and outlook leave nothing to be desired, and with such encouragement in view, and only seven weeks of the half-year to run, a comparison of last and present carrying-over prices may be not only edifying, but highly profitable if promptly acted upon.

	April 25.	May 11.	Decline.
MIDLAND	150½	149½	1
GREAT WESTERN	158	155½	2½
NORTH WESTERN	172¾	170	2¾
GREAT EASTERN	95¼	93½	2
SHEFFIELD "A"	38	36½	1½
METROPOLITAN	86	82¼	3¾
DOVER "A"	95	92½	2½
BRIGHTON "A"	153¾	147¼	6½
CHATHAM ORDINARY	18¾	18	¾
CALEDONIAN	117¼	116⅓	1
DO. DEFERRED	41	40¼	¼
NORTH BRITISH	69½	69½	—
DO. DEFERRED	44	43¼	¾

Contangoes have been generally higher than at last settlement, but not beyond the proportion of the advanced price of money in the open market.

The highest claims to present speculative support may be classified as follows, viz.:

MIDLAND, CALEDONIAN, DEFERRED,
BRIGHTON "A," DISTRICT,
METROPOLITAN, DOVER, "A,"
SHEFFIELD "A," HULL AND BARNSLEY.

AMERICAN RAILROADS

Are now equally entitled to support as when we, in last circular, highly recommended them. They have withstood the Russian political and monetary shock and general weakness of the foreign market better than home stocks, and that in face of the continued gold drain from New York. The banking reserve there is still, however, on an ample scale, and during the later months of the year it will, in turn, withdraw largely from Europe in payment for grain, which will inevitably be in large demand. The highest points touched during the account by the principal stocks is recorded below as a comparison with last and present carrying over:—

	Apl. 25.	Highest in interval.	May 11.	Extreme decline.
ATCHISON INCOME BONDS	51⅔	52	48½	3¼
NORTHERN PACIFIC PREFS.	72	73½	71¼	2¼
ONTARIO	18¼	18⅜	17⅛	1
UNION PACIFIC	52¼	53	48½	4⅜
MILWAUKEE	65¼	67¾	64	3¼
ERIE	22	22¾	23¾	2
LAKE SHORE	115½	115½	113	2½
ILLINOIS CENTRAL	104	104	101	3
NORFOLK & WESTERN PREFS.	55	58	54⅓	3⅓
CENTRAL PACIFIC	31½	32⅞	31½	1
DENVER PREF.	62	62⅞	59½	3½
LOUISVILLE AND NASHVILLE	82	83¼	79½	3¾

On the decline these stocks have nearly all equal claim to the support of buyers particularly the grain and Pacific stocks, and

NORFOLK AND WESTERN PREFS.
CANADIAN PACIFICS

have only at intervals maintained last carrying-over price of 81½. Meanwhile they are fully as deserving as Americans of the highest scale of quotations claimed for that list.

The President was accused of cutting rates without consent of the Western Traffic Association, which has since, it is said, been fully disproven or satisfactorily explained, but the effect of the rumour upon the shares is exhibited in the difference of the quotation a fortnight ago and now—79¼—or a decline of 2¼. They should be bought.

GRAND TRUNK STOCKS.

Electioneering intrigues, and the alleged issue of gratuitous tickets for such and similar purposes, have brought the management in discredit, and it is urged that the accounts require investigation. So erratic is this market, and so unduly swayed by trifling considerations, that a decrease of only £8,000 in the weekly take, while £10,000 decrease was expected, sent the Preferences up 1 to 2 points at a bound.

Last account and now they compare as follows, viz.:—

	April 25.	May 11.
Ordinary	9	9
First Pref.	61	60
Second Do.	40¼	40
Third Do.	22¼	22½

MEXICAN RAILWAY (VERA CRUZ)

Continues to return satisfactory traffics, but the Interoceanic "bogey" hangs over the different issues, and even the recent improvement in silver to 45½, engineered in the States, failed to favourably affect the price. With the growing trade of Mexico and its increasing direct intercourse with Europe, fears of disaster from the Interoceanic competition appear to be groundless, and the Ordinary and Second Prefs. are presently good speculative purchases.

They compare as follows, viz.:—

	April 25.	May 11.
Ordinary	41⅜	39½
First Pref.	122⅞	121
Second do.	73¼	71

FOREIGN STOCKS,

The evil influence of which has so largely controlled the course of the general market in the past fortnight, compare as follows:—

	April 25.	May 11.	Decline.
Portuguese Three Per Cents.	53½	44	9½
Russian Conversion	99	96	3
Egyptian Unified	98	94⅝	3⅜
Argentine Railway Loan, 1881	68	63	5
Uruguay	50¼	48	2¼
Do. Unified	56½	44½	12

This selection represents the principal stocks dealt in here and on the Continent, and their course may be accepted as index to the remainder of the list.

MINING AND MISCELLANEOUS

have ruled irregularly, and been more or less adversely affected by the foregoing considerations, which, in even the most promising, have led to realisations.

We confine present recommendations to—

Anglo-American Telegraph.	Callao Bis	Oceanas	Silati River.
Peruvian Corporation	De Beers.	Wentworth	Broken Hill.

CALLAO BIS, LIMITED.

In the interest of present and intending shareholders, we afford the following latest telegraphed official particulars extracted from the *Capitalist*, May 9, 1891: "May 7, telegram: 415 tons crushed, yielded 510 ozs. gold, equal to 1 oz. 5 dwts. per ton. The mine is reported to be improving. The new mill works well. April 13: Manager reports Independiente No. 3 level west driven 24 ft. on course of lode, which is 5 ft. wide, of good value. Water very troublesome. No. 1 winze in No. 2 level west—Lode 4 ft. wide, showing visible gold. New battery of 10 stamps almost completed. The previous crushings this year have been:—

	Tons.	Gold, oz.	Average per ton.
January 10	380	555	1 oz. 9 dwts.
February 7	456	343	0 ,, 15 ,,
,, 28	545	695	1 ,, 5½ ,,
March 19	560	660	1 ,, 0 ,,
,, 27	263	318	1 ,, 4 ,,
May 7	415	510	1 ,, 5 ,,
	2,619	3,081	Value £11,400.

Upon every Stock which we recommend we have carefully compiled "Reasons Why," and our aim is to afford such information in its entirety to all inquirers.

We continue to direct constant attention to every class of investment or speculative business, including Options, which are becoming a favourite medium.

Cover in protection of clients' operations may be deposited either in the form of cash or any marketable security.

The fullest information cheerfully and promptly given in response to all inquiries.

GEORGE GREGORY AND CO.

P.S.—Write for our work, entitled "Hints to Speculators" (136 pages), giving a mass of information, and teeming with reliable, honest, and straightforward advice. It also contains the highest and lowest prices of all stocks, together with dividends paid for the past 10 years. Issued gratis and post free.

£5 COMMANDS £500 STOCK AT 1 PER CENT. COVER.

QUINLAND—LONDON.

MINING MARKET.

City, Friday Evening.

A MINING MARKET WITHOUT A HISTORY—BROKERS RETURN FROM THE HOLIDAYS TO FIND LITTLE BUSINESS BUT A SPIRIT OF INQUIRY ABROAD—THE SHARES THAT HAVE BEEN DEALT IN, WITH SPECIAL MENTION OF AUSTRALIAN BROKEN HILL CONSOLS, MONTANA, OTTO KOPJES, ETHERIDGE, NEW GOLD HILLS, CALLAO BIS, EMMA, TOLIMA, ETC.—A BAD WEEK FOR HOME MINES AND A GOOD OUTLOOK FOR NEXT WEEK'S BUSINESS.

It may be true of a nation that it is happy if it has no history, but a Mining Market without a record is miserable. No history in the latter case means no business ; no business means no profit ; and no profit means for dealers neither a long life nor a happy death.

When brokers returned from the deluge, which, in the spirit of the truest irony, some of them called their "holiday," it was to find their letter, boxes filled with charitable appeals, rather than with orders to buy or sell shares, and inquiries of a roving character as to mines in general, rather than instructions to deal in any in particular. "Just fancy," said one broker, "I have a client to-day who has sent me a list of 42 questions, to each of which he expects a categorical reply." "What are you going to do with him ? " asked a sympathising friend. "I suppose I must answer him, as I've nothing better to do," was the reply of the broker as he moodily walked to his inkpot and pen. The truth of the matter is that but few brokers would have returned at all this week to the Rialto had the weather offered them the least inducement to stay away. Business has been largely confined to Australian Broken Hill Consols. The report and dividends were considered satisfactory, and shares close at their best, with every indication of firmness. Wentworth Proprietary Gold shares have been neglected, and have fallen. There has been a fair demand for De Lamars, and the market is in a healthy state. In the shares of the Maid of Erin Co., brought out this week with the indigestible capital of 600,000*l*., there has so far been no market. Both the inside and outside markets have neglected them utterly.

There has, we regret to say, been a fall in Montanas, due to heavy selling, principally in the North of England, and, it is also said, to the closing of the large account of a deceased shareholder. We are able to state that there is nothing as regards the mine to warrant such a fall of prices as has taken place this week. Quotations ought to revive, and, in fact, would revive, if shares were always dealt in on the merits of the properties themselves. Etheridges fell on the issue of the re-construction scheme, but the need of further capital must have been evident to every shareholder who has given the subject a moment's thought. The scheme is a good one, and the position of the mine decidedly warrants a further trial. Gold Hill shares have been inquired for at better prices, and there has been a fair amount of business in Otto Kopjes, which, however, close considerably lower than they were at one time during the week. The meeting of Callao Bis caused considerable inquiry for the shares, and there is every reason to suppose that one of the first descriptions to move upwards on the least revival in market prices will be this highly promising company. As we point out in our leader colums, when the shares were at 3*l*., the prospects were not anything like so good as they are to-day, when they are quoted round about 7s. 14,000*l*. worth of gold returned from this property at a shallow depth in the course of only a few months we hold to be the earnest of far better things in the near future. The adjoining property, El Callao, has a most unpromising look, and unless something be found shortly the end cannot be far off. The report of the superintendent published in our present issue is both disappointing and discouraging.

There has been a free market for Emma shares, and a rapid elimination of weak holders. Those who act on the idea that these shares should be sold at 2s. 6d. or 3s., do so in the teeth of all the facts we have been at special pains to set forth so as to warn holders and also those of Flagstaffs, against the wiles of the evil ones who would induce them to sell at present ridiculous prices. The monthly return of 5,000*l*. from Tolima was read favourably by the market, and the shares rose. Colombian Hydraulics were also inquired for, and Gravel Gold, which is now at work (see summary of directors' report in another column). There is news of a satisfactory character this week both from Loma and Tesoro. Frontino shows a profit for last month of 907*l*. From the foregoing summary it will be judged that a spirit of inquiry has been abroad, and that is always the forerunner of business.

Having thus summarised the features of the week we may proceed, in a few words, to mention one or two facts of a more general character.

In the Diamond Market there has been a slight recovery in De Beers shares. The report of the London and South African Exploration Co., shows dividends declared during the year to amount to 16s. 6d. per 10s. share. South African gold shares have been on the downgrade, notably Jumpers, which have fallen $\frac{7}{16}$ths. It is to be noted in favour of this concern that ore yielding only 8 dwts. per ton can now be profitably treated. Land shares have also been weaker.

In the Australian section, apart from Broken Hill Consols, already mentioned, there has been a recovery in Mount Zeehan—a share of promise—and Gympie Great Eastern, but one or two others have fallen fractionally.

In the Indian section there have been no dealings that have materially altered prices, but a decided firmness was noticed in Ooregums as the market closed. Rumour has it that in the Oriental block of the Goldfields of Mysore an important discovery has been made. It will be seen in another column that a correspondent has got scent of this, and wants the directors to supply him with confirmatory information.

The Quebrada meeting to-day did not alter prices, but the advent of Mr. Mathieson to the board was hailed as an omen of good for the company. Copper shares closed firmer than a week ago, thanks to the advance in the metal, which we pointed out as more than probable. Copper has risen from 51*l*. 5s., at which we quoted it last week, to 53*l*.

Several Foreign Shares, not already mentioned, have been firmer, notably Sierra Buttes, Orita, Linares, and Pahang Corporation ; but where changes have occurred in other directions they have been for the worse.

Homes Mines again present a miserable record. With the solitary exception of Wheal Basset there has been an all round fall.

The outlook for next week is hopeful, and active business may be safely predicted.

Kaffirs.

There is really nothing to be said as regards this market of an encouraging nature. When a broker gets an order to either buy or sell it is with the greatest difficulty he can execute it. There is no change in any mine to call for special notice.

Business: A rise is shown in Pigg's Peak Ordinary of 6d.; ditto Preference, 1/16; Sheba, 6d.; Henry Nourse, 1/8; and Langlaagte, 1/16; whilst a fall is noted in Aurora, 1/16; Battery Reef, 2s.; City and Suburban, 3/8; Crœsus, 1s.; Crown Reef, 1/4; Durban Roodepoort, 1/16; Geldenhuis, 1/16; Glencairn, 6d.; Johannesburg Waterworks, 1/16; Jumpers, 1/16; Royal, 1/16; Simmer and Jack, 1/16; Wemmer, 1/4; and Wolhuter, 1s.

Indians.

There has been but very little doing in this class, and with the exception of Nundydroog, Goldfields and Ooregum, there is very little change. Balaghats are quoted higher, but it must be borne in mind the shares are now dealt in, call paid 19s.; the shares are still very scarce, and prices should go higher. Harnhallis are without mention and prices purely nominal.

Business:—A rise is shown in Glenrock of 3d., but a fall has taken place in Goldfields of Mysore of 1/16; Indian Consolidated 6d.; and Mysore Reefs 3d. Ooregums are firm although no material change in price. Others remain as last quoted.

Diamonds.

On Saturday last these shares were again neglected, and on De Beers being forced for sale they closed 5/16 lower; on Wednesday, however, there were rumours of an increased dividend, and in consequence prices advanced, and at one time the shares changed hands at 14 3/4, but do not close quite so good. Ottos Kopje, St. Augustine and Griqualand West have been freely dealt in, but there is no striking change, although prices are inclined to harden.

A rise has taken place in De Beers of 1/4, whilst a fall is recorded in North Eastern Bultfontein of 1/8. Ottos Kopjes are also quoted lower.

Kaffir Lands.

The market for this class has again been very restricted, and prices generally are lower. The principal dealings have been in Oceana, British South Africa Chartered Co., Bechuanaland, Goldfields of South Africa, South African Exploration and Read's Drift.

Business.—There is no rise to record, whilst those lower are Bechuanaland, 1/8; New Grahamstown, 6d.; Oceana, 1/8; and Transvaal Gold, 6d. Others remain unchanged on the week.

Australians.

The life of this market has been again the dealing in Australian Broken Hill Consols and Wentworth, but prices, although varying several times each day, close much the same as last week.

There were some free dealings on the announcement that Australian Broken Hill Consols had declared another dividend of 1s., and prices closed higher at 3/8, 1/2.

Mount Zeehan became firm on receipt of wire that 20 tons of first class ore had been shipped, and 5,000*l.* worth of second class was at grass.

Business.—A rise is shown in Australian Broken Hill of 5/16; British Broken Hill, 1/4; Gympie Great Eastern, 9d.; and Mount Zeehan, 1/16; whilst a fall is noted in Bonnie Dundee of 9d.; Cumberland, 3d.; Etheridge, 6d.; Mosman, 6d.; Scottish Australian, 1/8; and Wentworth Proprietary, 3/16.

Copper.

The market for these shares has again been greatly influenced by the dealings from Paris, but on the price for the metal advancing 15s. on Wednesday, shares rose and dealings freely took place. Tintos on Tuesday changed hands at 21 11/16, but on Wednesday they were quoted xd of 18s., so that in comparing to-night's prices with last week's, the above dividend should be added.

Capes, Masons, Libiolas, and Panulcillos have all been in demand, and close higher.

Business:—A rise is shown in Capes of 1/8; Mason and Barry, 3/8; Rio Tinto, 1/4; and Tharsis, 1/8. The only fall has been in Libiola of 1/8, this being the amount they rose last week.

GENERAL FOREIGN SHARES.

The course of the general foreign market has been uneven.

Business.—A rise is shown in Linares of ¼; Orita, 1s.; Pahang Corporation, 1s.; Sierra Buttes, 1/16; and Tolima, ⅛; whilst a fall is noted in American Belle, 6d.; Balkis, 6d.; Barretts, 6d.; Elkhorn, ⅛; Flagstaff, 3d.; Golden Feather, 6d.; Kapanga, 6d.; Montana, 1s. 6d.; Silver Mines of La Luz, 3d.; Spitzkop, 3d.; St. John del Rey, 3d.; Tesoro, 3d., and United Mexican, 1s.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—The following telegram has been received from the managing director resident at Broken Hill, dated May 15 :—"6 tons of ore, containing 46,326 ozs. of silver, raised during the fortnight. Eleventh shipment, consisting of 6 tons of ore, containing 46,326 ozs. of silver, will be shipped for London per steamer leaving Adelaide on May 27. Additional output from other parts of the mine, 25 tons of ore, containing 7,684 ozs. of silver, shipped this week to London."

BONNIE DUNDEE.—Cablegram from the managing director at Charters Towers :—"Have crushed 400 tons for a yield of 437 ozs. of gold; approximate valne 1,486*l*."

BROKEN HILL PROPRIETARY.—The company announces that the result for the week's working to the 14th inst., received by cable dated Melbourne, 15th inst., should have been given as :—"4,627 tons of ore treated, yielding 833 tons of lead, containing 180,453 ozs. of silver."

GYMPIE GREAT EASTERN.—Cablegram from the mine, dated May 18 :—"There is a great improvement in Orient reef, first-class ore being taken out."

FOREIGN MINES.

ELKHORN.—Cable information from the mine :—"Bullion produced for week ending May 16, $8,950."

ESMERALDA.—The manager cables as follows :—"Have started milling to-day. East cross-cut is out 182 ft."

FRONTINO AND BOLIVIA.—Advices for March state :—"Produce, ,719*l*. 18s.; cost, 3,812*l*. 12s.; estimated excess of returns, 907*l*. 6s.

GOLDEN FEATHER CHANNEL.—Cable from Col. Frank McLaughlin, the company's general manager at Oroville :—"Canal and walls (5,000 ft.) finished. Expect to commence about May 25 laying flume. Everything is going well.—MCLAUGHLIN."

MAMMOTH.—The mannagee reports that bullion value $7,980, first instalment for month of May, has been sent to bank, the rate of production being above the average.

MINE OWNERS' TRUST.—The following telegram is from the manager at Ouray (Red Mountain District, Colorado) : "Colorado Boy : Struck a rich body of ore, a new vein fully 3 ft. wide ; the ore assays first-class, 400 ozs. of silver per ton ; second-class, 110 ozs. per ton ; vein is compact and well defined. The strike is 40 yds. east of last discovery."

ORITA.—A cablegram from their superintendent relates to run No. 56 :—"We have cleaned up from the branch sluice 500*l*."

PAHANG CORPORATION.—A further shipment of 10 tons of black tin per s.s. Gulf of Mexico.

PINOS ALTOS BULLION.—The out-turn for the fortnight ending 9th inst. was $14,000.

SAN SALVADOR SPANISH IRON ORE.—Telegram from Santander, May 20 :—"Publicly started (washing) machinery to-day ; great success. Many enquiries (as to) what price (the company) will carry and wash (ore) for small miners."

TOLIMA.—Cablegram from the superintendent respecting the estimated Apl. returns :—"The gross returns are 8,000*l*. ; the net profit is 5,000*l*."

UNITED MEXICAN.—Telegram : "San Cayetano : Gross returns for week ending May 16, $2,480 ; expenditure for week ending May 16, $3,550 ; loss for week ending May 16, $1,070. El Cubo : Gross returns for week ending May 16, $5,800 ; expenditure for week ending May 16, $5,200 ; profit for week ending May 16, $600."

ZARUMA.—Cablegram from the manager at the mines respecting Apl. produce :—"Mill working 16 days crushed 330 tons of quartz, producing 190 ozs. of bullion. There is a favourable change in the weather. Hoisting resumed. Have to be constantly pumping."

HOME MINES.

SALT UNION.—The quantity of salt delivered by the Salt Union in Apl., 1891, was approximately 138,000 tons, against 161,000 tons in 1890.

WHEAL BASSET.—Capt. Tamblyn, formerly of Killifreth, has been appointed manager of Wheal Basset. In the 200 cross-cut a valuable lode has been intersected.

AND ALL PARTICULARS OF FOREIGN AND HOME MINES

SEE PAGES 818 AND 819.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

CITY AND SUBURBAN.—The new battery of 30 stamps will commence running to-day (Saturday).

GEORGE GOCH AMALGAMATED.—The company advise the receipt of 125 ozs. of gold ex Spartan from Cape.

WITWATERSRANDT (KNIGHTS).—The company advise receipt ex Spartan s.s. from Cape of 208 ozs. smelted gold.

AFRICAN GOLD RECOVERY (MCARTHUR FORREST PROCESS).—The manager cables :—"Sheba tailings up to May treated 1,500 tons, 2,850 ozs., troy, plus 150 unsmelted."

GRASKOP MILL AND MINING.—The Mar. crushing of 177 ozs. has been sold through Messrs. Johnson, Matthey and Co., Limited, for 683*l*. 14s. 3d., or 3*l*. 17s. 3d. per oz.

NORTH-EASTERN BULTFONTEIN.—The company has telegraphic advice announcing 5,500 loads washed, producing 1,100 carats of diamonds, for the week ending 16th inst.

GOLDFIELDS OF SOUTH AFRICA.—The transfer books will be closed from the 22nd to the 29th inst., both days inclusive, for the purpose of making a further issue of capital sanctioned on the 7th inst.

HENRY NOURSE.—The capital having been increased to 100,000*l*. shareholders are requested to send in their share certificates to be exchanged for share certificates in such increased capital. The London office, Warnford Court is now open for the registration of transfers.

VICTORY HILL.—Report for March : Winze 1 is completed. The highest assay by fire has not reached 5 dwts. This winze has been a very good test for the grade of rock above No. 1 drive on the south side of the hill, and for the ventilation of the mine, which is now very good. Drive 1 : I am still prospecting for the lode in this level, and hope by the end of this month to meet with some results. Drive 2 : We have a lode, averaging 3½ ft. to 4 ft. in width, assaying 5 dwts. I hope for an improvement, as the rock is looking very well, and the poor results greatly surprise me. Winze 3 : The last general sample from this winze went 9 dwts., and a sample from the footwall gave 2 ozs. 4 dwts. These results are very satisfactory at this depth, and with the reef showing up 3 ft. The pump is doing good work and keeping the winze dry.

TRANSVAAL GOLD EXPLORATION AND LAND (Apl. 20).—Mines.—Ophir Hill, Theta vein : Ore extracted 30 tons ; assay value 6 ozs. 3 dwts. gold per ton. A large amount of stripping work was done during the week. In the lower level at a point where the ore deposit had disappeared in the drives, by stripping the overlying ground, it

was found again about 2 ft. thick, all of high grade ore. Brown's Hill, Nu vein: Ore extracted at Nos. 1,211 and 1,216, 25 tons; assay value 16 dwts. per ton; and at No. 1,209, 60 tons, assay value 2 ozs. 5 dwts. per ton. At No. 1,211 a ground tram was being laid down to facilitate stripping work. In No. 1,209 the ore body had become thinner, and was much mixed with chert. Mill: The battery and pans worked full time all the week. Transport of ore from Theta and Pi veins was proceeding.

Horo Concession Exploration.—Report from the manager at the mine, dated Apl. 18.—I beg to send you below the report of the work done here from the 1st to the end of the 15th of this month:—No. 2 tunnel winze: The drive from the bottom of this winze towards the intermediate tunnel has been advanced 14 ft., in hard ground. Intermediate tunnel: This tunnel has been driven 16 ft. towards the winze in No. 2 tunnel. The pannings from this tunnel, and from the tunnel driven from the bottom of the winze to meet it, show no gold. The distance to drive to connect with the winze is 23 ft. I hope to get through by about the end of the month. Tramway, pipes, &c.: The tramways for transporting ore from the intermediate tunnel to the adit, and from the adit to the battery, are being constructed, as well as the necessary ore trucks. There are a few more pipes to rivet for the pipe line, and the settling tank is being finished. We are still delayed by the non-arrival of pipes from Morveni. A few pipes only have been delivered, the transport rider estimating that he will bring them all here by the end of May. Prospectors: There is nothing to report of the prospectors for the fortnight.

Gipsy Queen (Apl. 21).—Better progress has been made generally. The lode in the low-level drive does not yet show a well-defined body, but on the southern side there is some very rich quartz, gold being freely visible. I cannot say whether this forms part of the Gipsy Queen lode or not, as the ground here is much disturbed. The fact that the junction drive has passed the point where I expected to find the lode without any mineral being met with proves the existence of some considerable break of schist. Until we can ascertain the effect of the different series of faults and slides which so often cross the lode the work of following it up will be very difficult. As a proof of this I may mention that the intermediate drive from No. 1 winze to No. 2 was holed to the latter, and it shows that there are 2 ft. of solid quartz left standing on the footwall, although both winzes were commenced on the same lode. The quartz is rather poor (8 to 10 dwts.). The intermediate drive north from the old shaft has holed to a rise from No. 8 drive, and a stope of rich mineral is now available. Comstock Mine: Work in No. 1 shaft has advanced slowly, as there is so much water. A small pump will be put down.

Piggs Peak Estate.—Mine report for week ending Apl. 18.—Devil's reef: Cross-cut on top of the hill in 94 ft.; cut the hanging-wall; commenced driving north-east. Drove for the week 18 ft.; very rich for iron, but shows no gold in panning. Cutting under main road shows a few colours in panning. Cutting under main dump, 53 ft., shows a little gold in panning. Cutting on opposite side of hill from main shoot, 50 ft.; no gold in panning. Winze in bottom drive sunk 8 ft.; total, 33 ft.; no gold in panning. One white man and six boys getting out mine timber. Remaining boys filling bags and loading waggons. Tamblyn reef: Shaft down 10 ft., going through splendid-looking rock, all full of copper stains, but shows no gold in panning. Open cutting for main drive, 14 ft.; drive in 2 ft. 261 ft. of cuttings 4 ft. deep, shows no gold in panning. Peak: South drive No. 2 driven for the week 2 ft.; total, 36 ft.; no change in the rock. Piggs drive: Driven for the week, 38 ft.; total, 73 ft.; drive still in soapstone, which requires close timbering. No. 1 works: Drive for the week, 48 ft.; total, 165 ft.; face of drive is in very promising looking ground. Huntington mills: With the two mills on the property I can more than pay expenses for the next year with what ore I have in sight at the Devil, Pirate, and Peak reefs.

COMMERCIAL NOTES.

Metals.

The Metal Market has been active during the current week. Bank Rate remains 5 per cent. Bar silver closes 44¼d.

Copper has been in demand, and at higher prices. G.M.B. warrants have advanced from 51*l.* 10s. to 52*l.* 15s. cash, and from 52*l.* 10s. to 53*l.* 10s. three months. To-day's prices are 52*l.* 12s. 6d. cash and 53*l.* 5s. three months. We quote English tough, 56*l.* to 57*l.*; best selected, 57*l.* to 58*l.*; strong sheets, 64*l.* 10s. to 65*l.*; Indian sheets, 60*l.* to 61*l.*; yellow metal, 5⅝ to 5¾; ore, 9s. 3d. to 10s. 9d. p.m.

Tin has been in good demand at steady prices. Straits on the spot was sold at 92*l.* 12s. 6d.; June, 92*l.* 15s. to 93*l.*; July, 92*l.* to 92*l.* 10s.; three months, 92*l.* To-day's prices are 92*l.* 10s. cash, 92*l.* 15s. June, and 91*l.* 15s. three months. The Straits shipments to date are reported to be about 1,500 tons. The Dutch Market has been firm. We quote Banca, 55fl to 55⅛fl; and Billiton, 54⅜fl; English ingots, 95*l.* 10s. to 96*l.*

Tinplates are still disorganised. We quote ordinary Coke for prompt delivery 16s., and for July-Aug., 13s. 6d. per box, Liverpool.

Spelter steady. Ordinary brands, 23*l.* to 23*l.* 2s. 6d. ex ship here. Specials, 23*l.* 5s.

Lead dull. We quote soft Spanish, 12*l.* 7s. 6d. to 12*l.* 10s.; soft English, 12*l.* 12s. 6d. to 12*l.* 15s.; L.B. China Pigs, 13*l.*; sheets, 13*l.* 10s. to 13*l.* 15s.

Quicksilver steady. Rothschild's price 8*l.*; seconds, 7*l.* 19s. to 7*l.* 19s. 6d.

Antimony easier. Hallett still quotes 60*l.* 10s. for prompt shipments to America; Continent, 56*l.*; ordinary brands and delivery, 51*l.* to 54*l.*

REPORT OF MEETING.

WHEAL CREBOR.

MINE NEARLY PAYING ITS WAY—AN ENCOURAGING REPORT.

A general meeting was held at the Offices, Gracechurch Buildings, Gracechurch Street, on Wednesday, to examine and audit the accounts, and to transact the ordinary business of the company.

Mr. John Schofield

(chairman of the company) presided.

Mr. C. B. Parry (secretary) read the notice of meeting.

COMMITTEE'S REPORT.

The account of receipts and expenditure from Nov. 28, 1890, to Apl. 17 last, which the committee now present to the shareholders, includes 20 weeks' cost, amounting to 1,318*l.* 7s. 11d., against the returns for 16 weeks only, amounting to 1,120*l.* 9s. 11d., and a deficiency is thus shown of 197*l.* 18s. There is now on the mine a quantity of copper and mundic ores raised during the same period, valued at 100*l.*, which being undressed is not, but might fairly be, included in the accounts as a credit, which would reduce the deficiency to under 100*l.* The balance of assets over liabilities is now 1,298*l.* 0s. 11d., as against 1,495*l.* 18s. 11d. at the last meeting, and 1,206*l.* 19s. 7d. when the mine was taken over from Mr. Bawden. This result is less satisfactory than the committee had hoped for, and is principally attributable to the extra four weeks' cost, which has to be charged against the returns to complete the financial year of 13 lunar months. The continued low price of copper, notwithstanding the stocks in this country continue to be reduced, has also lessened the tonnage value of the returns, although the quality of the ore sold has been maintained. Since the last meeting, the winze on the underlie of the north branch of the lode on the new discovery in the 144-fm. level has been sunk and holed to the drivage at the 156-fm. level east, when a cross-cut was put out to intersect the lode, which was found to be 17 ft. wide from wall to wall, and the main part of the lode has been driven upon east for some distance, which is now producing 6 tons of superior mundic and a little copper ore per fm. There being more lode standing north and south of the level, in about three weeks hence a cross-cut will be put out to intersect these parts of the lode, which it is hoped will result in finding the lode productive of copper in payable quantities. The mine, as will be seen from the report of the agent, continues to be largely productive, and may be considered to be looking very promising, although, whilst the returns of mundic are increasing, and of better quality, there is a reduction in the returns of copper ore, but there is good ground for believing the falling off in the production of the latter is only temporary. The committee visited the mine on the 9th inst., and found everything in good working order, and that the management was thoroughly efficient and highly creditable to Capt. Holman, the works having been carried on, despite the severe storm and tempest which recently raged through Devon and Cornwall, without any accident or interruption whatever.

AGENT'S REPORT.

May 16.—Having connected the winze, which was sinking below the 144 at the time of the last general meeting, with the 156-fm. level, thereby securing good ventilation and an easy way to work the ore ground laid open at the 144, and having cross-cutted the lode at the 156 about 2 fms. east of the winze, and found it to be 17 ft. wide, yielding mundic on the hanging wall for 4 ft. 6 ins. wide to the amount of 4 tons per fm., and for 1 ft. in width on the footwall 2 tons per fm., the intervening part being killas and lode material, with strings of mineral running through it. We are now driving the 156 east on the hanging part of the lode; the end is 32 fms. from the shaft and 7 fms. east of winze; the part of the lode carried is worth 6 tons of good quality mundic per fm., and showing indications of making copper ore. We purpose continuing this course a little further and then cross-cut to prove the value of that part of the lode which is standing. We are stoping out the ore laid open at the 144; the stope in the bottom is worth 4 tons of copper ore and 4 tons of mundic per fm.; the stope in the back is worth 3 tons of copper ore and 4 tons of mundic per fm. In the upper levels we have 10 men working on tribute from 12s. to 13s. 4d. in the £. In these levels there is a good deal of ground laid open that will pay to work on tribute, and we hope to increase the number of tributers to work this ground, and are offering liberal terms to induce tributers to take new tribute bargains.—P. D. Holman.

A SATISFACTORY RECORD.

The CHAIRMAN: I have very little to say on the subject of the results of the past four months in addition to what has been set forth in the report. From that you will learn that we have not succeeded in paying our way, which is, of course, a circumstance to be regretted, but I still think it cannot be inferred that we shall not do better in the future. There are causes which make the balance against us rather heavier than otherwise it would be in consequence of this being the time when we have to bring in an extra month's cost, which amounts to 263*l*. Deducting that from the actual cost, it would reduce it to something like about 100*l*. a month, including 100*l*. worth of ore, which we have not credited, because it is not dressed for market. Therefore, I do not think we need be alarmed at all about the fact of our not having shown in the accounts a profit instead of a small loss. It is a matter of finance rather than of actual returns. The low price of copper has militated against our returns, and also the fact that the production of copper is not very large.

EXCELLENT MUNDIC.

The mundic improves in quantity and quality particularly in the 156 winze, where it is now worth 6 tons, and in fact from there we are getting a very superior kind of mundic quite equal to any we have had before, if not better. The lode is very compact, and the mundic very solid. We are expecting to have a further improvement, and most probably we shall find a body of copper ore later on. The idea is that the ore in the 144 has dipped to the east, and that we are not far enough in that direction to overtake it. We are looking forward to its being found as a continuation of the mundic. There are other important points, but we think it wise not to undertake anything that would add materially to the costs. We are proceeding gradually and wisely with our explorations at the 156. When further extended we shall have to put out a cross-cut to a lode, 7 ft. wide, but of this we cannot speak positively. If the branches come together east it may have a beneficial effect upon the productiveness of the lode. I think our prospects altogether satisfactory. (Hear, hear.) The copper market is very steady. It is true there has been no big advance, but, on the other hand, there has been no particular fall. It is now about 52*l*., whereas at the last meeting it was 50*l*., though, unfortunately, we sold one parcel at the lowest point. Our next sale will be in another month, and I am afraid we shall not be able to increase it above the last.

COMMITTEE VISIT THE MINE.

I think we may fairly calculate on having something near that, but cannot say positively. The mundic contains more copper ore, but not sufficient to make it worth while to separate it from the mundic. We get an enhanced price for the mundic, which compensates us for selling it with the copper, and that is more advantageous than separating the copper from the mundic, which would perhaps cost more than it brought. The committee went to visit the mine on the 9th of this month. Col. Cragg and myself went down there, and were highly satisfied with what we saw. We may congratulate ourselves upon the way in which the mine has been managed, for we have escaped many of the disasters which have befallen our neighbours, in consequence of bad weather. I do not think we have suffered 10*l*. worth of damage. We have, therefore, every cause to be satisfied with the care that has been taken of our property. We took our manager quite by surprise, and found him just on the point of going under ground. There is every reasonable ground for expecting better times for Wheal Crebor. (Cheers.)

Col. CRAGG confirmed what the chairman had said, and observed that the mundic brought from the 156 end was of very good quality. If they reached the vein of copper, he believed a valuable discovery would be made.

A CORNISH PROVERB.

Mr. PARRY: It is always said that "mundic rides a good horse." In other words, that it is on the top of a body of copper.

Mr. BAWDEN: There is only one point of exploration in the mine, but it is very important. At the shaft the lode in the 156 was very small indeed, so small that it was suspended. The discovery in the 132 about 30 fms. to the east of the shaft induced us to resume the driving of the 156 to see whether the lode went down or not, and the result of that drive, and the sinking of the winze, has proved that a lode no wider than your hand when discovered at the 132 has opened up 17 ft. wide by the time it reached the 156. (Cheers.)

ENCOURAGEMENT.

We have not yet developed that sufficiently to say what it will do, but it has gone down, and the bottom of the level is quite as rich as the back of the forebreast. If we find that this continues in length and opens up as we expect it will do we shall have an inducement to take up the level underneath, and shall be able to prove whether the great lode is going down to the north lode that we opened on at the deeper point or not. If it does not it is to all intents and purposes a new mine. This discovery was made by a tributer. If it had been made by me three months after I had taken the mine on tribute I should have done well by it, but, unfortunately for me, though fortunately for the shareholders, it was made only a month before my contract ran out. It looks now as if we were going to open a new and valuable mine. Col. Cragg has spoken in terms none too strong about the mundic, and Mr. Parry has said it rides a good horse. I do not see why our discoveries should not be repeated. The lode has the same character and appearance, and I do not see why we should not get better results in the deeper levels.

After a short discussion, in the course of which the CHAIRMAN said, in reply to questions that the committee were doing as much exploring work as they thought they should, the report on his motion, seconded by Mr. BELLINGHAM, was unanimously adopted.

A vote of thanks to Mr. Schofield for his services to the company closed the meeting.

THE agent of the Middlesborough Town Co. informs us that certificates for the new shares (fully-paid) will be ready for delivery in exchange for the bankers' receipts or scrip certificates on and after the 1st prox. All the shares being now fully-paid will henceforth rank *pari passu*.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

GOLDFIELDS OF MYSORE.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—Why do the directors of this company take the trouble to publish such meagre reports as are sent home respecting mining operations? It is well known that this company is virtually a land company, and has made large sales already (as you pointed out) of about one-sixteenth part of the property for sums sufficient to more than repay the whole of the capital. Why do not the directors also give us some information as to the exploratory work which Mr. Taylor told us at the Goldfields meeting was proceeding so satisfactorily by Mr. Lavelle, the pioneer or discoverer of the Colar Goldfields? Rumour has it that some very important discoveries have been made in the Oriental Block, and also on other parts of the large estate owned by the company, notably to the south of the Concessionaires Block. Surely in these times some crumbs of comfort might be given to the shareholders if satisfactory reports are really to hand. for the Oriental Block has always been considered, I venture to say, one of the most valuable tracts of land the Goldfields Co. possesses. I have the highest opinion of the ability and integrity of the board, and thank them heartily for what they have done for us, and if they can see their way to let us a little more into their confidence as regards the progress and results of the prospecting now going on, I shall be more than ever grateful.—I am, &c.,

ANGLO-INDIAN.

London,
May 22, 1891.

TOLIMA CO.

SIR,—I yield to no one in respect for that country in the fashion at present—namely, Africa. There are, no doubt, some very valuable mining properties in Africa, and some which, regarding them from a shareholder's point of view, leave much to be desired. But, after all said and done, dividends are dividends, whether they are paid by a South African or a South American company; and why a mine (a South American one I grant), which pays 20 per cent. dividends, like the Colombian Hydraulic, should only stand at par, and the Tolima Co. A and B shares, with the prospects of that company, only stand at 9 and 5 respectively, is to me a mystery.—I am, &c.,

R. G. WEBSTER.

83, Belgrave Road, S.W.,
May 22.

DEVON CONSOLS.

SIR,—I see that Mr. G. Pawsey Witt, of 19, Mark Lane, is a candidate for the office of director of Devon Great Consols, and I hope he will be elected, as I know him to be a gentleman practically acquainted with the copper industry, and well fitted to assist the board, which must now be very shorthanded, seeing that one of its members has died, and which must be a very disunited one, seeing that the remaining member disagrees on matters of high policy with the chairman.—I am, &c.,

DEVONIAN.

May 22.

CALLAO BIS MEETING.

SIR,—I should like permission to say in your columns how pleased I was with this meeting, and particularly with the testimony Mr. Gregory bore to the high repute the company enjoys out in Venezuela. I was also thankful for the independent testimony of Mr. Ross, which was much to the point, and I hope will be carefully read and weighed by all the shareholders. I have never lost faith in this company, and to-day my belief in its future is stronger than ever. Time will realise the prognostication of the chairman (I think it was) that the shares will one of these days be worth as many pounds sterling as to-day they are quoted at shillings.—I am, &c.,

HOPE WITH REASON.

May 22, 1891.

COPPER.

SIR,—It is gratifying to notice that copper is again on the upward move, and therefore those who are interested in the producing companies may look forward with some amount of hope to the result of the present year's working in their respective companies. In your last issue you spoke very hopefully of this metal, giving as a ground for your opinion the shutting down of the Anaconda mine. This fact has, no doubt, had an influence on the market, and from the present outlook it would appear that the price of the metal must still further increase, and that very soon. Under these circumstances copper shares look like a good investment, several of the companies being at the present time unduly oppressed by heavy bear accounts, which will, no doubt, soon have to be closed if the metal continues to rise.—I am, &c.,

HOPEFUL.

SIR,—Your "selected list" of last week should be made good use of by the speculating public, as there are no doubt many mining companies whose shares are at the present decidedly low. I look with particular favour on Balaghat, Loma, Gympie Great Eastern and Namaqua.—I am, &c.,

INVESTOR.

BRITISH MINING INTELLIGENCE.

D'ERESBY AND GWYDYR (May 20).—No. 10 levels, south cross-cut: The end driving south from this cross-cut has further improved. We first cut the lead coming up from bottom of the level. It now extends to the roof and is widening, and now worth 1 ton of lead to a fm. No. 9 level: The stope going south behind the shaft produces a good mixture of lead, worth 15 cwts. per cubic fm. The cross-cut first started 7 fms. south of shaft also shows the lode to contain a good mixture of lead close to the level. If we discover lead here in paying quantities we have an unwrought section of ground 20 fms. long at each level to work upon. I may also remark that the ore ground we are now entering at the No. 10 south cross-cut is, according to diallings, lying to the west or footwall part of the lode, and untouched by any of the drivings below No. 7 level. Other general work below and at surface is going on satisfactorily. We are pumping with water by day and with the engine at night.—H. NOTTINGHAM.

DRAKEWALLS (May 21).—The 10-in. lift is fixed, and all the other necessary work made complete to the 160-fm. level, and the men have resumed sinking the engine shaft to-day. The lode in the 160 driving east is producing 10 tons of mundic per fm., saving work for tin and occasional stones of copper ore. The lode in the 160 driving west is yielding 7 tons of mundic per fm., and saving work for tin. The rise in the back of the 160 west is yielding 6 tons of mundic per fm., and a small portion of tin. The lode in the stope at the back of the 160 west continues to produce 10 tons of mundic per fm. and a little tin, and the stope in the bottom of the 147 east is producing 11 tons of mundic per fm., and saving work for tin. The lode in the 147 driving east continues hard for exploration, consisting of capel, quartz, peach, with a little mundic and tin ores. No change in the lode in the 147 driving west. The lode in the back of the 132 west of the cross-course is producing 5 tons of copper and mundic ores. The carpenters are getting on as fast as possible with the fixtures for the jigging machinery. The arsenic soot weighed off on Saturday last 56 tons 15 cwt.—H. RODDA.

GAWTON (May 21).—The lode in the stope in the back of the 105 east is yielding 9 tons of arsenical mundic per fm. Stope in back of the same level west of rise will yield 11 tons of mundic per fm. The stope in bottom of the 95-fm. level east is yielding 10 tons of mundic per fm. The stope in back of this level is yielding 10 tons of mundic per fm. In the 95 west of cross-cut the lode continues to show a strong appearance, being 7 ft. wide, and yielding 10 tons of mundic per fm. The stope in back of this level will yield 11 tons of mundic per fm. The stope in bottom of the 82 east will yield 10 tons of mundic per fm. The stope in bottom of same level west of winze will yield 8 tons of mundic per fm.—G. ROWE.

LEADHILLS (May 19).—Brown's vein: The 145-fm. level north of Jeffrey's shaft shows a vein 4¾ ft. wide, charged with spar and ore, worth 20 cwts. per fm. The stope above the 145 north of Jeffrey's shaft is worth 25 cwts. of ore per fm. The two stopes above the 145 south of Wilson's shaft are worth 40 and 35 cwts. of ore per fm. respectively. The stope above the 145 north of Wilson's shaft is worth 35 cwts. of ore per fm. The 130-fm. level north of Jeffrey's continues in an unproductive vein above 4 ft. wide, but it has been wet for several days now. The three stopes above the 130 north of Jeffrey's shaft are worth 25, 20, and 25 cwts. of ore per fm. respectively. The stope above the 130 south of Jeffrey's shaft is worth 15 cwts. of ore per fm. The stope above the 130 north of Wilson's shaft is worth 30 cwts. of ore per fm. The 115-fm. level north of Jeffrey's shaft is in a vein 4 ft. wide, well mixed with quartz and ore, worth 25 cwts. per fm. The stope above the 115 north of Jeffrey's shaft is worth 25 cwts. of ore per fm. The 100-fm. level north of Jeffrey's shaft is in a vein 4½ ft. wide mainly quartz of rather a dried nature, but showing a spot of ore. The 85-fm. level north of Jeffrey's shaft is in a vein 3½ ft. wide, mixed with stone, just dark enough for producing ore. The 70-fm. level south of Wilson's shaft is in a vein 4½ ft. wide, nicely mixed with kindly spar, and shows dampness, but yet without ore. The 35-fm. level south of Flat Rod shaft is in a vein above 4 ft. wide, showing a nice rib of spar mixed with ore worth 30 cwt. of ore per fm. The stope above the 35 south of Flat Rod shaft is worth 70 cwt. of ore per fm.—T. NEWBIGGING.

PRINCE OF WALES (May 20).—During the past week the men in the 180-fm. level west have been driving by the side of the lode, which, as far as seen, looks promising. At the 180-fm. level east the men are cutting ground in order to bring the whim kibble down. In the 166 west the men are through the cross-course, which is a large one, and the lode being heaved a little to the north we have only just reached the south wall. In the cross-cut south the ground is much the same as for some time past.—J. PROWSE.

ROMAN GRAVELS (May 21).—The casing and dividing, &c., of the engine shaft from the 140 to the 155-fm. level has not yet been completed, but everything will, we hope, be in order for the working of the machine cage to the bottom of the mine on Monday morning next. The lode in the rise in the 140 north is worth about 1 ton of lead ore per fm. The bunch of ore does not seem to go up very far above the back of the drivage, and this strengthens our opinion that we have merely passed through the top of the deposit, and that the 155 north will lay open a rich and profitable length of ground underneath. The three stopes at work in back of said 140 are each worth about 1 ton per fm. The 140 south is now within, say, 6 ft. of the perpendicular of the winze from the 125, which is sunk 11 fms. There is now rather a large feed of water in the winze, and sinking is, therefore, going on very slowly, but we hope to effect a communication some time during the week after next. We notice no material change in the vein either in the winze or forebreast since last week. The 140 south-east has somewhat improved since last week, and the 125 south also shows a more promising lode. The four stopes in back of the latter at Lewis winze are together producing 5 tons of lead ore to the fm. The four stopes in back of the 110 are together worth 5 tons per fm., and the three stopes in back of the 80 are together producing 5 tons lead ore and 3 tons blende to the fm. The 80 forebreast is at present comparatively unproductive, but the vein is still wide and strong, and we shall continue to send it forward to prove the ground up to the shale. The stope in back of 80 on east lode is worth 1 ton per fm. at present, but this is due to its being only at the commencing of the bunch of ore; another stope will shortly be at work here.—A. WATERS.

SOUTH CONDURROW (May 20).—Marshall's shaftmen are employed in opening out eastward at the bottom of the shaft preparatory to fixing skip-road, and casing down the shaft. We hope to commence this work next week. There is no material alteration in the pitches and bargains throughout the mine.—W. RICH.

SOUTH DARREN (May 21).—The shaft is let to sink under the 142 level to six men and three labourers at 17*l.* 10s. per fm. Very good progress was made in the shaft last month. This week sinking has been partly hindered by the gudgeon of a bob breaking, and by the fixing of additional timbers under the penthouse, rendered necessary by the ground getting loose, owing to joints going behind the pieces. The depth is now 21 ft. 4 ins. under the 142 level. The 130 end west is let to four men at 9*l.* 5s. per fm. There is a nice branch of lead about 6 ft. behind the end, which is running into the north side; worth 12 cwt. of silver lead ore per fm. I have put the men to shoot out this before driving the end any further. Six men are engaged picking and trimming ore stuff. Drawing and dressing is being carried on.—J. MITCHELL.

VAN (May 21).—The cross-cut at the 150-fm. level, now driven about 6 fms. towards the south lode, continues in very hard ground, in which some strings of lead and blende ores are met with; six men are employed here. A stope over the 150 by four men on the old lode is producing 18 cwt. of lead ore per fm., and in the eastern end of said stope four men are driving in a lode worth 1 ton of lead ore per fm. A stope over the 135-fm. level on the south lode is being worked by four men, and the lode yielding 1 ton of lead ore per fm. At Seaham's winze we have now driven 4 fms. westwards for a "water lode," and shall complete timbering there in course of a few days, when cross-cutting north (at the 150-fm. level) will be commenced towards the lode, which we expect to intersect almost immediately. The 120-fm. level driving east by six men is in a hard portion of the vein at present, and only shows occasional bits of lead and blende ores. In the cross-cut behind this end driving south by two men, the lode shows spots of lead and blende, but not to value. One of the old stopes over the 105-fm. level has been worked out to the level above, the other is continued by four men in a lode worth 1 ton of lead ore per fm. The stope over the 90-fm. level by four men is yielding 18 cwt. of lead ore per fm. We are making repairs to some of the dressing machinery, and intend commencing the dressing of ore next week.—J. PAULL.

WEST WHEAL GRENVILLE (May 19).—The shaftmen have this week, in agreement with your instructions, been costeaning by side of hedge in field north of the account house, commencing at the spot where Mr. Henderson stated it was probable the flat lode might crop up; finding nothing in pit sunk here we continued northwards; the pits in this direction showing well-defined clay slate rock. We then went south of first pit sunk, and found a bed of slightly mineralised quartzs, amples from which showed faint edge of tin on vanning shovel. We have now sunk a pit further south where we find the course of quartz continuing, and are now sinking on same to ascertain its dip, or if it carries defined walls.—Capts. J. SKEAT, N. TEMBY.

WHEAL UNY (May 20).—Hind's engine shaft, to sink below the 244-fm. level by 18 men at per contract for the lift at 45*l.* per fm.: lode unaltered since last reported; looks very healthy. The 244 to drive west by six men at 7*l.* per fm.; lode still maintains its value. The 230 end west to drive by four men at 7*l.* per fm. Here we have commenced driving on the soft part of the lode for speed; the south and most productive part is very hard. We can stope it after. The 230 end east to drive by four men; lode at present poor. We have cross-cutted north and south 4 fms., and find nothing better, and feel satisfied we are driving on the main part of the lode. The stope in 230 west we have set on tribute, with a certainty of getting the tin stuff better selected. The 203 west to drive by six men at 9*l.* per fm. Judging from the levels above, we hope soon to have better tin ground than at present. A stope behind this end by 12 men at 6s. 6d. per ton, turning out fairly well. We also set 19 tribute pitches at tributes, varying from 5s. to 13s. 4d. in the £, and offered 13s. 4d. in the £ for any new pitches for four or six months if anyone felt inclined to take them for such long terms.—J. WHITE, D. H. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

ANTIOQUIA.—The directors have received advices from Mr. J. H. White, dated Mar. 8 and Apl. 6, which arrived almost together, and from Messrs. Restrepo, dated Mar. 12 and Apl. 11, 1891, the whole embracing the operations of two months. The statement for the month of Feb. is as follows:—384 tons mineral produced 176 ozs.; average, 9¾ dwts.; 70 tons attle produced 8 ozs.; average, 2 2-10th dwts.; 454 tons produced 184 ozs. Estimated value of gold, 490*l.*; cost at the mines, Medellin, and in London, 523*l.* 14s. 8d.; estimated lost, 33*l.* 14s. 8d. During the month sums estimated at 98*l.* 15s., included in the above statement of cost, were expended on capital account. The statement for Mar. is as follows. (The tons and ounces are not given.):—Estimated value of gold, 412*l.* 13s. 7d.; cost at the mines, Medellin, and in London, 366*l.* 9s.; estimated profit, 46*l.* 4s. 7d. During the month sums estimated at 76*l.* 18s. 1d., included in the above statement of cost, were expended on capital account. The mines give indications of improving again.

ASIA MINOR (May 8).—The 1st to 7th instant being Greek and Turkish holidays, very little work has been done in the mines during the past week. Ara Dere: There is still some lead in the end of the drive. The lode in the winze is not looking so favourable. Chief mine: The cross-cut from intermediate Hamburgh has, we believe, cut the Savalan lode. We hope it will prove productive. The ends east and west from cross-cut from No. 4 stope are worth 27 and 25 cwts. respectively. These drives are opening up some good stoping ground. There is an improvement in the end west from Tobacco stope, now worth 20 cwt. The stopes are about the same as last reported, with the exception of those in the back of long cross-cut, which are showing an improvement. Dressing floors: Owing to the holidays the dressing floors have been stopped for the greater part of the week. Production to May 8th: 3,581 tons crushed, yielding 172 tons rich silver-lead ore.

BALAGHAT-MYSORE (Apl. 29).—Report of work done for the past fortnight.—North engine shaft: The 600 north has been driven 15 ft. 3 ins., or a total of 16 ft. 3 ins. from the shaft. The quartz is now just coming in, and is about 6 ins. wide, worth 1 oz. 14 dwts. 14 grs. The 600 south driven 15 ft. 6 ins.; total distance, 17 ft. 6 ins. There is hardly anything to value in the end; in both of these drives we have been hindered two or three days by a fall of ground

in the 270 south stopes, which blocked the level and let water down to the bottom levels. The 500 north has been driven 20 ft.; total length driven from shaft being 533 ft. There is now hardly any quartz to value, and we are about at an end of the productive part of the lode. The 500 south has been driven 2 ft.; total length, 94 ft. There is just a little quartz at this point, worth a few pennyweights. The 500 winze: Sunk 3 ft.; full depth, 54 ft. 6 ins. The quartz is now about 1 ft. wide, and worth 1 oz. 19 dwts. 4 grs. The 500 stopes north: The quartz averages about 16 ins., now worth 2 ozs. 4 dwts. 15 grs. per ton. The 500 stopes south: The quartz is smaller here, being about 6 ins. only, assaying 5 ozs. 17 dwts. 20 grs. The stopes in the back and bottom of the 410-ft. level carry quartz, averagiug about 1 ft., and worth 1 oz. 5 dwts. 6 grs. The assays this week of these stopes are lower than usual. The 330 plat back stopes the quartz is 8 ins. wide, assaying 6 ozs. 10 dwts. 16 grs. The 330 north stopes carry quartz averaging 1 ft., worth 10 dwts. 5 grs. The 270 south back stopes: Quartz from 8 to 10 ins., worth 2 ozs. to the ton. Haines' shaft: The winze sunk below the 410 has been communicated to the 500 north. We are still busy securing the very bad ground at the 270-ft. level, when the shaft will be turned on the underlie, but I hope by next report this will have been done, and we shall commence stripping down the ground below the 270.—A. S. B. OAKLEY.

BRATSBERG.—Report for week ending May 9.—Hoffnung Mine: No. 2 adit level is worth ¾ ton, and No. 1 rise, 1 ton per fm. At No. 3 adit level the rise is producing at present only ½ ton per fm., but continues to look very promising. The rise in the back here is yielding 1 ton per fm. No. 4 level is yielding ½ ton per fm., and the mid-level at Murchison's 1 ton per fm. Johannes Mine: The eastern level on Howard lode continues to yield but little ore, but the western is worth ½ ton per fm., and the rise in the back 1 ton per fm. Surface work and remarks: The past week was broken by one holiday, and was also very much disturbed by men leaving for military service, and otherwise, as usual, at this season of the year. The steamer has just commenced to run again on the Bandak, which will enable us to speedily get ready for shipment the cargo which we were hiudered from shipping by the frost last Jan., and I trust that now we shall get some applications from miners and labourers, which we require very much; only this year, in comparison with former, the number of miners leaving us is small. Dressing operations continue to go on satisfactorily.—J. D. HOLMAN.

CASTILLON (May 8).—To-day instructions have been given to our agent at St. Girons to dispatch the blende to Bordeaux. We hope to make the cargo up to 200 tons by Wednesday a.m., and to have it delivered at Bordeaux in time for steamer leaving for Antwerp 23rd. We shall sample a parcel of silver-lead ore on the 20th, which we estimate at 50 tons, and sample will be sent you that day. During the week the lode in the end driving west at Cigalere has shown a little lead and blende, and, on the whole, looks more promising. Some good mineral has been got from the Bentallon level since last reporting, but I regret to say that the lode at this time is split up into small branches in the lime rock. At the point where this level is taken up we find that the underlying rock has assumed an almost horizontal position, which has had a prejudicial effect on the lode. We shall, however, continue to push on this part by four men, in the hope of finding something more profitable. The values of the ore-producing points are now as follows, at per cubic fm.: — St. Barbe level, No. 1 stope in bottom block C J equal to 12 cwt. silver-lead ore and little blende. No. 2 stope in back block C equal to 5 cwt. silver lead and 45 cwt. blende. No. 3 stope in back west of rise block B 16, 17 equal to 10 cwt. silver lead, and 20 cwt. of blende. No. 4 stope in back block D 20 equal to 5 cwt. silver lead and 45 cwt. of blende. No. 5 stope in back block E 21 equal to 7 cwt. silver lead and 40 cwt. of blende. No. 6 stope in back block F 23 equal to 25 cwt. silver lead and 15 cwt. blende. No. 3 level: No. 1 stope in back block A 23 equal 25 cwt. silver lead and 25 cwt. blende. No. 2 stope in back block C 20 equal to 30 cwt. blende and little lead. St. Victorine level: No. 1 stope in back block A 17 and 18 equal to 5 cwt. silver lead and 60 cwt. blende. No. 2 stope in back block B 19 equal to 8 cwt. silver lead and 30 cwt. blende. Ezpcleta level: No. 1 stopc in bottom block B 29 and 30 equal to 25 cwt. silver lead and 60 cwt. blende. No. 2 stope in back block A 30 equal to 10 cwt. silver lead and 30 cwt. blende. I am pleased to say the weather now appears to be setting in fine, and I trust it may continue to enable us to resume work at St. Jean level. Machinery in good order.—J. EDWARDS.

CHAMPION REEF.—Superintendent's report for the fortnight ending Apl. 27.—Mysore section: Carmichael's shaft: Sinking 4 ft.; total depth, 236 ft. There is very little change in the rock at this point since last reported. The 225 cross-cut east has been extended 10 ft. 6 ins.; total length, 54 ft. Nothing of importance has been cut since having passed through a small vein of schist 35 ft. from shaft. The cross-cut is stopped, and the men are now driving south on the small band of schist. Ribblesdale's shaft has been sunk 5 ft. 3 ins.; total depth, 231 ft. 6 ins. The small branches of quartz which have for some time past been vertical in the shaft have now got a good underlie west. The ground is strongly mineralised all over the shaft, and is also dipping west; these indications are very favourable, and we hope to intersect the lode in the course of a few feet more sinking. Garland's shaft: This shaft has been sunk 6 ft.; total depth, 231 ft. 6 ins. The lode in shaft is at present rather small and poor. Dalyell's shaft has been sunk 5 ft.; total depth, 236 ft. The sinking here is suspended for the time, and the men are now employed blasting out ground for tip plat preparatory to driving north and south on the lode. The lode in the shaft carries about 1 ft. of quartz, which gives an assay value of 5 dwts. 12 grs. per ton. Coromandel section: At Prospect shaft the 320 end north has been driven 6 ft. 9 ins. The lode maintains a width of 3 ft., and is composed of 17 ft. of quartz, the remainder being mixed with country rock. The quality of the quartz has improved very much during the last few feet of drivage, and the average of three samples gives an assay value of over 1 oz. of gold per ton. The 290 end south has been driven 6 ft.; total distance from shaft, 150 ft.; the lode in this end is about 15 ins. wide, composed of hard hungry-looking quartz, which only carries a trace of gold. The cross-cut west from bottom of winze below the 290 level has been driven 5 ft. 6 ins., and at that distance we cut the lode, which is about 1 ft. wide, and worth from 12 to 15 dwts. per ton. Work suspended at this point for the time being. One pare of men have been employed cutting a plat at the 320-ft. level, which will facilitate the handling of the rock at that level. Surface work: At Garland's shaft the house over the pumping engine is nearly finished, and the masons are now employed building boiler flues and chimney stack, &c.

COLAR CENTRAL (Apl. 29).—Eastern section, north division, new shaft: The 200 ft. north-west cross-cut has been driven 11½ ft.; total, 41 ft. 6 ins. The ground is still hard and very unfavourable in appearance, there being as yet no signs of a lode. East cross-cut has been driven 15½ ft.; total length, 37 ft. 6 ins., in ground of much the same character as that met with in the west cross-cut.—A. S. B. OAKLEY.

COLOMBIAN HYDRAULIC (Apl. 15).—The following are the details of operations during run No. 171. Run No. 171: This run was made from Clarke's banks, and, as before, we only cleaned up the fork sluice, so that another run began simultaneously at the head of the mine. After 762 hours we cleaned up on Apl. 1 $4744.82 from the sluice, which, with purchased gold worth $1,535.00, produces a total of $6,279.82, against a cost of $6,912.55 currency for the same period. These banks have fallen off very much both in height and appearance during this run. The height will come in again, but there is an unsatisfactory amount of mud and sand showing in the face.—A. E. OAKES.

COLORADO (Apl. 30).—The fortnightly mine report has been received from the manager:—Terrible mine: He states that the 9th level west has been driven a distance of 420 ft. from the main shaft; the lode shows decided improvement. The 8th level west has been driven 501 ft. from the main shaft; the lode continues to hold good at 4 ft. wide. 14th level west: A raise to connect with the 12th level is now up 9 ft. from back of level; mineral vein about 2 ins. wide; lode, 4 ft. Coin lode: Rockwell adit level now driven 505 ft.; lode, 4 ft. wide; mineral vein, 2 to 3 ins. wide. Brown adit level driven 555 ft.; mineral vein, 1 to 3 ins. wide; drift looks exceedingly well. Brown tunnel level: Drift extended 278 ft. in fair solid ore; six stopes are being worked at these points. W. H. Brown lode: Drift advanced 29 ft. east and 30 ft. west; lode, 4 to 5 ft. wide; mineral vein. 2 ins. wide. Brown lode, Mammoth Tunnel level: Drift advanced 10 ft. since last report, now in 580 ft.; lode, 4 to 5 ft. wide. Glasgow lode: Drift now in 142 ft. from Mammoth Tunnel level; the ore that is being found at this point is of very high grade, the last assay being 571 ozs. silver per ton; the drift is certainly improving. There are, besides, several other points at work which do not call for special notice.

ELMORE (May 5).—Since writing you last week, we started drifting on the vein west from the 540, and are now in 10 ft. The drift on the vein east is now in 65 ft. No change in the quality of the quartz found either east or west. The formation is getting harder as we drift east, and we are looking for a change for the better. We have not completed the mill test from the Star ore; however, from the appearances of the plates, the ore is poor. In future most of the work will be confined to the 540 level, drifting, cross-cutting and raising. It is our intention to thoroughly prospect the big vein, and cut into the Elmore every few feet. We hope to find a pay shoot of ore in the near future.—G. A. MCCORNICK.

EMMA (May 4).—Operations at the mine the past week are as follows:—In the drift from point of connection with upraise from No. 4 level we drifted, cross-cut, and raised 25 ft.; total 235 ft.; worked six men. In the face of drift an improvement is noticeable, the ore streak has widened to about 18 ins.; the ore is galena, carbonate and iron intermixed with brecciated limestone and quartz. It is, therefore, still too low grade for market, but is a most excellent concentrating ore. We, therefore, save it for treatment in the mill. The ledge is fully 6 ft. wide. Ledge matter strongly marked with mineral, and promises further improvement. The upraise from this level shows a narrow seam of galena ore. The cross-cut is in hard rock, but carries much oxidised iron. On the Illinois tunnel level we worked six men; raised 20 ft.; total, 57 ft. An improvement is also noticeable on this level. The upraise now shows 2 ft. of iron, with a little ore intermixed; also shows 8 to 10 ins. first grade galena and carbonate ore. We also drifted in the vein 10 ft., and while we have not yet encountered a regular seam of ore, we get quite frequently small nodules of ore in the ledge matter. The rock is inclined to be soft, and is such as may be expected to contain ore. We mined about 25 tons concentrating ore, making about 275 tons now on hand. The weather this past week has been more like spring. Snow is beginning to melt away quite perceptibly.—H. C. WALLACE.

— May 4.—Telephone communication was opened yesterday. Quite likely the tramway will be open for business by June 1 prox. Will probably be able to start mill by the 20th of present month. The surface water from the melting snow has considerably interfered with work for the past 10 days, but is decreasing. Wallace last night reported 1 ft. width of good galena ore in the works from Illinois tunnel level, and 3 ft. of iron ore, with spots of galena intermixed. In works from No. 4 level north-west he reported vein 7 to 8 ft. wide, 3 to 4 ft. being iron and galena mixed, apparently good stuff for the mill. Works from Emma tunnel have not been worked for about 10 days on account of rush of water, but it shows considerable milling ore and a little first-class. Mr. Wallace will now raise and sink at available points to get all ore possible, both first-class and for the mill, and in strong hope of encountering bodies of ore of magnitude.—C. W. BENNETT.

FLAGSTAFF (May 9).—Since my last report I have struck another body of ore in 6th level; it is in 10 ft. further than the last body—the one that I cabled you about—it is about the same quality of ore as the other, most all first-class. I have drifted on it 6 ft., and it still continues on, it is from 1 ft. to 2 ft. wide, and from 4 ft. to 5 ft. thick. I have not taken out much of the ore this week, as I wanted to drive ahead as fast as possible to see to what extent it will lead to. This is splendid ground for ore, and I think that we will find a larger body of good ore here soon. This level is now in 109 ft. 7th level: This is now in 18 ft., and splendid ground for ore. I would not be surprised to strike ore here any day, but my calculations are that we will have to drive somewhere in the neighbourhood of 150 ft. before we find ore. Number of tons of ore raised the past week, 9, all first-class.—A. L. SWOPE.

GOLDFIELDS OF MYSORE (Apl. 29).—Fortnightly report of superintendent.—South shaft: This shaft has been sunk 7 ft.; total depth, 256 ft. 6 ins. The rock in the west side of shaft is very clean; but on the east side there are several stringers and patches of quartz

which carry a trace of gold. The shaft has been divided and timbered down from the 206-ft. level to within a convenient distance of bottom of shaft. The winze below the 206-ft. level has been sunk 4 ft.; total depth, 41 ft. 9 ins. The lode is making more vertical, consequently a much greater depth will have to be sunk in the shaft before cutting the lode at that point. The assay value of the lode has fallen off considerably during the last few feet, probably this is accounted for owing to the winze being too far in the hanging. We are however sinking more vertically and hope soon to get on nearer the footwall of lode.

GREAT EUKABY (Apl. 13).—Bird-in-Hand Mine: Good speed is being made in sinking the Victoria shaft, 3 ft. having been sunk in last week; total depth, 10 ft. 9 ins. below No. 5 level. We are at present concentrating our efforts in this direction, and intend pushing this shaft down to No. 6 level as fast as possible. Engines and pumps continue to work well.—J. M. CRAZE.

GYMPIE GREAT EASTERN (Apl. 2).—Fortnightly report:—During the past fortnight the rise on the Orient reef has been put up 14 ft.; total, 111 ft. from where we cut the reef; the reef is small, being not more than 6 ins.; it shows a little gold. The country is good for gold, being slate and conglomerate. The cross-cut at this level has been extended 6 ft.; total, 413 ft. from the shaft; there is no change in the country; the north drive has been extended 10 ft.; total, 63 ft.; the reef in this drive is about the same as last reported. The south drive has been extended 7 ft.; total, 44 ft.; the reef formation is about 30 ins., with about 10 ins. of quartz through it; I have seen no gold in it. The stopes going north above this level all show a little gold, but there is a lot of mullock through the crushing stuff. The 690-ft. level: The back stopes north and south above these levels all show a little gold. The stone going through the mill is looking poor. We may get some better gold before we wash up. For the four weeks ending Mar. 23 there have been 400 tons of quartz crushed for a return of 312 ozs. 19 dwts. of smelted gold. I am still crushing with 10 head, as the crushing stuff is very limited and poor. There are five head crushing for the Nicholls' lease, and 10 head idle. I would recommend sending a plan of the Orient reef to the London directors and shareholders, as it would give them some idea of the extent of the Orient reef in their property, together with reef cut 290 ft. from the shaft, and where we should intersect the same in gold-bearing country. Everything about the mine, winding engine, and battery is in good working order. There are 53 men employed—46 on the mine and seven at the battery.—J. JAMES.

INDIAN CONSOLIDATED (Apl. 25).—Phœnix section: The mill has worked almost without stoppage, but for a week we have only been able to use 10 head owing to a jacket on cam shaft breaking, but the steady crushing and some good stone have combined to keep the amount of amalgam up to the average. Stope A continues of the same quality, but there is more quartz in sight. Stopes B, D, and E: I have no change to report in these. Stope C: We have been getting some good stone from this point, and though the lode continues the same size as reported in my last, the value is not as great. Stope F: As we go south the stone here gets poorer, but I shall drive it out. Stope G: At this point (back of No. 2) we have a make of very fair stone, not, of course, equal to tramway, but good for this level. Almost opposite G we have commenced sinking a winze as directed. It is too soon to say anything yet, but full particulars will be given in my next. Tramway level: The drive here has been continued 7 ft.; the lode continues much the same, but shows less quartz. No. 1 level: The lode matter here is quite 3 ft. thick, soft, with a small splice of quartz showing.

— (Apl. 29).—Colar section—No. 1 New shaft: We have sunk 3 ft. 6 ins., making full depth 225 ft., and have not yet cut the lode. We have started to cross-cut east for the lode, and when we meet with it shall communicate Nos. 1 and 2 shafts as quickly as possible, so that the water will go back along the level from No. 1 to No. 2 shaft. At present we cannot make any speed in sinking with our available appliances for keeping the water. No. 2 new shaft: We are cleaning up the bottom of the shaft preparatory to cutting a cistern plat and making arrangements to continue to sink the shaft. The 210 south has been driven 20 ft. 6 ins. in hard, unproductive rock; total distance, 156 ft. 3 ins.; the rock-drill will be taken away from this end to drive the end going south from the No. 1 east cross-cut as we still carry quartz there. East cross-cut, drift north: By hand labour we have driven 7 ft.; total, 18 ft.; the lode is very much mixed up, and the quartz shows only a trace of gold. East cross-cut, drift south, has been driven 6 ft.; total, 21 ft. 6 ins. We have about 2 ft. of quartz here, but it is still poor; a rock-drill will be put in to drive this end. East cross-cut No. 2 has been driven 16 ft., and is still in barren ground; I think it advisable to drive this further ahead. Main shaft, 240-ft. north, has been advanced 17 ft. 6 ins.; total, 167 ft. 6 ins.; the ground continues hard, but we carry a few inches of quartz. Roache's shaft: The 130-ft. east cross-cut has been driven 6 ft.; total 10 ft.; we have not yet come across anything of importance.—A. S. B. OAKLEY.

— Office note.—The following telegram has been received from Mr. Oakley:—"East cross-cut, No. 1 New shaft, 13 ft., cut quartz, 8 ins., poor."

INDIAN GOLD (Apl. 28).—Koorumber tunnel: 5 ft. driven in much better ground than of late; total length, 1,047 ft. 9 ins.; assay, 16 dwts. 8 grs. No. 1a side stope: 2 ft. stope; a pocket of good ore; assay, 1 oz. 1 dwt. 5 grs. No. 1b side stope: Ground cleared 3 ft. 11 ins.; reef 5 ft. wide; assays, 1 oz. 9 dwts. 9 grs. No. 1c stope: 4 ft. stoped; reef 4 ft. 6 ins. wide. All the above in similar ground. No. 1d stope: 3 ft. 6 ins. cleared; reef 6 ft. wide. No. 2a stope: 3 ft. 4 ins. stoped; reef 4 ft. wide; now in a section of good ground. Understopes 1, 2, and 5: 17 ft. 1 in. stoped; average width of reef, 5 ft.; in very rich pyritic ground, intermixed with half decomposed ore, which holds free gold; assays, 1 oz. 6 dwts. 3 grs. Koorumber bottoms and pillars: About 40 tons broken; this ground under careful selection. No. 11 tunnel north: 4 ft. driven; total length from cross-cut, 68 ft.; reef larger than drivage; assay, 1 oz. 2 dwts. 20 grs. No. 11 tunnel south: 4 ft. 6 ins. driven, making distance from cross-cut 95 ft.; assays, 13 dwts. 1 gr. No. 11 rise has advanced 1 ft. 10 ins., totalling 29 ft. 2 ins. from end of cross-cut. This will proceed much quicker when ventilation is introduced. Ventilation of No. 11: Air pipes are being rapidly laid down to complete this operation. Milling proceeds satisfactorily, with improved results.—PHILLIPS.

LEEDS COPPER (May 7).—I beg to hand you the following as my report for the week ending above:—Kent shaft: The 20-fm. level driving west of this shaft has considerably improved, the vein being now fully 4 ft. wide, showing good ore throughout it, and worth fully 5 tons of ore per fm. The 20-fm. east drive is suspended for the time through lack of miners. The stope in the back of the 20-fm. level has also changed for the better, vein showing 4 ft. wide and producing 3½ tons of ore per fm. The stope in the back of the 15-fm. level continues the same, worth 4½ tons per fm. The drive opposite steam drill stope is as last reported; vein 3 ft. wide, worth 2 tons of ore per fm. The stope in the back of the 10-fm. level, Steam Drill Stope, continues as last reported, worth 4 tons of ore per fm. Surface: We have our boilers placed and connected with the engine. Mason's building is the same. The excavations for crusher and mill complete. The masons will commence to build bed as soon as frost leaves. Our machinery is now coming in better. Most of the crushers delivered, and parts of the jiggs. Everything is pushed on as rapidly as possible.—T. R. DAVEY.

LOMA (Apl. 18).—The mine superintendent reports as follows:—Ditch: Tools are now gone up to start at once a number of men on this work. I note your instructions regarding this work, and have every reason to believe you will obtain a well-made ditch. There is nothing of greater importance for our future success than having a well-built ditch. Till work is well in hand I do not see anything to call your attention to under this heading. Mine: We are able to run from three to five hours daily. There is no change to note in appearance of gravel bank. We are having an extra amount of vegetable soil to clear away at present, but this gives little trouble compared to pipe-clay. I am glad to say we are quite free of the latter in our fronts. As I have before mentioned, we are waiting extra pressure, and to obtain this we will only be able to make use of part of our present small water supply. To help matters as much as possible, I have been retimbering the Jiminez resevoir, and increasing the height of the dam. On this work at least two-thirds of our costs have been expended, but as it is our only resource for obtaining water till new work is carried out, I thought it best to make the most of it, and carry out the work at once. At the mine I have all work well ahead. Lumber for sluice on hand, and about 60 ft. ready for laying. I expect to be able at once, after seeing Mr. Welton, to go on with necessary work from bulkhead to mine. As I gather Mr. Welton's contract is to this point. We are both anxious to push work ahead, and I believe from hereon I may be able to get the ditching in progress rapidly while Mr. Welton is coming from Misones. By next mail I will be better able to state in what manner we determine to carry out the work. Clean up: We may make a clean up in about 14 days, but we will not clean down the ground sluice till next run, when we will obtain in a great part the gold of the present run.

MONO LAKE.—*Resumé* of report by Capt. Curtz:—The 20-stamp mill will require but little repairs to put it into working order; this can be done at comparatively small cost. The 80-horse power engine, roasting and chloridising furnaces, ore houses, blacksmith's shop and assay office, bullion and melting furnace, require but little alteration to facilitate cheap reduction of the ores. I should advise more powerful pumping and hoisting machinery on the Advance mine and additional reduction works as the ores in the mines named will be sufficient to keep double the pressing milling capacity of your mill running for many years, by running a few drifts into the lode and opening stoping ground. I find the expenses of mining and milling the ore will not exceed $5 per ton, and the ore and concentrations can be worked up to 96 per cent. of the assay value. The extraction of large quantities of ore is now an easy matter, and its reduction made at a minimum cost. It is my opinion that as soon as the mines are fully opened by cross-cut drifts there can be no difficulty in extracting from Colorado and Advance alone 200 tons of ore a day. In conclusion, I have no hesitation in saying you have one of the most extensive and richest mining properties in California, and which only requires developments to produce enormous results.

MONTE DEL ORO (May 12).—Fortnightly report:—Taylor's engine shaft: During the fortnight 7 ft. were sunk on the underlie, making the total depth below the 244-ft. level 67½ ft.; progress in sinking has been considerably retarded on account of the quickness of the water. The lode continues small, it being composed of a flookan, a sample from which yielded no gold on assay. Shaft No. 6: The 244-ft. level north was extended 17½ ft., making the distance from the shaft 499 ft.; composed of slate and branches of quartz; the lode is from 18 ins. to 2 ft. wide, and the two samples from it assayed respectively 1 dwt. 7 grs. and 2 dwts. 14 grs. of gold per ton. No change has occurred in the west cross-cut, which is now 265½ ft. long, showing an advance of 12½ ft. for the two weeks. Driving was impeded because of the large quantity of stuff which had to be cleared after the water in the level was forked. The 186-ft. level north was advanced 16½ ft., making its total length 661½ ft., when driving was temporarily suspended, since, owing to the ventilation being so bad, satisfactory progress could not be made. At a point distant 495 from the shaft the men who were driving the 186 level commenced sinking winze No. 10 towards the 244-ft. level, and they have already sunk 6½ ft. A sample obtained from a branch of quartz 18 ins. wide assayed 1 oz. 2 dwts. 20 grs. of gold per ton. Low's engine shaft: The weather proving favourable we were successful in forking the water in this shaft with the windlasses. Since then 6½ ft. have been sunk, making the total depth reached, 69 ft., and as the water is not now very troublesome to deal with I am hoping the shaft will reach the 186-ft. level without further interruptions.—J. ROBERTS.

MOUNT MORGAN EXTENDED.—The directors have received the following from their local committee (per Mr. R. Ballard, M.I.C.E.) dated Rockhampton, Apl. 7:—During the fortnight we have driven 28 ft. in the eastern cross-cut at the 86 ft. level in shaft No. 3 Immanuel. The total length of this drive is now 104 ft. We have met with no gold in the strata through which we have passed for the last 43 ft. The end of the cross-cut is now just underneath the centre of the ravine. The country is getting more open, and the heads of rock are lying more in the direction of the drive. After careful examination I have decided to continue this drive for another 50 ft., which will carry it fairly across the ravine, and it will be a subject for further consideration whether we ought not to carry it even further than that for the purpose of testing the ground under No. 2 tunnel, and making this exploration complete before blocking up the cross-cut as a water reservoir for the pumps of No. 3 shaft. The number of men employed are altogether 22.

MYSORE (Apl. 29).—Mining operations for the fortnight ending Apl. 28:—The progress in the various bargains throughout the mine

continues to be very satisfactory. The lode in the 780 north of Rowse's shaft is 2 ft. wide, and assaying 4 ozs. This level has just intersected the rich run of quartz gone down in the 700; we have also communicated No. 1 winze in bottom of the 700 to this level, so that the ventilation now is good, and everything favourable for rapid development. The lode in the 550 south of the incline shaft (on the west lode) is 6 ins. wide, and assaying 3 dwts. 6 grs. Glen's shaft: The lode in the 250 north of shaft is 6 ins. wide, and assaying 2 dwts. 14 grs. Schaw's shaft: The lode in the 450 north of shaft is small, but unproductive. The lode in the 450 south of shaft is 1 ft. wide, estimated to be worth 8 dwts. The lode in the 320 south of shaft is 1 ft. 3 ins. wide, and assaying 3 dwts. 6 grs. The lode in the 320 north of shaft is 6 ins. wide, and yielding occasional stones of quartz. Tennant's shaft. The lode in the 360 north of shaft is 1 ft. wide, producing a little quartz and carrying a good footwall. The lode in the 290 north of shaft is small and poor, but the ground is getting broken up, and letting out a good deal of water, and I think it is approaching very near the run of quartz gone down from the level above. The lode in the 290 south of shaft is 9 ins. wide, and assaying 1 oz. 13 dwts. 8 grs. This is better than anything we ever had in this level, and it looks ¾ promising for further improvement. The 180 north of shaft has come into contact with old men's workings which are gone below the level, but we cannot say how far. The men are now engaged in making a level through these workings, and find a good deal of quartz standing on the east or footwall side of the lode that will assay 6 dwts. 12 grs. Stopes: The lode in stope in back of the 700 south of the incline shaft (on the wide lode) is 3 ft. wide, and assaying 5 dwts. The lode in No. 2 stope in back of the 700 south of the incline shaft is 2 ft. wide, and assaying 2 ozs. 8 dwts. 23 grs. The lode in stope in back of the 700 south of Rowse's shaft is 2 ft. 6 ins. wide, and assaying 2 ozs. 0 dwts. 23 grs. The lode in stope in back of the 700 north of Rowse's shaft is 2 ft. 6 ins. wide, and assaying 2 ozs. 18 dwts. 6 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 6 ozs. 10 dwts. The lode in stope in back of the 620 north of Rowse's shaft is 2½ ft. wide, and assaying 4 ozs. 2 dwts. 2 grs. The lode in Nos. 2 and 3 stopes in back of this level is 1 ft. wide, and assaying respectively 1 oz. 13 dwts. 6 grs., and 9 dwts. 2 grs. The lode in stope in back of the 620 south of incline shaft is 3 ft. wide, and assaying 1 oz. 17 dwts. 5 grs. The lode in the stope in back of the 550 north of Rowse's shaft is 3 ft. wide, and assaying 3 ozs. 11 dwts. 20 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 oz. 11 dwts. 15 grs. The lode in stope in back of the 550 south of Rowse's shaft is 1 ft. 6 ins. wide, and assaying 1 oz. 12 dwts. 21 grs. The lode in stope in back of the 400 south of Taylor's shaft is 2 ft. wide, and assaying 6 dwts. 12 grs. The lode in stope in back of the 360 north of Plummer's shaft is 2 ft. wide, and assaying 3 dwts. 22 grs. The lode in stope in back of this level, south of shaft, is 2½ ft. wide, and assaying 5 dwts. 12 grs. The lode in stope in back of the 296 north of Plummer's is 1½ ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in back of the 296 north of Rowse's is 3 ft. wide, and estimated to be worth 8 dwts. The lode in stope in back of the 236 north of Rowse's is 3½ ft. wide, and assaying 3 dwts. 6 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 18 dwts. The lode in stope in back of the 180 north of Tennant's shaft is 3 ft. wide, and assaying 2 ozs. 12 dwts. 21 grs. The lode in No. 2 stope in back of this level is 3½ ft. wide, and assaying 1 oz. 16 dwts. 23 grs. Rising: The lode in rise in back of the 450 north of Schaw's shaft is 2 ft. wide, and assaying 14 dwts. 8 grs. Sinking: I am very pleased to say Rowse's shaft has passed through the trap-dyke, and is now being sunk in the usual country rock, which is mixed with small veins of quartz and carbonate of lime, and looks very congenial for the production of gold. The lode in No. 2 winze in the bottom of the 700, which we have again resumed sinking, is 4 ft. wide, and estimated to be worth 5 ozs. The lode in winze in bottom of the 290 north of Tennant's shaft is 2 ft. wide, and assaying 10 dwts. The men are making very fair progress in sinking Gilbert's shaft. Mill samples:—New mill, 2 ozs. 8 dwts.; old mill, 1 oz. 11 dwts. 16 grs.—J. GILBERT.

NEW CALIFORNIA.—Mine report for second half of April:—Shaft: Sinking below the 2,000-ft. level down 2,179 ft.; the lode in the shaft is 2½ ft. in width, and in the past few weeks the returns from the ore milled from the sinking has fully corroborated the great value given it in recent reports. The ground we are going through is of the same schistose character that was met with in the shaft when we first reached this ore shoot (about 100 ft. above the present bottom), and gives every promise of continued richness. The 2,000-ft. level—Drift west of shaft in 796 ft.: Since last reporting we have come across occasional stones of smelting ore, and the tendency has been toward a decided improvement. The 2,000-ft. level—Stopes east and west No. 2 winze: The stopes just behind this end are yielding 8 tons of rich milling ore per fm. from a lode 3 ft. wide, and we will soon be able to increase our force in these workings. The 1,900-ft. level—Stopes east of No. 3 winze: The stopes at this point continue to yield a fair quantity of milling ore, but the vein is smaller. The 1,500-ft. level—South branch, drift in 79½ ft.: The stopes in this branch are going forward and up, and are in good pay. The drift east of junction (in 175 ft.) shows 8 ins. of good vein, while that coming towards it from the east is poor just now. The 1,400-ft. level—B lode (in cross-cut): Here we have a 2 ft. vein, well mineralised, and yielding an unusually high percentage of concentrates, which, with a good showing on the mill plates, makes its working quite profitable. The 1,100-ft. level—Drift east of shaft in 460 ft.: There has been a steady improvement in the 1,100 drift east since resuming work, and the ore last milled proved payable. The 1,600-ft. level west cross-cut north in 20 ft., and 2,000-ft. level west cross-cut north in 27½ ft.: These are prospecting works to cut through the porphyry dyke, and explore a vein that has been so met with at other levels.—F. RICKARD.

NEW DEVALA-MOYAR (Apl. 28).—No. 1 winze: We have sunk here 4 ft., making this winze 53 ft. below the 116-ft. level; the lode is about 3 ft. thick, and is mixed with black rock, the bands of quartz carrying some pyrites; the reef continues to run very flat. The 116-ft. level, drive west: We have extended this end 5 ft.; total length, 143 ft.; we are still in the reef, but it is of no value. There is no alteration in the stopes; they continue to yield an average quantity of quartz for the mill. In some of the stopes the stone requires a good deal of selection, owing to splices of black rock running through the reef in certain places. The filling up of the underhand stope in the 78 level has been completed. The erection of the stone-breaker at the mouth of the tunnel is completed, and it is working well. During the week 142 trucks of quartz (106 tons) have been sent to the mill.—R. B. JOHNSTON.

NEW EBERHARDT.—The mine manager reports under date May 3, as follows:—Total weight of ore extracted and assorted, 42 tons; assay value of same, as per mine samples, $37 per ton. The general appearance of the mine has not materially changed since my last letter to you. The direction of our ore cannot be depended upon; to-day, as it were, we may be running on good ore in a westerly direction, and to-morrow we shall be following the same ore in a southerly direction. Our chairman knows full well how irregular the ore seams have been, from his observations whilst here. My hopes have been and still are, that we may sometime find a place where the ore pitches down, until then the deposits will continue to be irregular. Mill: Our mill has run steadily during the week crushing 94 tons of ore; assay value of same, as per battery samples, $11 per ton. You will observe there is a falling off of $2 per ton, which is caused by the drop in the mine assays to $37 per ton. Ore teams: The ore team is still hauling, having brought down during the week 71 tons of ore from the mine, this being the first week for the season it has brought full loads. Bullion shipments: Please find herewith shipping receipt for two bars of bullion. Total ozs., 3,251.61. Standard value, $3,846.65.

NEW HOOVER HILL (May 11). There is no change to note in the drift going south of the Briol's shaft at the 130, and we have not cut into any water yet. Sinking below the 50-ft. level south of Provost's old workings the vein continues in the bottom, and I think the water is getting less as the spring advances. In following a streak of ore running into the east side of the above old workings, I have found some ore there which will pay to work, and which will give us more ore than we have been getting recently.

NEW VISO (May 16).—All our work, both underground and at surface, is going on regularly and satisfactorily. I have just started a new rise in the roof of the Mi Amor adit, in order to prove a promising piece of ground and provide the necessary means for working a deposit of tin bearing alluvion recently discovered in this part of our property. I have no other change to report.—R. R. NANCARROW.

OOREGUM (Apl. 29).—Superintendent's report for fortnight.—I beg to hand you the mine report for fortnight ending yesterday:—The health of the camp continues satisfactory, and since the last report many of our Moplahs have returned, and are now at work. The remainder are ready to return, but we want to complete the new bungalows for their accommodation first. Wallroth's shaft has been sunk 8 ft.; total below 280-ft. level, 103 ft.; lode 4 ft. 6 ins. wide; value, 3 ozs. 16 dwts. 5 grs. per ton. We shall suspend the sinking to-morrow, and commence the 360-ft. levels north and south, and cut plat. The 280-ft. level south advanced 19 ft. 6 ins.; total, 589 ft. 6 ins.; lode 2 ft. wide; value, 2 ozs. 2 dwts. 11 grs. per ton. No. 1 winze bottom same level sunk 2 ft. 2 ins.; total, 45 ft. 7 ins.; lode 2 ft. wide, assaying 2 ozs. 14 dwts. 10 grs. per ton. No. 2 winze, sunk 3 ft. 6 ins.; total, 74 ft. 8 ins.; lode 2 ft. wide; value, 4 ozs. 1 dwt. 5 grs. per ton. No. 1 winze bottom 280-ft. level north sunk 2 ft. 8 ins.; total, 76 ft. 10 ins.; lode 1 ft. 6 ins., value 13 dwts. 2 grs. per ton. No. 2 winze sunk 1 ft. 1 in.; total, 23 ft. 9 ins.; lode 9 ins. wide, value 12 dwts. per ton. No. 3 winze sunk 1 ft. 2 ins.; total, 37 ft. 8 ins.; lode 3 ins. wide; no sample taken. From what we passed through in the shaft, the lode should soon improve in these latter winzes. The 215-ft. level north advanced 2 ft. 4 ins.; total, 71 ft. 9 ins.; lode 1 ft. 6 ins. wide, value 5 ozs. 17 dwts. 6 grs. per ton. We have now let contracts to drive the 215-ft. level south, and 230-ft. level south from cross-cut north. Low's shaft: Sinking has been resumed with a rock-drill. The 350-ft. level south has been advanced 10 ft. 2 ins.; total, 111 ft. 8 ins. The branch reported in the last has opened out to 1 ft. wide, and assays 3 ozs. 16 dwts. 5 grs. per ton, and we expect a further improvement in size. Winze 270-ft. level south sunk 3 ft. 8 ins.; total, 31 ft. 4 ins.; lode, 1 ft. 6 ins. wide; value, 8 dwts. 17 grs. per ton. Probyn's shaft: Sunk 9 ft. 8 ins.; total below 450-ft. level, 82 ft. 8 ins.; lode 5 ft. wide; value, 2 ozs. 12 dwts. 16 grs. per ton. The 450-ft. level north advanced 10 ft. 9 ins.; total, 26 ft. 6 ins.; lode 4 ft. wide; value, 4 ozs. 7 dwts. 2 grs. per ton. The 450-ft. level south advanced 11 ft. 5 ins.; total, 158 ft. 5 ins.; lode 3 ft. wide; value, 3 ozs. 5 dwts. 8 grs. per ton. Rise in back same level, 9 ft. 10 ins. risen; total, 17 ft. 4 ins.; lode 1 ft. 9 ins. wide; value, 1 oz. 1 dwt. 19 grs. per ton. No. 2 winze, 366-ft. level south, sunk 3 ft. 6 ins.; total, 15 ft. 6 ins.; lode 1 ft. 3 ins. wide; value, 1 oz. 3 dwts. 22 grs. per ton. The 300-ft. level south advanced 9 ins.; lode, 1 ft. wide; value, 17 dwts. 10 grs. per ton. Tailings machinery: The excavations for the pans and settlers will soon be finished, and the bricklayers are building the chimney, which is now about 40 ft. high. Some parts of the new battery of stamps have been delivered on the mine, and many more are on rails from Madras.

ORITA (Apl. 19).—The following are details of the operations during run No. 55:—Run No. 55: On the 16th I cleaned up at Mondeco 155 ozs. of amalgam, value about $930. The bedrock at this section of the mine has risen to such an extent that I saw it was of the utmost importance my getting the fourth opening ready for the water. Since the 2nd inst. this work has, therefore, had my undivided attention, and by the 16th I had the pipe laid, fork pipe and water gates in place, monitor in position, and 48 ft. of 5-ft. sluice finished. The water I turned on to run off some tailings and soft granite bedrock, that we may continue laying sluice. I cannot say much about the ground, as we have done so little washing; at the same time, I am glad to say we have exposed 20 ft. of gravel, but till more sluice is put in I do not wish to run it off. Channel: Here we are getting in sluice, but owing to heavy rains we got our cuts choked, and cleaning them out must stand over till we lay six boxes of sluice at head of main. I have every hope of getting all ready here by end of month, but the cutting out at Mondecol compelled me to clean down, and to do so had to take men out of channel, also the carpenters had to see to work at fourth opening. Branch: At this moment the water is in use here, where I fixed up one of the new monitors last week. The bank is not now so hard, but where soft the pipeclay is not under 14 ft. thick. Our next clean up will be from here, after which I will be able to turn into the channel for a run. Annual meeting: This has come round again in what appears to me here a very short time, and as you can see from what has happened, just now is rather a difficult time to report. If you can allow me time to get a run in the channel, I have every hopes of doing work that will convince the shareholders of future success in much less time and more effective, than any report I could send to-day.—H. J. PRINDER.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN and BIRMINGHAM BANK, LIMITED.

Investors in all classes of Stocks and Shares should read Mr. Thos. Thompson's Mining and Investment Circular, free on Application.

Shares sold at Special Prices for forward delivery (One, Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LESTER AND HOOK,

Option, Stock, and Mining Share Dealers,

2, COPTHALL CHAMBERS, E.C., and MINING EXCHANGE, 9, OLD BROAD STREET, E.C.

A GREAT ADVANTAGE TO RAILWAY OPERATORS.

Lester and Hook are prepared to deal in Home, Colonial, Foreign, and American Rails, for two months forward on deposit of 2 per cent., and guarantee to close at any time before the expiration of the account specified on the contract.

Lester and Hook advise immediate purchase of Louisville, Mexican Ordinary, Milwaukee, Brighton "A," and Canada Pacifics. The above Stocks are leading the Market, and a rapid advance in prices is fully anticipated.

Telegraphic Address: — "LONGEVOUS, LONDON."

MEMBERS OF THE MINING EXCHANGE.

BURRELL, BRADDOCK & CO.,

Stock and Share Brokers, Mining and Financial Agents,

STOCK EXCHANGE BUILDINGS,

90, QUEEN STREET, MELBOURNE,

Undertake Agencies for Investments in AUSTRALIA, and negociate the purchase of Mining Properties.

Personal inspection by a member of the firm of all properties under negociation, thus ensuring the safest guarantee of the *bonâ fides* of mines, &c.

REFERENCES.—MESSRS. BURRELL & COMPANY, 117 and 118, Leadenhall Street, London, E.C.

Bankers: THE COMMERCIAL BANK OF AUSTRALIA.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

Board.

B. B. TRENCH, Esq., Chairman.

Sir Charles Metcalfe, Bart. | Major J. W. M. Cotton.
L. Balfour Burns, Esq. | Richard Smith, Esq.
Sir Stuart S. Hogg. | Edward Dicey, Esq., C.B.

Head Office.—19, ST. SWITHIN'S LANE, LONDON, E.C.

South African Office.
NATAL CHAMBERS, JOHANNESBURG.

General Managers in South Africa.
W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

Bankers.—THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.
THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—
The skilled investment in South Africau Mining, Land, or other securities for European investors.
Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.
To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.
Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.
The receiving of money on deposit.
The purchase and sale of properties, and all classes of South African securities or interests.
A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A Special Cable Code for Prompt and Economical Communication between the South African and London Offices.

Further information can be obtained at the Head Office of the Company.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether business results or not. We can always give reliable information.
We open any number of all classes of Mining Shares at close market price of the day on 10 per cent. deposit, and carry them over as long as clients wish at low contaugo rates.
We close speculative accounts at any time, and pay profits instantly, irrespective of account day. We sell shares at current prices for forward delivery at one, two, or three months on 15 per cent. deposit. We are members of the Mining Exchange, and subject to the rules and regulations of that institution.
Send for our prices before dealing elsewhere.
Options at low rates for account, one, two, or three months in Mining, Land, and Miscellaneous Shares.
We deal in every description of Miscellaneous Shares.
We publish a South African Share List daily at 4.15 p.m., containing useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

ARTHUR FORBES & CO.,

AUSTRALIAN INVESTMENT AND MINING AGENCY,

BRISBANE, QUEENSLAND,

And at 16, CORNHILL, LONDON, E.C.

Telegraphic Address:—"ORPHARION, LONDON."

Have special business in Australian Securities generally, and in the following Australian Mining Stocks:—

Brilliant, Victory, New Victoria, Sunburst, Golden Gate, Brilliant Block, St. George United, Day Dawn, and other Charters Towers Mines; Broken Hills, Mount Morgan, Raub (Pahang), Muldiva, Gympie Mines, &c.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

S. B. Poynter.—Sell at a small profit rather than wait till prices recede, as these shares are very speculative.

P. G. (Hampton).—Spread your investments more. Those named we should suggest, say, 500 of each.

J. S. Baker.—They will, no doubt, participate in any revival that may take place. Keep them.

Spiegelschiff.—Very bad selection, and afraid you can only get out at a loss.

Overcharged.—We have made full enquiries and cannot find fault with the price. It certainly appears reasonable.

Maid of Erin.—No. Wait.

C. Williamson.—Hold them for the present.

Fusee.—Sell at once. Your fears are only too well founded.

Stubbs (Herne).—Good opinion of the management. Shares should go better presently.

J. J. Spink (Broomwood).—Rather a small number to deal in. Can only advise you to purchase in fifties or hundreds. Otherwise leave them alone.

B. L. Calder (Yale).—Buy and average the price of those you hold. The mine is respectably managed.

Inquirer.—The address is 21, Rue Vivienne, Paris.

Wheat Ear.—The shares are absolutely valueless. You must consider them a dead loss.

Smithers.—Think well of their future.

Peakite.—There appears to be a loss at present, but we advise you to hold on, as your chance of more than recovering your outlay is good.

Foolish Holder.—Dispose of the last named at the small price offered, but keep others for the present.

Piper.—The market is very restricted. Would rather not advise a purchase, as you would find it difficult to sell should you wish to do so.

Callao Bis.—*Verbatim.* See also leader.

M. M. (Romford).—The re-construction was inevitable, as they had little or no funds. We advise you to join it.

Salt Lake.—See "Mining Market."

F. Hyland (Eagle).—Ultimately, we believe, the concern named will prove profitable, but at present it is under a cloud. Think you should hold on.

Montana Holder.—False rumours.

G. I. S. (Belgium).—Keep those you have, but do not increase your holding.

The Mining World.

LONDON: SATURDAY, MAY 23, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

ADVANTAGES AND DISADVANTAGES OF RE-CONSTRUCTION.

THERE is no subject connected with joint-stock enterprise about which a greater amount of nonsense has been spoken and written than that of re-construction, and especially the re-construction of mining companies. A railway or any other great commercial undertaking has, generally speaking, no difficulty in raising additional capital when needed, by the issue of preference shares or debentures; but with most mining companies, experience has shown that it is futile to attempt to obtain funds by these means. There are, of course, exceptions, where the property for which working capital is required has a marketable or mortgageable value; but, as a rule, the worth of a mine unprovided with the necessary "sinews of war" is an entirely unknown quantity. The property may have been proved to demonstration and, given the means of working it efficiently, its future may be absolutely assured, and yet its saleable value may be next to nothing. We fully admit, of course, that it would be better in the great majority of cases if, when the period of impecuniosity arrives, the shareholders were themselves to subscribe for preference shares or even for debentures; but under the Limited Liability Acts there is no power to compel an unwilling minority to fall in with any general scheme for the salvation of the company. It frequently happens, therefore, that the only alternatives are re-construction or complete collapse. And yet it is by no means an uncommon thing to hear re-construction proceedings spoken of as swindling in disguise.

In such an enterprise as mining, it is impossible to gauge with accuracy the amount of money which will be required to produce profitable results. The most that can be expected from any expert is that his estimates should be approximately correct. But it would be the heighth of folly to abandon an undertaking of real and substantial promise for the sake of, it may be, a few thousand pounds, simply because the only means of raising the funds needed is by liquidation and re-construction. What, for examples, would have been the experience of the original shareholders in such companies as Ooregum, Guston, Balaghat-Mysore, Frontino and Bolivia, Don Pedro, Flagstaff and New Queen—only to take a very few instances—if they had simply thrown up the sponge after one ineffectual endeavour to obtain success? The answer is self-evident. The original subscribers would have lost their money irretrievably, and a fresh lot of people, with more of the spirit of adventure, and, we must add, more common sense, would have reaped the advantage of the initial outlay upon development plant and machinery. Fortunately for themselves, the great majority of the early shareholders in the companies we have mentioned had either courage or conviction, or both, and in the result they have either been rewarded by the receipt of handsome dividends, or, at the worst, they have had the opportunity of realising in the market a much larger amount from their holdings than they would have obtained as dissentients, or as participators in the proceeds of a forced sale of their property. It is, therefore, absurd to condemn re-construction upon principle, simply because the process occasionally gives rise to abuses. One might as well inveigh against the whole system of limited liability, because discreditable frauds have been perpetrated in connection with it, or oppose the spread of banking and life assurance because a few banks and assurance offices have failed.

While we say this, however, it must not be supposed for a moment that we are unmindful of the disadvantages of re-construction. At best it is a necessary evil, and one that should only be resorted to when all other means of raising funds have been tried and found wanting. It is, of course, very hard that original shareholders, who are unable or unwilling to add to their investment, should be practically wiped out, as so frequently happens, and, wherever possible, the interests of those who have embarked their money at the outset should be conserved. But it is not to be denied that, in very many instances, shareholders have themselves to blame for their misfortunes. If they had stubbornly refused to subscribe for shares in any undertaking for which a sufficient margin of working capital had not been provided—sufficient, that is, in the light of experience and common sense—they would not have had to lament their subsequent losses, and, in all probability, promoters and vendors of an unscrupulous character would have learned a salutary lesson. That is, however, somewhat beside the point. All that we have wished to do has been to point out that the system of re-construction has its advantages as well as its disadvantages, and that it is ridiculous to rail against it on the ground of principle. If every case as it arises is considered on its own merits, those who are interested need not bother themselves about the ethical aspect of the question.

CALLAO BIS MEETING.

WHEN Callao Bis shares were suddenly run up to 3*l.* each, the prospects of the concern were not anything like they are to-day—that is, at a time when a perverse market has run them down to 7s. It is only a year since salvation came to Callao Bis in the form of the two mines called Independiente and Nueva Providencia. These mines were brought to the company by the Marquis de Rojas, a nobleman of great influence in France. At the time he approached Callao Bis directors with the request that for a consideration wholly in shares, coupled with (from those he represented) an offer in cash to help to work the properties, we referred to the incident as one highly complimentary to English mine management in general and to Callao Bis management in particular. The summers that have passed over us since our connection with mining began are many, but we fail to remember a single instance in which a similar compliment has been paid to English management by the shareholders of France, or of any other nation. The good repute of the company, which led to this handsome offer a year ago, has been maintained until the present time, for it was cheering to hear Mr. Gregory say that there is no similar concern in Venezuela that stands in higher esteem or in better repute. Too often, as Mr. Ronaldson pointed out, there has been presented by English companies in that territory the sorry spectacle of petty jealousy, leading to an antagonism that ought not to exist, and ending in litigation, which has been wasteful of the money of shareholders, and destructive all round. Now, the policy of Callao Bis directors has been that of peace. Instead of squabbling with their neighbours, and abusing the Government, they have exchanged courtesies with the one, and, by the diligent exploration of their mines, merited the protection of the other. This is a policy which has its basis in reason; and given so sure a foundation, there is every chance that the superstructure will be equally good.

It must be owned that down to the acquisition of the Independiente and Nueva Providencia Mines a year ago the course of Callao Bis has resembled that of true love. The directors worked with, we had almost said, the energy of despair, seeking to cut the Callao lode to prove Sosa-y-Mendez of value, to develop the Unda section, and by a variety of other operations, to save the company from collapse. More than once have they passed through the fiery ordeal of re-construction, and the shareholders have followed them through the furnace with a willingness whose only index could be their perfect confidence in those who were directing their affairs. At last success seems to have come, and we shall be surprised if, during the next twelve months, a dividend be not declared. The grounds of our faith are those which inspired the chairman in his speech at Thursday's meeting, which animate his colleagues, which one can read in the letters of Mr. Chartier and Capt. Gribble, the able superintendents, and which can be detected in every line of Mr. Ross's speech, a recent, and competent, eye-witness hailing from the spot. In 12 months' time, with the work practically to be commenced *de novo*, Independiente has yielded between 14,000*l.* and 15,000*l.* worth of gold, and is seemingly only on the threshold of a remarkable success. Nueva Providencia is believed to be equally rich, but we strongly urge the directors not to spread their energies too widely or to attempt to do everything all at once. These two mines will occupy all the time, as well as the money, the directors can spare, and Sosa-y-Mendez, which, when work was suspended, was giving ½ oz. to the ton, ma

be left until the projected railway is made. This line, for which we believe Mr. Ross has obtained the concession on behalf of a syndicate, is spoken of as likely to be ready within 12 months, and though we are not so sanguine as to the time in which it can be made, of this we are quite sure, that its advantages to Venezuelan mines were not exaggerated. Many mines which are now languishing could then lift up their heads and make their low class ore pay. At present anything under ½ oz. to the ton will not pay expenses. This is extremely heavy, though we remember the time when only 2-oz. ore could be made to yield a profit. Nothing of late years has been more remarkable in mining than the great reduction of expense in working Venezuelan Mines, but charges must come down further still, if the poor ores which abound in Callao Bis and other mines are to be made to pay. Only can this be done by a railway connecting the mining district with the river Orinoco—a distance of 75 miles. When this railway is made, the shares of Venezuelan mines as a whole, and particularly of a well-managed concern like Callao Bis, will reach a value that is not even indicated by present quotations. We admire the candour of the chairman in stating that the board were considering the subject of a call of 1s. a share to expedite the works in hand. Now, no shareholder likes a call at any time, but he likes it still less to be sprung upon him *after* a meeting, when the information should have been given to him *at* the meeting. The object of some companies is to "get the meeting over," and then deal with the shareholders as good it seemeth them; but the directors of Callao Bis are made of different stuff, and the shareholders will respect them all the more for the frankness of the chairman's statement. Shareholders hate anything in the nature of a "trick," or springing the unexpected upon them. They lose confidence in directors who so act, and they proportionately are inspired with it in the case of those boards who deal with them frankly, let the necessities of the case be what they may. We have long had an abiding faith in the ultimate prosperity of Callao Bis, and it is with sincere pleasure we now see the directors and shareholders on the point of a success, which they have laboured to achieve amidst so many disappointments, but with never failing persistency and courage.

SQUABBLES.

WE have no wish to pronounce any sort of verdict on the squabbles that are now proceeding between the directors and a section of the shareholders of that company with the long-winded appellation of "The West Indian New Gold Mining Corporation, Limited," but so far as we have been able to observe, one at least of the charges brought by the latter against the former is without basis. The directors, it is said have withheld information from the shareholders. All we can say is that we have received periodical reports from the office with great regularity, though, of course, we cannot say whether they are textually what the manager has written, or whether even they do justice to the spirit of his communications. Generally speaking, it is much to be preferred that directors or secretaries of mining companies should send to the Press only the salient points from the reports of their agents, for the double reason that they are more likely to interest the shareholders as well as to find in their condensed form readier insertion in the mining papers. The letter of the report should be discarded, but, of course, the spirit preserved. Now, whether in the past the shareholders have had reason to complain of want of communication from the board, or whether they have not, all we can say is that since Mar. 10 they have been simply inundated with circulars from the contending parties. Much valuable ink has been shed in this wordy warfare, the combatants in which evidently share the opinion of Richelieu, that "the pen is mightier than the sword." Let us tabulate them.

Mar. 10.—This is the date of a circular from Mr. H. Edwards, the secretary, stating that persons with whom the board had entered into financial negotiations had failed to carry out their part of the contract, and that, therefore, a call was necessary.

Mar. 20.—Circular signed by Messrs. H. White and G. Brown announcing that they had convened a meeting of the largest shareholders, and that the directors had placed every information, including the books before them, thus refuting the statements of Messrs. Merino and Brunker, our old friends of Yuruari fame if we mistake not, that the board wished to avoid examination. This circular also stated that the directors had managed affairs with economy and efficiency, and that the mine had not been starved as alleged. The circular also informed the shareholders that litigation had been initiated, and was still being carried on by Messrs. Merino, Brunker and others, entailing great expense." Finally, the circular recommended withdrawal of proxies from the litigants.

Apl. 18.—A long circular by W. Mackay, elsewhere styled (we presume he is the same gentleman), J. H. and J. K. Mackay, urging the shareholders to have an investigation into what he alleges is the the mismanagement of the board, and describing the property (as we truly believe it to be) as rich in gold and timber, and having easy access to the sea. He wants to know how the capital has been expended, and asks "what have the directors done during the past year beyond drawing their fees?" Finally, he asks for signatures to enable him to call a special general meeting, and mentions the names of his solicitors. This brings us down to the merry month of May.

May 4.—Circular by the secretary announcing the receipt of the first report from Mr. Cambiaso, the new manager, the wish of that gentleman to receive his salary in fully-paid shares instead of cash, and announcing a small consignment of gold. Reports by Mr. Cambiaso and Mr. Johnson are appended. Some other documents were issued between this date and the next, but we have not been able to obtain copies.

May 19.—Circular from the secretary calling a general meeting for June 9 in compliance with the Mackay requisition.

May 19.—Circular by Mr. Buckley (the chairman), in which it is pointed out that Mr. "J. H." Mackay is a shareholder (400) of only a few week's standing, and stating that the whole agitation is connected with speculative dealings in the company's shares, and further alleging that these proceedings are injurious to the company's interest. Finally, Mr. Buckley asks shareholders to withdraw their proxies given to Mr. Mackay, and to send them to the directors. The ink was scarcely dry on the Buckley circular when Mr. Mackay armed himself with a fresh quill.

May 20.—Circular from Mr. Mackay, in which he points out that "I and my relatives and friends hold 13,000 shares." He points out that the board have already handled 32,000*l.* of re-construction money, and again asks what they have done with it, asserting that the recent reports shed no light on this matter whatever.

In the midst of this deluge of circulars it is necessary that the shareholders should forthwith construct a sort of joint stock Noah's Ark for safety, or the chances are they will be submerged. It will be noted that, in the later communications, Messrs. Merino and Brunker disappear, and Mr. J. K., or J. H., or W. Mackay, we do not know which, is to the fore. No explanation is vouchsafed either by that gentleman or by the board as to this change of base. Speaking generally, and again without pronouncing any decided opinion on the matters in dispute, it is far easier to make random assertions that directors have squandered the shareholders money, and only drawn their fees, than to sustain them by actual proofs. Mr. Mackay may have a strong case, but it does not appear in his circulars, though that is by no means saying that it may not be made manifest in the speech which we suppose he will deliver on June 9. Speaking generally, also, it is the common experience that violent changes in the administration of a company seldom do shareholders any good. Those were the words of true wisdom that Hamlet uttered when he said he preferred the ills he had rather than to fly to others that he knew not of. Mr. Mackay and his supporters may show at the forthcoming meeting negligence of duty, reticence in the matter of imparting information and wasteful expenditure, and if he can do so we advise the shareholders to vote with him. If he fails to do so, and if in any sense his proofs do not toe the line of his assertions, then we unhesitatingly advise the shareholders to reject him as an injudicious counsellor, and to give their fullest confidence to the board.

DEATH OF THE CHAIRMAN OF THE GOLDEN LEAF CO.

MANY of our readers will be both pained and surprised to learn that Mr. W. George Cavendish, chairman of Golden Leaf, Limited, is no more. It was only on Apl. 30 that he addressed the shareholders, in a speech of great power and clearness, on the improved aspect of their affairs, and once more manifested by the enthusiasm he threw into all he then did and said his deep solicitude for the welfare of the shareholders. His loss will be deeply felt by the company, and also by a very wide circle of personal friends. Mr. Cavendish was not much known in the joint stock company world, and his name will be chiefly remembered by the well devised scheme of re-construction which he conceived, matured, and carried out, by which the "Carlisle" and "Empire" Companies were placed upon their present basis under the title of "Golden Leaf." The circumstances attending his death were as remarkable as the sad event itself was sudden. Between 11.30 and 12 o'clock on the 17th inst. Mr. Cavendish left his house at Surbiton, and entered his boat for a row up the river. Very shortly afterwards some persons on the river saw him fall backwards, apparently by accident, but as he did not appear to recover himself they rowed alongside, and, to their horror, discovered Mr. Cavendish dead. They immediately took the boat in tow, and brought it back to Messenger's boat-house. The face of the deceased had so changed that he was not recognised, and a message was actually sent to Mrs. Cavendish, whose house was nearly opposite, asking her to whom Mr. Cavendish had lent his boat. The reply, of course, was that Mr. Cavendish had gone out in the boat himself, and the body was at once taken home. It was only then that, to the inexpressible grief of his family, it was learnt that he had passed away. He was only 46 years of age, but looked much younger. He had always been noted as one who took a great interest in athletic exercises and sports. He leaves a wife and three children; the eldest a son, about 18 or 19 years of age, and two daughters. The proximate cause of death was syncope, brought on by over exertion. The funeral took place on Thursday, and was attended by the members of his family, as well as by upwards of 100 personal friends of the deceased, including the following:—Messrs.

Chapman, Cogan, Gent, Kühn, Gilberf, and Elsden ; Mr. J. Russell Clipperton, a co-director in Golden Leaf ; Mr. H. Cameron Richardson, secretary of the company ; Mr. E. H. Young, the accountant ; Mr. Albion Chadbourn, of Messrs. Richardson and Chadbourn, a friend of many years' standing ; Mr. J. Crick, an old colleague on the Empire and Carlisle boards ; Mr. Ritchie, Mr. W. L. Farrell, Messrs. F. and F. D. Edenborough, and many other sorrowing friends. The service was very impressive. The coffin was entirely covered with floral tributes. "Oh, rest in the Lord," from "Elijah," was played as the procession entered the church, and the "Dead March in Saul" was rendered as the coffin was borne to the grave.

DEVON GREAT CONSOLS.

WE have received the report of the directors and the statement of accounts of the Devon Great Consols Co., Limited, and the Devon United Co., Limited. The former, considering all things, should be satisfactory to the shareholders, who must not forget the fearful winter through which we have passed, and from which some sarcastically say we have not even yet emerged. Mr. Thomas Nicholl Roberts and Mr. Thomas Glen are to be nominated as directors in the place of Mr. Henry Cattley Stewart, deceased, and Mr. Stanley Morris, who has retired. We heartily congratulate the shareholders that these gentlemen have consented to come forward. We have known both of them for some years, and believe that if elected they and Mr. Watson will work harmoniously together for the good of the shareholders.

In the statements of accounts for the half-year ending Apl. 30, there is included an additional month's cost of over 2,000*l.* (*i.e.* a *seven* months' cost) owing to this sum having to be provided for on the very day of closing the accounts (Apl. 30), although not actually due to be paid until May 2. The further great fall in the price of copper during the last six months of some 10*l.* per ton made a difference of some 600*l.* to 700*l.* on the sale of the 1,251 tons of copper ore on Apl. 23, which realised 1,521*l.* 4s. 6d. This amount is not included in the receipts and expenditure account as the same will not be receivable until the 20th inst.

QUEBRADA AFFAIRS.

IN another part of our present issue will be found a full report of the meeting of the Quebrada Railway, Land and Copper Co., which was held yesterday. The meeting was in every respect a success, and the statement which Mr. Matheson (the chairman) made to the shareholders was not only satisfactory as regards the results of the past year, but showed very clearly that the company was making progress, and that the current year would be even better than its predecessor. In our last issue we gave the financial result of the year's operations, and it only remains for us now to say that the directors were able yesterday, after writing off the sum of 49,337*l.* of capital expenditure, to pay the full dividend of 10 per cent. on the preference shares and distribute 5 per cent. to the ordinary shareholders. This was encouraging enough, but Mr. Matheson's remarks as to the future were even more so. The works are now in full operation, and as a consequence the income from all sources is increasing by leaps and bounds, while, on the other hand, the costs are decreasing month by month. The result of the operations for the first four months of the present year shows a large increase over that for the same period of 1890, and the chairman, speaking of this, was able to say, "It is only now that we can be said to be justifying the considerable outlays made during the last three or four years." The future of this company, in our opinion, is practically assured.

KABOONGA PROSPECTS.

THERE seems to be a feeling in the minds of a certain section of Kaboonga shareholders that something is taking place in the lower levels of the mine, of which parties on this side are not cognisant. A fortnight ago we drew attention to the somewhat significant fact that the present manager should consider it worth his while to give up an appointment yielding him an income of 50*l.* per month, and accept the superintendentship of this property at a similar salary. It was scarcely natural that he should do so unless he saw a fair chance of improving his position ; and, understanding him to be a keen business man, we inferred that he saw that chance in the promising features of the mine. That this view was held by some of the shareholders there can be no doubt ; and it was, therefore, with no little surprise that they heard yesterday the reply of Mr. Barrowman to the cable dispatched at the meeting on May 8 as follows :—"My advice is to discontinue all work, and dispose of machinery and plant through Walker's Limited, if possible." More surprising still was the announcement made—that Mr. Power, the managing director, had only this week received a letter from the manager urging the further sinking of the shaft.

As may be imagined, the shareholders were at a loss to understand the meaning of this extraordinary contradiction ; but at yesterday's meeting they decided almost unanimously to try one more cast and see what success it will bring them. In taking this step they have acted in the true, miner-like spirit—*nil desperandum*—and in this respect it would be well for some other mining speculators to emulate them. Had they decided to wind up the company, the property would have been sold by auction for a mere song, and probably purchased by some of those who are just now "disinterestedly" recommending its abandonment. The shareholders have, however, resolved to go on to the extent of a 3d. call. This will yield upwards of 3,000*l.*—a sum which it is calculated is sufficient to enable the shaft to be sunk from 100 ft. to 150 ft. The directors have generously relinquished their fees, and have undertaken to keep the London expenses within 600*l.* a year. It is to be hoped that the shareholders will in the same spirit respond to the directors' appeal, and not hamper them by delaying the payment of the call. We cordially wish the company every success, and a happy issue out of all its troubles.

AFFAIRS IN SOUTH AFRICA.

Kimberley, Apl. 26, 1891.

RUSHING THE WESSELTON MINE.

THE long threatened rushing of the new Wesselton Diamond Mine really came off on Wednesday afternoon. I think I have informed you in previous letters that the unemployed diggers of these diamond fields have been agitating for the throwing open of this mine to the public for some weeks past, and a long correspondence has passed between the Claimholders' Protection Association and the public on the subject. The farm being held under a Free State title, it was obvious that there were legal difficulties in the way, and our Government took advantage of this to pursue a shilly-shally policy. I think I informed you a month ago that a proposition was made at a large meeting of diggers to rush the mine, but better counsels prevailed, and the project was postponed, only to be taken up with greater vigour at a meeting held this day week, when a large number of members of the association, and a crowd of outsiders, determined to take the law in their own hands, and rush the mine, in defiance of all authority. It must be conceded that they gave the authorities a good 48 hours' notice. The meeting was held on the Monday, and the rush did not take place until the Wednesday afternoon, when a procession of some 500 diggers left Kimberley, headed by a Mr. J. H. Wilson, who, by the bye, is actually working *débris* ground the property of the De Beers Co., and marched to Beaconsfield, where they were joined by 1,000 more men, and the whole party then proceeded to the mine, about 2 miles distant. Of course, there was a large crowd—some attracted by curiosity, and others manifestly sympathising with the movement. Arriving at the mine, not more than half a dozen policemen were found on the spot, and these officials looked passively on, and the rushers proceeded to peg out their claims ; neither Mr. Wessels, nor the concessionaire, Mr. Ward, attempting in any way to stop them. Having taken his machine from the waggon, Mr. Wilson put his pick into the ground, and publicly challenged any one to stop him, nor did any one do so, or attempt to interfere with the scores of diggers, who at once imitated his example. In order to carry out their determination, these men carried with them all the paraphernalia for camping out, and each man sleeps on the spot, and I may add, that so strong is the sympathy in the town that since the diggers have been there several merchants and diamond buyers have sent out provisions and blankets, and work is going on in downright earnest. Although they have barely scratched the surface, two diamonds have already been found ; the first, two carats and a half, and the other six and a quarter. Now, you will want to know what Mr. Wessels, the owner, and Mr. Ward, the concessionaire, are doing. As I said just now, the rush took place on Wednesday afternoon without a protest. Thursday went over, and nothing was done. Friday also ; but on Friday evening an advertisement appeared in the evening paper, signed by Mr. Wessels, as owner, and Mr. Ward, as concessionaire, to the effect that all trespassers on the mine will be prosecuted. The advertisement also appeared in the next morning's paper, but certainly up to yesterday (Saturday) afternoon nothing was done—the diggers being merrily at work. Now comes the crucial test. According to the Diamond Trade Act, none of these diggers can sell a single diamond without a permit from the Detective Department, and this permit they certainly cannot obtain without having first procured a license to dig from the Civil Commissioner, which they have not got. A rumour is going about that the Civil Commissioner has received instructions from Government to issue these licenses. I very much doubt this, but we shall know more about it before the next mail goes out. One thing is very certain, and that is that the Government is bound to do something at once. These men are desperately in earnest, and they will not stand being played with any longer. All sorts of rumours are afloat—that which has more than a modicum of truth in it being that there is a split in the Cabinet on the subject, and I shall not be a bit surprised if before you receive this you will have had a cablegram informing you that Mr. Rhodes has resigned. Another rumour is that the De Beers Co. (who really have an interest in the mine) will allow the rushers to get at the payable ground, and then turn them off. I can hardly think they will allow matters to go so far, because if they do no one can answer for the consequences.

MASHONALAND.

In the above paragraph I have hinted that it is quite on the cards that Mr. Rhodes will send in his resignation, and it is quite possible

that he will find that his position at the head of the Chartered Co. will compel him to do so. I have already informed you that he has completely thrown himself into the arms of the Africander Band, but he has already found that by so doing he has by no means strengthened his position. Although there is really no Africander Band in the Transvaal, the Transvaal Boers are in active sympathy with that body, and a large number of Transvaal Boers, in defiance of Mr. Rhodes and the Chartered Co., have announced their intention of organising a "trek" on a gigantic scale to proceed into Mashonaland in June, and form another Dutch Republic. They have made no secret of the matter, and it is well known that they will be joined by a large number of Boers in this colony, the Free State, and Natal. Within the last few days Sir Henry Loch, as High Commissioner, has issued a proclamation warning these people that they will do this at their peril, and he has prevailed upon the President of the Free State to issue a similar proclamation. Now it is well known that in doing so Paul Kruger is holding with the hare and running with the hounds. His sympathies are clearly with the trekkers, and it is extremely likely that the trekkers will carry out their project, and if they do a conflict is inevitable. Mr. Rhodes's only hope is that these Boers are divided. He certainly has a large party of them with him, not only here but in the Transvaal; but on the other hand, the Hollanders in the Transvaal are leaving no stone unturned to induce these people to go into the promised land. As a counter move Mr. Rhodes has publicly announced that his intention is to people the new country with Africanders, and Africanders only, whether of English or Dutch descent, provided they promise and agree to occupy the land under the flag and regulations of the Chartered Co. This is all very well, and looks very fine and large, but I fail to see how it is going to be carried out. So far as I can see, Lobengula, the Matabeleland King, has consented to allow the Chartered Co. to prospect for gold and work gold mines, but I am not aware of his having given any consent for people to settle on the land, pasture their cattle, and till the soil. Taking all these things into consideration, I shall not be surprised any day to hear that Mr. Rhodes has washed his hands of the Cape Colony Premiership.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE fluctuation and uncertainty as to the future of the Money Market, principally at present due to the bullion movements, has given rise to much uneasiness, although with the great influx of gold, and the absence of any export demand at the moment, particularly for Russia, rates have fallen rapidly under the competition to employ money and the continued marked scarcity of bills. Since the Bank rate was raised last week to 5 per cent. a million has gone into the Bank within the *Gazette* week chiefly from New York, whence the exports, since they commenced, have reached close upon 9,000,000*l.* sterling—an unprecedented efflux, which may be attributed to the action of the Silver Bill and the McKinley tariff. With the advance of the season, however, the crops will require the withdrawal of money from New York for the south and west, which will lead to stringency there, and to a reflux hence, while the shipment of the crops will turn the balance of trade in favour of the States. Messrs. Rothschild are sending 1½ millions of gold this week from their vaults to Russia, and it is understood that 3 millions will be taken from the Bank for the same quarter, by the end of June. The Bank return for the current week is very favourable, but in view of the contingencies, cannot be considered strong. The stock of bullion has increased over a million, to 22 millions, while the note circulation has contracted, bringing up the reserve to 13,800,000, or practically the same as last year. The liabilities under public and private deposits have augmented about a million each, so that the proportion is only 1¾ better, at 35¾ per cent. The private securities have increase 600,000*l.* The exchanges, which have been very favourable, have fallen back, in consequence of the drop in the value of money, discount having relapsed to 4 to 4¼ per cent., and short loans to 3 to 3½ per cent.

There has been a variety of incidents at the Stock Exchange, although a short week. The financial affairs of Portugal continue to exercise much attention, particularly in Paris; whilst the comedy at Belgrade, in which the erstwhile Queen Nathalie has played the leading *rôle*, has not been without its effect, for, unfortunately, it has a political significance. General business has not expanded, but there has been great activity in reducing the extensive "bear" account, governing all markets, and that fact even encouraged some bull buying. Moreover, it now needs no penetration to observe that at the least hint of any favourable change in circumstances prices would rebound, so that, considering all in all, there is good ground for accepting the situation as being better. Consols rose appreciably. Colonial Inscribed on the other hand relapsed, owing to a new Queensland loan, which has made its appearance at a somewhat doubtful moment. The issue can, however, be regarded as a cheap and safe investment. English Railways fluctuated largely, and are firmer on balance, though the weather during the holidays had a marked effect upon traffics. Those for last week were good, nevertheless, and those who anticipate only moderately onerous contaugoes at the sctttlement on Tuesday have repurchased. North British Stocks have been very backward, and Brighton "A" has pursued an erratic career, being one day up to 145, another down to 141, and all (so it was said) upon rumours concerning the Board of Trade report in respect of the late accident. Whether apocryphal or not, their system is believed to require many very needful repairs or improvements. International Bonds have risen, including Portuguese, but the latter lost pretty well all their recovery upon extensive foreign sales and unconfirmed rumours that certain Government guarantees on railways were not forthcoming. The coupons are being paid in Paris as usual, only at another agency. Uruguayan advanced sharply on reported land sales; Argentine dropped on the contrary. Mexican railways are better, Grand Trunks lower, and Lombards flat. The railroads of the United States present few features, although firmer in the face of weak cable quotations, for Wall Street is literally controlled by gold exports. American Breweries are still more sold than bought. Iron, Coal, &c., are heavy. English Breweries denote strength. Eastmans Meat have been active.

The rapid fall in the rates for money has been followed by a reaction in the exchanges, but the effect of this has been to some extent modified by the relapse in discount rates on the Continent; nevertheless the decline is such as to prevent the prospect of any gold coming over. The supply from New York continues, and 487,000*l.* more gold has gone into the Bank to-day, including some sovereigns from Paris. A further shipment of 600,000*l.* from America will be made to-morrow, making 1,750,000*l.* for the week. Discount has been easy at 4 per cent., but some brokers hold aloof, and money for short loans 2½, 3 per cent., with 3¼, ½ per cent. over the settlement.

Public Securities have shown strength, and final quotations were the best. The continental markets supported stocks here, it was believed that a Ministry has at length been formed in Lisbon, and moreover, the prospect of an easy settlement caused large re-purchases. but otherwise the public did absolutely nothing. Consols took the lead, rising fully ¼, to 95 11/16, 12/16 for cash, and 95⅜ for delivery in June, but no revival occurred in Colonial Stocks. Foreign Bonds closed at a universal improvement of ½ on an average. Portuguese recovered 3 per cent., Spanish over 1 per cent., and many others gained ¾. Argentine, &c., contributed to the prevailing movement, but Uruguayan receded, and Suez Canal were easier as well. In the English Railways there has been activity, and rising prices were the rule towards evening. Great Eastern, North Western, Midland, and South Eastern Deferred appeared strongest. Brighton "A" is better, but its course has been erratic. The Scotch lines were indifferently supported. Mexican (Vera Cruz) Second Preference rose 2 per cent., and Grand Trunk hardened after falling, but Argentine Railways relapsed 2 to 6 per cent. American Railroads fluctuated considerably, but are nevertheless generally firmer, a prospect of an early cessation of gold exports having encouraged operators to buy. Louisville and Milwaukee shares improved over $1 each, but the remainder was less impressed. Banks, Trusts, &c., declined, but Eastmans, Hammond's Meat, and Bell's Asbestos shares are stronger.

Annexed are the final quotations to-day:—Consols Account, 95¾, 95⅞; Egyptian Preference, 90, 90½; Egyptia, Unified, 94⅞, 95⅛; French Four-and-a-Half per Cents., 102, 103; Hungarian, 89⅝, 89⅞; Italian, 91¼, 91½; Mexican, 85¾, 86¼; Peru Corporation Bonds, 72¾, 73¼; Peru Preferred, 23¾, 24¼; Russian, Four-per-Cents., 96, 96½; Portuguese, 43⅛, 43⅜; Spanish, 71¾, 71; Turkish, 1871, 94, 94½; Turkish Defence, 92¼, 92¾; Caledonian, 117⅝, 117½; Great Eastern, 92⅞, 93⅛; Great Western; 154½, 154¾; Brighton "A," 142⅛, 142⅜; North Western, 169⅝, 169⅞; Metropolitan, 83¼, 83¾; Metropolitan District, 30, 30½; Midland, 150¾, 151; North British Ordinary, 42¾, 43; North Eastern, 158⅜, 158⅝; South Eastern "A," 90⅝, 90⅞; Mexican Ordinary, 38⅜, 38⅝; Grand Trunk, 8 1/16, 8 1/16; Grand Trunk First Preference, 58, 58¼; Grand Trunk Second, 38⅛, 38⅜; Grand Trunk Third, 21¼, 21½; Canadian Pacific, 79⅛, 79⅜; Denver Preference, 58⅜, 58⅝; Erie, 20⅜, 20⅞; Milwaukee 65⅛, 65⅜; Lake Shore, 112, 112½; Louisville, 79¼, 79¾; Atlantic First, 32¼, 32½; Ontario, 17, 17¼; Ohio, 19⅜, 19⅝; Norfolk and Western, 54⅜, 54⅝; Reading, 16⅝, 16⅞; Reading Five per Cent. Bonds, 54, 55; Union Pacific, 47, 47¼; Wabash Preference, 21½, 21¾; Ottoman Bank, 12⅞, 13; Anglo-Telegraph, 46¾, 47¼; National Telephone, 4⅝, 4⅞; Hudson's Bay, 17⅜, 17⅝; Suez Canal, 103½, 104; Guinness, 312, 315; Allsopp's Ordinary, 31. 33; Bryant and May, 13⅞, 14⅛; Eastmans, 9¼, 9½; G. H. Hammonds, 3¼, 3½; Salt Union, 6½, 6¾.

LONDON AND SOUTH AFRICAN EXPLORATION CO., LIMITED.

16S. 6D. A SHARE DIVIDED FOR THE YEAR.

THE report of the directors is highly satisfactory. The revenue for the year was 113,585*l.* 10s. 9d., against 110,214*l.* 12s. 2d. in 1889, 85,326*l.* 5s. 2d. in 1888, 83,541*l.* 6s. 6d. in 1887, and 77,864*l.* 7s. 7d. in 1886. The distribution for the year was 82,500*l.*, being 16s. 6d. per share.—G. BROWN, Secretary.

JAVALI CO., LIMITED.

DIVIDEND OF 25 PER CENT. FOR THE YEAR.

May 16.—The profits of the year, after charging to revenue 1,000*l.* towards the cost of Pim's tunnel, amount to 3,171*l.*, of which 1,314*l.* have already been distributed; and the directors propose a final dividend of 3d. per share, making 25 per cent. for the year. Pim's tunnel has been completed within the time named by Capt. White, and at about the cost which he estimated. It will afford a cheap outlet for the ore to be extracted from the western sinkings, besides opening up more than 100 ft. of backs to the different ore-shoots found in the upper or Pollock's tunnel, which was the highway for the old mine. The balance at the credit of profit and loss is 4,175*l.*; and when the proposed dividend has been paid and deducted, there will remain 2,859*l.*, savings from revenue, besides a balance of 1,186*l.* on capital account, making a total of 4,045*l.*, as working capital, a sum which the directors believe will be sufficient, but not more than sufficient, for the wants of the company, for it must be remembered that a large portion of our assets are always afloat. It is with much regret that the directors have to report the retirement of Mr. Charles Green from the board on account of ill-health. He had served you faithfully for fifteen years, and his general intelligence and souud judgment made him a most valuable colleague. The board have elected Mr. Cecil Paget, one of the largest shareholders, in his place.—E. SCHUBERT, Secretary.

THE PERSIAN BANK MINING RIGHTS CORPORATION inform us that intelligence has been received from their prospecting staff in the South of Persia of the discovery of very extensive deposits of borax.

REPORTS OF MEETINGS.

KABOONGA MINING CO.

CABLEGRAM FROM THE MANAGER—CONFLICTING REPORTS—SHAREHOLDERS RESOLVE ON FURTHER DEVELOPMENT BEFORE GIVING UP—HOME EXPENSES TO BE REDUCED—DIRECTORS RELINQUISH THEIR FEES.

THE adjourned ordinary general meeting of this company was held at the City Terminus Hotel, Cannon Street, London, yesterday.

Col. Geo. Bruce Malleson, C.S.I.,

presided.

Mr. WILLIAM P. FOOT (secretary) read the notice calling the meeting.

OPINIONS OF LARGE SHAREHOLDERS.

The CHAIRMAN: Gentlemen, it will be in the recollection of those of you who were here present this day fortnight that on the motion, "That the report and balance-sheet be adopted," a considerable discussion ensued, and it was finally resolved, on the motion of Mr. Clayton, that a telegram should be sent to the manager asking his opinion as to the advisability of carrying on the mine, and that that telegram should be communicated to the shareholders. Well, gentlemen, I have to inform you that I have received a copy of that telegram, but, after consultation with some of the largest shareholders, I thought it advisable not to put it into the papers, but to communicate it to you this morning, in order that you might decide this morning how to act upon it; and I propose, as soon as I have finished my remarks, to hand that telegram, as we received it, round this room. I may say that I received last night from Farnborough a letter from the mover of the resolution—Mr. Clayton—which, with your permission, I will read to you.

LETTER FROM MR. CLAYTON.

Mr. Clayton writes as follows:—

"Farnborough, Hants, May 20, 1891.

"To the Chairman, Kaboonga Co., Coleman Street.

"Dear Sir,—As it is improbable that I shall be able to be present at the adjourned meeting of the company to hear the cable reply from the mine, allow me to state that, presuming the expenditure is reduced to a limit that coincides with the expressions of the shareholders at the last meeting, I, for one, have no objection to trying the reef for another 100 ft., at an expenditure that should be well within a 3d. call.

"Meanwhile, I would humbly suggest to the board the desirability of turning their attention to the production of auriferous copper concentrates which abound in your district, and which can be readily sold to the Queensland Smelting Co., without a heavy expenditure for machinery or special knowledge in mining.

"I may say that there are a number of good mines now doing this in your district, and payable properties can be obtained on easy terms by any company with a small amount of ready capital to work them.

"I am, yours faithfully,

"(Signed) REGINALD B. B. CLAYTON."

We have received also a letter this morning from Mr. David Roberts, the

OWNER OF 2,110 SHARES.

I do not know whether he was present at the last meeting, but I presume he was. He writes to us from Aberystwith, under date May 19, as follows:—

"The Brewery, Aberystwith, May 19, 1891.

"Dear Sir,—I note by your letter of the 15th inst. that your adjourned ordinary general meeting is to be held on the 22nd of this month. I regret that I shall not be able to attend the meeting. I trust that the directors, if they resolve to carry on development at the Kaboonga Mine, will endeavour to reduce the calls to 3d. per share, and cut down all expenses to the lowest possible margin. Is it worth while to go on crushing with such poor results? Better spend, I should think, all the money in sinking the shaft. I am not a miner, and merely put the latter remark before you as a suggestion.

"I am, dear sir, Yours sincerely,

"(Signed) DAVID ROBERTS.

"To William Foot, Esq.,

"Secretary Kaboonga Mining Co.,

"54, Coleman Street, E.C."

Now, I may tell you that my colleague, Mr. Power, who was for three or four years on the mine, has received a letter from our manager there, and our manager makes a suggestion analagous to that which is contained in the letter which I have just read to you. The manager suggests that we should devote all our energies to sink on for another 100 ft., and he says: "If you will do this, you will be able to save my salary by giving Mr. Kelly 4*l.* a week," and he has a man on the spot who understands the chemical part of the work, and who, for a small amount, will attend to those duties. His suggestion is that we should devote all our energies to sinking the shaft lower, the expense of which can be put down as at least 300*l.*, or probably 350*l.* a year. This would enable our funds to hold out for a much longer period.

PROPOSED REDUCTION OF LONDON EXPENSES.

Now, gentlemen, at the last meeting we were asked whether it would not be possible to reduce the home expenses, and I think it was Mr. Sheridan who suggested that we should reduce them to 600*l.* a year. Well, we have carefully considered that proposition, and we have to inform you that we are willing to agree to your suggestion. (Hear, hear.) We have arranged to cut down the actual home expenditure to 500*l.* a year, with a margin of 100*l.* for legal and other expenses which we cannot anticipate. (Cheers.) The proposal before you, before we proceed to any other business, is "That the report and balance sheet be adopted"; but before I formally put that, I will ask you to listen to the suggestions which we are about to make for the future working of the mine.

A SHAREHOLDER: Excuse my interrupting you, but we are met to-day to hear the reply to our telegram. I think before we discuss the report and balance-sheet we had better hear it.

The CHAIRMAN: I do not wish you to discuss the report and balance-sheet before learning the contents of the telegram; but I think it is only fair and right that, before I hand this telegram round, you should hear what the views of the board are regarding it; and our views are that we should make a

CALL OF 3D. PER SHARE

—one call only—(hear, hear)—and that we should devote all our energies to sinking the mine another 100 ft. or more—as deep, in fact, as the funds realised by the payment of 3d. per share will allow us. I warn you, gentlemen, that this telegram, as it comes from the mine, is against such a proposal; but it is for you to judge whether, considering the big interests at stake, and the fact that no mine in the world ever succeeded at a depth of only 250 ft., especially in that country (Queensland)—whether, having spent all the money we have, it is not to the interests of all of us to spend a little more. That is a matter which concerns you, and it concerns us as well as you, because we are all in the same boat. Some gentleman stated at the last meeting that we only made such a proposal for the sake of earning our fees. Now, we have renounced our fees, and we are going to work for nothing. (Cheers.) Therefore, it is for you to consider whether, in your interests and in the interests of all, it is not better to sink 100 ft. or 150 ft. further. We know that the country is rich in pockets; we have occasionally come upon stuff which returned 7 ozs. of gold to the ton; and there is no reason, if we sink deeper, why we should not come upon such stuff again. Now, gentlemen, in handing you this telegram, I think in your own interests you will agree that it should not be communicated to the Press.

A SHAREHOLDER: Let us have everything above board. I propose that the telegram be read to the meeting.

Mr. LAWTON: I second that. The Press cannot do us any harm.

The CHAIRMAN: Is it your pleasure that I should read you this telegram? ("Aye.") Then it is as follows:—

TELEGRAM FROM THE MANAGER.

"My advice is to discontinue all work, and dispose of machinery and plant through Walker's Limited, if possible."

I now beg formally to move, "That the report and balance-sheet be adopted."

Mr. D. H. ALTEN: I have pleasure in seconding that.

Mr. CHATER: Before any further remarks are made, I think we would like to hear the letter to Mr. Power, if it is not private.

The CHAIRMAN: It is a private letter.

A SUGGESTION.

Mr. F. POWER: The letter I received by the first mail this week, and in it he says that if the directors decide to go on he would suggest that they stop all top work, because even if he got enough stuff to put through the mill—which he could do by getting other men to work—it would not pay. He suggests stopping all surface work and simply sinking under the direction of Mr. Kelly, who understands it, and a young fellow out there who can do the assaying. In that way a saving can be effected of about 40*l.* a month in management expenses.

Mr. CHATER: You stated at the meeting last August that you thought the proceeds of the quartz then on the dump would be sufficient to pay the working expenses of this year. Have your views altered with respect to that?

Mr. POWER: I do not remember saying it.

Mr. CHATER (reading from a MINING WORLD report): I asked you "Do you think that the crushing with these five stamps will pay the directors' fees and a dividend as well?" and you replied, "I have just said that the five heads of stamps were put up as an experiment, to enable us to test the various quality stuff we have on the property." Then I asked "Do you think ten heads of stamps will pay?" and you said, "Yes, certainly."

Mr. POWER: Go on reading.

Mr. CHATER (continuing to quote from the report): "If we get the proper stuff to put through." (Laughter.)

Mr. POWER: I told you that we had put the stamps up as a trial, and that if we had the proper stuff it would pay expenses. (Hear, hear.)

"10 SHARES" PROPOSES TO WIND UP THE COMPANY.

Mr. CHATER: Last Aug. I protested on the ground of expense against the appointment of another director. Here we have a board of six directors; there were five at that time, but another was appointed at an additional expense to the company. What for? To drive a five-stamp mill. Now they talk of sinking another 100 ft., and we shall have heavy administration expenses in connection with the London office, when an ordinary day labourer could undertake the duty of sinking without any office. I think that the shareholders would do well to wind up the company with the least possible delay. From beginning to end it has been managed unsatisfactorily, and the best thing the shareholders can do is to wind it up and wish they had never had anything to do with it. I propose "that the company be wound up."

Mr. W. H. SMITH: I second it with all my heart. (Laughter.)

Mr. SHERIDAN: Can such a proposal be put to this meeting, Mr. Chairman?

The CHAIRMAN: No.

Mr. SHERIDAN: The letter which Mr. Power has received is, to my mind, very important, and if he could have allowed us to read that letter, or given us some extracts from it, he would have reassured some of us, and it would have been fairly conclusive; but the letter was written before the cablegram was sent, I presume?

Mr. POWER: Yes; it takes six weeks for a letter to come.

A SENSIBLE VIEW.

Mr. SHERIDAN: The question for us to consider is whether we shall spend a shilling amongst the lawyers in winding up, or whether we shall spend the shilling amongst ourselves to see if we can do better. It is certain to my mind that we shall lose the shilling anyway.

Mr. PETERS: Can there be no middle course between winding up and re-construction? Is it not possible to work this mine in such a way that there will be little or no expense at home, and a certain amount of money to sink this additional depth out there? (A voice: There is not a mine). This hole then. (Laughter.)

A SHAREHOLDER: You might sink it here and save expense. (Laughter.)

MINING A VENTURE.

Mr. PETERS: Mining is a venture, and nobody iis to be blamed if it does not turn out well. All we can blame people for is giving us an unjust, sanguine report. There is no doubt we have been very much misled formerly—I do not say by the directors; but those who had the making of these reports made them as picturesque and beautiful as possible for the shareholders, and have caused them to lose their money. How they feel under the circumstances I do not know; I know how I should feel. The question is: Can we do anything with what is left? There is a small balance of money, and there is a 5-stamp mill.

A SIGNIFICANT HINT.

We have a telegram from the manager, who says "Give up." That means that the property will be sold by auction, and probably knocked down for 50*l*. If there is anything good in it he may buy it. ("Oh!") At the same time I cannot forget that we sent the telegram out with the express intention of acting upon what he would say. There are two sides of the question to be looked at, and we should not act hastily. Fortunately we cannot pass a resolution to wind up to-day, but if there is a middle course by which we can hold on to any chance that is left, I shall be very glad to fall in with it.

Mr. OGLE: The chairman submits an alternative course—that we spend 3d. more, and abide by the result of that.

Mr. PETERS: I should say that 100*l*. for expenses would be quite enough. What is there to do but to meet once a fortnight?

A SHAREHOLDER: If it is agreed to sink another 100 ft. I think there should be no home expenses. Perhaps Mr. Power will tell us what it costs to sink a single foot?

COST OF SINKING.

Mr. POWER: If the gentleman was at the last meeting he must have heard me go through all that. The cost is 4*l*. or 5*l*. per foot; but it depends entirely upon the sort of ground they go through, because they have to haul the stuff from the lower levels.

Mr. SMITH: I understood at the last meeting that we were to abide by the telegram we received. I think that that states the value of the mine, and knowing that nothing has been handed over to us from this mine for these many years, I do not see why we should sink 100 ft. lower when there is no proof that there is anything in the place. A gentleman in Swansea stated to me four years ago that it was one of the worst mines that could possibly be worked, and that there was absolutely nothing in it.

Mr. WINDUS: The same was said of the Mysore mine.

The CHAIRMAN: Mr. Smith has stated that there was an understanding that we should act upon this telegram; but when I inform you that the shareholders present at the last meeting represented only a very small minority of the shares of the company, it was only fair that those who had a far greater interest in the company should be consulted. They, therefore, acting in that spirit, have, I imagine, attended here this morning—at all events we have a very much larger meeting to-day than we had a fortnight ago—and I think it is for those who have the greatest interest in the company to decide whether we shall act upon this telegram or pursue that middle course referred to by Mr. Ogle—namely, to subscribe 3d. a share, and give the mine one more chance. (Hear, hear.) If you do not, it is possible that the mine may be sold to some one else who will reap an enormous fortune by it; but that is a question for you to consider.

THE MANAGER'S CONFLICTING STATEMENTS.

Mr. WINDUS: I think it quite possible that our manager may have been mistaken in recommending us not to go on, because I happen to know a man who has been mining in Queensland for many years, and he informed me that he has been on mines where large amounts—30,000*l*. or 40,000*l*.—have been expended in sinking a shaft, and the whole of it has been abandoued, but other parties coming afterwards had made a big discovery. It does seem to me extraordinary that our manager, after advising us by letter to go on sinking the shaft, should cable us unfavourably in reply to the telegram we sent him a fortnight ago. I think it would be an act of mining cowardice to stop now, when, by an expenditure of 3d. a share, we might come into good ground. At the present time mining matters are not as they were a little while ago; if there were a little more speculation about we should not hear what we have been hearing to-day. (Hear, hear.)

Mr. CHATER: The last speaker says that lots of mines have been abandoned, and then people have sunk and reaped very large results. I have been all over Queensland, and I can tell him that for one case such as he speaks of there are hundreds that have never turned out anything at all.

THE BEST CRUSHING.

What is the best result we have had in crushing?

The CHAIRMAN: 4 oz.

Mr. CHATER: From how many tons?

The CHAIRMAN: From the samples that were sent over.

Mr. POWER: 1½ ozs. is the best crushing; from 6½ tons.

Mr. CHATER: Of picked ore.

The CHAIRMAN: No, not picked ore. From 6½ tons.

Mr. CHATER: I know perfectly well what the property is, and if the shareholders go on, they will throw good money after bad. Besides all that, gentlemen, the thing we have to look to is the past management of the mine—the glowing reports that have never been fulfilled. Have we the confidence to go on? I consider the management of this company is a monstrous anomaly, and I wonder that such a state of things is allowed to go on. The past experience of this company should teach us. (Cries of "Time.")

The CHAIRMAN: I think it right that you should know that the shareholder who has just sat down is the holder of 10 shares in the mine. (Laughter.)

Mr. CHATER: I represent people who own thousands of shares in this mine. I sold out all my holding except 10 shares, which I retained simply because I wished to have my say and to represent those whom I had recommended to take shares. My advice is

ALTOGETHER DISINTERESTED.

I know that my people have lost thousands of pounds, and I do not wish them to lose more.

A SHAREHOLDER: Why did you recommend them to buy?

Mr. SMITH: That is not a proper question. This gentleman has come here as an honest man for the purpose of saying a word to protect others.

The CHAIRMAN: But you have to consider whether you will pay an additional 3d. per share; and that is a question which touches the large shareholders more than it does the holder of 10 shares, because the call on 10 shares would only represent 2s. 6d. The gentleman has spoken of the very glowing reports which we have given. Now, we have not given a single glowing report. Since this company was formed we have given only the *ipsissima verba*—the very words which we have received from our agent on the spot, from the gentleman who wrote this telegram, and from his predecessor. Those of you who have read those reports in the mining papers will know whether there was a single spark of glow in those reports. They told the truth, the whole truth and nothing but the truth.

A PERTINENT QUESTION.

Mr. OGLE: Have you any estimate as to what depth the 3d. call will enable you to sink to?

Mr. POWER: 150 ft. I should think; unless they meet with very obstructive ground.

Mr. OGLE: The question is whether we shall re-construct or sink 100 ft. more. We have heard one side very distinctly, and although I am very much averse to paying more calls, still I think it is worth the venture to pay 3d. a share on the understanding that if we are not successful when we have spent that, it must be re-construction.

A VOICE: Liquidation.

ARREARS OF CALLS.

Mr. CHATER: How many shares are there in default on the last call?

Mr. ALTEN: The balance-sheet says 405*l*., but part of that has been paid since the beginning of the year.

Mr. CHATER: I asked the chairman how many shares?

Mr. ALTEN: It is easily reckoned at 6d. a share.

The CHAIRMAN: The arrears are now about 400*l*.?

A SHAREHOLDER: Have steps been taben to recover that money?

The CHAIRMAN: We have sent out notices of forfeiture.

A SHAREHOLDER: How much will 3d. per share produce?

The CHAIRMAN: 3,100*l*.

Mr. CHATER was proceeding to put several other questions, when—

Mr. OGLE rose and said: Put it to the meeting, Mr. Chairman. Our time is valuable; and this gentleman has spoken for so long. (Hear, hear.)

THE 3D. CALL SANCTIONED.

The CHAIRMAN: All who are of opinion that we should go on working on the principle of a call of 3d. per share will please hold up their hands. Thirty-four. Against, six. Carried. Now, gentlemen, I will ask you to vote on the motion, "That the report and accounts be passed." It has been proposed and seconded. All who are in favour of that will signify the same in the usual manner. On the contrary. Carried with four dissentients. (Cheers.) In consequence of the decision of the shareholders we shall make a call of 3d. per share, and we shall limit the home expenses of the company from June 1 to 600*l*. a year. We name that date because up to that date engagements have been made. There is one thing more. I hope someone in the body of the room will propose an auditor for the company. Mr. Dunn has performed the duties hitherto.

Mr. BREWER: I shall be very pleased to propose Mr. Dunn as auditor.

Mr. OGLE: I second it.

OFFERS WHICH ARE REJECTED.

Mr. CHATER offered to audit the accounts for nothing. (Laughter.)

Mr. PETERS said he could supply a board room, one of the best auditors in the City of London, and the use of offices as often as the directors liked for 100*l*. a year. (Laughter.)

The CHAIRMAN: The question is "That Mr. Dunn be appointed auditor."

The motion was carried—24 voting in its favour, and 23 against.

Mr. BREWER proposed that the auditor's fee should be 10 guineas.

Mr. JONES seconded the motion.

Mr. CHATER moved an amendment—that the remuneration be one guinea. (Laughter.)

A SHAREHOLDER seconded the amendment.

The CHAIRMAN put the amendment to the vote, and declared it lost. Mr. Brewer's proposal—that the fee should be 10 guineas—was carried with one dissentient.

On the motion of Mr. BREWEB, seconded by Mr. WINDUS, a vote of thanks was accorded the chairman, and the meeting then terminated.

QUEBRADA RAILWAY, LAND AND COPPER CO., LIMITED.

A SUCCESSFUL YEAR—DIVIDEND OF 5 PER CENT. ON THE ORDINARY SHARES—SUBSTANTIAL REDUCTION IN WORKING EXPENSES.

THE ninth ordinary general meeting of this company was held yesterday at the City Terminus Hotel, Cannon Street, E.C., for the purpose of transacting the general business of the company.

Mr. H. M. Matheson

(chairman of the company) presided.

Mr. N. G. BURCH (managing director) read the notice convening the meeting, and the report and accounts were taken as read.

SATISFACTORY RESULTS.

The CHAIRMAN said: Gentlemen, the report and accounts having been for some days in your hands, I cannot doubt that you have examined them and have appreciated their importance, and therefore my task to-day in drawing your attention to some of the principal features need not be a heavy one, or occupy much of your time. The balance at credit of revenue account, along with 36,560*l*. 4s. 6d. brought forward from 1889, amounts to 136,375*l*. 5s. 1d. From this deduct debenture and other interest 32,416*l*. 2s. 10d. and interest on the preference shares for 1889, 3,751*l*. 16s., total

36,167*l.* 18s. 10d., and we have a disposable balance of 100,207*l.* 6s. 3d. But in order to bring the operations of the company into a paying position, outlays on capital account had to be made over several years. The outstanding balance of these, amounts to 49,337*l.* 17s. 7d., which it is evidently desirous to write off. We have also reserved a sum to cover any claim for royalties, 3,000*l.*, and to provide the interest on preference shares for 1890, 3,751*l.* 16s. These, together, amount to 56,089*l.* 13s. 7d., leaving a net disposable balance of 44,117*l.* 12s. 8d. Out of this nett balance we recommend a dividend of 5 per cent. on the ordinary shares, absorbing 36,296*l.* 11s., leaving to be carried forward, 7,821*l.* 1s. 8d.

COSTS DECREASE.

Your late lamented chairman, Mr. Bruce, explained so fully in his address of last year, the improvements made in all the departments of this large industrial undertaking, that I do not need to go over the ground again. That the persevering efforts of the directors, under the able advice of Mr. George Thomson, in laying the lines of successful working, by the installation of the best modern machinery and plant, should have already borne such good fruit, is matter for sincere congratulation. The works are now in a thoroughly efficient state, and although only in full operation for about half of the year 1890 they show an advance in every particular, output of ore, produce in copper, reduction of cost, and earnings by railway traffic, to which your directors confidently point as an earnest of the complete fulfilment of those expectations which were held out to you, when the important works that have been referred to were undertaken I have mentioned reduction of cost. In 1888 the cost of mining was 19s. 3d. per ton, in 1889 it was 16s. 6d., and in 1890 14s. And I am thankful to be able to say that we are endeavouring, with good hope of success, still further to materially reduce the cost of mining during the current year. We hope to keep down costs, but shall not do so at the expense of exploration and development, which you may rest assured will be carefully kept in view as essential to the right working of the mine. The extension of the smelting works at Casa de Tejas has necessitated the preparation of additional roasting floors, and this work, with railway siding to the new and much more convenieut site, and other outlay, is estimated to cost 1,500*l.* Several additional furnaces will have to be erected.

FIRST FOUR MONTHS OF 1891 SHOW AN INCREASE.

A sum of 600*l.* is required for the necessary extension of the company's wharf at Tucacas, and on the railway there are still 12 miles of slag ballasting to be done, and the strengthening and repairs of bridges; but beyond these moderate outlays, and some improvements to the workmen's houses, the board do not anticipate any special expenditure during the current year. I do not think it needful to deal further with the report of 1890, the adoption of which I propose presently to move, but as we have had experience of four months' working during 1891, I feel sure it will interest you to know how the business of the company is progressing as compared with former years. It is only now that we can be said to be justifying the considerable outlays made during the last three or four years. The output of ore from the Aroa Mine during the four months from January to April inclusive, was as follows, viz.: In 1891, 31,583 tons; in 1890, 17,613 tons; in 1889, 17,937 tons, and the copper contents gross, in 1891, 2,963 tons; in 1890, 1,596 tons; in 1889, 1,699 tons. In the smelting department the tonnage of ore smelted in the same period of four months was: In 1891, 26,258 tons; tons of regulas produced, 3,718; tons of copper, in regulus, gross, 1,441. In 1890, 16,001 tons; tons of regulus produced, 2,077; tons of copper, in regulus, gross, 813. In 1889, 12,110 tons; tons of regulus produced, 1,765; tons of copper, in regulus, gross, 614. As regards the railway, you are already aware that in Jan. last, the President of the Republic inaugurated the new railway to Barquisimeto, which was then opened for traffic. This railway is, by agreement, worked by the Quebrada Co. It will interest you to know that the joint earnings of the two railways, exclusive altogether of the ore traffic, have been as follows:—In Jan., 6,000*l.*; Feb., 9,500*l.*; Mar., 11,250*l.*; Apl., 12,000*l.*: On our Quebrada Railway alone the traffic, exclusive of ore, during the first four months, has been as follows, viz.:—1891, 21,050*l.*; 1890, 15,742*l.*; 1889, 16,655*l.* In the original prospectus of the Bolivar Railway Co. this class of traffic was put down as estimated to yield 6,000*l.* per annum.

INCREASE IN PASSENGER TRAFFIC.

Such is the increase in the passenger traffic since the opening of the new line that, as stated in the report, we find it necessary to charter another small steamer to work it between Tucacas and Puerto Cabello. In giving you these comparative figures of the output of ore, the manufacture of copper, and the earnings of your railway, I confine myself to an almost bare statement of the facts, and leave you to draw for yourselves the inferences as to the practical effect of the great improvements that have been made in each of the departments, and the enhanced value of your property. One word touching the two old companies. You will remember that the existing Quebrada Co., at its formation, took over the properties from the New Quebrada Co. and the Bolivar Railway Co., which then practically ceased to exist. Mr. Burch was appointed liquidator, and he must call a meeting of each of the old companies before they can be finally and legally would up. Let no shareholder be in the smallest degree disturbed; the matter has no importance whatever, being purely the final step required by the Act of Parliament. You may, perhaps, have heard of a boundary in dispute between Great Britain and Venezuela. The particular point in dispute lies between the Rivers Orinoco and the Essequibo, on the other side of the country from your property. We trust that the matter will soon receive a pacific settlement, and we will do anything in our power to assist in briuging this about. I now propose "That the report and accounts for the year 1890, now submitted, be received and adopted," and, of course, before putting the resolution, I shall be ready to hear questions that any person in the meeting may wish to put, and to answer them to the best of my ability so far as is convenient, and suitable for the interests of the company. (Cheers.)

Col. R. H. LLOYD ANSTRUTHER, M.P. (director), seconded the motion.

QUESTIONS.

Mr. CARTER: Might I ask if it is possible to declare an interim dividend, and, if so, whether there is any intention of doing so now that we are in a position to expect dividends? There is one other point, and that is with regard to the accounts and the railway in particular. I do not know how the accounts are made up exactly, but the receipts seem to have been 38,000*l.*, and the expenses altogether 47,000*l.* Would the chairman kindly explain that? There does not appear to be any receipts from the steamers. Of course, there is an explanation, but I am not quite clear on these points.

Mr. FRASER: I desire to begin by congratulating this meeting upon having Mr. H. M. Matheson as chairman of the company. (Cheers.) It has done, and is doing, good to the market value of this concern But whilst congratulating the shareholders I merely rise to ask one question—What is the intention of the board respecting the preference shares? I am both a preference and an ordinary shareholder, and I think it is a pity these preference shares paying 10 per cent. should not, if possible, be liquidated. I have got a vague idea that the intention is, at some time when convenient, to redeem them, and what I want to get at is whether they are to be redeemed at, say, the nominal value or at the par value, and whether the company is to continue paying 10 per cent., or at some future time to redeem these preference shares.

Mr. BLAXLAND asked whether the board, after four months' trial of the railway, considered that 45 per cent. of the takings would be sufficient for this company to make a profit. It seemed a very low percentage to take.

The CHAIRMAN: As regards the expenses, 47,000*l.*, and the receipts, 38,000*l.*, the whole of the ore is carried for the 47,000*l.*, but the 38,000*l.* merely refers to the receipts for local traffic, which is separate entirely from the carrying of mineral. There is no comparison between the two amounts. Then, in regard to the redemption of the preference shares, I am afraid the gentleman must have forgotten that when you create shares you have not the power to redeem them. It can only be readjusted by the re-construction of the company. Some day we may succeed in effecting a reduction of the heavy charge of 10 per cent. which the gentleman justly considers so onerous.

THE BARQUISIMETO RAILWAY.

In regard to the 45 per cent., I am glad to say we have had the figures for the first two months communicated to us from Venezuela, and they are entirely satisfactory. There is a balance of profit. You see all our staff is engaged in working the line, and there is a saving in that respect, and also our engines, and some of our waggons, and so on, so that the 45 per cent. is well within the mark. We are saving money by the working of the Barquisimeto Railway.

A SHAREHOLDER: Does it involve the maintenance of the line?

The CHAIRMAN: By our agreement we do come in the maintenance. It seems when the contractor is out of his year of maintenance our company comes into it under the agreement.

Mr. FRASER: How is it we cannot get an official quotation for the preference shares?

The CHAIRMAN: It seems a quotation cannot be got for any amount under 50,000*l.*, and it was not desirable we should spend more than was imperatively necessary, so we did not make up that sum. As to the receipts from the steamers, of course they are included in the local traffic. They are really a part of the railway, and are included, which I think is on the whole satisfactory. As regards the interim dividends, there is no restriction of power whatever. We may pay them, and if the company prospers, as I am certain it will, no doubt the matter will receive the attention of the board.

Mr. CARTER suggested that the accounts of the railway might be kept separate, so that shareholders could see what the receipts from the railway had been, and what the total expenses.

The CHAIRMAN then put the resolution, which was carried unanimously.

DISPOSAL OF PROFIT.

The CHAIRMAN proposed "That out of the disposable balance of 100,207*l.* 6s. 3d., the directors are hereby empowered to apply the sum of 49,337*l.* 17s. 7d. in writing off the balance standing against the company's capital account at the close of the year 1890, and that the said sum of 49,337*l.* 17s. 7d. be forthwith transferred from net revenue account to capital account for that purpose."

Mr. T. W. MEATES (director) seconded the motion which was carried.

The CHAIRMAN proposed "That the payment of the dividend due on the company's preference shares for the year 1889, which dividend was paid on Feb. 12, 1891, amouuting to 3,751*l.* 16s., and which stands debited to the company's net revenue account now submitted, be, and the same is hereby, confirmed."

Mr. JAMES THOMPSON (director) seconded the motion, which was carried.

The CHAIRMAN then proposed a dividend of 10 per cent. for the year 1890 on the 37,518 preference shares of 1*l.* each.

Mr. WM. NEWBOLD (director) seconded the motion, which was carried.

The CHAIRMAN then proposed a dividend of 5 per cent. for the year 1890 on the ordinary share capital of the company, free of income tax.

Mr. JAMES ANDERSON (director) seconded the motion, which was carried.

RE-ELECTION OF DIRECTORS.

Mr. JOHN MORRISON (director): I beg to move the re-election of Mr. Matheson as a director of this company. The death of our late chairman, Mr. Bruce, made it necessary to supply the place which he so ably filled, and the directors sought in so doing to obtain the services of a gentleman with the highest qualifications. It is almost unnecessary to say that in Mr. Matheson, who, at the earnest request of the directors, consented to take part in the management of your company, the directors consider they have obtained the services and intelligence of the best man that London could supply. (Cheers.)

Mr. JAMES THOMPSON seconded the motion, which was carried unanimously.

The CHAIRMAN proposed the re-election of Mr. T. W. Meates as a director of the company.

Mr. ANSTRUTHER seconded the motion, which was carried unanimously.

Mr. WILLIAMS proposed the re-election of the auditors, Messrs. Welton, Jones and Co., at a remuneration of 50 guineas.

Mr. WM. MEATES seconded the motion, which was carried.
A vote of thanks having been accorded to the chairman, the proceedings terminated.

THE AVALA QUICKSILVER MINES, LIMITED.

THE CHAIRMAN DETAILS THE PRESENT POSITION AND PROSPECTS OF THE COMPANY—MR. WEIFERT'S GENEROUS OFFER TO PROVIDE WORKING CAPITAL IS ACCEPTED — THE DIRECTORS REDUCE THEIR FEES, AND EXPENSES ARE TO BE CUT DOWN.

THE annual ordinary general meeting of the above company was held at the City Terminus Hotel, Cannon Street, yesterday, for the purpose of receiving the directors' report and statement of accounts to Mar. 31, 1891 ; the election of auditors, and for general business.

Mr. James Mactear, F.R.S.E., F.C.S.,

presided.

Mr. G. L. S. MAGGIOLINI (the secretary) read the notice calling the meeting.

The CHAIRMAN said that he presumed that the shareholders would, as usual, agree to take the report as read—(agreed)—and if any gentlemen wish to ask any questions or to make any remarks upon the report, he would be very glad to hear him. He had one or two remarks to make himself which it would, perhaps, be best, with the permission of the meeting, that he should make now, and he first of all desired to express the regret on his own part, and on the part of the other directors, for the unfortunate result of the year's working. When they met this time last year they looked forward for a very successful year, and they were exceediugly hopeful. They had had a very satisfactory report given them in the mouth of June last year, which was written by Prof. Loraniteh, who was a well-known mining authority, and the statements that they received from him were very considerably better than those they had been calculating upon when basing their opinion upon the prospects of the company before it was formed ; but unfortunately, as time went on, it was found that the impregnation of the rock with cinnabar—for that was the way that the ore was found, as he explained to them in his speech at their meeting last year—was not so great as it was in the parts that they had previously worked upon. The chairman then proceeded to explain upon the map the various workings and the parts of the mine from which the ore had beeu taken, but this explanation was purely of a technical character. Proceeding, the chairman stated that they had present with them that day one of their Servian directors, Mr. George Weifert, and from their conversations with that gentleman, and also from the couversations he (the chairman) had had with the other members of the Servian board, when he paid a visit to that country the month before last, they had found that the opinion of those gentlemen was that the mine would be found to prove an exceedingly valuable one in the deeper levels, and they advocated further development. That, of course, meant a considerable amount of money to be expended in an unremunerative manner, and as the company were not at the present time in a position to spend that money,

MR. GEORGE WEIFERT HAD COME FORWARD IN A MOST GENEROUS AND HANDSOME WAY,

and so strong was his belief and confidence in the future of the mine, that he had expressed, under certain conditions, his willingness to provide the company with such working capital as might be required to prove this mine to the proper depth—say some 75 or 100 metres—below the lowest levels now existing. (Cheers.) The history of all quicksilver mines was that they invariably became richer in depth, and he (the chairman) felt confident that if this mine was developed such would be the case with them, and there could be no doubt that they would be getting much richer ore as they went down. Turning to the results of the year's working, he had to deplore very much the loss shown by their accounts, but the cause of this loss was the diminished quantity of mercury contained in the ore, as he would prove by statistics that had been taken out. In the 12 months of the year previous to the year now under review they worked 2,229 tons of ore, and they sold mercury equal to 6,645*l*., while in the present year—that was to say, in the year ended Mar. 31, 1891—they worked 2,179 tons, but they only received, for the mercury obtained therefrom, 4,443*l*., a difference of 2,100*l*. in the money received, making the loss, as shown in the accounts, the amount of 2,287*l*., after deducting the balance carried over from last year. Had the strength of the mercury (the percentage) been the same as in the previous year they would have practically had no loss whatever in this year. In order that the shareholders might better appreciate the work which has been done on the mine, he would like to give them some more figures. For the previous year—the first year after taking over the mine—they worked 10,672 days' work of a man, that was adding together the total of all, while in the past year they had worked 17,997 days' work of a man, or an increase of 7,300, which was very nearly 80 per cent. more than in the year before. In the former period galleries were driven to the extent of 541 metres, while this year they had driven exploring galleries to the extent of 1,327 metres. In the previous period they extracted 2,235 cubic metres of mineral, and for the past year uo less than 6,500 cubic metres, so that the shareholders would see that while it was impossible to tell what the rock contained until they had got it broken up and pierced through, they had done, if nothing more,

A CONSIDERABLE AMOUNT OF EXPLORATION WORK.

Again explaining upon the map, the chairman pointed out that at first the mine yielded very rich ores, and it was originally the opinion of himself and the various experts who examined the mine at the time, that it was one of the richest mines that had yet been known, but unfortunately their hopes and anticipations had not been borne out, because the ore became disseminated and went off into a number of shoots passing rapidly downwards, but by the shafts that had been sunk it was found that it became richer as it went down. There could be no doubt that these shoots continued to get richer as they went down, but at the same time the ore was of a "pockety" description. Now, the shareholders would doubtless like to hear a few remarks in regard to the condition of the company's capital account at the present time. There was about 19,000*l*. to be accounted for, of this 5,900*l*. was arrears of calls, and in regard to these arrears he might explain that they were caused almost entirely by the death of one of their largest subscribers in Germany, which had caused a great deal of trouble and a great deal of delay, but now his affairs had been taken over by a Berlin gentleman of a very high position, and they had no reason to doubt but what the whole of this money would be paid in due course, and he believed with interest. They had also cash in hand, and there was stock at the mine, 4,000*l*. odd, consisting of a large amount of new material, which had not yet been used and which would come in very valuable later on. There were also sums in connection with the concession and searching rights, and altogether the figures totalled up, as would be seen by the items in the accounts, to 18,800*l*. from which had to be deducted their creditor's amounts, and the shareholders would thus see the way in which the money had been expended. There could be no doubt whatever that the general expenses of the working of the company stood much too high,—(hear, hear)—but there were a great many difficulties that had to be encountered, and all communications between Servia and this country had to be translated from Servian into French or German, and then again into English, and *vice versa*, and he therefore thought that they were much indebted to their acountants, and especially to Mr. Robinson, for the very able manner in which the accounts were kept in shape, and for their wonderful correctness.

THE DIRECTORS REDUCE THEIR FEES.

Well, dealing with the question of the heavy expenses, the directors had had the matter under their most careful consideration, and they had decided to make an arrangement for the reduction of the expenses to a very large degree. (Cheers. The directors had reduced their fees to 300*l*. in all; the salaries in Belgrave had already been reduced. The office expenses here would be reduced, and there would also be a considerable reductiou in the legal expenses. The preliminary expenses would continue to appear in the accounts, because that was an item which was being written off by instalments, but taken altogether, he thought that the shareholders might look for a reduction of something like 2,000*l*. per annum ; more than that, he did not think they could promise, because there must always be a considerable amount of expenditure with correspondence, translations and travelling expenses with a business so far away as Servia. He now came to a very important matter, and he wished to express

A VERY STRONG FEELING OF THANKS AND EVEN OF GRATITUDE

to Mr. Weifert for the generous way in which he had come forward and helped the company in connection with the important matter of the provision of the necessary capital for the development of the mine in depth. They were very pleased to have him present with them that day, and they had also present Mr. Alex. Z. Yovitchich (the Servian Charge d'affaires), who would be willing, if the shareholders desired it, to translate any questions that any of the shareholders might like to put to Mr. Weifert, and to give his replies to them, as that gentleman could not speak English. The proposal of Mr. Weifert had been embodied iu a deed of agreement, which would be submitted to the shareholders later on, but which was explained at the end of the report, and which he (the chairman), with the permission of the shareholders, would now read to them. It was as follows :—"Under the circumstances Mr. Weifert (one of the Servian directors), aud one of the vendors, who had originally invested in the property on the faith of the reports, and whose present holding in the company amounts to upwards of 32,000 shares, has voluntarily come forward with a proposal to find a sufficient sum to carry the works to a greater depth, under the confident belief that as the workings get deeper the ore will increase in richness ; and, as it is estimated these workings will occupy nearly two years, he has further proposed to pay to the shareholders in respect of the disappointment and delay, the equivalent of a 5 psr cent. dividend during such period. The amount will be paid by him to the directors to be distributed in the same manner as dividend. Mr. Weifert will not claim any return for the amount to be paid in lieu of two years' dividend, and will accept ordinary shares for the sum he will have to provide to carrry the workings deeper, so that the directors feel confideut the shareholders will fully appreciate Mr. Weifert's generous proposal."

(Loud and continued applause.) Well, that was the offer. He (the chairman) had nothing more to add, and subject to any questions or remarks from the shareholders, he begged to move :—"Resolved, that the report of the directors and statement of accounts be received and adopted, and that the deed to carry out the proposal made by Mr. Weifert, referred to in the report (the engrossment of which deed has been produced and read to the meeting) be approved, and the directors be requested to couvey to Mr. Weifert the thanks of the members."

The Hon. J. ASHBURNHAM seconded the motion.

Mr. HARGROVE (the solicitor to the company) then read and explained the agreement proposed to be entered iuto between Mr. Weifert and the company, the provisions of which were greeted with applause.

Mr. BEVITT stated that when he first received the report he was somewhat disappointed at the result presented, but that disappointment was

CONSIDERABLY ALLEVIATED

when he came towards the end of the report and found the offer of Mr. Weifert, and he thought under all circumstances, and considering how it showed that gentleman's confidence in the property, they could not do better than pass the resolution and accept his generous offer. (Hear, hear.)

Mr. SANDERSON asked several questions, including one as to what the chairman's opinion was as to the future prospects of the company.

The CHAIRMAN, in reply, said that, giving his private opinion as a shareholder, and not his opinion officially as chairman of the company he had to say that he entertained the very best opinion of the mine and its prospects. He had carefully studied

THE HISTORY OF ALL QUICKSILVER MINES.

and he had found that the invariable result of the working of these mines was that they got rich in depth, and became richer and richer as they went down. As regarded the likelihood of auy loss being incurred in the current year, he could only say that Mr. Weifert had come forward and saved them from the possibility of such loss by the provision of the capital necessary for the work. (Loud applause.) If they were to stop now they would lose their concession, lose their

plant, and lose the whole of the results and benefits of the development they had carried out at so much expense, and the company would go over to somebody else who would reap all benefit of the money that had been expended, while this company would get no interest whatever for all they had done. As to who Mr. Weifert was he could tell them that he was a gentleman of fortune and property resident in Belgrade. He was a German, and greatly interested in business enterprises in that country. He (the chairman) did not think they would require further information than that. (Hear, hear.) As regarded the drawing up of the agreement, that was a legal question, and he would call upon the solicitor to answer it.

Mr. HARGROVE (the solicitor) said that as solicitor for the company he prepared the deed in the interest of the company, but, naturally, as Mr. Weifert was doing a thing that he was no more bound to do than any other gentleman present in the room that day, he had intimated the terms upon which he would do what he promised, and those terms were consequently embodied in the deed.

Some further discussion was raised by Mr. SANDERSON upon the question of the directors' fees, and

The CHAIRMAN, in reply, said that he wished it to be clearly understood what it was that the directors proposed to do. They were entitled, under the articles of association, to certain fixed fees, the amount of which was very large, but they had agreed that they would not, as directors, draw more than 300*l.* per annum; that would cover the directors here and the directors in Belgrade, and would be complete payment for all services rendered by the directors to the company either visiting Servia or anywhere else, but they could not be expected to pay travelling expenses, &c., out of their own pockets. (Hear, hear.)

The resolution was then put to the meeting and unanimously carried.

Mr. SMYTHE said that his main reason for rising was to propose a vote of thanks to the chairman and to Mr. Weifert, but he would like to be allowed to offer a few observations. It was impossible to strike oil in a mining venture at once. Their mine was

PRACTICALLY A VIRGIN MINE.

It was only 180 or 190 ft. in depth, and that was really only scratching the surface, and until it was thoroughly developed they could not tell how valuable it might be. He thought that they were very much indebted to Mr. Weifert for having come forward voluntarily and found sufficient capital for the carrying on of the working of the mine in depth. The reason why he (the speaker) came to be interested in the company was that some time ago he received

PRIVATE INFORMATION FROM SERVIA WITH REGARD TO THE VALUE OF THE PROPERTY,

which was so satisfactory that he at once bought some shares, about 500, and he believed that they would turn out a very profitable investment for him. (Hear, hear.) He believed that when the arrears of calls were paid, and with the amount that Mr. Weifert was going to provide they would have a very ample capital, and he hoped that in about 12 months time their accounts would show that they would be able to pay a dividend. (Cheers.) He was very pleased that the development work that had been carried on up to the present time had been paid for out of revenue, and had not been made a charge upon capital. He sincerely trusted that the hopes and anticipations indulged in for the future would be realised, and he begged to propose, "That the thanks of the meeting should be given to their chairman (Mr. Mactear), and to the directors, and also to Mr. Weifert for his generous offer to find working capital to sink to depth." (Cheers.)

Mr. BEVITT seconded the resolution, and remarked that all mining must be regarded as of a very speculative character, but he really believed that they would achieve a considerable success in this company. It was impossible to decide upon the value of a mine until it had been thoroughly tested, and until you had thoroughly tested a mine you could not say whether it was valuable or whether it was worthless. He, therefore, approved of the proposal that the mine should be tested in depth, and then they could see what the result would be. (Checrs.)

A SHAREHOLDER asked whether Mr. Weifert would address the meeting?

Mr. ALEX. YOVITCHICH said that Mr. Weifert had asked him to address a few words to the shareholders, and to tell them that he had done all in his power to promote the interest of the company. Unfortunately, Mr. Weifert could not speak English, and was, therefore, unable to address the meeting, but should the shareholders desire to ask any questions he (the speaker) would be pleased to translate them to Mr. Weifert.

No questions were asked.

The motion for a vote of

THANKS

to the chairman, directors and Mr. Weifert, was unanimously carried.

The CHAIRMAN, in reply, said that on behalf of himself and colleagues he begged to return thanks for the vote that they had passed, and he also returned thanks for Mr. Weifert. He feared that he (the Chairman), hardly deserved the vote, because upon the last occasion he must confess he certainly came before the shareholders with a more glowing account than had proved to be the case, but he must say that if he were to go out to the mine again and find it in the condition that he did when he made his last report upon it, he could not honestly or conscieniously give any other report than he did. It appeared then to him as it has appeared to other experts, to be

THE RICHEST MINE HE HAD EVER SEEN IN HIS LIFE,

and all he could now say was that he hoped before the end of the two years was up that it would become so again, and that the directors would then receive a vote of thanks of a much more hearty character then they did that day. (Cheers.) There was still a further matter of business to be completed, which was the re-election of the auditors of the company, and that would conclude the business of the day. It was a matter for the shareholders themselves.

Mr. MACLACHLAN then proposed the re-election of the retiring auditors.

A SHAREHOLDER: At what fee?

The CHAIRMAN said that the previous fee was 25 guineas, which, he thought, was a very moderate amount, because the accounts were of a very difficult character, dealing with money of a foreign currency, and there being a lot of work in connection with exchange. He assured the shareholders that they could not have better auditors. He thought they might pay the same fee.

Mr. ANDRE seconded the motion for their re-election at a fee of 25*l.*, which was carried.

This terminated the business of the meeting, and the agreement between Mr. Weifert and the company having been formally signed and sealed, the proceedings terminated.

EL CALLAO MINING CO.
